## Preface

THE STRONG, persisting demand by students, and general readers interested in democratic citizenship, for my *Theory and Practice of Modern Government*, whether the original two volumes or the abridged one-volume edition, has encouraged me to revise the latter.

I am immensely (though apologetically) grateful that they have not been deterred by the length of my treatise, but, rather, seem to have welcomed what I have attempted: depth with breadth; analysis with comprehension; original research, first-hand observation, and personal experience—sufficient for the student himself to acquire an independent grip of the situations discussed.

This, then, is the one-volume edition. It is now so thoroughly rewritten as to be a new work. The facts of government have been brought up to date, and the trends and ideas have been, with measure, reconsidered and refashioned, so that this work may represent the contemporary mind, hopes, and difficulties of mankind in government today. Some omissions in the one-volume edition of 1934 (for example, the American Presidency) had to be restored but were newly written. The attentive reader will see, I hope, that every opportunity has been taken, and the felt necessities met, to develop the structure where change has occurred in the provinces of action and thought. The comparison is still the governments of Britain, the United States, France, and Germany—but at the proper points the experience of nazi Germany, fascist Italy, and Soviet Russia has been adduced.

However, it would seem proper to point to a number of specific additions, though to mention them all would be to mention almost every page. A new introduction relates the character of the state, the value of political science, the problem of power, and the nature of democracy. More than earlier, the features, justification, and consequences of the democratic principle are brought out, and this is thrown into relief by the contrasting world of dictatorships. The impact of the planned economy—or democratic socialism—on electorates, parties, legislatures, executives, and civil services is traced. The classic theme of the separation of powers is re-judged. Of course, the new constitution of France, the downfall of Weimar Germany, the rise and fall of the nazi state, the peculiarities of the Soviet constitution, are analyzed in relation to their national environment and the interests they serve. The latest developments in bills of human rights are evaluated. Examination is made of the creeds and organization of political parties in democracies and dictatorships under stress of war and its aftermath. Some new things are thought on public opinion and how the various agencies of communication and education

## PREFACE

and propaganda form public policy. The busy, determined process of renewal of legislatures, cabinets, councils of ministers, and the presidency is fully displayed. Particular attention is given to legislative and popular controls over the executive branch of government, now so heavily and newly burdened with economic, social, and international responsibilities, and to the reorganization of executives, with auxiliaries for planned leadership on a broader front than ever before. The crucial problems of the civil service—to get, keep, manage, and inspire in the service of the state enough of the best minds and characters of the living generation—have been reconsidered, with novel information and perspective. And finally, we have assayed the challenge of reconciling vast multitudes of men and women with diverse values under the one peaceful dome of a common democratic habitation, and the influence of time on the political process.

Perhaps it is not amiss to say one other thing. In an age where the social sciences more than ever avow their indispensable reliance on each other for insight into the same world of social experience from different points of view, not a few scholars in sociology, anthropology, modern history, and general philosophy have found this treatise a useful companion to their own studies—even if only to define and unravel the questions they feel bound to ask of human groupings in their own particular focus of interest. Their work has certainly been indispensable to this one, as they may see.

It must be emphasized, then, that this volume is abreast of our own time. Great reforms and reconstructions have occurred in the last fifteen years, under the stress of economic disaster and total war. I have tried to make the consequences on government understandable, and this in the light of the millennial strivings of men for a state fit to live in. It should also be emphasized that this is not the two-volume edition, which is being reprinted from time to time until it also can come out in a revised form.

My small book, *The Future of Government* (London, 1946), concisely surveys political institutions and movements in the critical decade, 1932-42.

I shall be deeply gratified if this edition is of as much value to students as they have said the first was. The world certainly needs citizens who understand that the good government of oneself is the surest guarantee of durable and happy self-government in the state.

May 1, 1949

H.F.

## PUBLISHER'S NOTE TO 1961 EDITION

In this edition a number of changes and additions have been made by Jean Blondel, of the University College of North Staffordshire, in order to incorporate the main features of the Constitution of the Fifth Republic of France as well as the early practice of the new régime.

# Contents

## Part One

### MAN'S POLITICAL URGENCIES

1. *Government and the State* 3  
What Can We Learn?—Philosophy and Institutions—Why Government Matters—Government Is Politics Plus Administration—The Demand for Rights is the Demand for Government—The State—Coercion, Commonwealth, and Obedience—Sovereignty and Rights in Democracy—Geography and Political Power—Power and Morality—Nationality—The Characteristics of Leadership
2. *Politics and Economics* 23  
Indirect Production—Production for Future Consumption—Division of Labor and Economic Groups—Division into Classes—Capitalism, Private Enterprise, and Economic Decentralization—The Arrival of Planning—The Nature of Planning—The Tensions of Acquisitive Societies—The State and Population—Property—He Who Has, Governs!
3. *State Activity: Historical Development* 37  
To 1776—Adam Smith—Forces at Work from 1776 to 1870—From the Crises in the 1870's and 1880's until World War I—Since World War I
4. *State Activity: Analytical* 55  
The State as an Instrument of Conversion—The Valuable Qualities of the State—The Conditions of State Activity

## Part Two

### THE FUNDAMENTAL INSTITUTIONS OF GOVERNMENT

5. *Forms of Government, Especially Democracy* 67  
The Democratic Spirit—Democratic Institutions—Democracy and Liberalism—The Stages of Democratic Development—Dictatorial and Democratic Leadership—Mystification *versus* Mystery, and Democracy
6. *The Separation of Powers: False and True* 94  
From the Eighteenth to the Twentieth Century—United States: Problems and Readjustments—The Separation of Powers: Europe and Britain—The Fall of the Triad of Powers
7. *A More Scientific Understanding of Powers* 109  
The Electorate—Party and Legislature—The Cabinet and President—The Administration and the Courts of Justice—The Courts of Justice

## CONTENTS

8. <i>Constitutions: The Institutional Fabric of the State</i> Definitions—Form of the Constitution—Amendment	116
9. <i>Constitutions: Supremacy and Contents</i> Difference between United States and British Constitutions—Government by Judges—Survey of the Guarantee of Constitutionality—Substance: Historical Development—The Significance of Constitutions	139
10. <i>Federalism: The Central-Local Territorial Fabric of the State</i> Federalism in Australia and Canada—The Rise of Federalism in the United States—The Rise of Federalism in Germany: to 1848—Germany: From Economic to Political Union: 1848–1918—Sameness of Motives, Difference of Fate in Federations—Contrasts Between American and German Federalism—The Necessity and the Difficulties of Federalism—Main Trends of Federalism in the United States—International Federation—Federalism as the Guarantee of Liberalism	165
11. <i>Federalism—Germany, 1918–39</i> The Founding of the Weimar Republic—The Weimar Republic's Federalism—Nazi Federalism—Past and Future of German Federalism	191

## Part Three THE SOVEREIGN MAJORITY

12. <i>The Electorate and Political Parties</i> Responsibility and Representation—What Entities Shall the Government Represent—Representing the Sovereign People—Who May Choose Representatives?	219
13. <i>Representative Government Is Party Government</i> Requirements for Nomination—Nomination in England, France, and Germany—Nomination Regulated by Law: the United States—Nomination and Election of Legislators in Dictatorships	237
14. <i>Public Opinion and the Parties</i> The Nature of Public Opinion—The Sources of Public Opinion—Party is King!	258
15. <i>A Closer View of Party and a Sketch of Dictatorial Parties</i> The Central Machine—Funds, and Unpaid Workers—Sale of Honors—Spoils—Statutory Limits on Party Activities—A Sense of Proportion—Political Parties in Three Dictatorships	283
16. <i>The Character and Policies of Modern Parties</i> England: Conservative and Liberal Parties—England: Labour Party—France—Political Parties in Germany—American Political Parties—Concluding Observations on Political Parties—Dictatorial Parties	311

## CONTENTS

### *Part Four* LEGISLATURES

- |   |     |
|---|-----|
| 17. <i>Legislatures: General Problems</i><br>The Mandate of the Legislature—The General Value of Legislatures—Legislatures: Their General Nature—The Duration of Legislatures—The Size of Legislatures—Incessant Pressure on Legislatures—Dissolution, and By-elections | 369 |

MAN'S POLITICAL URGENCIES

CHAPTER 1

*Government and State*

CHAPTER 2

*Politics and Economics*

CHAPTER 3

*State Activity: Historical Development*

CHAPTER 4

*State Activity: Analytical*

Justice without power is unavailing; power without justice is tyrannical. Justice without power is gainsaid, because the wicked always exist; power without justice is condemned. We must therefore combine justice and power, making what is just strong, and what is strong just.—P A S C A L.

On what shall man found the economy of the world which he would fain govern? If on the caprice of each man, all is confusion. If on justice, man is ignorant of it.—P A S C A L.

## Government and the State

### WHAT CAN WE LEARN?

No human situation here and now or in the future can be identical with any situation in other times or places. What a treatise on government can teach is therefore of limited value—but it can be very far from valueless. If the situations are not identical, they are not completely different: there are recognizable similarities. We can get to know how men *are likely* to act in the social organization called "the state." We can become the prophets of the probable if not the seers of the certain. It is also not without interest to know—and not entirely impossible to know—the motives, the bodily compulsions, the spiritual insistencies that cause men to throw themselves into positions of leadership or submission. If we ask for a lesson in completely and minutely accurate prediction, we shall ask in vain, though sometimes so many similarities exist between then and now and there and here that it is a pleasant surprise to realize how much an intelligent mind can foretell, and how frequently it is possible to merit the unpopularity of those who can rightly say, "I told you so!"

Usually, however, the political scientist does not know enough about all the elements that are relevant to his own problem, and usually the material is fragmentary or unobtainable for various reasons. Furthermore, where the answer depends on a judgment of motivating forces—that is to say, in the province of what was or is in the actor's mind—the observer is seri-

ously baffled: the actor may not merely be mistaken about his own grounds of action but he may be entirely unaware of them. The actor may be duped by his own fancy; or he may be a deliberate cheat where any of two or three or more motives may fit as an explanation satisfactory to the observer, who may yet be wrong in his choice or unable to choose with assurance. In future situations the combination of personalities and material conditions must have its own specific pattern, as also the thousand-fold various degrees and proportions of human qualities thrown against the thousand-fold diverse environment. It looks as though we might throw up our hands at the prospect of finding any value in the study of government.

We may be reassured, for we are not, of course, entirely without guidance. Intelligent thoughtfulness is obviously of central importance in weighing the similarities and differences in various situations in time and place. This intelligence—observing, comparing, making allowances for degree and circumstance, moving from the facts in the distance to those in our presence, treading tentatively through hypothesis and surmise to the point of conditional and still dismissible conviction—this intelligence is sovereign. But on what shall it feed? To talk of government alone is, in spite of the immense width of its human range, already to have narrowed the phenomena to be observed and explained. It is to focus on one marked element in history out of hundreds which might distract and confuse us. The lines

are firmer because they are narrower; and being narrow they are tolerably definite. The shorter the period studied, the clearer, because the simpler, the relationships of cause and effect. The more the eye is concentrated on a single organ or process of government, the more assured the truths discoverable about it, though the less known about the things on which one has turned one's back.

#### PHILOSOPHY AND INSTITUTIONS

Now there are two royal paths of insight into the behavior of men and women in their social organization called "government." Along one path is pursued the exploration of the ideas, the principles, the theories of what is right and wrong, what is desirable or undesirable, as men and women have held them, sometimes in a philosophic, systematic form. The speculations begun by Plato and Aristotle are not merely whimsical amusements, ending in a chuckle or giving rise to a gasp of wonder, but serious exercises of the intellect and feeling regarding man's fate in government: they warn, they encourage, they inform. They reveal at least all the recesses of one man's mind. They display his account of how many minds and characters at a specific time struck up against the problems presented to them by the place in which they dwelt. They follow through from the urge or temptation of a purpose to the practical outcome in victory or defeat. They proclaim a highest good or supreme duty like Justice or Virtue, and then draw conclusions, from the nature of the universe and of man, on the right and logical arrangements necessary fully to subserve such ends; they explore what transformations of environment, of habits, of laws, even of man himself, are required, and how far the process can be tolerable and successful.

It will be noticed that the political theorist or philosopher does not and cannot altogether exclude a concern for institutions, however ethereal his end, however celestial his aspiration. Since political achievement is for men and through men, political achievement is through institu-

tions, which are nothing but men acting more or less deliberately in a fairly durable concert for the attainment of a considered complex of ends. He may start as Plato did, with Justice, and arrive at the need to limit the freedom to compose poetry and songs, or to institute common ownership of almost all possessions. Or, seeking good in growth, he may, like Aristotle, find he must appease the appetite for wealth by systematic education, lest the contest for it produce destructive revolutions. Or, fearful above all of disorder and death, he may, like Hobbes, prescribe the need for armies in the hands of absolute government. Or, like a gentler man than Hobbes, like John Locke, he may proceed from the pursuit of happiness and tolerance to government by legislatures founded on popular election and the separation of powers. The political philosopher begins with an end and then finds ways and means, that is, institutions.

This present work pursues the second main track to political understanding: it examines the institutions of government as they actually work, and usually does this by showing how they evolved stage by stage. Yet it would be poor instruction if the mechanism were not related to the end for which it was established, and showed no concern for the purpose that animates and makes dynamic the whole apparatus. The philosophy is immanent in the institution of government; for government is the exercise of authority by men over men, and a philosophy guides the distribution of authority. No one can talk intelligently of the electorate without talking of Rousseau; or of the ballot without remembering John Stuart Mill; or of law courts and the Bill of Rights without Locke coming to mind; or of the nature of obedience without Aquinas's system looming in the background; or of parliamentary procedure without being prompted by Jeremy Bentham's theory of pleasure and pain; and when dictatorial political parties are under appraisal it is in the dogmatic presence of Karl Marx. But our emphasis is on institutions as they serve us today. At the minimum, the more steadily our eyes are focused on institutions, the

more they are opened to the possibilities and probabilities which assist us with hints towards efficacious inventive thought, enabling us to order affairs so that the ways and means shall not get across the path of our ends and so that the ends shall be shaped according to what we have learned is not impossible.

A strong warning is necessary: the institutions of government must not be regarded as eternal and petrified. Institutions are nothing but useful or useless habits: they were acquired for a purpose, and purpose changes. The world of political reality is not the printed world of books, or of statutes, or of administrative rules and orders. The cut and dried is not political. De Tocqueville's novelty has become a commonplace: "Do not confound the institutions of government with the necessary foundations of society." The "machinery" of government consists of men, women, and children, thousands and millions of them, placed in living relationship and conducting themselves in an ordered manner: but the order is constantly changing, growing, and the purpose is changing, and with it the pattern. Government is provisional, tentative; it is a process of what has been, what is or just was, and what is about to become something else, even if only slightly different; it is in transition to the future. Ortega y Gasset, in a much misconstrued book, conveys something of my meaning:

Whether we like it or not, human life is a constant preoccupation with the future. In this actual moment we are concerned with the one that follows. Hence living is always, ceaselessly, restlessly, a *doing*. Why is it not realised that all *doing* implies bringing something future<sup>1</sup> into effect? . . . Let it be clear, then, that nothing has a sense for man except in as far as it is directed towards the future.<sup>1</sup>

It is imperative to remember that mankind in its separate states, as in the world at large, is on its way from somewhere to another proximate destination, and then

on, once again. Vista after vista of progression can be sensed. We shall soon realize that old as government is, it is in its infancy—that is the most striking impression given by contemplating it. Hence, what we here describe is transitory: a moment, if a long moment, in being and becoming. If any reader thought that the governmental arrangements we shall discuss were the final shape, the unaltering inert form, he would gravely misrepresent what the author is anxious to convey.<sup>2</sup>

## WHY GOVERNMENT MATTERS

GOVERNMENT is man's unending adventure. It is his heaviest collective and individual burden. Yet it is his supreme hope of liberation from individual feebleness.

Government is an endless adventure because man is deficient in wisdom, virtue, strength, and material resources—deficient compared with his burgeoning capacity to imagine, to wish, to want. Every discovery or invention that carries him nearer to the fulfilment of his desires still leaves him unsatiated, for he at once spots new horizons and disparages his past imperfections.

Government, again, requires endless effort because the rich depths and complexities of human nature have not been fully fathomed, in spite of thousands of years of conscious speculation. Tomorrow always springs some unexpected variation of human circumstance and environment. No philosopher has yet succeeded in producing a completely satisfactory version of history and politics for everyone else.

The most powerful mind cannot embrace all history even if it can discover or recover the scattered, incomplete, garbled or falsified sources. The most ingenious mind cannot weave and interpret all the parts into a whole meaningful to others. The most sensitive and imaginative heart cannot give due weight to all the qualities it perceives, the weight

it would receive from other interpreters of mankind, of nature and events, even if the other two desiderata were fulfilled. Government, further, is endless, because the feature on which Karl Marx erroneously placed the most stress—that is, the complicated material environment—is in a continual wave of change under the gusts of the human mind, surging up from the unprompted creative unconscious.<sup>3</sup> Deep down in man are many insurgent, ruthless, elemental needs, below the surface of the rational and the conscious, and they will out: they give to all the institutions of government a momentum and a ferocity not explicable by the polite. These needs are the world of Schopenhauer, of Freud: of the myths of immortality, the passion for self-preservation, the thirst for ideology. Perfection of theory and perfection of practice have always just eluded the great scientists and practitioners of the art of government.

Government is an adventure, not a textbook, because its end or purpose shares the dark or bright nebulousness of man's ultimate purpose. Each philosopher adds his own end; each philosopher gives to the general term all philosophers use his particular inflection, thinking it essential. As Acton said, "Of freedom there are two hundred different definitions,"<sup>4</sup> and this wealth of interpretation has caused more bloodshed than anything except theology. And with every child born into the world, the total destination of mankind through government shifts, because each child possibly bears with it an amazingly new and certainly rather different idea of what constitutes felicity or truth.

Government is composed of patterns of human cooperation; the allocation and forms of authority; and procedure. That is its anatomy. Its soul lies in choosing between alternative objects of happiness

and choosing between duties and sacrifices, and effecting a proportion between them. It allows no complete rejections, but imposes a decision on a tolerable mixture of preferences, seeking and keeping power balanced against what other men and women are seeking—seeking, keeping, and changing. The institutions of government are created and amended by men to enable them the better to attain what they believe to be their happiness and to fulfil what they surmise to be their duty. We do not lose sight of the fact that the process is not altogether systematically deliberate, nor that each generation inherits much that it finds obstructive. Political institutions represent the difference between human nature in the raw and civilized man. All that separates the baby of the Stone Age from the baby born yesterday is its social heritage—government.<sup>5</sup> Rousseau, however, claimed that the institutions of government were so wicked (in his time) that the Stone Age baby was the better off of the two: yet he hastened to claim that if his ideas were heeded, the golden age would arise in the future and no longer be buried in the past. As such, government is a heavy burden, for men must carry it without rest if they wish not to slither back into the ever-tempting moral slovenliness and practical defeatism of barbarity. The temptation to cease caring for government is as insidious as the temptation not to keep clean; and people think too often that they can have their cake and eat it, and even eat somebody else's. The most dangerous fallacy in government is the negligent belief that people can have what they want through government without paying the cost of production.

If a government is dictatorial, the dictatorial clique bears heavy burdens, the more so because the people do not even thank it for the things it seems to do

## GOVERNMENT IS POLITICS PLUS ADMINISTRATION

primarily for its own pleasure. If government is democratic, the burden is not abolished: it is still existent, but it is distributed. In a democracy, government is less brutal, but it exacts much more of the average man in brainwork, patience, tolerance, and sometimes asks him deliberately to decide to do violence to others, even to kill, for the public welfare. Equally exacting is the individual management of the techniques required to build and maintain a just order that embraces millions of fellow-citizens and to prevent it from being destroyed by the weight of individual and group egoism. It is not a long step from persuasion to picketing; from picketing to violent repulse of non-strikers and from that to the summons of the militia; from lockouts to machine-guns; from a general strike to mismanagement of the national economy and the violent extremism of political parties; from extreme political views to the banishment of opponents from public office and employment.

These various qualities make the study and practice of government a fascination and a duty. Government is the most massive and effective of the instruments which men have constructed to maximize their own power to be what they want to be, and this constitutes their freedom.

Everybody who knows anything knows that it is a waste of our short lives to insist on ideal perfection. Popular government, or any other for that matter, is no chronometer, with delicate apparatus of springs, wheels, balances, and escapements. It is a rough heavy bulk of machinery, that we must get to work as best we can. It goes by rude force and weight of needs, greedy interests and stubborn prejudices; it cannot be adjusted in an instant, or it may be a generation, to spin and weave new material into a well-finished cloth.\*

### GOVERNMENT IS POLITICS PLUS ADMINISTRATION

A COMPLETE act of government consists of the conversion of the desires or will of some individuals or groups into the be-

havior of others or all in the society in which they dwell. The desire or will may be related (among other ends) to morals, as in the prohibition of liquor traffic or divorce. Or it may be concerned for religion, requiring that a particular creed be taught in the public schools or be given privileges by the state. Or the prime object may be economic, for example, that monopolies be suppressed or left free or that mass unemployment be prevented. The purpose of government is to convert all such desire or will into the authorized and commanded behavior of those who live in that area of settlement we call the "state." The desire or will may emanate from one mind, or spring spontaneously from many, or be developed by a minority.

Thus, government falls roughly into two general parts, definable, if not completely severable: (1) the process of politics, and (2) the process of administration. The first comprises the origin, development, and maturing of social will, so that popular loyalties to a desire are marshalled in such a way as to establish a law or convention socially accepted or simply acquiesced in. And this involves simultaneously the stimulation of social readiness to make the direct and indirect sacrifices of time, money, economic habits and to establish the rewards and self-restraints which are necessary to support and nourish the will thus engaged. The result is a reservoir of social will and power. Administration is the use of this reservoir of social will and power by appropriate personal, mechanical, territorial, and procedural methods, in order to render specific governmental services to those entitled to them and to enforce duty where the will or ability is lacking.

As for the relative importance of the two, politics and administration, for civic welfare as for study, the first takes precedence by an incalculable distance. The machinery of administration is subordinate to the political phase of government; and it ought to be. For the political determines will and function, and these are prior to, sovereign over, and creators of, the administrative machine and proce-

\* John Morley, *Notes on Politics and History* (New York, 1914), p. 197.

ture. First is will, then function, and then, a long distance after, administration. Administration is an applier of discretion, and the discretion is the political almost entirely unhampered in its character and free will; but administration is merely the reflection of political rule; it is a recipient of smaller amounts of discretion, and this, also, on terms of accountability to the political masters. Administration hath slain its thousands, but the political process its ten thousands. The administrator can improve the work the politician wants him to do but he cannot utterly destroy it; the man of politics can utterly destroy the administration and dictate that it shall never even come into being. A mistake of administration can do neither the good nor the harm that can be done by an act or omission or error of judgment in political decision. This gives us our sense of proportion. I have been too long concerned with my studies of administration to be suspected of disprizing administration: but to overrate its value in the entire process and apparatus of government is to make grievous mistakes in statesmanship and to distract citizens from principle by displays of gadgetry.

The relationship of the two may be suggested by the famous rhymed opinion of Alexander Pope from the *Essay on Man*, and an answer to it offered by the present author, in the same form. Thus, Pope:

For forms of government let fools contest,  
Whate'er is best administer'd is best.

and we reply:

But what is best must free men still decide,  
Lest leaders gull them, and officials ride.

#### THE DEMAND FOR RIGHTS IS THE DEMAND FOR GOVERNMENT

WHAT, then, sets government going, gives birth to its functions, and molds its organs? Every man is the abode of an interwoven complex of associative and separative tendencies, of friendly and hostile dispositions. Individual man is

by himself incomplete. It is his nature to need the help of others to complete himself. He is a parasite on some, a murderer of others, to satisfy his longings, which may be noble but too powerful for self-control. Yet he also sympathizes with some of the aims of other people. Hume and Adam Smith and Edmund Burke built much of their political and economic theory on the conviction that man had a natural, indefeasible sympathy for man,<sup>7</sup> instinctive and general. Out of this crepitating ball of fierce energies, dynamic or static, springs forcefully a design of cooperation or domination, again in intermixed layers and seams, marvellously subtle and combined.

If man's aims were merely economic, the task of government would be very easy. That, incidentally, is why Karl Marx was able to simplify it and hand to Lenin and Stalin a misleading formula.<sup>8</sup> Man's mind is unbelievably rich and various, and it is because all of human nature is involved and exigent that government becomes difficult, for it is concerned with the reconciliation of diversities by persuasion, or with the settlement by force of the most complicated rights and wrongs.

The economic and social setting of modern man is amazingly complex. The state is large, comprising many millions, each of whom is a little different from the others and possessed of an exasperating stubbornness. Society is compact of a myriad involutions. Any one problem—even one as limited as whether the sale of oleomargarine should be free of restriction—is stinging in its wrapped-up obstinacies: and this is one only of thousands, many of far more moment than this. Social interdependence is exceedingly dense because the members crave a

<sup>7</sup> Cf. Basil Willey, *The Eighteenth-Century Background* (London, 1941).

<sup>8</sup> Stalin found that he had to learn for himself: "We have no right to expect of the classical Marxist writers, separated as they were from our day by a period of forty-five or fifty-five years, that they should have foreseen each and every zigzag of history in the future in every separate country. . . ." Cf. *Leninism* (New York, 1942), p. 470 ff.

## THE DEMAND FOR RIGHTS IS THE DEMAND FOR GOVERNMENT

high standard of living, and these, for their own purposes, belong to a plethora of occupational and social groupings each congealed by hard organization, with loyalty to insiders but some hostility to outsiders. Social interdependence rests on these groups, though not wholly. An intense conflict over what is yours and what is mine is in constant play. At the same time, an exigent demand insists on other values: the right to self-government, freedom from the encroachments of authority, freedom of speech, freedom of criticism, freedom of religious belief and practice, freedom to move or not to move about the country, freedom to invest savings wherever one will, freedom to rear a family in the ethics pleasing to the parents, freedom to have as many children as the parents please—and so on.<sup>9</sup>

Thus the mind of every man and woman is truly pregnant with a state. In other words, each mind is intent on supreme authority for its own values. And every such state is different. As each of us looks through the film called "state" into the recesses of his own mind, each perceives a different picture, an *order*, which in some particulars, at least, is unique for each person. To some, state means personal power; to others, money; to some, war; to others, either peace and poetic contentment or frenzy; to still others, charity or savagery. One identifies the state with the felicity of his family, another with a favorite race. Hegel saw it as the embodiment of the cunning of divine Reason; Louis XIV, as himself, grand, victorious, powerful, *le Roi Soleil*. Lenin saw the classless society; Hitler saw Germany as the noblest race with himself as servitor and master, so much better than his father, a petty customs official, loyal to a trivial part of the contemptible Austro-Hungarian state. An artist has conceived of a state in which all the citizens are tributary to the artists who govern them and reward them by

producing art.<sup>10</sup> Acton looked on the state as either the "true demonstration of religion" or as nothing. Were we to enumerate all the different visions, we should narrate a slightly different one for every member of the human race—and that truth contains some important, far-reaching democratic consequences, which, if acknowledged, can produce peaceful government, but which, if ignored, may cause even good men to cry out for a government standing above coerced serfs.

Which of the multitude of minds and states is *right*? Each thinks he is right; but no external revelation, no technology, is available as a test to help man settle this question unqualifiedly or beyond objection by all men. Only his social devices determine the question, without settling it. The Grand Inquisitor in Dostoevsky's *Brothers Karamazov* confronted the apparition of Christ on precisely this question: whether to leave the determination of what is right to the freely questing masses and risk unrest, turbulence, riot, murder, and war; or to take choice out of the hands of the masses, stilling their unrest by bread, the circus, a myth, a hierarchy, and the infallibility of a doctrine enforced by imprisoning and torturing the disobedient.

Yet all men and women meet, and all states stand, on the same base: the demand for obedience of others to *their* special character. Each would like the world *fixed* that way, the way they think *right*. For knowingly or not, each expresses in his social energies W. H. Auden's "Canzone":<sup>11</sup>

What can we know

But panic and caprice until we know  
Our dreadful appetite demands a world  
Whose order, origin, and purpose will  
Be fluent satisfaction of our will?

How different states can be may be realized from the quickest mental comparison between the western democracies (and even among them) and fascist Italy,

<sup>9</sup> Cf. The conflict of values as portrayed in Justice Frankfurter's opinion in *Minersville School District v. Gobiitis*, 310, U.S. 586 (1940).

## GOVERNMENT AND THE STATE

nazi Germany, and the Soviet Union. Each represents a different conception of material and spiritual good, and each began with ideas in the minds of somebody—but not all at once, nor all under the impulse of one idea, nor irrespective of the different environments to be mastered.

Out of the contiguity of men with different impulses, and therefore different beliefs of *rights*, an order arises, precarious, contingent, on sufferance, but fairly set for some time. Some individuals and groups dominate the rest by sheer power of a physical kind, by coercion; some by persuasion; some by a mixture of these; and some by sheer energetic initiative carrying all before it over the complaisance or apathetic inertia of the rest. Some values subdue and subordinate the less potent contenders. And a state arises by this contending process of subdual and submission; as Pope says in his *Essay on Man*:

Till jarring interests of themselves create  
The according music of a well-mixed state.

### THE STATE

THE state that thus arises can be defined in various ways according to the point of view.<sup>12</sup> It may be regarded as the association in any territory that is supreme over other associations and individuals. Or, it may be envisaged as the supreme social framework. It can be defined as the supreme permeator of all with a hierarchy of values, maintainable in the end, if necessary, by force. In all these definitions, the essence of the state is in its monopoly of coercive power, declared and enforced as the only legitimate monopoly; in its very existence, which is an immanent threat; or in its active use in the naked form of force when the members of the society (who may have very wide spheres of unrestricted and unlicensed initiative) threaten the main

values and are about to disrupt the society by exercising force against each other.

This, then, is the state; and its supreme power and monopoly of coercion (which it can devolve in many ways on its own terms) is *sovereignty*.<sup>14</sup> The political process revolves around the acquisition of this sovereignty; the administrative, around its executive utilization. The struggle for the possession of sovereignty is also a struggle for legitimacy: men strive above all things to be *right*, to be thought *right*.<sup>15</sup> Whatever the form of their struggle—for acquisition of material goods, for the power to give orders to other people, for self-preservation, for a point of law or in intellectual conflict—men are desperately trying to be *right*. This, the desire to be right and to be acknowledged as right, is probably the most persistent and intense drive in all men and women, though it is disguised by the name of the things about which they claim to be right. They so strive because they crave rightness for itself: they have no rest without its assurance. They seek it, also, because without its active or passive acknowledgment, they become unsure in governmental action, fumble, act more cruelly than they perhaps wish, while the threat of disobedience or revolt pursues them down the days and nights and years.

### COERCION, COMMONWEALTH, AND OBEDIENCE

GOVERNMENT may be equated with the state when we are thinking of the state in the sense just defined. Or, government may be spoken of as the more proximate agencies, like the legislature, the parties, the executive, the law courts, the police, or unemployment benefits. Or, government may mean, according to context,

<sup>14</sup> Cf. Charles Merriam, *History of the Theory of Sovereignty since Rousseau* (New York, 1900).

<sup>15</sup> Cf. G. Ferrero, *The Principles of Power* (New York, 1942). And contributing to an understanding of the relationship between metaphysics, ethics, and political philosophy and practice, see K. R. Popper's brilliant and wise *The Open Society* (London, 1945).

<sup>12</sup> For a contrast cf. T. D. Weldon, *States and Morals* (New York, 1947).

<sup>13</sup> Cf. for various definitions, Roscoe Pound, *Outlines of Jurisprudence* (Harvard, 1943).

the men who hold office at a given time. Their relationship should be clear.

Why do people obey government? Because it serves them with values, values for them; or because they are afraid of its coercion. The values are not merely material values, concrete utilities, but also spiritual satisfactions. There are rebels who reject a high standard of living because it can be bought only by a loss of spiritual freedom or by cruelty to minorities. We know from public opinion polls everywhere that some merely acquiesce out of habit—there are those everywhere who to important questions of statecraft return the answer, "Don't know!" Apathy, and interest in other aspects of living, make them subjects by nature, almost slaves by nature. Others, again, succumb to the formidable challenge of the only alternative: to establish a rival state: "What can't be cured . . ." All of us, however, for different acts of government, and at different times, obey because we fear that the force at the disposal of government, manipulated for society, would be used against us. For however well-constructed and amiable a system of government, not all the people can be pleased all the time by the laws and the administration of them. Quite large minorities may find themselves disaffected. Is the state to be disrupted, and the considerable value of order to be subverted, on each such occasion by every dissident? We have Socrates's conscious and reasoned repudiation of this course, when the loss to him was no less than his life: he had always supported the idea of law, and, now, when it told against him, was he, by disobedience, to deny the validity of his own teaching of the value of the *idea* in the long run? For the state is an order in time: without duration, it would be altogether another thing. A point may, of course, be reached where the values of order—that is, tranquillity, regular and unviolent processes, persuasion, reasoning, debate, and the calculability of the future—may become trivial compared with the intensity of resentment at the object for which coercion may be in-

voked. This risk is always contingent in government, and the discontented will fight back, almost certainly reciting the last pages of John Locke's *Essay on Civil Government*, or the *Vindiciae contra Tyrannos* without the slightest idea that these put their justifications in neater phrases, if rather more archaically and bookishly.<sup>16</sup>

Did any societies ever exist without the immanence of coercion? As we push back to the state of nature or the golden age, murky or glittering in the pages of Plato, Hobbes, Locke, Rousseau, and Hume, we cannot find an actual time which will give us a certain answer to this question. As anthropology threads its way back through the centuries until the records fade into mere conjecture—except in Engels's crushing footsteps<sup>17</sup>—and as we introduce the results of the study of contemporary primitive societies,<sup>18</sup> we find that there always was and always is coercion operative in social existence. Its forms are very various, and so also are the occasions and purposes of its use. Coercion is innate in man's constitution, nature, and values. He cares so much about some things he requires for the satisfaction of his animal nature and his wonder about the value of life altogether—the nature of God the meaning of immortality, the compulsion to feel *right*—that he is prepared to force others into the social ways of fulfilment of his needs. But it is rarely that he will use violence when he can get his own way otherwise.

Democratic government is also a user of coercion. But the legitimacy of its coercion resides in the people when acting through majority vote exercised through certain procedures. Democratic governments use coercion—armies, police

<sup>16</sup> Cf. Charles Merriam, *Political Power* (Chicago, 1934), and Bertrand Russell, *Power* (London, 1937).

<sup>17</sup> Cf. Frederick Engels, *The Origin of the Family, Private Property, and the State* (London, 1884).

<sup>18</sup> Cf. W. C. McLeod, *The Origin of Government and Politics* (New York, 1924) and the works of R. H. Lowie, B. Malinowski, Robert Redfield, Ralph Linton, and Clyde Kluckhohn.

forces, prisons, fines, searches, and so on—because in spite of all the fact-finding, debate, reasoning, kindness, and a high degree of consensus, some men and women, even large proportions of the population, may be irked by measures taken by the government, even where the government is the recently elected legislature. For example, if the medical profession were converted from a free profession into a state-appointed, state-paid, state-regulated service, many medical men might very painfully feel the pressure of the coercive power of the state if they attempted disobedience or sabotage. The merit of democracy lies in its intention to get for the maximum number the maximum social benefit available through the country's resources, science, and manpower, while attempting by its methods to reduce force to a minimum. But some remnant of coercion there must be, since men have biological differences of physique, mind, and values not conciliable by persuasion.

Clearly, then, the state and government are indispensable, indeed, natural. The states of our time did, in fact, have their origin in acts of force in the service of some or other of the values held, as we have suggested above. As the grouping in a single area grew larger in population, in the complexity of occupations and ideas and values, and included more of the previously separate and different groupings, so the range of force of the triumphant government expanded and intensified. A common superior came into existence. It facilitated order, peace, and communications. In the course of time, a common morality, up to a point, was established. Oppenheimer suggests that the state was at last founded when the ruling group put to death one of its own members for committing an act of prohibited violence against one of the conquered.<sup>19</sup> The common superior, now permeated up to a point by the common morality, is the *constitution*—that is to say, the nexus of fundamental institu-

tions prescribing the scope and rightful succession to ruling positions and the authority to use force. Or, in a phrase crude enough to miss the saving holiness, "who gets what, when and how."<sup>20</sup> The constitution is the autobiography of the power relationship, concrete and spiritual, in any human group, and like all autobiographies, it includes some fancies which are not lived up to, and excludes some vices which are lived only too well.

Within a nation, or any society for that matter, many groupings of human beings abound. In many respects they are like the supreme grouping, the state; but in one final quality they are not like it. Non-state social groups—like churches, business associations, labor unions, civic reform societies, professional guilds, athletic clubs, philatelic and other hobby organizations—all these, numbering thousands in modern nations, have characteristics shared by the state. For example, they have a hierarchy of authorities; they have rules of procedure; and their activities are marked by purpose, by the whole gamut of the tactics of gaining power and avoiding submission to others, and by pressures, moral and material, sometimes to the point of violence. In these things they are like the state, and their study is an indispensable accompaniment of the study of the state, because they offer additional opportunities of observation and learning, and they happen also to be part of the reason why the state is necessary.

Yet there are some very marked and decisive differences between these non-state groups and the group known as the state. *First*, in a non-state group, entrance or exit is more voluntary than in the state, where membership is involuntary and exit almost impossible unless the state grants permission. *Second*, the objects of a non-state society, with the possible exception of the churches, are very limited; they usually have a single purpose, whereas the state has always had a multiple object and today touches almost

<sup>19</sup> Cf. F. Oppenheimer, *The State* (New York, 1922), pp. 91-92.

<sup>20</sup> Cf. H. Lasswell, *Politics: Who Gets What, When and How* (New York, 1936).

every aspect of a man's life. *Third*, although the non-state groups possess some forms of pressure—for instance, refusal of membership, "blackballing," and denial of privileges, which may in some cases produce the greatest pain and economic damage (e.g. in the closed shop, refusal of communion, refusal to marry in a church, pressure against a business firm which will not come to heel)—they do not have the severity of the final coercion at the disposal of the state. *Finally*, above all, these groups, like individuals, exercise their pressures and coercion only on sufferance from the state until—because they are exacting too much from the public (as a monopoly of any kind might do) or are threatening the general welfare or security of the state (as a society of physicists or priests or political philosophers might do), or are exercising a pressure on their own members (workers not in the union, or doctors who practice group medicine, or corporations not prepared to enter buying and easing agreements that restrain trade) which is considered by society in general unduly to deprive them of life, liberty, and the pursuit of happiness—until the state limits their power so to act, on pain of fines, imprisonment, or abolition. The greater, ampler, territorially wider coercion rules the lesser ones, because the greater, ampler, territorially wider welfare embraces the lesser ones.

Within the last three centuries, the area of commonweal in the state has gradually overtaken and, in total, remarkably reduced the ancient area of coercion. Many state activities are carried out with almost universal consent, and might have full consent if some men were not too lazy to be anything but parasites on the political effort of their fellow nationals. Such governmental activities yield a utilitarian or spiritual good—for example, the regulation of transport, or the spread of free education—almost universally as the result of benefits every individual enjoys. These activities use the product of long habitual peaceful living together in one area small enough, given the means of communica-

tion, for ideas to circulate and master the individual minds and consciences.

Yet the modern state still has areas of (a) legitimized coercion and (b) coercion that is not legitimate. The latter has been inherited from primitive states of society, and the inertia of millions of men and women dispersed over wide areas has not yet overtaken the unjustified power now possessed by some which arose out of luck, force, fraud, sharper wits, or absence of scruple and enabled economic and political privileges to be established on the basis of the lack of education or good-nature of those millions. It is at that latter wrong that Marx directed the spear of his class-conscious and equalitarian principles.<sup>21</sup> But he exaggerated, placing all weight on the economic nature of man. Hence, he regarded the state as simply and only an instrument of the minority to suppress and exploit the propertyless majority. Hence, for Marxists, the state today is not merely the scene of commonweal and cooperation, but also the scene of combat, and of combat not merely for the values which might now be formulated if all began equal and with a clean slate, but of combat about existent hereditary coercions which conflict with contemporary conscience and therefore with will.

In the Marxian perspective, of course, the exploitative and therefore the coercive factor in the state became especially and unnaturally conspicuous and grim. Indeed, all the rest of human nature and endeavor in government, reason and love, were discarded as merely "housekeeping"! Easy for Marx, then, to argue that man's liberty and equality in the state of nature, and in the happy future, would return only when the state, identified with coercion, is overthrown, that is, when the bourgeois state crashed in ruin. No classes, no state! Abolish the former and you dissolve the latter! But, sir, how did classes start? If out of human nature, the impulses may be expected to be straining to pour out again at any time. Then,

<sup>21</sup> Cf. *The Communist Manifesto* (1848) of Marx and Engels.

even on this minor ground, the state will still be needed to prevent their victorious resurgence, and so government also. For it would seem that Adam lives on after Marx and is likely to survive Stalin.<sup>22</sup>

#### SOVEREIGNTY AND RIGHTS IN DEMOCRACY

THE world has arrived at a point in time when both the commonweal and coercive factors of the state are in the hands, or about to come into the hands, of the new legitimates—the people themselves. At last, the millennial writhing of the peoples for a principle of legitimacy—that is, an ultimate moral basis for deciding the values which are to rule societies and for making those values concretely supreme, by the use of force if necessary—has gone through all the more vulnerable principles, monarchy, aristocracy, theocracy, oligarchy, ideocracy, and has arrived at the least (though still to some extent) vulnerable, *democracy*—that is, government by all, but in practice government by the majority cognizant of the respect it owes to the minority. From this generalization the U.S.S.R. and like polities are excluded, because they deny the capacity of the people to govern themselves for their own freely conceived purposes.<sup>23</sup>

Outside the despotisms, every man or woman is sovereign at one and the same time as he or she is a subject. From each radiate orders to others, and upon each focus commands from others, government being the medium through which are transmitted reciprocal and weighted rights and obligations. An enormous responsibility rests on each, for the rights he demands can be implemented for him in the end only by the duties his fellow men render. The richness of his happiness and fulfilment, so far as any government can facilitate this, depends on the services, that is, the subjection rendered

to him by others; and they, in their turn, cannot but demand a *quid pro quo* of sovereignty over their fellows.

It is today more important than it ever was, even more important than it was when the first edition of this book appeared a few years ago, that we surrender the abstract, unreal notion, of a government and the governed in opposition to each other, as two discrete entities: one claiming duties, the other fighting for rights. The opposition may be valid for a dictatorship without popular support; and in the absolute states of the centuries before our own, it fairly well represented reality. To continue to entertain it is to make gigantic mistakes in understanding of the truth about human nature in politics and political action. It is to believe that rights originate with a government, which has an inexhaustible supply thereof; that benefits can be extracted from government by threats and laws without asking which people in the community must provide the government with its resources. It is to ignore the responsibility for government which is our burden and our privilege; it is to disregard the need for individual self-government; it is to give exigence a licensed field which is empty of the idea of mutuality. Yet some men still think this way.

The truth of this reciprocity has a sterner ring in the democratic than in the dictatorial state. It becomes more starkly evident as the whole of society, through the state, assumes more and more responsibility for social and economic regulation, becoming in some cases the employer of the labor of millions, and the manager of basic social possessions and the means of production. The older veil over economic realities—the contest between workers and capitalists—is torn away. It can no longer be used to obscure the true bases for the production of wealth: industry, discipline, punctuality, uninterrupted work, inventiveness. It can no longer be used to hide the truth about distribution of wealth: some acceptable relationship between reward and effort the tension between the different occupa-

<sup>22</sup> Cf. Joseph A. Schumpeter, *Capitalism, Socialism, Democracy*, 2nd edition (New York, 1947), Part I.

<sup>23</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), Chaps. VII and IX.

tions in their respective quests for the largest possible share in the total product of industry, the need to give extra reward to those who do the most disagreeable and dangerous work. The conditions of ownership and management are rapidly changing: new incentives and an owner's sense of responsibility are called for.

The men and women in each occupation are the employers of the rest; each occupation is complementary to or in competition with other occupations. The producers of some commodities are the consumers of those produced by men and women in other industries. When government has assumed responsibility for almost all productive and distributive activities—either by nationalization or by deep regulation—it is at once the mediator among them, since they are claimants on each other, and a unifier according to a high, national hierarchy of values. But all, as the electorate, make the claims on each other through political methods, and at the same time make the national pattern. The triple responsibility is now merged in the duty of each citizen: as employer, as consumer, as statesman. And since his state is irrevocably part of the constitution of the world order, such as it is, he mingles with this trinity, his responsibility as diplomat.

To avoid disaster, and to make the utmost of ourselves in the vast areas which are the territorial foundation of each state, what an enormous amount of knowledge, sagacity, and patient judgment is needed! What a delicate balance between self-doubt and assurance, of concession and insistence! What a well-considered, rationally and sensitively elaborated apparatus! In a democracy all men and women are rulers. They have asked for it. All recent kings and queens of the past ruled under a sense of obligation, and after a proper education; the others are remembered with contempt, they were often disobeyed, some were overthrown, and a few were killed. King Demos rules on the same terms, or is killed for the same reasons. Writing in the early 16th century, an archbishop of

Turin<sup>24</sup> in the service of the court of France declared that three "curbs" changed tyranny to civility among monarchs and preserved them from the hatred of their subjects: religion, justice, and police. The first is commensurate with the whole Christian ethic. The second required external bodies, of a representative kind, to limit absolute power; the right of suit in civil matters against the Crown; independent judges; and the complete honoring of the laws and ordinances made by the king himself. The third required good sense; that the king take counsel before action; and that the rights of the three estates should be treated with consideration.

## GEOGRAPHY AND PHYSICAL POWER

PIONEERS like Bodin and Montesquieu have accustomed us to think of government as controlled by geographical situation, climate, and race, though it must be admitted that they made some very stupid generalizations on the subject. In the course of this work we will have much occasion to observe the action and reaction of material environment and human qualities. The material environment sets the conditions within which man's ambitions and capacities may operate in government. Toynbee has made a very important feature of climate.<sup>25</sup> What is of more importance, since peoples move away from impossible climates or die out in them,<sup>26</sup> is the size and location of the country under a single government. A small area with a dense population has, other things being equal, the tremendous advantage of coherence; in swiftiness of circulation of ideas, in the continuity of contact between human beings, in understanding of each other, in the likeness of their fate and interests, in the almost instinctive emergence of

<sup>24</sup> Claude de Seyssel, cited in Carlyle, *Medieval Political Theory in the West* (London, 1936), Vol. VI, Part III, p. 220 ff.

<sup>25</sup> Cf. *Study of History* (Oxford, 1933), Vol. I, pp. 302-15 and Vol. III, pp. 4-7.

<sup>26</sup> Cf. F. C. Markham, *Climate and the Energy of Nations* (Oxford, 1944).

common opinion, they have immense advantages over the larger, wide-spread areas, with their population scattered thinly in small townships and in sudden vast dense clumps, with their diversities of climate, resource, and product. In the first category are countries like Britain and France, in the second countries like the United States and the U.S.S.R.<sup>27</sup> The former tend to develop a society with the cohesion of a family, and the similar expectations of justice and duty; the latter find it very difficult to establish articulation of social groupings and unified government.

Location exerts a profound effect on political institutions, by influencing the extent to which the community must limit the personal freedom of the individual: security and self-preservation are the factors which bear most heavily in this direction. Where nations are connected by land, especially plains, and even where rivers and mountains intervene, they come in time to fear damage or extinction or enslavement or loss of self-government. Some one, or group, or the masses of the population, decree defensive marshalling of all forces: personal conscription for the armed forces, the limitation or abolition of regional, local, or provincial autonomy, the regulation of commerce to strengthen home production of war supplies, and establishment of controls over inventors. Where the imminence of danger is less, by reason of resources and natural obstacles which still hold back the best-equipped enemy (as for Britain until the twentieth century, and for the United States till D-Day in World War II exhibited new possibilities of invasion from the sea), the liberties can be larger, as they have been, to the making of model communities. Then there is the demand which the increase of human energy makes upon the need for government. In the center of modern life stands this awful truth: that, as compared with the eighteenth century, man is now able, by the use of steam power, electric energy,

and the internal combustion engine, to do many times as much good and many times as much harm to his fellows. For whereas then the only source of energy was wind-power, manpower, or horsepower, now the wind and the muscles and the stamina of horse and man are actually negligible beside man's mechanical force.

In our own day, the exploitation of a new source of energy, that of atomic fission, thrusts the problem more memorably at us. Other types of weapon, including the bacterial, rank with the atomic bomb in their danger to man. Are we to descend into a Hobbesian era, or can the genius of Thomas Paine carry the weight of uranium? A few brief observations are offered.

If political science, studying historic and contemporary man, has any axioms at all, then this is one: that any increase in the power possessed by an individual or group must, when its gravity is appreciated, be followed by an increase in social control or, in other words, the power of Government. Scattered agricultural, weak, groupings do not produce or require intense central control of power. Densely populated areas, with powerful groups jostling each other, cannot avoid it. The social control of individual power means the assumption of a controlling or counteracting power by the central authority. The history of legislation in surprisingly varied phases of social life attests this axiom.

Power means the ability to do others harm or withhold what is for their good. The power may consist in *Material* form: for example, explosives, disease germs, or swiftly-moving, and therefore lethal, mechanical vehicles. Or it may be *intellectual*: knowledge, for example, of the technique of government; or of mathematics; or of the secrets of personal relationships or activities inside one's own or foreign groups. Clever people are held in distrust. Or, thirdly, power may consist in a *spiritual* form, such as ritual, charms, incantations, doctrines about human destiny and salvation. Power to influence destiny and salvation has been claimed by various orders of priesthood, and government has

<sup>27</sup> Cf. Edward Crankshaw, *Russia and the Russians* (New York, 1947).

finally stepped in to subordinate such power. In whatever form power arises, the struggle arises to control it if others can be frightened, influenced, coerced, or signally rewarded by gift or immunity from harm—so long as it is recognized as a substantial influence. Consider the history of monopolies of all kinds.

In the long run, the alternatives are that the possessor of power subjects society to his own will; or that he exercises self-control, limiting or suppressing his power in a measure that is tolerated by society; or that society domesticates him and his power to its purposes and will. In bygone ages the subjection of the masses was possible. For the future it is always a menace, but becomes less and less a possibility. It must suffer defeat by the combined effect of the diffusion of knowledge, the consciousness of the collective power of the majority, and the deep-rooted faith in the right of the majority to rule. As for the exercise of self-limitation, an appropriate illustration is the possession of the world by coercion: a Genghiz Khan, an Alexander, perhaps a Napoleon, would not hesitate. But that solution to international insecurity is excluded by the democratic scruples of the Bomb-owner.

The imminence of power's effects in time—that is, the rapidity between its exertion and its consequences—is of the essence of the problem of control—that is, of government. The speed of its deadliness must cause a tightening of controls over the Bomb, in the sense of Justice Holmes's phrase in *Abrams v. United States*, that the action of government is proper where there is "a clear and imminent danger that it will bring about forthwith certain substantive evils." The emphasis is upon immediacy. The area threatened defines the size of the society urgently interested in control, and the area is defined by the range and speed of modern vehicles.

Two aspects of atomic control can be foreseen. One is the sharpening of control by each nation over its own scientists and technical workers, by means of instruments like the Official Secrets Act. It will

matter little that the nuclear expert may claim his liberty to investigate the beneficent peaceful uses of nuclear energy, for its fateful destructiveness will always be paramount in society's mind until it is conquered. There can never be a retreat to the innocent state of mind before its advent. Like all experts, the nuclear physicist will certainly and properly be brought under "civilian" control, and subordinated to a responsibility to society through government. It can be taken for granted that the impulses which mastered theocracies, plutocracies, bureaucracies, will not suffer domination by technocracies. Those who put government by priests in the second place will not let government pass to the laboratories; the repositories of test-tubes will not be allowed to house the *arcana imperii*, any more than the temples were. The greater the technologist's power for weal or woe, the more will he be controlled—and all industry ancillary to his awful magic will also be governed by society. The international implication is the certainty of national controls over industrial establishments in order to implement each government's pledge to the international organization to allow an inspectorate full access to all plants.

The implications of the coming of atomic power have yet another aspect. No firm in private industry could ever have organized the search for and succeeded in the manufacture of the Bomb. Success was achieved in a way that can be repeated for making available to mankind foods and materials for consumption which are now indicated by science as not only possible but easily possible. The world of governments will never shake off the most impressive lesson of the making of the atomic bomb:

But the greatest marvel is not the size of the enterprise, its secrecy, or its cost, but the achievement of scientific brains in putting together infinitely complex pieces of knowledge held by many men in different fields of science into a workable plan. And hardly less marvelous has been the capacity of industry to design, and of labor to operate, the machines and the methods to do things never before done so that the brain child of many minds

came forth in physical shape and performed as it was supposed to do.<sup>28</sup>

## POWER AND MORALITY

WE have already appreciated that a powerful force dwells in every man and woman, and that force is immanent and even imminent in all human affairs and comes to its consummate organization in the government of great societies. What are we to think of the use of force or power to compel other men to do our will? Our ideas can be clarified by a consideration of the disavowal of power by Acton.<sup>29</sup>

Power tends to corrupt and absolute power tends to corrupt absolutely. Great men are almost always bad men, even when they exercise influence not authority.

This, which is vulgarly misquoted by omission of the word "tends," is Acton's most insistent warning, while his most exacting criterion requires that the institutions of liberty must limit power.

The terms of this theory need weighing. We may omit the second part of the dictum, since if the first is right or wrong, the second part merely magnifies the rightness or wrongness; and, for the rest, it is rather in the nature of a cry of anguish.

Power corrupts. Whom does it corrupt? It must corrupt men—men in authority. But can power corrupt men of predominantly noble character? Does not power's corruptibility depend on men's natures and purposes? Can power possibly corrupt those who are originally pure in heart, really pure in heart, and not merely impure dissimulators on the road to power? If Acton utters so unproportioned a thought—and the value of history and political science lies in proportion—he is rejecting all mankind as corrupt. For all men exercise some degree of power; we have, indeed, been at pains to make clear that all of us are at some time the employers of sovereign authority! This is to speak as a monk who has fled the world,

not as a man of it. It is conceivable that Acton is right—then the conclusion would seem to be that life is not worth living in any of the forms taken by the nations and states of antiquity and modern times. Not even the holiest sect can hold up its head against Acton's doom . . . it is an escape from life and courage. It does not discriminate among men or causes or degrees of responsibility or the mixture of good and bad in every man.

Next, if power corrupts, what is corruption? Acton gives a hint:<sup>30</sup>

But the possession of unlimited power, which corrodes the conscience, hardens the heart, and confounds the understanding of monarchs, exercised its demoralizing influence on the illustrious democracy of Athens.

Upon this, the political scientist offers two observations. *First*, against the corruption that results from the exercise of power is to be weighed its benefits to the statesman or thinker or priest or citizen (who may be all three) who wields it. Power heightens sensitiveness; it stimulates the imagination of purposes and expedients; it generates invention; it increases compassion when it places men where they confront the sorrows which government exists to assuage and the trials that must be visited upon some in order that others may have a more abundant life; and it develops fortitude and humility. Power compels men to think, to choose, to endeavor towards the conquest of pain and the discovery of truth. Is this catalogue not at least as tenable as Acton's sweeping anathema?

It is strange, indeed, that Acton does not adduce the life of Christ or St. Paul; that he does not remember Hegel's compassion for the agony of great men; that he does not consult Marcus Aurelius; that he does not introduce in this light the mighty liberators of man (like Lincoln) whose deeds he chronicles.

The *second* observation on Acton's ban on power is the answer given him by Bishop Creighton.<sup>31</sup> Great men are usu-

<sup>28</sup> Official Statement on the Atomic Bomb, *New York Times*, August 7, 1945.

<sup>29</sup> Cf. Acton, *Essays on Freedom and Power* (Boston, 1949), p. 364.

<sup>30</sup> *Ibid.* p. 40.

<sup>31</sup> *Idem.*

ally "representative" men, that is, they are acting on behalf of others as agents or trustees. Now, most statesmen arrive at the seat of power because they have been elected, more or less directly, or have themselves, with a small group of followers, risen to authority for the fulfillment of a cause, the realization of an ideal, the battle for an order (not excluding Acton's own noble order of liberty, truth, or Christianity). The government of other men, the government of societies small or large, is dependent not only on the character of the man who governs, but also on the necessities of the human and environmental and historically determined factors in the situation. For the statesman (for ourselves) the character of other men poses the problem in power. Every man is a repository of power, expansive or statically defensive; for a man is compact of physical energy, intellect, passions, spiritual intimations, and psychological impulses and appetites; this is the alpha and omega of power in government. Power in government can only be exorcised when men dissolve; it can only be dissipated when men no longer live.

Not a single ideal to which Acton rightly attaches worth could be practically effectuated without the use of power. Furthermore, the values which men seek in establishing government, indeed in craving it—and they may be splendid, humanist values—instinct with moral splendor as Acton's were—impose the final tasks of coercion and fraud on the shoulders and the consciences of governing men. If those who govern should seek the salvation of their own souls by abjuring power, they merely shift the locus of damnation to their clients' souls, for these, then, will be compelled personally to exercise the residue of cunning and coercion for their own advantage.

Power or influence in government is the power that corrupts. And power's essence? Power is only magnification. It is a magnifier of good as well as bad, it ennobles as well as corrupts. The consequences of power are a function of the purpose and character of its agents. Gladstone, the peer of Edmund Burke, and

Acton's political idol, himself said that a minister with power could do ten times the good in office than he could out.<sup>32</sup> And Creighton confronted Acton with this oblique answer:<sup>33</sup>

I remember that in 1880 I met John Bright at dinner: he was very cross, apparently a cabinet meeting had disagreed with him. Amongst other things he said: "If the people knew what sort of men statesmen were, they would rise and hang the whole lot of them." Next day I met a young man who had been talking to Gladstone, who urged him to parliamentary life, saying: "Statesmanship is the noblest way to serve mankind."

As Acton followed actual, contemporary politics, he was constrained to admit the value of power. He commended fine causes—for example, the rights of the Irish tenant against avaricious landlords, the value of the great territorial state embracing and subduing a congeries of nationalities. But they could not triumph without the marked use of power. Indeed, *a propos* of the former, Acton declared:<sup>34</sup>

As much authority as is wanted to protect the few against the many, or the weak against the strong, is not contrary to freedom, but the condition of freedom. The disease lies in society, not in the state. The other view, that the only dangerous enemy a nation has is its government, is pure revolution, and was invented by St. Just.

As a warning, Acton's dictum has value. But the kingdom of politics is of this world. As a warning in politics, it counsels us to build the machinery of government, write its procedures, and foster its spirit in such wise as to buttress checks and balances, to promote decentralization without falling into anarchic decrepitude and injustice, and to invigorate independence of mind. Acton ought not to have missed Pascal:<sup>35</sup>

Justice without power is unavailing; power without justice is tyrannical. Justice without

<sup>32</sup> Cf. p. 602 below.

<sup>35</sup> Blaise Pascal, *Pensées and Provincial Letters* (New York, Modern Library edition, 1941), p. 298.

## GOVERNMENT AND THE STATE

*power is gainsaid, because the wicked always exist: power without justice is condemned. We must therefore combine justice and power, making what is just strong, and what is strong*

*Acton made his crucial test of morality even more transfixing to the man of conscience. He asserted:*<sup>36</sup>

The greatest crime is Homicide. The accomplice is no better than the assassin; the theorist is worse. Of killing from private motives or from public, from political or religious, *eadem est ratio*. Morally, the worst is the last.

Yet there would be more murder rather than less if there were no politics, no government. Burke's injunction, which we may sum up as saying that the proper business of man is politics, would save much murder and injustice, even though it meant the steady exertion of preventive or remedial power. Burke said:<sup>37</sup>

It is not enough in a situation of trust in the commonwealth, that a man means well to his country; it is not enough that in his single person he never did an evil act, but always voted according to his conscience, and even harangued against every design which he apprehended to be prejudicial to the interests of his country. This innoxious and ineffectual character seems formed upon a plan of apology, and disculpation falls miserably short of the mark of public duty. That duty demands and requires that what is right should not only be made known but made prevalent; that what is evil should not only be detected, but defeated.

The implied intervention in the political process can come about by coercion or by persuasion: education would limit the former by making the would-be coercer realize that there are limits to the long-run value of coercion for his purposes, and that there are good reasons in morality why coercion should be limited. Education would also limit coercion by indicating how much of it there would have to be unless self-government made coercion unnecessary.<sup>38</sup>

## NATIONALITY

MAN is not born free, he is born national; and, being national, he is assured some freedoms he might otherwise not have had. A peculiar integrating force in modern government is that consciousness of kind that we call nationality. It is true that people appeal to others in the name of the nation—that is, the collective whole—and of patriotism for selfish purposes; yet this is evidence of a recognition of duty, courtesy, and peaceableness, in itself a spontaneous feeling of kinship, of sympathy. Nationality is a quality of a corporate personality, which the nation is, and it therefore gives unity to the state, and engenders a will above that of all its adherent individuals and groups. It is a personality in the sense that it is a complete whole, with character, outlook, energy, a history, a feeling of unity and insistence on a future, and spiritual objectives supported by energies. It is no use attempting to belittle it, as Acton did, with the adjective "criminal," or to regard it as a malady of infancy, or a silly state of mind. This is a condition of man that has taken centuries to grow; it is growth, not caprice. The corporate personality goes far in absorbing individual personalities.

Men look for Grace, and it is given to them by Place—today's local habitation of the state they live in. Most of men's elementary and ardent cravings have come to be satisfied, up to the present point of time, by and inside the corporation of men that has formed on a distinct territory in the vast wide world. A common language, a common cultural inheritance, common physical characteristics (up to a point), many years of exclusive possession of certain territories cultivated by their hands or the hands of their ancestors, make them feel at home, and they have a profound longing for home. From man's first consciousness he is played upon by the specific human and environmental influences of a Place: noises, food, light, weather, landscape, customs, occupations, songs, cattle, parents, stories, products—they grow with him and he with them: he is nothing much without them. His iden-

tity is made up largely of them. By the time he has reached the age of discretion and reason, when he might prefer alternatives, his senses are no longer able to conceive those alternatives without prejudice. In any case, he must continue to live and make his fortune in a place—the whole world seems hardly ready to turn nomad. Men yearn for value, not merely commodity. They want more than a stone, they need bread; they need more than bread, they need spiritual purpose and justification. They need praise: that is, they need a hierarchy of values, and an authority, something beyond them, that raises them up in their rightful place. They yearn for the divine and the holy and immortality: this collective person embraces them in its immortality.<sup>39</sup> The combined researches and thinking of constitutional historians, anthropologists, and psychoanalysts have demonstrated the coincidence of the locality, the home, and the divine—of Place and Grace—that is the nation. It is this local society that has in our own day amalgamated the services of religious minister, ethical leader, and spiritual healer, and combined them with the gifts of public order and increasingly of economic welfare and security. This society bestows both praise and blame, distributes honors and casts down in shame. This becomes the highest loyalty, and religion itself has been bent to serve it.

So far the world has offered the mass of common men no more vivid alternative for fervent loyalty. Though it is expressed more as a defensive and offensive force against other nations, yet its power at home does soften and inhibit the potential violence of man against man, spurs the citizen to public devotion and self-sacrifice, and clothes certain duties and rights with the quality of spontaneous naturalness. In our own day, nationality is cultivated, deliberately worshipped, for

it is seen that without it the egoisms would come nearer to breaking the society in pieces. Wherever it is not mature, there are continuing threats of breakdown of common parliamentary institutions, and always serious tensions. Government proceeds on the basis of common obligations, or relapses into logrolling. Where nationality is excessive it may be equally destructive, by subduing the life, the rights, and the scruples of the source of all life, mind, and conscience—the individual.

As we read the chapters that follow, and reflect on the conditions of leadership and of popular control of the actions of government, and consider how the entire way of life of each nation organized in its state is linked to and penetrates all others (by reason of their economic interdependence, the inseparability of their territories from each other, the rapid and passionate wildfire spread of moral feelings, the swift communications that tell all of each other's fate, charity and cruelties), as we see their resources managed by government in the interests of a few or of all, and as we observe the growing strength of each inevitably coupled with each one's fears of all—we appreciate that the constitution, the formal expression of the way of life of each nation, is, indeed, a part of the constitution of the world. One bad constitution hurts and may corrupt the rest: a good one assists to salvation.<sup>40</sup> The citizen is a part of the sovereign power, a diplomat in an age of open diplomacy in his own country: and as he is good and capable in his country so he works good or ill for the whole world.

## THE CHARACTERISTICS OF LEADERSHIP

In all forms of government, whatever the basis of authority, we see the same qualities of leadership, though the forms and beneficiaries vary. As we progress through a review of the various organs of government, electorate, political parties, legislatures, and from time to time glimpse the executive, it is as though we were steadily ascending the steps of a pyramid up to the summit. This ascent is marked

<sup>39</sup> Cf. Rudolf Otto, *The Idea of the Holy* (New York, 1939); Ian Suttie, *Origins of Love and Hate* (London, 1938); Royal Institute of International Affairs, *Study of Nationality* (London, 1940); Herman Finer, *America's Destiny* (New York, 1947), Chap. 5; Hans Kohn, *Idea of Nationalism* (New York, 1945); E. H. Carr, *Nationalism and After* (London, 1946).

<sup>40</sup> Cf. E. S. Corwin, *The Constitution and World Organization* (Princeton, 1944).

by the brighter clarification and definition of policy, rising from the seething and multitudinously colored public opinion, upward to the ever more orderly and deliberate processes of sifting facts, formulating law, and guiding administration.

If an aphorism can be ventured, the process of government, thus viewed, shows a successive gain in Consciousness, Coherence, Constancy, and Conscientiousness—the four chief marks of statesmanship.

Consciousness means the sensing of principles and ends; the vision of the future; diagnosis of the parts in the whole design of the near or distant objective; clarity regarding the efficacy of the means to ends; equity which determines the proportionate burden each group should justly bear on the road to the goal.

Coherence signifies that all the men and the agencies serving government are brought and held together in concerted pursuit of a common end, with no gaps, no overlapping, no incongruous public declarations, no departmental or individual actions obstructive of the common end to be reached.

Constancy connotes steadiness of vision and demeanor, loyalty to purpose, attachment to rightness of policy from the beginning to the conclusion, without wavering, hesitancy, self-contradiction or caprice; it means dynamic dependability.

Conscientiousness means a sense of responsibility for achievement of consciousness, coherence and constancy in harmony with the will of the people, an ever-exacting acknowledgment of obligation. It implies responsibility for initiative.

The executive is the epitome of all these qualities found diffused in all the other organs of government. It does not displace them; it works with them. But it crystallizes the four qualities we have distinguished, qualities outstanding in the nature of government itself.

It will, therefore, never be a surprise to the political scientist, though it may be properly disturbing to all democrats, that when the society is in a crisis of self-preservation against dangers from within, and especially against dangers from without, there is a temporary vesting of addi-

tional and sometimes unlimited power in the hands of the executive. Two world wars have shown us that this is unavoidable, beneficial, and redeemable when the war is over.<sup>41</sup> Burke said, "A constitution without the means of change is a constitution without the means of its preservation," and we may reverse the aphorism, and say, "A constitution without the means of its preservation is a constitution that will never survive to times of peaceful change." Though we must ever be on our guard that the procedures and safeguards examined in the ensuing chapters never be subverted, we must recognize the need of exceptional measures while a crisis, in sense of "clear and present" danger, is upon us. But this is far from saying that the executive alone assumes the prerogative (that is the name for the initiative in uncharted seas of a crisis, which requires new powers or novel ways of using powers that have been unaptly distributed to the critical situation). All powers may still cooperate, but the constitutional distribution of authority will now correspond to the forces tugging at its peacetime design, and tugging it out of shape.

We have seen, then, that political institutions operate as the expression of a particular aspect of human life, and that the essential nature of this aspect is the social struggle for and the subsequent use of the supreme power within a territory. And in default of words less obscured by history, we call this supreme power the state, and its supremacy, sovereignty.

Before we embark upon the study of political institutions separately, we are faced with two problems whose discussion is a necessary prelude: first, the relationship between politics and economic institutions and processes (chapter 2), and second, the conditions of state activity (chapters 3 and 4).

<sup>41</sup> Lindsay Rogers, *Crisis Government* (New York, 1935), and C. L. Rossiter, *Constitutional Dictatorship* (Princeton, 1948), and my review of the latter, *Columbia Law Review*, April 2, 1949.

## *Politics and Economics*

### INDIRECT PRODUCTION

THE economic organization of modern societies is based upon indirect production. The commodities which men and women regularly make and the services they perform are not directly for themselves; but they are at the command of others, at any rate to satisfy the demands made or likely to be made by other people.

From the standpoint of the economist, therefore, the state is an economic institution; from the standpoint of the political scientist, economic organization is a factor whose form has a necessary influence upon that of the state. That special branch of political science which is public administration is usually nothing more than economic activity conducted by public authorities. If the economic motive is strong enough, the political institution is obliged to respect its processes. That is not deplorable to the patient searcher, though it may be to the political reformer, for as Maeterlinck says: "There comes, too, a period of life when we have more joy in saying the thing that is true than in saying the thing that merely is wonderful."

Indirect production means that a great territorial gap yawns between various producers, and between producers and consumers. They do not know each other's character as in the village economy of the eighteenth century. Government is therefore required to establish standards such as weights and measures, currency, credit,

conditions for "fairness" or "quality" in commerce, and the qualifications of certain professions and trades. Between mere regulation and state management lie important values of liberty and welfare, but not differences of principle.

### PRODUCTION FOR FUTURE CONSUMPTION

YET modern economic organization is, in addition, marked by the fact that its methods of production are "roundabout." Commodities and services are not, as a rule, made for hand-to-mouth consumption: the planning of production for the future is necessary in every society, particularly where indirect production is so complexly organized. This is the particular and amazing difference between the nineteenth century and all others that preceded it. The production of the material welfare consumable on any one day is dependent upon concerted efforts made long before, sometimes years before, through a complicated and expensive organization of machines and men. Without preliminary calculation and organization, the goods would not be there; without the anticipated consumer, the preliminary calculation and organization would be useless.

More recently, the masses, whose authority in democratic states is final, and whose silent, stubborn wishes in dictatorial states must to a large degree be respected, have demanded social security, full employment, and a high standard of

living. That is, they have a vital interest in the control over the future, and government therefore is called upon to provide the stability and foreplanning necessary to make today's productive activities intermesh with those which will come, perhaps, in distant years.

The virtue of roundabout methods of production is punctuality; all must proceed as anticipated and arranged. No single item with which men reckon may disappoint, on pain of disaster to the general plan. We have reached a stage of economic production in which the range and prediction are concerned not merely with territory but with distant time. If any one of the multitude of factors in this calculation is changed by an undue interruption of supply, grievous harm may be done to the life of many other parts of the community, which, far from being immediate parties to the dispute, are entirely innocent of it. The state, if nothing else precedes it in time and efficiency, is required to maintain the continuous fulfillment of social expectations, and, *in proportion* as these are vital to the civilization desired, obedience to the state must be unconditional. All this presses to a demand for executive stability and the diminution of political partisanship in the interests of stabilization. It calls for the prevention of industrial strife. If man as a consumer wants a high standard of living, including security, then man as a producer must not interrupt his work: continuity becomes the spirit of his laws.

#### DIVISION OF LABOR AND ECONOMIC GROUPS

MODERN economic organization involves political activity and institutions to respond to the effects of division of labor. To safeguard and develop their interests in the division of the product of industry, in order also to further their cultural development, men and women, engaged in similar tasks, whether in the same factory or craft or industry, form organizations. Society is divided vertically.

The community of industry bids fair to outdo in significance the community of religion or neighborhood. It helps to

evolve a special allegiance to the group organization, founded on the special interests which it represents and seeks continuously to realize. It is difficult, almost impossible, for the individual member of such a group to compare the worth of his loyalty to it with his loyalty to communities and to the great community, the state, outside it, and, comparing, to rate its value lower. Such a voluntary acceptance of a secondary status comes sometimes, but not often. The respective values to be compared are so intangible and comprehensive that even a fine philosophic mind measures them with difficulty. David Hume in his *Treatise of Human Nature* observes,

Here, then, is the origin of civil government and society. Men are not able radically to cure, either in themselves or others, that narrowness of soul which makes them prefer the present to the remote.

The average man tends to modify his special occupational conceit and allegiance only when he is persuaded that the effects are, in the ultimate sum of economic good and evil, good for him, or, when not accepting the argument, he is forced into the behavior it implies. His group is unmistakably the potential subverter of the state of the day, and that state is, at a certain point, bound to "push back."

The vertical division of society has two consequences. (1) Each vocational grouping is reluctant to regard its representation in the legislature as adequately representing it. Hence the lobby and other informal or formal hearings and representative arrangements of a direct nature, such as representation on advisory boards in the government departments or, as in France and Germany in the interwar years, the existence of special occupational assemblies, or, as in Fascist Italy, the Chamber of Corporations. And (2) these organizations are the repositories of knowledge so specialized that their cooperation with representative assemblies and the civil servants is essential to sound legislation and administration.

## DIVISION INTO CLASSES

### DIVISION INTO CLASSES

Now modern industry exhibits not merely a division into separate occupations but a division between those who actually and legally control the instruments of production and those who are obliged to submit to an occupational discipline. This horizontal division of society is close to the division postulated by Karl Marx in his theory of the class struggle—proletariat and bourgeoisie.

What are the broad political implications of this feature of industrial organization? Let us first be clear about one thing. Employer and employed are equally servants of all those forces which the economist calls demand, and for which we may use the concrete term, the consumer. (The deliberately established monopolistic perversions of this principle will be considered presently.) The employer as well as the employed will receive no income unless the consumer is satisfied in the long run. Any employer, whatever his nature (kind or cruel) and whatever the method of his selection (by birth or property, or election by the workers), or whatever the nature of his industry (private entrepreneurial or nationalized), is bound to pass on to all workers the orders implied in the consumer's demand. This fundamental relationship must be respected by all political institutions; should they fail in this, they must find themselves obliged in some way to use persuasion or force to maintain their alternative.

Political tension, however, arises especially in the relationship between employer and employed from the secondary role of the employer—as the legal controller of the equipment, and, therefore, as supreme manager of the methods, processes, and conditions of work. Workers in every occupation dispute the employer's control; the workers of all occupations dispute the position of all employers, and class stands against class.

The means of production are private property, but they are instruments of production affecting national and group welfare, and nation and groups have an

interest if the owner-manager should be lazy, monopolistic, or less capable than some alternative form of management. This is the view taken by left-wing politicians and labor unions and is an important basis of socialist thought. The clever, ambitious, sensitive worker cannot help harboring a sense of injustice, and we must expect to see him endeavor to remove its causes. To see this world daily slipping by and his talents unrewarded, to realize, too, that his children must possess extraordinary ability and grit to climb to the rungs where the hereditary mediocre effortlessly cling, must be for him a revolutionary incentive.

In the Soviet Union the means of production have come fully under state ownership and management<sup>1</sup> in order to implement equality of opportunity, the career open to the talents, and the development of invention, all of which were regarded as otherwise difficult if not impossible owing to the restrictive practices of private property. In Great Britain<sup>2</sup> and Western Europe, large steps have been made by the democratic processes in the same direction. In the United States, the sphere of free enterprise and ownership is still the largest in the world, but since 1932 (that is, since the Great Depression<sup>3</sup>) remarkable strides have been made in public regulation and socialized activity: e.g., the credit activities of the federal government, symbolized best by the Reconstruction Finance Corporation.

The close relevance of the division of labor and the formation of well-organized groups and "classes" in modern states to

the theories of political parties is described in some detail later. Such interests and parties are not the result of personal vagaries and theoretical perversity, or of an antipatriotic, antinational plan, freely preconceived and pursued out of sheer enthusiasm for doctrine; they are the result of plainly perceptible causes, material and spiritual, directly and inseparably bound up with our present mode of economic life.

#### CAPITALISM, PRIVATE ENTERPRISE, AND ECONOMIC DECENTRALIZATION

AMONG the factors not yet taken into account is the actual daily management of economic resources, material and human. Modern economic organization has been peculiarly marked by its extreme and often surprising degree of decentralization—that is, omitting the example of the U.S.S.R. and allowing for great modification currently developed in other countries. The economic process has not been regulated from one center, or even from a few great centers, but almost every individual human being has been an independent center of decision, energy, and responsibility. "Economic decentralization" has been seized upon by economists anxious to emphasize the theoretical merits of the capitalistic system, while minimizing the inefficiencies of actual capitalism.<sup>4</sup>

The development which led to this situation is traceable to two broad classes of causes: (1) men's theories and passions concerning their worldly existence, rewards, and punishments; and (2) the theories arising from the actual experience and past failure of guild, municipal, and state control. In the first broad class of causes will be found dominant the spiritual changes which were at once the causes and effects of religious Protestantism—their victorious course beginning in the fifteenth century, and their essence being summed up in Strafford's description of the Puritans: "The very genius of

that nation of people leads them always to oppose, as well civilly as ecclesiastically, all that ever authority ordains for them." In the second class of causes, the grand factor is the influence of the physiocrats, Adam Smith, and the older economists, who expounded the lessons taught by the failures in one and a half centuries of mercantilism and its Continental types, Colbertism and cameralism.

This spiritual development and economic experience together gave birth to that extreme decentralization which until recently marked our economic organization. Individual men and women and, till late in the nineteenth century, children were neither regulated nor hindered by government in their calculation of what and how much of economic goods or services should be produced or consumed; the individual alone was responsible, and he received the reward and suffered the damage.

There is no doubt that this system, operating with minimum restraints from about 1815 to 1870, assisted an immense increase in the aggregate wealth of these countries, and that, for vastly increased populations, a greatly increased standard of living was made possible. However, a large proportion of the population in every generation since, say, 1800, has been so badly fed, housed, clothed, and educated, and so sick, that its condition has been one of permanent misery. The economic system has not prevented dark blots from staining civilization, nor has economic wellbeing gone with any regularity and certainty to those whose merits in social life were splendid but not economic.

Further, as the capitalist system developed, it was seen that its efficiency was more dependent upon large-scale regulation, that is, upon the combination of small units, than upon its old doctrine of decentralization and free competitive enterprise. By about 1845 laissez faire and its attendant social doctrines were played out; from 1880 government has with ever-accelerated speed entered as supreme regulator of the economic process, and today we are in the middle of the social battle

## THE ARRIVAL OF PLANNING

around the control of industry. The day of Samuel Smiles and John Stuart Mill's "Liberty" have gone, so far as we can now see, never to return.

### THE ARRIVAL OF PLANNING

NEVERTHELESS, there has recently been a recrudescence of defenders of private enterprise, among them being Walter Lippmann (*The Good Society*) and F. A. von Hayek (*The Road to Serfdom*). Hayek challenges the compatibility of planning and democracy, stressing these arguments:

(1) The best planner cannot possibly have a sufficient comprehension of the gamut of human emotions to know what is best for the public welfare. (2) Partial planning is not possible; undesired reactions may occur in areas excluded from the plan. (3) Because of conflicting interests in the legislature, and the rapidly shifting demands of an advanced technology, the administrators must arbitrarily make the rules effectuating the plan, thus violating the "rule of law." (4) Reliance will be placed on force, resulting in the most undesirable individuals holding key positions, all because the plans will not be logically defensible. The same pattern of totalitarianism following on planning, as experienced in the Germany of the 1920's and leading to the Nazi state, will be duplicated in Great Britain and the United States if they continue to encourage social engineering.<sup>5</sup>

Hayek, however, has overlooked several strikingly important points: (1) Total planning would be reprehensible to the people and the legislature, which always acts short of extreme ideas, whether their exponents be of the left or right. (2) As a result of several centuries of lawmaking or planning, legislative abilities have considerably increased. Consequently, planning can be delimited exclusively to the fields that the people, through their legislatures, desire. (3) When unwanted results accompany deliberately planned ends, it is always possible for society to

impose decontrols. (4) The process of correcting legislative and administrative errors by repeal or amendment has never halted. (5) Careful study of the trend in administrative processes reveals the many scientific safeguards that society has developed. Practically, our alternatives are a far cry from, on the one hand, a perfect system of *laissez faire*, and, on the other, tyrannical public administrators who represent the logical conclusion of an invalid hypothesis based on hostility to them. We are, instead, confronted with actual industrial and commercial policies, as contrasted with present and potential government administration. (6) Lastly, it should be noted that Hayek is discussing noncomparables in predicting a Nazi-type future for Britain. The extent and type of planning to be found in any country is an outgrowth of its peculiar institutions and climate of opinion. Analysis of these theories and practices from beyond the periphery of the system is meaningless.

The trend is all against the "competition" of individuals and small firms, and all towards the creation of great trusts and combines, ordering and monopolizing the production and sale of commodities. They are economical, but they may become tyrannical, because they can not only fix prices but, avoiding competition, no longer need to improve their own efficiency. It has been calculated that about sixty per cent of prices of commodities in America are "administered" prices, or prices fixed by corporations not subject to free competition.<sup>6</sup> When monopolies are economical, political power is sought to help their birth; when they are tyrannical, government is called upon to offer the consumer and small producer its protection.

Political institutions have already proceeded far in their control of industry and economic distribution in all the countries we are discussing. There are variations of extent in each of them, but it is perfectly clear that the extent and forms of such control now constitute the most passion-

<sup>5</sup> For the point of time when this struggle assumed serious meaning, see Helen Lynd, *England in the Eighties* (New York, 1945).

<sup>6</sup> Cf. National Resources Planning Board, *Structure of the American Economy*, 1939.

ately contested question in political life. Planned economy, *Étatisme* and Syndicalism, Socialism and Guild Socialism, *Planwirtschaft* and *Gemeinwirtschaft*, Rationalization and Amalgamation, and Communism—all in their native countries and outside them—are the solutions which men, organized politically, are demanding or refusing.

It may be observed that this economic problem is both the offspring and the parent of moral "ideology." For a general attitude to the spiritual value of life regulates our economic conduct, while the economic process, according to our likes and dislikes, will be accepted, rejected, or amended according to the values, freedom, leisure, opportunity, and so on that we worship.

A special aspect of the government control of the economy is the relationship between finance and industry. The banking system is the intermediary between savers and users of capital. The banks are convenient deposit institutions and accumulate savings, and then, upon this basis, make loans for investment and business enterprise. The extent to which they risk their depositors' money has for generations been regulated by the state, since the ordinary safeguard of the withdrawal of deposits is usually ineffective once a failure has occurred. Government thus acts preventively as a support to credit, especially where investments are made abroad and alien notions of government and financial honor prevail; and this governmental control is an encouragement to saving because it assures savers that their savings will not be lost. This supply of credit for industry and commerce has become vital to the roundabout method of production, and agriculture and industries can be helped or ruined by the policy pursued by the banks. Hence the matter has become one of public economy, to be regulated by institutions with more authority to enforce such a policy than the private-profit relationship normally provides, and according to rules with an eye to the welfare of the whole body of citizens (as well as any particular bank or firm of stockbrokers or manufac-

turer or merchant) and with an eye also to foreign conditions and world prices.

#### THE NATURE OF PLANNING <sup>1</sup>

PLANNING has either of two general motive forces—increased production or more equitable distribution and consumption—and both require a high degree of government control of economic processes. The first motive implies the use of natural resources, labor, skill, science, and organization to the maximum degree and kind of productivity, that degree and kind being established at a central point upon the belief that an immense increase of production and a lightening of human toil can be so secured. One aspect of this order of thought is technocracy, the government of society by technical experts. The most extreme views of this kind, extreme to the point of political impossibility even perhaps in the dictatorships we already know, ignore the free expression of citizens' preferences and neglect the consequences to civic liberties and the rights of opposition. But more sensible views look to production planned for maximum consumption with an earnest and preventive eye upon the possible loss of freedom. Indeed, this is the crucial problem of modern democratic government: to discover how to plan maximum production, and distribution which will promote the maximum welfare, while pre-

<sup>1</sup> Cf. Friedrich A. Hayek and others, *Collectivist Economic Planning* (London, 1935); F. A. Hayek, *Industrialism and Economic Order* (Chicago, 1948); Rex Tugwell, *The Fourth Power, in Planning and Civic Government* (Washington, April-June, 1939); Barbara Wootton, *Lament for Economics* (New York, 1938), and *Freedom under Planning* (Chapel Hill, 1945); Friedrich Hayek, *The Road to Serfdom* (Chicago, 1945); Herman Finer, *The Road to Reaction* (Boston, 1945); John D. Millett, *Government Planning* (New York, 1948); and Rex Tugwell, review of Millett, in *Public Administration Review* (Spring, 1948). See also J. M. Clark, *Alternative to Serfdom* (New York, 1948).

## THE NATURE OF PLANNING

serving liberty of political dissent and vigorous economic experimentation.

The other motive force toward planned production begins with the idea of more equitable distribution. This means not distribution according to a man's capacity to produce (and especially not the capacity to produce in the present rather haphazard economic process) but distribution according to need. The governors of the program of production are consumption needs, not profit making which follows the indicator of effective demand. It includes also a wish for "justice" in the human relationships of production, of labor standards, workshop management, and so forth, and of a better share of the employees in the process as well as the product of industry, the process itself being a contribution to the latter. But any considerable intervention in distribution can be implemented only by control of production: that is the lesson of Soviet experience as well as the plain twice-told lesson of the war economies of all the belligerents. The movement for planning had its origins in World War I. The chief impetus came when the German generals suddenly saw that the war was not to be won quickly and that all resources, human, material and scientific, must be mobilized for a single purpose. Little as the postwar fulfillment was, relative to the promise of a better world made during World War I, something of the promise was kept. Moreover, there remained a mental and moral sense that certain social changes could no longer be denied in modern states simply on the ground that they were administratively impossible: what had been done for war could be done for welfare.

Planning had its immense difficulties even in wartime, when aggressive or defensive emotions unified mighty multitudes of men and women as to the purpose of the state.<sup>8</sup> For the millions of individuals were not absolutely like-minded, nor by any means identical, in their degree of sacrificial determination, or in their endurance or toleration of hard-

ships socially imposed for the purposes of victory. Therefore, the observer must ask himself questions about the effectiveness of governmental planning not merely in terms of administrative techniques and institutions, but above all in the context of the diverse and changing aims of individuals and groups. Can a plan which is far-reaching and taut be arrived at by free discussion and agreement, a plan which will not only satisfy a vast majority but continue to satisfy a majority? And is society to permit the usual free right of opposition to and criticism of that plan and its administration with the possible result of its piecemeal dismantlement or total subversion? Furthermore, there is the question whether those who plan can limit their influence to what is consciously planned only, or whether the plan will not have indirect consequences of control over the rest of individual activity. Have governments the psychological and technical ability for self-limitation in their planning activity, or must they become absolute?

Yet in various ways, unmistakably important advances were made in all countries, democratic and otherwise, along the lines indicated, as a consequence of the productive and distributive motives referred to above, and side by side with the need to take planned antidepression measures. Here and there, in the various sectors of economy, a number of public corporations arose for production purposes, while simultaneously came the establishment of more and more comprehensive social-security schemes—that is, schemes for the maintenance of the income of the unemployed and those distressed by accident, invalidism, sickness, old age, widowhood, orphanhood, etc. Along the distributive line, World War II aroused sentiments of social equity, based upon the notion of the justice of equality of sacrifice of all classes and occupations in a community at war for common survival. This culminated in such instruments as the Atlantic Charter, with the declared objective of "securing, for all, improved labor standards, economic advancement and social security," so that "all the men

---

<sup>8</sup> Cf. Albert Lauterbach, *Economics in Uniform* (Princeton, 1944).

in all the lands may live out their lives in freedom from fear and want." Another such pronouncement of political intention was the declaration made by President Franklin D. Roosevelt in January, 1942, of the Four Freedoms: Freedom from Fear, Freedom from Want, Freedom of Religion, and Freedom of Opinion.

As piece by piece was added, in the interwar years, to their specific organs of planning of production and social security and assistance, each nation established an agency of comprehensive planning, that is, of planmaking and of studies and investigations to that end. Later, we shall analyze the nature and effectiveness of the Economic Council in Germany, the Economic Advisory Council and royal commissions and advisory bodies in Great Britain, the *Conseil National Économique* in France; and the National Resources Planning Board in the United States. All these institutions fulfill one or both of two functions: namely, they bring together representatives of the main economic groups in the hope of securing from them both (a) intimate and expert expression of their special views and desires (essential to the education of public administrators whether as executives or as draftsmen of laws), and (b) a mutual arrangement of policy based on this expression. Or they make scientific and long-term analyses of trends requiring governmental intervention, if the government desires a particular economic or social result rather than a fortuitous result growing from the undirected operation of those trends. The Economic Advisory Council in the United Kingdom and the National Resources Planning Board in the United States were more particularly adapted to this latter objective; and of the two, the wide vision and scope of the National Resources Planning Board, its independent status as an organ of insight and foresight, and its independence of immediate politics and politicians, resulted in a considerable contribution to social prescience, if not to the adoption of executive plans.

The work of these comprehensive planning bodies achieved little, because over-

all planning, as suggested previously, is a political act on the highest level. It is a matter for the supreme executive and the legislative assembly, with the assent of the people. Any planning body of the kind mentioned, whether exclusively advisory or fitted into the governmental machinery (like the *Reichswirtschaftsrat* or the *Conseil National Économique*) cannot but be an adjunct, a subservient if useful and even indispensable organ, to the process of planning which goes on continuously in every state in the form of the more thoughtfully predictive and concerted progress of government policy.<sup>9</sup> It is, indeed, a mistake to place exclusive hopes in democratic countries in one single organ of planning of the character indicated. Democratic governmental systems are served, as it is, by a planning process which looks something like this:

In the center are the cabinet or the President and the legislative bodies upon whom falls the first as well as the final responsibility for results. They ultimately decide; and their decisions become not merely a plan, but a special form of plan, namely a law, which is normally followed by application in detail. Before the matter comes to the summit point of decision, however, there is a twofold process, one commencing at the cabinet or Presidential stage, while the other finds its destination there but emanates from the distance outside. In the *first* process, the cabinet or the executive or a legislative steering body develops a policy, that is, a plan—a considered pattern of desires and the will to their attainment. Through its offices it then marshals the information, the suggestions, the favorable or unfavorable reactions of, it may be, hundreds of social organizations and individuals, in order to make that plan workable, to fit it to the hard and the soft contours, and perhaps modify it when analysis proves that ambition or ideals have outstripped national capacity to fulfill them.

Simultaneously, in any highly developed society, a *second* process is going on.

<sup>9</sup> Cf. p. 546 below.

## THE NATURE OF PLANNING

Various societies of interested people, some occupational, some social, some religious, some anxious to give and others to receive or be protected, have their plans—that is to say, their desires that government shall make universal certain rules of civil conduct. Universities, for example, are concerned not only with teaching but with research in economic and social matters and with the possibilities laid open by natural science. Enjoying relative independence of thought, they are able to suggest long- and short-term directions and to recommend ways and means. Besides, in the last quarter of a century, there have come into existence various institutes of social research—historical, economic, statistical—for political and economic planning. Usually these are without a political party bias, though they may have very definite corporate convictions regarding the plasticity of human nature and social organization and the shape in which these ought to be molded.

In the end, however, whether or not there is a special all-comprehensive governmental organ at the top of this congeries of free planning bodies, the sifting of the plans suggested comes into the hands of the trusted professional civil servants or career public employees. These are the professional advisers of political ministers and legislators, the draftsmen of plans. In the end, to these is assigned the responsibility of converting those plans which receive the *imprimatur* of the sovereign political bodies into the behavior of the citizen. In the planning process, the chief service is rendered by these civil servants. For, though they may not create or originate the laws, they hold a strategic position for discovering and sifting and collating administrative and technical ways and means (as well as machinery) and adjusting plan to plan, not to mention facilitating the everyday execution of the result. Hence, all importance ought to be attributed to their role, no matter how well organized are the specially established private or political organs of planning. The final planners (if not the inventors or discoverers before

the plans reach the stage of enactment) are the civil servants, and nothing should be allowed to obscure the view that the making of the plan and its achievements are a direct function of the quality of the civil servants. For the recognition of this proposition has a decisive bearing upon the problem of the education and recruitment of public officials. In this and other ways, the development of intervention by the state has made the problem of "bureaucracy" progressively more acute.

It may well be asked wherein planning differs from government, as traditionally practiced and taught? It does not differ in kind; and reasoning to the contrary is wrong and of ill effect. Then why use a new word? One of the reasons in the United States is to avoid use of the cursed word "socialism." But planning does add the two qualities of wider activity and more pervasive activity of government; insofar as planning is the comprehensive management of a nation's men and resources, the lateral and temporal characteristics of government are carried to lengths never before practiced in states so large. By *lateral planning* is meant that all the factors which are complementary to each other—men, resources, skills, agencies of government, environmental factors, the legal conditions, and so on—are marshaled and carried forward together, so that there is no conflict, overlapping, or underlapping, in the march of all the agents to the objective or objectives. By *temporal planning* is meant the emphasis on the foresight regarding conditions that will prevail in the future (distant, or fairly close) and the arrangement of a succession of stages in time by which each part is to be accomplished, so that all the factors are joined at the point of time set at the beginning, and no stage is so unsuccessful that the result in the far future is jeopardized. There is a heavier emphasis than in traditional government on prognosis and inventive-mindedness.

We are already becoming the beneficiaries of contemporary experience with the widest governmental planning. One of the most intelligent practitioners has

stated his problem: and closely resembles the theory outlined above.

Planning can be divided logically into five stages:—

The first, without which none of the others can happen, is making up one's mind to plan and grasping what planning means.

The second is assembling the necessary facts and forecasts to make sure that the plan can be put on a sound practical basis.

The third stage is actually devising alternative plans and seeing what they each offer and what they each cost in terms of resources and disadvantages.

The fourth is the taking of decisions between alternative plans, including the decision what is to be planned and what is to be left unplanned.

The fifth, and by far the most extensive stage, is carrying out the plans in practice. This includes explaining them, adjusting them and devising all the necessary ways and means of ensuring that what was planned on paper does in fact happen at the right times and in the right places and in the right way.

#### THE TENSIONS OF ACQUISITIVE SOCIETIES

Now in all that we have so far said there is latent the likelihood and fear of social strife and misery. Why? It is because the product of industry and agriculture is in men's estimation so scarce that they strain and leap to dispute each parcel of it. Men are today ruled by the ideal of the high standard of living and are perturbed by the knowledge that even with about eight hours' steady work for five days per week, under conditions of severe industrial discipline unknown to their ancestors, the standard is difficult to attain. They are enormously greedy; they are unconscious of it; and when they meditate upon the depths of their greed they dignify it by the name of an impersonal title like the "high standard of living." Indeed, it has become the pledged objective of both the United Nations (article 56) and the International Labor Organization (Declaration of May, 1944) to achieve a high standard of living.

<sup>10</sup> Herbert Morrison (Lord President of the Council in the Labour government), "Economic Planning," in *Public Administration* (London, Winter, 1946).

This acquisitiveness is one of the roots of our present major political problems, domestic and international. The notion is current that, above all things, the acquisition and consumption of a great amount of material wealth is man's most proper good. This ideal is not the sudden creation of any particular year or set of men, though the phrase has a history perhaps no older than a century. No deliberate weighing-up of spiritual and material values caused its establishment. In the last century and a half, western Europeans and Americans found themselves suddenly in possession of the steam capacity to acquire immense riches, to increase and multiply. They tasted of the fruit of the machine and found it good. And God came to be spelled Get.

Each generation produced its wonders, its triumphs over the earth, the seas, and the heavens, and found itself ever freer of the limitations of time and space; and the standard of living became so absorbing a religion to men, even now untouched by criticism, that those who dare to assert another standard, or come from countries where the standard of living is lower, or live and work where it is lower, are treated as damnable heretics. Protective duties are set up against countries with a lower standard. Even the Soviet state is an idolator of material wealth. Stalin has never followed Ghandi in finding a loin-cloth adequate for Russians!

The political difficulty is that this greed is for satisfactions which the common opinion of mankind calls noble, and thus produces a scramble in which all parties are right. It is true that the mere possession of riches does not necessarily result in its immoral consumption, and that for moral consumption wealth is necessary. It is even true that the more riches we have, the more may we be able to turn our attention to the pursuit of spiritual beauty and supremely virtuous activity. Yet it comes about that we can reverse Mandeville's famous saying, "Private vice; public good," and say instead, "Private good, public vice," for our very virtues are apt to embroil us in civil commotion and international war. The mother wishes to see

her son do well at school and obtain a situation which shall be "nice," respectable, well-paid, and not too laborious. The father provides the necessary means to achieve such a pleasant destiny. If, however, all mothers and fathers act similarly, and if their sense of what is "respectable, well-paid, and not too much work" is of a similar quality, the result may be, indeed we have seen it to be, what all parents unite to say they condemn: war at home and abroad. Those economic and social qualities which now pass for family and national virtues inevitably affect industrial relations, and political institutions are unavoidably embroiled in them, since the supreme authority lies with them. Forsyte drives the English state, the Buddenbrooks the German, Babbitt the American, and Belphégor the French.

Our preference to wash with soap made of vegetable rather than of animal fats leaves us blind to the exploitation of backward races who are employed to produce palm kernels. Labor is sweated so that the consumer may be attracted by the cry of "cheap!" For the rubber supply upon which modern transport so largely depends the cruelest atrocities were committed in Africa. For the oil which drives machinery or moves tractors in the fields of Soviet collective farms or drives our cars (Americans use eight barrels of forty-two gallons each per year), a daily war is waged between companies and nations, in which hideous strokes of force or guile determine the comparative standard of living of modern nations. For sugar the liberties of Puerto Rico and Cuba were bought and sold. We are not content with chocolate; we demand it in forms attractive to the palate and the eye. The very seasons are controlled and nature's order distorted, for we are not patient to wait until our own spring brings us young vegetables; they are ravished from sunnier climates, and even the bees are made to give up their honey by the artificial fabrication of the light and heat of summer. Every ingenuity is practiced to tear from man and nature the utmost they can give to satisfy the appetites. But Englishmen

cannot ask for high dividends and high wages without rights in the Middle East and Africa; the Frenchmen cry out for the *mise en valeur* of their colonies; the Germans turned toward Russia as a field of exploitation since opportunities were denied them elsewhere; and some Americans fearfully hold their hand over their pile of dollars lest too many immigrants should knock off a few and reduce its height.

#### THE STATE AND POPULATION

Now, individuals, families, industries, and nations, might be as acquisitive as it is in them to be were there enough material welfare to satisfy all. For what we call "excess" is measured by the ratio between how much is demanded, the number of the applicants, and the amount available for distribution. Here's the rub. For the full strength of human passions is obliged, as the world is constituted at present, to operate through exhaustible material resources, and therefore to rage against unyielding confines.

The amount available for distribution is limited by the condition and quality of economic organization and by industrial and agricultural technique—and then the amount per head is the aggregate producible quantity divided by the number of the population.<sup>11</sup> At any one moment, man's ability to exploit natural resources and control the number of his kind fixes the amount of material welfare available for the satisfaction of his appetites. Man's knowledge and power over nature increase, and, therefore, the number who can live and develop their personalities as they will may increase. But the political scientist, especially when he is expected to consider the larger schemes of social amelioration, may as well abdicate at once, unless he recognizes that his answer is governed by two conditions: (1) the uncertain prospect of invention, which may

<sup>11</sup> Cf. Eugene Staley, *World Economic Development* (Montreal, 1944); and T. W. Schultz (ed.), *Food for the World* (Chicago, 1945).

come slowly or rapidly, but which is hardly at all amenable to direction and control; (2) increases or decreases in birth rate over a short period which it is not within political power to alter; it is very problematical whether reproduction even over a long period can be influenced by governmental plans (the inspectorate, for example, would find insuperable difficulties). It then follows that men's desires, satisfiable by economic means, may be variable within the limits set by (1) and (2), but that a limit nevertheless exists to the total amount of material welfare at any time available to realize human aspirations. This may be considered unfortunate; but it is dreadfully true.

Yet in our own time the triumphs connected with fertilizer, penicillin, electronics, the making of artificial protein foods, dietetics, and the refinement of mechanical power and of atomic energy give promise of substantial increases in per capita productivity.<sup>12</sup> Meanwhile the political scientist must remember that the power of the land to sustain a population establishes an ultimate, though a variable, margin to the power of political institutions; it is perhaps the most powerful of the elements which govern the extent to which the ideally good is realizable. In Britain, France, and Germany, where the population is dense in relation to resources, the problem of control of population is a continuing anxiety; in the United States and the U.S.S.R., less so.<sup>13</sup>

<sup>12</sup> Joseph Schumpeter, *Capitalism, Socialism, and Democracy* (New York, 1947).

<sup>13</sup> David Glass, *Struggle for Population* (London, 1936). In Britain, the Royal Commission on Population was appointed in March, 1944, "to examine the facts relating to the present population trends in Great Britain; to investigate the causes of these trends and consider the probable consequences; to consider what measures, if any, should be taken in the national interest to influence the future trend of population, and to make recommendations." The fifteen-member commission has received evidence at fortnightly meetings and has secured assistance from three advisory sub-committees: (1) biology and medicine, (2) economics, and (3) statistics. These scientific committees have completed several reports.

Cf. W. Vogt, *Road to Survival* (New York, 1948), for policy regarding backward peoples.

## PROPERTY

"PROPERTY," said Harrington, "produces Empire"; and fundamental in any economic and therefore political organization is the problem of private property. Private means exclusive, and it is clear that the power of the great association called the state must vary with the extent to which the exclusiveness of possessions is accorded by morals and law to individuals and lesser groups. Whether possessions are held to be lent for a time, or for a lifetime, or whether the power of unregulated disposition goes further, beyond the owner's lifetime, and whether the general mind of the time does or does not attach the idea of social obligation to that of property—all these things manifestly affect the nature of political institutions and the nature of the state.

Now, broadly speaking, the modern state began with the theory and the practice of the social regulation of property. According to the church, which preceded the state as the supreme community, and according to the state, which was at the outset ruled by religious traditions and even by religious ministers, a man could not do as he liked with his own. But by the middle of the eighteenth century men had escaped from the traditional morality and therefore from the state, which had sought to be its vehicle. Already in 1689 John Locke had claimed the immunity of property from arbitrary seizure by the state, that is, had claimed that property should be excluded from the sphere of the acknowledged supremacy of the state; and, before him, the Parliamentary champions against the Crown became warriors partly to safeguard their property from irregular levies by the state. Blackstone makes a profound obeisance to the English principle: "So great is the regard of the law for private property that it will not authorize the least violation of it; not even for the general good of the whole community."

The Continent was slower to extricate itself from the toils of the benevolent despots and their economists and public administrators, but when it did, in France

particularly, it was with a rebellious cry, the clash of victorious arms, and a philosophy sprung from the head of the *Économistes*. The physiocrats founded their philosophy of the state upon the axiom that the absolute exclusiveness of property was the supreme condition of the greatest material welfare, and that this again resulted in the highest moral good. All the declarations of rights on the Continent and in the United States included the right to private property, and even in the German constitution of 1848 it holds a proud place.

The essence of the philosophy which supported these clauses was plain: (1) it is good that much wealth should be created; (2) the greatest amount will be created if men are certain that the reward for which they work will be exclusively theirs. We shall never be able to give a certain answer to the question: If the world between 1750 and 1850 had admitted the right of the state to regulate individual activities and the disposition of property, would there have been as much riches created with less attendant social misery? For we have no means of even guessing who would have governed, and with what competence, in the name of the state, and that is decisive of the question. We know that in the nineteenth century, Europe's population quintupled with an accompanying increase in wealth per capita, and that the Americas became populated with a very large growth of wealth. We know also that critics arose to proclaim the misery of the masses and to call attention to the advent of new industrial relations and institutions which needed social control; and that governments began, upon various principles, and under various names, to deny the exclusiveness of property, and to take away from its privateness.

Two observations may be added. *First*, when Locke stipulated that the value of the state lay in its protection of property, he also stipulated that there should be a strict limit on the amount of property which anyone could hold. *Second*, in our own day the legitimization of the kind and degree of property permissible depends upon the preparedness of the average

man to support it. Some amount of private property is essential to civil liberties; some degree of private property is essential as an incentive to production and invention. Part of the modern political struggle revolves around the determination of how much, in each case.<sup>14</sup> We have yet to discover the answer.

The controversies of our own day are embittered as they circle around the problem of how far the social control of property shall go.<sup>15</sup> Property is continually encroached upon by: (1) the right of eminent domain; (2) the police power; and (3) taxation.

(1) Eminent domain has meant the right of the state to annex private property, on payment of due compensation, for public uses, with a growing emphasis on the positive social aspect of promoting public welfare.

(2) The more significant concept of police power extends the element of compulsion in governmental acquisition of property rights to an exclusion of payment.<sup>16</sup> The state has "the power of promoting the public welfare by restraining and regulating the use of liberty and property." Prohibition in the United States destroyed the entire liquor industry without remuneration being made; Great Britain and Continental nations have assumed entire control of whole industries—coal and the railroads, for example—under the same power. Here is the storm center of the modern state. Whatever it does must inevitably be paid for. Most must be paid for in taxation, since per-

<sup>14</sup> Ernest Beaglehole, *Property* (London, 1931).

<sup>15</sup> *Principles of Political Economy*, Book II, Chap. 1, Sec. 3. Mill said: "The laws of property have never yet conformed to the principles on which the justification of private property rests. They have made property of things which never ought to be property and absolute property where only a qualified property ought to exist. They have not held the balance fairly between human beings, but have heaped impediments upon some, to give advantage to others: they have purposely fostered inequalities, and prevented all from starting fair in the race."

<sup>16</sup> Benjamin F. Wright, *Growth of American Constitutional Law* (New York, 1942), Chap. VI.

sonal services have been discarded as uneconomical and inconvenient.

(3) Every tax is a subtraction from private property; it may not be directly taken from capital, but it certainly converts the income to public use. Indeed, taxation has been called confiscation; and it is. When men fight political battles on the field of taxation they not only seek to divert public expenditure from one purpose to another more desirable one, but some of them attempt to secure that as much money as possible shall be kept in private pockets and freely disposed of by the owner, while others endeavor to draw upon private purses for public expenditure. It should be noticed also that since World War I, taxation has been established as much more consciously and considerably an instrument to regulate the volume and kind of production and employment and to combat depressions.

#### HE WHO HAS, GOVERNS!

FOR the time being we have said enough to indicate how and in what ways, the

great society, the state, is concerned in economic institutions and motives. Engraved upon the heart of modern society, to a depth reaching to its inmost core, is the motto of a Birmingham bank: "He who has, is!" written in the vernacular and not in Latin; and those who would understand the character and functions of modern government must understand the spirit and institutions of which this motto is a symbol. For though it is not everything to modern man, it is much. "He who has, is!" That is not all. He who has, governs! Yet, who may have, may be determined by the supremacy of a just principle of government—for example, majority rule.

Even if the government were confined to these economic functions only, their persistent emergence from human weakness and collision would necessitate the establishment and operation of the state. Engels and Lenin were in gross error to believe that the "government of man" would wither away before "the administration of things."

## *State Activity: Historical Development*

AMONG the manifestations of the state, its functions hold a cardinal position, and an examination of the conditions of state activity is elemental to the comprehension of the seemingly inextricable confusion of parts which constitute the state. The history of state activity falls into four periods: the first, up to the time of Adam Smith; the second, from the turn of the nineteenth century to about 1870; the third, from 1870 to the end of World War I; and the fourth, the period since that time, particularly beginning with 1929, the advent of the Great Depression.

### TO 1776

ADAM SMITH's magistral work was the first systematic treatise inimical to state activity, and until his time it had seemed the right and proper policy for the state widely to regulate human activities—*laissez faire*, indeed, appears as a brief exception in centuries of activity by the state.

To those who erroneously believe that the modern state alone has essayed the task of positive action in a wide sphere, the town life of the fourteenth to the middle of the sixteenth century offers an emphatic contradiction. As soon as the wider territory now known as the "nation," but then known as the "realm," "commonweal," or "kingdom," attained a state of settled organization in England, France, and Prussia, and as soon as the rulers were firmly established on their thrones, what had been done in the nar-

row area of the town was attempted for the nation.

Soon the three great systems of state activity arose: Colbertism in France (preceded, however, by a good deal of state activity), mercantilism in England, and cameralism in Prussia and other Germanic states.<sup>1</sup> Trade and industry, manufactures and agriculture, prices and wages, apprenticeship and skilled craftsmanship was tightly harnessed in rules ministering to the prince's treasury, the defense, the glory, and the general welfare of the nation, as that was conceived by the prince and his counselors. The latter, as merchant adventurers, not infrequently had a personal interest in the policy they foisted on the prince. Roughly for two and a half centuries, from 1550 to 1800, the process of controlling social and economic activities was most forcible, and ever extending in its scope and detail.

*Eighteenth-Century Benevolence.* The age of enlightened and benevolent despotism spread everywhere. But the cameralists of Prussia supplied two things lacking elsewhere: (1) they maintained a logical and detailed program for the application of their doctrine of state activity and a tradition, developing further an already long series of treatises and teaching the old and the new to generations of

<sup>1</sup> Cf. Henri Pirenne, *Economic and Social History of Mediaeval Europe* (London, 1936); C. W. Cole, *Colbert and a Century of French Mercantilism* (New York, 1939); Eli Heckscher, *Mercantilism* (London, 1935), 2 vols.

students at the universities; and (2) they also insisted, as never elsewhere, upon an administrative organization and a civil service deliberately trained in the qualifications required for their work. The Prussian people thereby enjoyed a state that was well and honestly administered (though the virtue was relative), but they were obliged to suffer restrictions which became so galling that poets and dramatists cried out against them in works which achieved the widest popularity. The full doctrine of the police state or benevolent despotism is to be found in the works of Christian Wolff. Its doctrine is also the commonly accepted code of France and England in the same century; but in England the doctrine of state activity was not extended and carried out as in France and Prussia (and Austria). While these countries had a professional civil service spread over the country and actuated by the central authority, England carried out her policy of state interference mainly with reference to foreign trade and the acquisition and development of colonies, while her domestic administration was, in its higher branches, given up to the mercies of the ignorant, slothful, and corrupt, and unpaid officers and justices of the peace of towns, counties, and parishes, and the foppish wretches and their underlings in Westminster and Whitehall.

In view of modern controversies, it is not unimportant to note that the Russian autocracy pursued a like policy of state development of mines, forests, and frontier settlements, while toward the end of this period the framers of the American constitution were of a mercantilist frame of mind. They believed in the state fostering trade and industry.<sup>2</sup>

*The Foundations and Price of Success.* What were the spiritual foundations of these systems of state activity, and what practical effect did they have? The first question is easily answered: that is, it is easy to enumerate the influences though it is difficult to ascribe to each its proper

weight. The state was new; it had but recently emerged from the agonies of combat, and even in the eighteenth century the process of violent aggrandisement was not yet ended. In such a condition men's fears of authority, and their patriotic hopes in it, form a reservoir of energy from which self-sacrifice and obedience can be obtained, even if those sacrifices are not strictly related to the aims and ends of conquest and defense. Restrictions which would not be brooked in the ordinary state of peace and peaceful mind, when the temper would grow impatient in the normal course of industry and life, are pressed forward by the body of psychic forces to which we give the collective name patriotism, and the burden becomes a joy.

All this is bound up to some extent with the person of the king, who, everywhere the conquerer of the Pope, is said to be the Victorious, the Wise, the Peacemaker, or the Saint, *Gloriose, Serenitas, Clementia*, the Magnificent, the Great, the Just, or Very Christian, the Philosopher, and *Dei Gratia*, who certainly lives in an atmosphere, and amidst a ceremonial, in which all virtues are magnified, while vices are sedulously hidden from the contemporary populace to enrich the reading of you, the later generation.

The state entered a field in which the extent of its territory and population was a singularly important condition of success in the things men wanted—international mercantile and colonial success, and the regulation of domestic conditions to ensure this.

The sense of solidarity, we may even say the sense of state, which had enabled the municipality to frame and execute its regulations, became in the sixteenth and seventeenth centuries a national consciousness. The generation and strengthening of the national spirit in the struggles between Pope and state, the breakdown of the old settled order by the Renaissance spirit, and the awakening of enterprise and acquisitiveness by the discovery of lands and wealth in the Far East and Far West—all these gave the power of attracting and directing human

<sup>2</sup> Walton H. Hamilton and Douglass Adair, *The Power to Govern* (New Haven, 1937).

energies to the only unit big enough to enter into a struggle for possession, the nation, with its area and population extended as far as possible. Even now, in an age of atomic bombs, the world reckons in manpower; how much more so when the only mobile energy available was contained in the sinews of men and horses. The state of mind was one in which the desire for national power mingled with the sheer incomprehensibility of individual freedom, which might or might not have been regardful of the necessary power of the state. In England the evolution of the desire for power is marked clearly by the reign of Henry VII; of him Bacon has said that "he bowed the ancient policy of this realm from consideration of plenty to consideration of power." Now flourished the *raison d'état*.

Further, in the infancy of an organization, things are done and suffered which maturity alone can condemn and amend. What was the alternative? The very things which men feared and hated—localism, ecclesiastical strife, and oppression by tyrannical individuals and overlords. The choice among alternatives can come only when there are alternatives theoretical or actual, and at the origin of things there are, by hypothesis, none. Alternatives are the offspring of history, or, as Bacon said, "Truth is the daughter of time." The state enjoyed the benefits of an almost complete consensus. This itself was only part of a much wider state of mind, that of the Ages of Faith. The Church was still the paramount educator of youth; the English state, indeed, gave the Church of England the monopoly of it. "Man," in Kant's words, "had not yet made his exit from the state of his self-made minority." Church and princes were rarely questioned.

Two other conditions which produced state activity require emphasis: (1) the fiscal needs and policy of the government; and (2) the pressure of commercial and industrial people who pursued their own interests consciously or unconsciously under cover of claims that the nation would benefit. If the latter were powers for liberty, the liberty primarily sought was in

the interests of their own acquisitions. However, the liberty gained for a few could not be restricted to their sole benefit.

Even as these conditions secured for the state that general obedience which is its very life, others were arising which eventually penetrated Leviathan and dispersed its ancient elements.

Another question has yet to be answered. Were the regulations effective? how much success did they have? what hindered that success? No answer can be given until the question is made more precise. When we ask whether they achieved their object, there is the broader object and the narrower. The broader object was said to be national strength obtained through national wealth. But this aim is constituted of a tremendous number of ingredients: the balance of trade, the increase of population, the manufacture of certain articles in sufficient quantities to ensure adequate defense in war, and so on. No exact inquiry has ever been made into the effect of mercantile regulations upon these things. We know generally that all countries prospered; but the causes of prosperity, like the growth of knowledge and the increased international division of labor, were so powerful that enrichment was possible even if the regulations were economically unsound. It is certain that all countries lost much in aggregate welfare, in order that they might be well off in some particular aspects, in the possession of certain manufactures, of colonies, and, in the case of France and England, of large and well-equipped navies. It is also certain that we cannot find any widespread challenge to the policy. Whether these values could have been obtained with less expenditure and dissatisfaction is another question, and one that has not been answered by economic historians in the kind of detail which alone would be useful to us. An incessant struggle was needed for success. There was no general spontaneous obedience to the demands of the state, and the state was compelled to explain itself and reprove its citizens or officials in preambles to statutes and in circulars, and

thus secure obedience. Statute after statute complained that the previous ones had not been properly obeyed. Numerous officials were necessary, and in all countries, customs officers became the watchdogs of import and export regulations and were perhaps the best hated of all. But the inspectors of industries of various kinds were hardly less detested and deceived wherever possible. In France and Prussia, state activity at home was taken seriously and carried out by professional administrators—in Prussia by expert and specially trained men—while the central authority maintained a strict and continuous and almost vindictive superintendence over its agents. It is not amiss to observe that the Prussian public economy was much dominated by the military authorities, since the economy supplied the means for the maintenance of the standing army. The richer the economy, the bigger and better equipped the army.

In England amateurism prevailed in the local justices and the government of the towns, and the poor-law in the eighteenth century is an eloquent testimony to its insufficiency at that time and in the circumstances, and an illustration of the fact that the success of the activity of the state (like that of any individual) depends upon the ability and character of those who perform it. English commercial policy was successful through unscrupulous sacrifice of Ireland, victorious wars which brought rich colonies, and the favorable maritime situation of the country. To this success the Navigation Acts contributed. Success was bought by methods which had not taken into account an ultimate possible loss—the loss of the American colonies and all that came of that in war, commercial embargoes, and destruction of shipping. The state can often win its way, as a private individual can, if it is ready to make the future pay for the present, and nation as well as individual may accidentally stumble into such a course without deliberately intending to set present gains and losses against those of the future. If Colbert, Cromwell, Grenville, Frederick the Great, and the kings of France and their counselors could have foreseen all the

consequences of their policy, they might have pursued other ends, but such knowledge is possible only when experience and science are at hand to teach, and even these have their limitations; in proportion to their magnitude, the activity of the state is seemingly successful until the day a reasoned balance is struck.

The activity of the French state was more or less successful, but at what cost? Its officials were recruited in an infamously wasteful fashion, for men like Colbert came but once in a generation. The peasantry, whose agriculture was deemed inferior to the glory of manufactures, commerce, and colonies, was so oppressed that the only possible issue was violent revolution. The crude repression, fines, imprisonments, litigation developed a mistrust and hatred of public administration (which, it seems, is hardly eradicable even now from the Frenchman, however much he may agree with state activity as a theory) and, according to some authorities, weakened all trust in self-government. But these are heavy prices, though there is no way of reckoning them in francs. Further, several generations of French men, women, and children were obliged to live under a restrictive régime which, as far as we can tell, diminished the total aggregate welfare possible in a spontaneously developing individualism. We may ask, too, would not manufactures and commerce, if left to themselves, have better satisfied the originators of restrictive schemes, if these could have observed the long-run outcome?

*The Downfall of State Activity.* When men had experienced these things for a couple of centuries, they began to doubt their wisdom. Opinion became rational and individualistic; where before it had been traditional and social, it now became utilitarian. The Absolute Good, whereby men judge of temporal things, changed its nature: until the middle of the eighteenth century it had been an end inseparably connected with that social grouping called the State; now the Absolute Good became charged with individual values. The Enlightenment spread: people ceased to believe, as before, in mir-

acles, books abounded on the Order of Nature, wits like Voltaire laughed royal and religious nonsense out of men's hearts. The scientific triumphs of the seventeenth century suggested support for the individual as sovereign creator of the State. Kant crowned all by his worship of man's rational nature, and, catching fire from Rousseau, dedicated his talents to the gospel of Progress achievable in the State through man's dynamic and unfettered reason. In England Locke had created a set of doctrines which compelled men's everyday thought and behavior; the State was posterior to the welfare of the individual, and its sovereign power properly limited by the will of its individual members. Hume's skeptical mind paved the way for social teachings even more shattering to the pretensions of the State than Locke's. In brief, however much all these thinkers differed among themselves, they collectively encouraged *first*, a belief that more freedom for the individual and less State activity would be socially fruitful, and, *second*, a belief that man, guided by individual reason and untrammelled by authority, would, by the unfolding of his nature, attain a state of perfection. This second part of the general belief we know as the doctrine of Progress. These beliefs have suffered strange vicissitudes since their formulation, but they still nominally rule modern society and statecraft. We have to ask what influence they had upon the development of State activity, and the answer seems to be that at different stages and in different places they had different effects, their first general effect being to encourage practical and theoretical movements subversive of despotic though "benevolent" government. The chief systematic contributors are the physiocrats and Adam Smith.

*The Physiocrats.*<sup>3</sup> The French *Économistes*, called also the physiocrats, formed the first school of thought to break with Colbertism and mercantilism. Their system, in so far as it concerned the problem of state activity, reposed upon two pillars:

the faith that agriculture was the only true productive work, that manufactures and commerce were of little value, and that individual choice was of higher worth than state regulation. All commerce and manufactures were, to them, unproductive, and therefore all encouragements thereof were social waste, especially if they were paid for by burdens upon agriculture. Agriculture alone produced; only agricultural peoples had the most desirable qualities: they had pure morals, they increased the population, they made good soldiers. Agriculture was the occupation of the majority of the nation and provided the greater part of the royal revenues. While it thrived—and it could easily be made to thrive (recent English agricultural progress proved this)—the nation would always have a good supply of food, but without it the raw material of all industrial activities would be lacking. No other form of economic activity returned a net product over and above the labor and capital put into it.

Existing restrictions in France discouraged agriculture instead of encouraging it; for had it been free, it could have driven good economic bargains with the industrial population and so have effectively reduced the value of the privileges that manufactures obtained from the state. About the middle of the eighteenth century the best political and economic minds in France seemed all at once to be seized with a question terrible for all systems and states: "Is all this really necessary?"

The gospel was bound up with their theory of property. To them the individual right to property in its most absolute sense was indeed fundamental, for this was the motive force of economic activity. Mirabeau, the Friend of Man, identified property rights with "the necessity of opening to the activity of the individual a free career, an unlimited field." "This which is mine," he said, "is the entire universe." Nothing must force this right, and the state's only business was to see that this principle was respected. For freedom to dispose of possessions was justified by the economy of agriculture, which required

<sup>3</sup> Georges Weulersse, *Le Mouvement Physiocratique* (Paris 1910), 2 vols.

## STATE ACTIVITY: HISTORICAL DEVELOPMENT

the intense application of the acquisitive and preservative dispositions of man. The right of bequest encouraged men to work for ends attainable only beyond their own generation, and plans made long ahead and works erected for future benefits were the essentials of agricultural economy. The tools and capital needed would find their best use if they were left to the free disposal of those who had an immediate interest in their most gainful application. Of all forms of property, the most indispensable was property in one's own person, the freedom to work when, where, and how one liked: "*La terre ne peut fructifier que sous la main des hommes libres.*"

Here then was logical consequence: a theory of almost complete state inactivity. Grimm fulminated against the madness of regulating everything, "*la fureur de trop gouverner*"; and d'Argenson had set up as the highest maxim of government, "*Pas trop gouverner!*" Don't govern too much!

However, it was not sufficiently convincing to say that property and liberty made for the best social good through agricultural production; it was still necessary to show how this came about. What was the motive force in individual human beings which was of such a potency and direction that it could be left to operate without state control? The answer, in brief, was this: no individual human being can seek his own good, his own personal interest, without at the same time producing the public good.

Society need not fear harm or disruption, for "every one works for others, in believing that he works for himself." This comes about because human beings realize the need for reciprocity: in order to satisfy their own appetites they are obliged to concede certain satisfactions to others. The pursuit of our own interests teaches us our rights, and, at the same time, our duties towards others.

Yet what is to prevent this individual pursuit of satisfaction from causing subversion, misery, anarchy? For not all men are good, nor is their wisdom remarkable. The physiocrats answer: the interest of

the individual, and its pursuit, must be enlightened: that is, he must be taught a philosophy of his own best interests and the natural possibilities of their satisfaction.

Government's part is to leave men alone; at the most it is to recall men to an enlightened view of their interest; and this is to be learned from the nature of things and of men. The state is properly limited to guaranteeing security, property, and liberty, and to the declaration of the principles of the social order discovered by philosophers.

The physiocrats were like all who have scrutinized the face of the heavens and discovered a God with whose promise and behavior they are intimately acquainted: admitting that He is all-powerful and all-wise, they will not let Him attend to His business alone. And, if men cannot learn His ways, they must be taught by those who pretend to know them. What, then, did the physiocrats teach as to the activity of the state? Since the laws were graven on the face of Nature, the legislator could not create laws, he could but declare them. The state should be no more than tutelary, securing property and liberty and explaining why it did so, for these explanations would bring home to citizens the *Ordre Naturelle*. "Liberty and immunity are the best administrators," and "Government has practically nothing to do except to dispense itself from doing anything." This was the logical and seriously held consequence of the physiocrats' genuine belief in their natural laws.

Though the physiocrats were lamentably in error, they had added at least two ideas of extraordinary importance to the science of state activity: (1) the idea of a natural order of social behavior which determined the proper scope and manner of governmental action, and (2) the theory that if the individual were left untrammelled, the greatest social good would result. In the first idea they themselves erred in believing that they had arrived at the complete truth, or even at the truth in the part which they had investigated. They too narrowly identified their personal beliefs with the designs of Na-

ture. Second, their optimism was unlimited and inveterate. The most impossible explanations were invented in order not to desert the beneficent intention of Nature acting through individual self-interest. And yet the doubt remained. Indeed, this doubt was so ineradicable that the physiocrats themselves threw up the sponge and admitted that there ought to be limits to state inactivity, and that the chief limit was state education. A damnable but necessary heresy! And indeed, as the public educational activities of the great business corporations and labor unions of our own day demonstrate, a continuing, necessary heresy!

These theories did not influence French government very much. Only with the Revolution itself was there a snapping of ancient threads and a throwing off of oppressive burdens.

## ADAM SMITH

In 1776, a few years after the zenith of physiocracy, appeared the work which was to exercise an influence more profound, extensive, and lasting—Adam Smith's *Wealth of Nations*. Smith thought highly of the physiocrats, though he recognized and denounced their cardinal errors. He was at one with them in their theory of human nature in society, on the existence of economic laws, and the inability of government to bring about the welfare of society better than could the untrammelled individual. He made mincemeat of the mercantile system. He showed that on its own principles it was ineffective and wasteful, and again, that those principles reduced the potential wealth of nations. Wherever the government put its finger it paid more than it obtained, and some classes lost more than any other classes gained.

Governments could not judge where human beings could best apply their work and capital. Only the individual, in his special situation, could best judge this. The argument rises to its highest burden in the famous passage upon the "invisible hand." This, and like phrases, have produced the error that Adam Smith was the creator of *laissez faire*. But he was in

fact too clever to surrender to the utter inactivity of the state proposed by the physiocrats. He recognized that a state has other needs besides material welfare, such as defense and instruction, and that these may not be attainable in the undirected higgling of the market. He objected, quite pertinently, to the following assertion by the physiocrats: "If a nation could not prosper without the enjoyment of perfect liberty and perfect justice, there is not in the world a nation which could ever have prospered."

Adam Smith's work has had a tremendous vogue, and its native virtue was enhanced by economic and political conditions at the time of its publication. Through the channel of Göttingen University, the *Wealth of Nations* percolated into Germany; *Smithianismus* became a cult, while the book was likened to the New Testament in its social significance. In England a prime minister avowed in the House of Commons his faith in its principles. In France Jean-Baptiste Say systematized, with national clarity, the work of the master. The world believed itself given over to *laissez faire*.

The world need neither have rejoiced nor feared inordinately. Bad conditions themselves bring about reforms, and good conditions maintain themselves. In England some important fiscal reforms were accomplished by reason of the conditions, and by about 1846 hardly a vestige of the mercantile system was left. In Germany a small measure of local representative government was established, and the emancipation of the servile agricultural population was begun. In France, free peasant proprietorship was inaugurated and trade and industrial corporations abolished. But all these things were not merely Smithian. It has been shown, for example, for Prussia, how many other currents contributed to that strong stream which carried away the ancient controls. Stein's was an independent creative talent at least on a par with Adam Smith's.

*Laissez faire* was never an absolute rule of government, or even approximately absolute, or the governments would have been forced to action in at least the three

directions indicated by Adam Smith. These were: (1) protecting society from violence and invasion, (2) establishing the administration of justice, and (3) providing for public works and public institutions which are profitable for society but not productive of individual profits. Between 1776 and 1876, at which later date a new impulse toward state activity successfully emerged, all governments made laws at great speed, on numerous aspects of social life, and saw to it that their rules were executed. There are few fictions so misleading as that which looks back at the early nineteenth century and says it was an "era" of *laissez faire*.

In France, after the abolition of state control in economic matters in the first raptures of Revolution and Restoration, dangerous and unhealthy industries were regulated, and as soon as the consequences of the Industrial Revolution, which came later in France than in England, began to loom large (that is, by about 1860), the state began to assume more and more activities in relation to them. The first great theoretical reaction against Smithian doctrines commenced in Germany. The most systematic of the Romantics, Adam Müller, refuted the doctrine of the "invisible hand" point by point, and showed very clearly to what social evils unregulated industrial revolution tended.

There was merely a pause while civilization developed, the agricultural eighteenth century being pushed out of the way and the steam-driven nineteenth rolling in. Only the obsolete was left alone or demolished; the new and desirable was at once harnessed. In proportion as the full potency of the new energies was revealed, and as the creatures of its titanic force were molded and emplaced, promising a magnified weal or woe, men lost interest in a Natural Order which left things to run amuck, and demanded deliberate regulation. For the Natural Order had been overtaken now by a machine order. State inactivity, which the Natural Order and the *Wealth of Nations* had advocated, was carried out mainly in international trade, as far as England was concerned.

The leaders of manufacturing industries were creating fortunes, factories, and power; and as a sequel, they created schools of thought and instruments of agitation claiming freedom. In England the so-called Manchester School was established—radicals with doctrines drawn from Smith and Bentham. Smith argued free trade; Bentham argued that men best knew their own interests, and that the best government was representative government, which included all interests. The Anti-Corn Law League was its chief bloom, and anti-state interference in the regulation of working conditions another. Its influence has only of recent years been seriously counteracted. In Germany, the German Manchester School, *Manchester-tum*, had no more than a very few years of authority. In France, despite brave protestations, very little was done to break down the network of defensive customs duties. In the United States, upon federation, commenced a policy of state regulation of international trade, and shortly afterwards of internal improvements—railroads, rivers, canals, roads, and posts.

Meanwhile there was a mighty fermentation in the home activities of the state, leading to a vast increase of functions between 1830 and 1870, at which date the theory of *laissez faire* or individualism was in a very tattered condition.

#### FORCES AT WORK FROM 1776 TO 1870

THE forces at work were (1) the economy of industrial environment, (2) the psychological influence of manufactures, (3) the ideas and sentiments of progress, Benthamism, and humanitarianism, and (4) democratic institutions.

*The Economy of Industrial Environment.* The economy of the new industries was conditioned by the nature of steam-power. The first result of this was congregation. It was necessary that people should be near the machines, too expensive to be installed at home. Congregation gave rise to new problems of public health administration and poor relief and the prevention and punishment of crime. In the matter of public health, the contagious nature of disease soon abolished the

notion of any absolute freedom of the individual or the locality. The possibility of the rapid movement of criminals by the use of modern transport and their opportunities to hide in the byways of the large towns made it necessary to establish national regulation of training and to provide numbers of police. Furthermore, when people live in densely packed areas, social misery becomes more apparent, and becoming aware is for the more conscious of the miserable the spur to reform.

*Second*, the new industry and commerce required for their full extension the rapid movement of raw materials to the manufacturing centers and the rapid movement of the finished product to the consumer. Articles could be produced cheaply in proportion to the size of the market, and large-scale organization was therefore necessary. Easy movement, large capital, credit, insurance, and safeguards for a proper administration of roads were provided for, and the principles of limited liability, insurance, and banking were established.

*Third*, the essence of the new economy was division of labor and roundabout production. Thence the need for continuity, the political implications of which we have discussed in an earlier chapter.

*Fourth*, a new type of subordination came into existence with the new industry. Traditional feelings of fellowship between master and servant were now overwhelmed by the ambition to inherit the new riches promised by machines. Samuel Smiles was the great prophet of the day, and his was a gospel strangely like the dollar standards of America at the present time, themselves originating with Astor, Gould, Fiske, and Rockefeller several decades later. When both employers and employed were themselves ready to take advantage of each other—the first by the discipline of hours and wages and fines, and the second by the strike and sabotage—and were jointly ready to take advantage of the work of infants and women under conditions of revolting cruelty, common decency obliged the state to take action even against Manchester and even against the American “robber barons.”

*The Psychological Influence of Manufactures.* The mere existence of manufactures gave men a startling sense of power. If their economic well-being was so easily obtainable by the mere institution of machines, why not their general social well-being, and their mental development? Reform of the law, which had, in 1814, been said by no less an authority than Savigny to be given to us by earlier generations and to be incapable of being remade, was now conceived of as merely one more problem in engineering.

It should be noted that this idea was already expressed by Bentham in his *Fragment on Government*, published in 1776, the same year that *Wealth of Nations* saw the light. Some contemporary writers argue (erroneously) that it is a lust for power which activates social planners, who are sometimes referred to as “social engineers.” Not the impetus to economic and social planning was inherent in the new industrialism, in the discontent with its inequities, and the new sense of social power and competence suggested by machinery, scientific cause-and-effect, and invention.

*The Ideas and Sentiments of Progress, Benthamism, and Humanitarianism.* The effects, material and psychological, of the new system in industry did not operate merely upon a small class and very small body of political rulers. Western Europe and the United States were now committed to democratic government, and though in Germany and France its full expression was impeded for some time by conservative and royalist forces, and in England by the upper and middle classes, government now had to reckon with the wishes of the whole population. The whole virtue of democratic government lay in its promise to shorten the circuit between the impulse of popular needs and the legal and administrative response. Nor was this all:

(1) The gospel of Progress and Perfectibility had been invented on the Continent, in France and Germany.<sup>4</sup> Before the

<sup>4</sup>Cf. another aspect in R. H. Tawney, *Religion and the Rise of Capitalism* (London, 1929) and Max Weber, *The Protestant Ethic and the Spirit of Capitalism* (London, 1930).

end of the eighteenth century no visions of indefinite possibilities of human progress upon earth had inspired men's plans. Static or cyclical patterns limited their optimism, or else perfection was, owing to the exigencies of the censorship, conceived possible only in Utopias as far away as China or at the bottom of the Atlantic Ocean. Now, however, men said that their own country could, with a few simple legislative arrangements, become the Kingdom of Heaven. Kant saw all the generations preparing for the Perfect Generation. Godwin explained the steps to be taken, in his *Political Justice*. Malthus quarreled with his father about the possibility of reaching this happy state, and, to prove the impossibility, composed the pessimistic first *Essay on Population*. Though invented in France and Germany, the gospel had a speedier effect upon the United States and England than upon them, for these were not so acquisitive, were content with intellectual as much as material satisfactions, and were moreover, for a large part Catholic, while the other countries were Protestant, if anything. Furthermore, Germany was handicapped by its fragmentation, and in addition, neither France nor Germany had fully responsible and representative systems of parliamentary government to act as the vehicle of the new outlook.

(2) Bentham, searching for a principle of political utility which should be unflavored by the "nonsense on stilts" of Natural Rights and the Natural Order, seized on the "greatest happiness of the greatest number." This was later incorporated into the radical faith and program in all countries, and became one of those powerful ultimate dogmas which lead society very far. The dogma could, of course, have had its application in a slackening of state activity, as it did for some decades, but then the effect was the opposite because society required it.

(3) The eighteenth century had seen an extraordinary revival of humanitarian feeling and benevolence. Prison, hospital, and health reform occupied the minds of many people in England for two or three

decades before the Reform Bill of 1832, and many things were accomplished.

*Democratic Institutions.* All these forces played upon the enfranchised classes, who, in turn, caused Parliament to undertake certain activities. The vote was to state activity what steam power was to industry: it drove the state fast and far. After 1834 Parliamentary debates, and therefore the motives of the members, became freely reported. From 1836 division lists were published by order of the House. In 1835 the first printed questions were put on the Order Paper, and year by year there was a steady increase in the number of questions asked by the government.<sup>5</sup> The Chartist movement demanded not only the vote and proper Parliamentary representation: men like William Lovett said: "But it is not for the mere possession of the franchise that is to benefit our country; that is only the means to a just end—the election of the best and wisest of men to solve a question which has never yet been propounded in any legislative body—namely, *how shall all the resources of our country be made to advance the intellectual and social happiness of every individual? It is not merely the removing of evils, but the establishing of remedies that can benefit the millions.* . . ." The spinners of Silesia and Lyons, and their like, were already preparing the way for radical and socialist parties in Prussia and France. In 1867 John Stuart Mill uttered his gloomy fear that the working class in a majority would certainly infringe property rights, although he had already admitted that "the laws of property . . . have not held the balance fairly between human beings, but have heaped impediments upon some, to give advantages to others: they have purposely fostered inequalities, and prevented all from starting fair in the race." By the time he came to writing his *Autobiography* he had reached

<sup>5</sup> In the United States it was not until 1873 that the *Congressional Record* was officially publishing debates and proceedings of Congress; prior to that, beginning with 1830, the *Congressional Globe* had been privately printed.

## FROM THE CRISIS IN THE 1870's AND 1880's

the conclusion that England required socialism.

What was the meaning of the growth of state activity? The immediate driving spirit was the unwillingness of those who achieved political sovereignty to allow the spontaneous behavior of people to have its ungoverned consequences. Human behavior was thus bent to conform with ends which individuals acting unchecked might not have pursued.

### FROM THE CRISIS IN THE 1870's AND 1880's UNTIL WORLD WAR I

STATE activity increased with the need for it, in spite of the prevailing dogma of laissez faire and self-help, and in spite of the economic theorists whose fatalistic individualism found its comprehensive expression in Mill's *Political Economy* and *Essay on Liberty*. But Mill himself was gravely worried by new longings; he could be neither entirely pessimistic nor so individualistic as his predecessors who had lived in the gloomy thirty years which began the nineteenth century.

Indeed, the full consequences of the industrial change were becoming visible and compelled the invention of institutions to cope with them. These, with the development of new doctrines and sentiments, caused the presumption in favor of laissez faire to be changed into a presumption in favor of state interference. That change came about by imperceptible but important stages in the 1870's and 1880's.

In the first place, this question had to be answered: was the state, as an arrangement producing a stable social order, to be allowed to founder from the shock of social forces making for disruption, or were these forces to be so adjusted as to allow further smooth continuance of life? All the economic interests were tugging against each other. People were becoming increasingly conscious of the cost of the new prosperity in terms of the misery of the working classes—England, again, necessarily the first.

*The Social Microscope*. An apparatus of exploration was invented for the social field, as mightily influential in its sphere

as the invention of the microscope had been in physics and medicine. Royal commissions of inquiry, beginning with that of 1832 on the administration of towns, were every five years or so making clear the relationship between detestable social phenomena and their exact quantitative causes. What else can so assault the conscience as exact knowledge? Who can for long resist the demonstrated fact that an evil is remediable by human intervention?<sup>6</sup>

Thus conditions pressed, and knowledge of their effects and causes was extended. The conditions of housing, health, factories, and mines were remodeled by the state. The sectional interests which had been created by the new industry (like the railway interest and the trade unions) were incorporated into the state by measures which (1) took away from the former the power to extract to the full from other occupations what the traffic would bear, and (2) arranged for the latter the possibility of legal withdrawal of their work with the minimum danger of penalties. All these things were not accomplished without much turmoil and stress—strikes, riots, and political battles in legislatures and in the secret avenues that lead to them. Evils were not eradicated immediately knowledge was gained and conscience informed; threats and fears of violence and disorder were required to ram home the logic of social justice.

The condition of the state's continued existence is that it should every day renew itself, nourishing government with fresh powers, and expelling the remnants of that which no longer lives with wholesome vigor. Among such powers are the mind and the spirit as well as economic welfare. These were peculiarly energetic and transformative in the two decades of change. Religion had long been allied

<sup>6</sup> H. M. Clotie and J. W. Robinson, *Royal Commissions of Inquiry* (Oxford, 1937); R. Vernon and N. Mansergh, *Advisory Bodies* (Oxford, 1940); Sidney and Beatrice Webb, *Methods of Social Study* (London, 1932). It was not long before American Congressional investigating committees and committee hearings on contemplated legislation accomplished similar results.

with fatalism as to this world's goods, but now it became socially active. In England, Nonconformity was allied with Liberal politics. The Church of England gave birth to Christian Socialism. In Germany a Christian Democratic party was formed. Pope Leo XIII, in the famous encyclical of 1891, recalled Catholics to a sense of Christian social service. The fatalism of religion was challenged by the social good offered by science. Against ensconced and complacent individualism another ideal was preached—an actually living community under Christ, in which no man has a right to call anything that he has his own absolutely, but in which reside spiritual fellowship and practical cooperation. (It is relevant at this point to draw attention to the strong Christian Socialist movements in Europe after World War II, which the Vatican has had the pleasure of morally fostering as an offset to the social doctrines of the Communist party.<sup>7</sup> Among them are the Christian Democratic or Popular Parties of Italy, Belgium, and Germany, and the *Mouvement Républicain Populaire* of France.)

*Arithmetic Becomes Argumentative.* The day of absolute principles in legislative discussion had passed more surely than the day of absolute government. For statistics—the mathematical recording and analysis of social phenomena—had become a servant of government, and commodities, qualities, behavior, and nature's operations were being investigated with an arithmetic minuteness and exactitude heretofore applied only in the physical sciences. Where, before this, men had been wont to talk in terms of absolutes, while recognizing that no absolute would suffice in actual politics, a means of measurement and degree now made it easy for men to retreat from their own absolute—laissez faire, for example—and yet not fly to the opposite extreme. In France in the 1830's and 1840's the whole battle for free trade was waged around the system of customs statistics then in use, while Prussia had already for many decades con-

verted the science of statistics into an art of government. Now this habit of mind does not necessarily lead to more state activity: it may work either way and which way it works depends upon the needs of the time. In the 1870's and 1880's the statistical habit of mind finally inclined, on the balance, to overcome eternal and absolute negations of state activity, because it inculcated the view that in society we are concerned only with the more or less. Moreover, the substance of statistics showed, as we have urged already, the number of points at which social life needed social control to avoid evils and produce good.<sup>8</sup>

Not only did arithmetic become argumentative, but since it dealt in units of calculation—sick people, hospital beds, children attending schools, miles of public road, etc.—it became possible to establish standard reporting by local authorities to central headquarters. It became easier to get appropriate solutions of local problems made by central officials. This conduced to the efficiency of centralization: for the local and central administrators were now talking about the same thing.

*The Social Conscience.* All this growth in the science of statistics and in social investigation does not entirely account for the growth in state activity and the substantial reign of collectivism. We must add to other factors the growth of a social conscience. An authority upon that time describes the upper layer of society as having been overcome with "a class-consciousness of sin." Let us recall the names of

<sup>8</sup> In this connection, the work of the National Resources Planning Board (especially in such studies as *The Structure of American Economy*, *The Economics of Planning Public Works*, *Technological Trends and National Policy*, *The Problems of a Changing Population*) may be noted as sponsor of a remarkable series of analytical and prognosticatory investigations. It would seem that its findings were so incontrovertible as eventually to become compelling social policy, and therefore in 1943 a Congress without bravery abolished the Board, with directions for the disposal of its work reminiscent of the Romans who scattered salt on the ruins of Carthage so that nothing should ever grow on that site again. Cf. Chap. 26 below.

<sup>7</sup> Cf. Papal Encyclical "*Of Atheistic Communism*" (*Divini Redemptoris*), March, 1937, for the general theory.

such people as Elizabeth Fry, Florence Nightingale, Octavia Hill, the Earl of Shaftesbury, Jane Addams, Sidney and Beatrice Webb,<sup>9</sup> each of whom changed the mind of the public to believe that the "impossible" could and ought to be done in his or her specific line of endeavor. Nor could liberalism avoid the effects of the energy released by the sense of social injustice. It was this development which caused Herbert Spencer to label Liberalism the New Toryism, and to compose his famous essays on *The Man versus the State*.

Soon this power began to be released in organized forms. After 1867, as a result of vastly different causes in different countries, almost universal suffrage was established and statesmen had to reckon with the natural desire of men to be saved from their miseries. By 1867 there was a representative if not responsible government for Germany, and by 1871 the Third Republic had been born in France. What one party promises in a democracy the other party must in the long run also promise. Mass party parliaments grew up outside Parliament, and state control over the processes of production and distribution came into the forefront of political discussions. Socialist organizations were created. At Oxford the movement in social philosophy—that of Green and Bosanquet—was in tune with the social theory of the time—indeed, led it. In France and Germany the "Socialists of the Chair" opposed reforms from above to reforms demanded by political parties.

The remaining theorists of laissez faire either were, in part, won over to the new doctrinal tendencies, or else they were successfully confuted in some famous controversies, like that between John Stuart Mill and James Fitzjames Stephen.

It is the proper end of government to reduce this wretched waste to the smallest possible amount, by taking such measures as shall cause the energies now spent by mankind in injuring one another, or in protecting themselves against injury, to be turned to the legiti-

mate employment of the human faculties, that of compelling the powers of nature to be more and more subservient to physical and moral good.

These last sentences are John Stuart Mill's and they seem to represent the position of a daring state interventionist. It would be difficult to find a match to these opinions outside the extreme socialist position even today. But this is only one of the places in which John Stuart Mill began by rehearsing the economics of 1800, only to conclude with the results of his own experience. The final words in the *Principles* were emphasized by the statement of faith in the *Autobiography*. The world was well on its way to socialism, and discussions like Mill's by stating the issues, cleared the way for it.

Mill's final statement of the case for laissez faire, that which appears in the *Essay on Liberty*, was finely confuted—and in our opinion, left quite stricken on the field of controversy—by James Fitzjames Stephen's *Liberty, Equality, and Fraternity*. The position of Stephen's book was, in regard to the main issues, also taken by Ritchie, in his little volume on *The Principles of State Interference*, an exceedingly sensible and just attack upon Herbert Spencer's *Man versus the State*. If we indicate Spencer's main thesis upon state activity, we shall hear the last and despairing trumpet call of laissez faire by a considerable mind until more recently Hayek's *Road to Serfdom* reintoned the flyblown score.

Spencer held that all legislative interference cannot help setting in motion unforeseen and unfortunate effects; that, without positive will, one legislative act inevitably and uncontrollably leads to others; that the conception is fostered that government ought to step in; that the beneficial weeding out of the weakest is impeded; that an officialdom is fostered which ever conspires to obtain more power over the people; that enslavement and despotism follow; that legislators are ignorant, especially of the "systematic study of social causation"; that the accumulation of state business results in "red

<sup>9</sup> Cf. Beatrice Webb, *Our Partnership* (New York, 1948).

## STATE ACTIVITY: HISTORICAL DEVELOPMENT

tape"; that spontaneous individual activity is practically always superior to state-controlled activity.

Stephen's answer to Mill and Ritchie's answer to Spencer were much the same. They show that discussion had revealed the essential problems involved in state activity and even point to a series of maxims which would be of service to legislators. These points had become clear:

(1) The "individual" postulated by Mill and Spencer was a mere abstraction. There is no such thing, if man is to be considered as a member of society at all. This "individual" was a *wish* personal to Mill, Spencer, and others, projected into, and dominating, the whole of their discussion.

(2) The antithesis between state and individual was founded upon this false view of the "individual," and upon the fallacy that the state was a sovereign authority the power of which emanated not from the constituent individuals, but from some undiscoverable but nevertheless reprehensible source.

(3) There is not necessarily any connection between state activity and centralization; the idea that these were synonymous, so frequently introduced into controversy, was erroneous, for the possible forms of organization for state activity were many, including municipal and vocational administration.

(4) Attacks upon the incapacity of legislators and administrators, of the kind made by Spencer (more crotchety and ignorantly stubborn in this regard than Mill), were not entirely valid arguments against state activity. It is true that the success of state activity depends upon the efficiency of the instruments, and that efficacy is one element in the decision to act or not to act; but it is an argument relative to a particular set of circumstances and not an absolute argument against activity. Nevertheless, Spencer had put his finger upon an important aspect of the question. The efficiency of the instrument is indeed of critical importance. Spencer's criticism of the competence of legislators, however, invited comparison between them and the actual competence

of private businessmen. Lord Pembroke in a pamphlet on *Liberty and Socialism*, published by the now long defunct Liberty and Property Defence League, made the comparison: "What," he says, "would private enterprise look like if its mistakes and failures were collected and pilloried in a similar manner?"

(5) The abstract notion of liberty itself was questioned, and it was asked, Is this more than one of many ends of which man seeks the realization? Some liberty is desirable, as well as other things, but nothing at all is attainable without a limitation of liberty. If, then, limitation is conceded, the extent of the limitation is merely a question of the more or less dependent upon the mixture of men's desires and capacities, and this varies in time and place.

(6) Stephen enunciated the questions to be asked before activity is undertaken by the state, and these were: (a) Is the object aimed at good (i.e., will it tend to advance the well-being of the community)? (b) Will the proposed means attain it? (c) Will they attain it at too great expense, or not (i.e., can the end be attained without doing more harm than is compensated by the benefit of its attainment)?

(7) It was further proved that the least amount of state activity possible was education: for if the masses, uneducated, were to become the legislators, all the evils prophesied by Spencer must result. But was it necessary to wait until all had been formally educated to a required standard; was not a state activity already a part of civic education, a means to reform character?

What was the net result of the development of state activity between the middle and the last quarter of the nineteenth century? The cardinal gain was the break-up of absolutes, or at least the break-up of old absolutes; for socialism, the new dispensation, was in its early days an absolute, as unmeasured as those it replaced. Further, toward the end of the century, government was actually conducting an enormous range of activities, and the immediate promise of all political parties was for more. The direction of opinion

was well established: the state could effectively act, for experience had shown that it could provide the organization and the officials. Furthermore, the state ought to act; Humanity, Fraternity, Equality, and the prudent prevention of social friction and waste demanded it. From this time dates the rapid development of socialist schools of thought, and of Socialist and Labor parties in practical politics. The western world has become more and more socialistic in deed and thought. The essence of that thought is, first, that the life of the individual person shall be made to respond to a social standard established by the state, and, next, that the state shall provide for the poor a minimum of services and security, at the ultimate expense of the wealthy.

## SINCE WORLD WAR I

WORLD WAR I had three effects on government: (1) it stirred social emotions; (2) it taught that if society and government deliberately planned their productive activities they could achieve remarkable results; and (3) it developed the popularization of government because the masses learned to have an additional confidence in their own ability as compared with the classes—aristocracy, or plutocracy, or politicians—who had hitherto governed.

*Social Criticism, and Proposals for Governmental Action.* Simultaneously, social criticism made clearer three deficiencies in society which would require to be corrected by government. These were:

(1) The rise of monopolies, which ruled production over a large field, sometimes to a 100-per cent control of certain commodities. In the United States and Great Britain an angry outcry rose against these, causing the accentuation of antitrust measures. This is still a major problem.<sup>10</sup> In

<sup>10</sup> Cf. A. E. Burns, *The Decline of Competition* (New York, 1936); Joan Robinson, *The Economics of Imperfect Competition* (Cambridge, 1933); J. M. Keynes, *General Theory of Employment, Interest, and Money* (London, 1935); and Alvin Hansen, *Fiscal Policy and Business Cycles* (New York, 1941) and *Economic Policy and Full Employment* (New York, 1947).

Germany the rise of the nation to world power, simultaneous with the industrialization of the economy, resulted in governmental favor toward monopolies, at least until the downfall of the imperial system in 1918. The question at stake everywhere is whether regulation is adequate for curbing the power of monopolies to underexploit their own productive opportunities, to continue methods less efficient than those which laws might introduce, and to buy up patents or sterilize their own inventions in order to avoid the necessity of reorganizing their plant and management, undertaking new business initiative, and working harder.<sup>11</sup>

It will be observed that it is entrepreneurs of this kind who lie on the path between the consumer and the technical possibilities available for increased production. They exercise a government over men.<sup>12</sup> The fostering of scientific advancement and technological development has become a major concern of all modern governments, not least the dictatorial ones, and substantial financial assistance (accompanied by general programs of research) is rendered by governments for these purposes.

The protection of invention by patent law has also required to be seriously reviewed, for the idea that anyone who receives a protection for an invention then has so high a degree of property in it that he need not use the invention or can sell it to a suppressor has become abhorrent to a society in quest of more wealth and less toil.<sup>13</sup>

(2) The movements for intervention of governments to secure equality became highly marked. This development was partly the result of the equalitarian no-

<sup>11</sup> Cf. House of Commons *Debates*, April 22, 1948, on Royal Commissions Bill to inquire into monopolies.

<sup>12</sup> Cf. Robert Brady, *Business as a System of Power* (New York, 1943).

<sup>13</sup> Cf. Vannevar Bush, *Science, the Endless Frontier* (Washington, 1945); Hearings on the Kilgore Bill on National Science Foundation (1946: S.R. 146, 79th Cong.); Walton H. Hamilton, *Anti-Trust in Action* (Washington: Temporary National Economic Committee, 1940).

tions developed during World War I, and partly the result of the practical policy and governmental activity of the Soviet Union, where the interested world was observing the idea of equality (that is, educational opportunity unobstructed by family and business privilege) and the reduction of inequalities that stem from inheritance and the power of property owners to direct the work of the propertyless. These movements were combined with the view that in many respects the system of private enterprise (that is, the relationship between the free producer and his customer) could not adequately deliver the goods—for example, in housing, health, diet, education. Hence the impetus in all nations to supply these through public authorities at less than cost or altogether without charge.

(3) The grave inequalities of property and income were revealed more clearly by statistical analysis and presentation. For example, in President Roosevelt's message of April 29, 1938, incorporating the recommendations of the Temporary National Economic Committee, he cited these facts: For the year 1935 to 1936, 47 per cent of American family units had incomes of less than \$1000, and less than 1½ per cent at the top received the same total income as the 47 per cent at the bottom. Of the corporations reporting income for 1935, 0.1 per cent earned 50 per cent of the net income, and 4 per cent earned 84 of the net profits; 0.1 per cent of the corporations reporting assets owned 52 per cent of the total assets. The gist of the matter was put by the President in his second inaugural address: "I see one third of a nation ill-housed, ill-clad, ill-fed."

The remedies for these evils—if they are to preserve the incentive of men and women to produce, while safeguarding their political and civil liberties—are highly complicated. They require, within a gradually and democratically developed system of governmental activity, the carefully organized techniques of popular acceptance, popular control, parliamentary surveillance, and administrative arrange-

ments of personnel, departments, and territorial decentralization.

With the increasing severity of depressions, the government's role in attempting to prevent these downswings in the business cycle is assuming supreme importance. In the United States the Council of Economic Advisers, established by the Employment Act of 1946, is symptomatic of this development. Its function is to advise the President and Congress on the state of the economy, recommending anti-depression measures.<sup>14</sup>

The type of governmental action that can be pursued includes all facets of economic life, specifically:

(1) Fiscal and tax policy. During a depression, governmental outlays will exceed its receipts. Large-scale expenditures—a planned series of public works, for example—will be utilized to produce increased buying power and to encourage private production. When a boom stage has been reached, emphasis will be placed on curtailing government expenditures to prevent overexpansion. Taxes, corporate and individual, will appropriately be heaviest during prosperity.

A central banking system (owned by government as in Britain or heavily controlled by government as in the United States) will, with its power over rediscount rates, its power to increase reserve ratios of member banks, and its right to engage in open-market operations, have substantial effect on the flow of credit and thus on investment.

(2) Flexible price policy. A strong program can be adopted to discourage price rigidities, much more widely prevalent among monopolistic industries.

Capital and labor can be encouraged to transfer from overcrowded industries by government contracts and by loans for capital and operating purposes.

(3) Social insurance. Unemployment insurance could be made universally avail-

<sup>14</sup> Cf. also William Beveridge, *Full Employment in a Free Society* (New York, 1945); and British Government, White Paper on "Employment Policy" (May, 1944) and White Paper, *Economic Survey*, 1947. Cf. also French "Monnet" Plan, Chap. 24 below.

able, with effective employment services to help locate jobs, and special government projects to absorb the unemployed. Restoring consumer purchasing power would be one of the chief economic results.

*Freedom to Kill Free Enterprise?* What had been perceived was this: that too many, if not all, private entrepreneurs claimed freedom from government direction, that is, claimed freedom of enterprise, without always giving in return, fully competitive enterprise. They wanted to be free not to do as the consumers liked—namely, to have costs of production reduced to the minimum and to have all new efficiencies and inventions exploited for their benefit—but free to be lazy and obstructive and inefficient. After a certain point they were seduced by inertia, not tempted by profits. They used freedom to kill freedom. The very nature of the competitive system is to kill competition: for the motive of competition is private benefit, and, therefore, after a certain point of welfare and income and security have been reached by a successful businessman or manufacturer, the competitive factor works simply to cause him to bar competition from others. This is inherent in the nature of the competitive system of enterprise, whatever its claims. After a certain point the spur to industry and invention must come from outside. The state is then called on to regulate or break up the monopolies, or to take over their management. The essence of monopoly has been well stated by Chief Justice White in the *American Tobacco Company Case*, 1907:<sup>15</sup>

... its acts demonstrated from the beginning a purpose to acquire dominion and control of the tobacco trade [by methods] ruthlessly carried out upon the assumption that to work upon the fears or play upon the cupidity of competitors would make success possible.

<sup>15</sup> *U.S. v. American Tobacco Co.*, 164 Fed. 700; 221, U.S. 106 (1911). Cf. also Final Report of the Temporary National Economic Committee, sections on monopolies. Cf. also H. Leak and A. Maizels, *Royal Statistical Society Journal*, for paper on "Concentration and Size of Business Units in British Industry," read in February, 1945.

It must never be forgotten that the laissez-faire economists implicitly or openly claim that competitive enterprise is a way of planning production: the mind of the producer being focused on the expressed wants of the consumers. The claim implies that the public benefit is the criterion. The question then is the practical one: does the system do its work better than a conceivable and workable alternative?

Thus, modern states have traveled exceedingly far in their economic and social activities since their origin in the sixteenth and seventeenth centuries, and very far indeed from their paucity of functions in the early part of the nineteenth century.<sup>16</sup> The next question has hitherto been chiefly a matter of intellectual wrestling and forecast: "Can work incentives and inventiveness and liberty be maintained at a high level compatibly with the self-control and social control implied in the state's provision of social security, the social services, the management of the basic industries, and the penetrating control of the monopolies it does not take over entirely?" It has still to be answered by the results of contemporary and future practice. For, though men demand much from the economy, they do not live by bread alone and they are not willing to surrender all spiritual freedom for a mess of pottage. They know, in the western world of Europe and the Americas and the British Dominions, that the true guarantee of personal dignity is to be found only in the system of democracy (if anywhere, and if imperfectly), where government which controls the economy is itself controlled by the people, and where voluntary association, and freedom of speech, meeting, and worship, are the sustainers of the popular power to determine the features of the community's way of life.<sup>17</sup>

<sup>16</sup> Cf. J. H. Clapham, *Economic Development of France and Germany* (Cambridge, 1928); Louis Hacker, *Triumph of American Capitalism* (New York, 1947); Max Weber, *Deutsches Wirtschaftsleben* (Berlin, 1941).

<sup>17</sup> Cf. Frank H. Knight, *Freedom and Reform* (New York, 1917) for the stressing of these latter considerations particularly—the attitude is philosophically laissez faire. Cf. also Karl Polanyi, *Origins of Our Time* (London, 1945).

## STATE ACTIVITY: HISTORICAL DEVELOPMENT

The passion for material welfare could conceivably go so far as to induce men and women to yield their freedom to a managerial class. Burnham has suggested that this is indeed happening, and that this class will ultimately take over politics in the cunning guise of a single political party.<sup>18</sup> The world of the technocrats,

also, who a few years ago offered to raise the standard of living and shorten the hours of work to some twenty or less per week for everybody, is one which is realizable only if all men and women being producers, submit themselves almost absolutely to the technocrats' commands.<sup>19</sup>

---

<sup>18</sup> *Managerial Revolution* (New York, 1941). The theme is grossly exaggerated, and the history and terms used are badly slanted.

<sup>19</sup> J. G. Frederick, *For and Against Technocracy: a Symposium* (New York, 1933).

## *State Activity: Analytical*

### THE STATE AS AN INSTRUMENT OF CONVERSION

AN act of government consists of the total process by which the desire of some individual or group in the society in question is converted into authorized social behavior by those people who are commanded by the government to act in that way. The process is divisible into two chief sections: politics and administration.

*Politics and Administration.* Before any government can successfully execute a program of planned action, it must gain popular support, keeping the opposition impotent or reducing its influence. Continual defense is needed to retain control of the governing process. It is this which is characterized as the political aspect. Administration, however, is the utilization of the hard-won power, the actual performance of the daily business of government, in accordance with the policy of the controlling group.

We may liken the state to a machine. Machines are contrivances which simply convert energy. Their use is to overcome the limitations of individual or collective power. Government is a machine in the sense that it is a converter of energy. Its ultimate force is composed of the psychological and physical qualities of the people, and their resources. There are phases in the life of society where local and national government is required to convert this force from what it is at any point of time into something more de-

sirable. But in the case of government the possibilities of conversion are immense, because human qualities are so many and diverse, and the processes are necessarily complex.

The state has no intrinsic advantage over any other social contrivance which is engaged in transforming its members' sentiments, energy, and resources, into more desirable products. It must necessarily submit to the laws of human nature and environment. No work is gained by using a machine. The product never contains more of the original material than was put in, though in its new form it may be more desirable. Indeed, work is lost in the process of transformation, for there is no perfect machine. Finally, "what is gained in force is lost in distance"—what is gained in one direction by the transformation is lost elsewhere because the transformation has taken place.

*Factors in State Activity.* The elements of the state as an instrument of conversion are:

(1) The initial energy: the first requirement. By this we mean the instincts, the sentiments, and the intellectual beliefs that certain courses of action or inaction are desirable or undesirable, and the mental and spiritual constitution which causes a movement of creation or destruction: as, for example, the desire to impose religious conformity, or to break up trusts, or to prohibit alcoholic liquors, or to establish workers' control in industry, or to avoid mass unemployment.

(2) However insistent the demands of the mind and the spirit, there must be present a sufficiency of material resources, because human energy by itself is often insufficient, however stimulated and encouraged, to accomplish what is desired. The recognition of this is one of the most powerful forces influencing modern man and government to discover and exploit physical resources, with heavy reliance on governmental action to secure such an advance.

(3) An administrative machine is necessary to apply the initial energy and the resources to their particular ends. This machine consists of the organization and the men especially engaged in formulating in detail the vaguer general wishes of the population, in converting the detailed formulas thus established into regulations, and in applying these to affect human behavior. It must be capable of understanding the general purpose, and steadfast in realizing it; it must be competent to know when, and where, and how much, its activity is required, and zealous in application; it must be honest; and it must be sufficiently powerful.

These three factors of energy, administration, and resources are observable in all forms of state activity, and upon their quality and combination depends the success of the undertaking. At the margin, where these factors cannot be produced, state activity fails. We shall, in the analysis which follows, explore the conditions which mold these factors in their special form, but first we shall analyze the valuable qualities which make possible the power of the state.

## THE VALUABLE QUALITIES OF THE STATE

THE state is not necessarily or intrinsically abler for all things than other human groups or institutions. Statistics on the relative efficiency of state and private industry show, for example, that in various times and places the competition between them has been close (in such activities as telephones, telegraphs, railways, mining, and great hydroelectric schemes like the Tennessee Valley Authority). As a rule,

however, the state has certain qualities which bring it superior power. These are (1) age, (2) the vastness of ordered territory and institutions, and (3) stability and order.

*Age.* Age produces awe and veneration, and these, in turn, create a submissive, reverent, and obedient attitude; they stir inexplicable loyalties in the individual heart, and people are loath to destroy an ancient fabric, even though a new one is more useful and better satisfies the reason of their own day. In order that the ancestral temples, the quaint usages of their forefathers, and congenial memories and ceremonial may live on, they are reconciled to commands uttered in their name. When men say "the wisdom of our ancestors," the psychological emphasis is rather upon ancestors and ancestry than upon wisdom. Men will make sacrifices of energy and time for the modern state for the sake of its many generations, especially in time of war, but also in combating sedition or constitutional reform.

The interest of a generation does not cease with its regard for the past or for its own immediate comfort. The state is a continuing association. It is possible to appeal to men at work, and to appeal successfully, in the name of future generations. Some, indeed, find their own personal immortality in that of the state; others cannot deny the claims of their own children or those of their family in a wider sense, and they work to make the state a "better place" for them. To maintain the continuing association becomes so paramount a consideration with most men that they give money, energy, and obedience, and then regard the consequent burden as light in terms of the promised results. This is particularly true of war for the defense or increase of a country's dominions. Another aspect of it was interestingly observable in fascist Italy; almost the whole appeal to the people to suffer subordination and discipline was expressed in terms of the state's futurity, and the Corporative Constitution began: "The Italian Nation is an organism having ends, a life, and means superior in power and duration to the single individ-

uals or groups of individuals that compose it." Likewise in Nazi Germany the *Volk* and the race were manipulated to secure obedience, self-sacrifice, and abnegation, in view of the future of the *Reich*. The Soviet Union relies on much the same grounds for a considerable part of the obedience of its citizens in accepting basic conversion of the economy rather than plentiful consumption goods. They have even circulated the phrase that the present generation is "the manure of the future."

Democratic governments are equally influenced, except that their decisions between present and future are made by the developing choices of free citizens. Measures to defer consumption are not popular where they are severe, and democracies find it difficult though not impossible to entrust government with such powers. The keynote of such acquiescence is expressed in Burke's superb phrases:

Our political system is placed in a just correspondence and symmetry with the order of the world, and with the mode of existence decreed to a permanent body composed of transitory parts, wherein, by the disposition of a stupendous wisdom, moulding together the great mysterious incorporation of the human race, the whole, at one time, is never old, or middle-aged, or young, but in a condition of unchangeable constancy, moves on through the varied tenour of perpetual decay, fall, renovation, and progression.

Feelings like these are evoked in the majority of men and women by the modern state more than by any other institution of our day. There was a time when the churches lived by such sentiments and taught and succored the poor, as a result; and though those days have gone by, the churches seem to be entering into an era of knowledge of their application, through cooperation with the political parties of their choice. In virtue of these sentiments, the state acquires authority and power, for men will obey its commands when these things are recalled, though obedience might be otherwise distasteful.

*Vastness of Territory.* Then the state extends, as a rule, over a wider territory than other associations; it rules wherever

territorial extent of authority is technically essential to effective and economical operation. The state has an advantage and so is obeyed. For example, it proved impossible to induce the United States Congress to allow any private enterprise to acquire power over so large a territory (two thirds the size of England) as that required to develop the hydroelectric resources of the Tennessee Valley Authority, yet it was essential that the whole of that territory be administered under a single hydroelectric and agricultural plan if it was to yield its maximum values.<sup>1</sup> The same idea is valid for the transfer to government ownership and management of the British transport, electricity, gas industries and iron and steel.

*Stability and Order.* Finally, the state is embodied in institutions and forms which, more than any others, are identified with the supreme guarantee of stability and order over the centuries. Now, struggles have occurred to decide which, among all the possible millions of rules, should be established. But all people have found the need for security. Whatever men's ultimate values, all require at least some calculable basis. Suppose social activities and obligations were as unpredictable and as uncontrollable as the weather, and you would obtain some small forecast of the misery of men's lives. The weather does not matter very much, for all ordinary purposes, in a manufacturing country, but it means life and death to an agricultural people. And men in the past have been alternately so disappointed and so elated at the hazards of the harvests that they have attempted to reduce them to order by making the elements into gods to whom they pray and sacrifice.

Man has plotted out time itself and charted the minutes and the days. The moment man becomes dependent upon others, even in the slightest degree, and as soon as social expectations are established, an order must be maintained in the recording and valuation of time. Only the

<sup>1</sup> Cf. Herman Finer, *International Lessons of T.V.A.* (Montreal, 1944), and Herman Prichett, *The Tennessee Valley Authority* (Chapel Hill, 1943), Chap. I.

unsocial beings have no order in time, such as infants and artists and tramps. But all others are bound to fix time. So with all other aspects of human behavior: some things must be fixed in order to relieve men of worry and anxiety, to act as a set basis for all the superstructure of industry, religion, and family life, and to be a measure of values and power. Men cannot bear the stress of encountering the unfamiliar. This is, in fact, what makes people save instead of at once consuming all they produce. Order is therefore natural to human kind. The state is one of the many institutions created, in part deliberately and in part unconsciously, to obtain the benefits of order, and it offers these benefits over a wider extent of human contacts than does any other institution.

The more complex the industrial operations of any society, the more complicated and refined its wants; and, as in our own day, the more that men dread economic and spiritual insecurity, the more the dependence on government and even the support of centralization and executive stability.

Nor is this all. The aid of the state is called for because, though a large number of people might act simultaneously, continuously, and similarly for the attainment of a desirable end, yet without a pre-arranged rule, there is possible at any time either too much or too little effort to assure the object. The state is regularity and associated effort, and it thus overcomes the waste caused by people giving in the wrong proportion at the right time or in the right proportion at the wrong time. Further, the moods of men are changeable from day to day, and their passions function intermittently. Intermittency of passion and alternation of moods render a common rule and a special instrument indispensable. Hence the cry for the state, which is a cry for the imposition and common acceptance of a rule ultimately controlling behavior, to regulate passion, moods, and attention, and to direct and apply them to an associated purpose.

Two illustrations are of eminent interest for our time. First, it has been found

unwise to rely upon individual acts of charity for the maintenance of public assistance and hospital care, so that it has been necessary for governments to organize and subsidize care for the poor and the sick. Hence, the central government of unitary states and the states in federal governments have assumed the administration of an enormous apparatus of public charity. Our second example came into being because provision by individuals against their own misfortunes in unemployment and sickness cannot be perfectly relied upon; because, also, the consequences of their improvidence will affect others; and because, again, a large proportion of the population finds it difficult to save out of their small income. Therefore all states have established elaborate schemes of social security which are dependent on universal or almost universal compulsory coverage. The universal coverage produces marked economies in administration and through the effect of averaging the risk.<sup>2</sup>

#### THE CONDITIONS OF STATE ACTIVITY

AGE, vastness of territory, stability and order: these are the qualities of the state which bring it great potential powers. But if the state is to use that power effectively in acts of government—if it is to be successful in both politics and administration—certain conditions must be fulfilled. The first of these is the presence of social conviction.

*Social Conviction* shows its importance in several ways:

(1) Only a good society makes a good state. The State's activity is never much, if at all, better in quality than the morality, the wealth, and the knowledge of the individual and groups which form the state. It often happens that the best brains and characters in society do serve the state, but the number of such minds is small

<sup>2</sup> The best survey is Abraham Epstein's *Insecurity, a Challenge to America* (New York, 1938). Also very enlightening is the International Labor Office Report, No. 4, *Principles of Social Security* (May, 1944); cf. also William Beveridge, *Report on Social Insurance and Allied Services* (New York, 1943); United States Social Security Board, *Annual Report*, 1948.

compared with the aggregate which remains in private industry, science, education, the churches, and elsewhere. Generally there is no higher level, more often a lower level in the cabinets and legislatures; and the incentives of officials take their tone, too often, from the social circles from which they are recruited. Whether there shall be competence, justice, and generosity in the activity of the state depends on whether these things are already present in society, and the state has no special additional qualities better than the level attained by its environment. On the whole it may be said that the state is much better off now in this respect than in the past and becomes increasingly better, owing to the establishment of methods of training and discipline which are considered in the chapters relating to parties, which select legislators, and to the civil services.

(2) Social forces make state activity. The state does not become active unless there are individual and social forces moving towards this end: spiritual forces, that is, which are productive of community and association. These forces are of many kinds. It is not absolutely essential that the forces should be articulately expressed—it is enough if they are felt—but they must exist if the state is ever to become active. These are the moral ultimates of individuals and associations, and they determine the scope and the direction of their energy. It may be said that these ultimates are not moral, but physiological, being dependent in the last resort upon the physical composition of human beings. Be it so! But men have called these things God or the Devil. Every man is a fanatic about something; he is convinced that something is of higher moral value or God-value than all other things, and it is this fanaticism which, at a certain temperature, involves the association of others to secure its satisfaction and social realization.

Zealots believe themselves providentially appointed to undertake crusades, and they regard plain occurrences as divine intervention. The best contemporary example of this relates not to existing state activity but only to that which is advocated. The

most radical Bernard Shaw, the great divine, proposes the equalization of incomes. If the reasons for this reform are followed, step by step, back towards the ultimate moral basis, we arrive at the Life Force, that which is before reason and which causes us to choose and contrive. In *Man and Superman* his Don Juan exclaims that as long as he can conceive of some being better than himself, he is uneasy if he is not making efforts to open the way for it if not actually to create it. He was utterly at the mercy of this compulsion. Inside him the Life Force urged him on to become clearer-sighted, to more searching and comprehensive self-consciousness. After millions of years, of trial, this same Life Force had evolved the eye to enable human beings to progress by avoiding fatal dangers and exploiting things that could help them. Shaw's Don Juan held the religious faith that the Life Force was evolving a mind that, like the eye, could more clearly see the purpose of Life and so enable men to assist that purpose instead of obstructing it by shortsighted aims.

This Shavian ultimate finds its complex incarnation in concrete suggestions for the reform of human behavior and seeks to find its expression, if necessary, in the state. And so with two other such ultimates: the Nazi and the Soviet.

Hitler's first principle was *Deutschland über Alles*: it was the duty of the superior Nordic "race" to rule the entire world. Since the other great Nordic cultures—the Greek and Roman—had crumbled because of the addition of blood of alien people, the German state now had to maintain the purity of the German "race." It alone had physical and mental qualities of high enough caliber to be "culture-creative." Thus Hitler: <sup>3</sup>

What we see before us of human culture today, the results of art, science, and techniques, is almost exclusively the creative product of the Aryan. But just this fact admits of the not unfounded conclusion that he alone was the founder of higher humanity as a whole, thus the prototype of what we understand by

<sup>3</sup> *Mein Kampf* (New York, 1940), p. 398. Permission Houghton Mifflin.

the word 'man'. . . . Exclude him—and deep darkness will again fall upon the earth, perhaps even, after a few thousand years, human culture would perish and the world would turn into a desert.

Consequently, the Nazis established a pattern of world conquest to subordinate the inferior nations of the world.

The Soviet dictatorship has stressed the liquidation of classes, believing that as long as classes exist, unemployment and poverty are inevitable. The general principles of article 1 of the 1925 constitution of the Russian Socialist Federated Soviet Republic state its objective:

. . . to guarantee the dictatorship of the proletariat for the purpose of suppressing the bourgeoisie, of abolishing the exploitation of man by man, and of bringing about Communism, under which there will be neither division into classes nor state power.

And Chapter 1 of the constitution of the U.S.S.R. of 1936 redeclares the principle and reports progress.<sup>4</sup>

In the degree in which men are sanguine that their values should stand above all others, they will (like the Soviet rulers) force their rule on society through government by all means at their disposal, even the most violent and brutal. Even democracy once forced its own triumph by revolution, and in the last resort, contending with despotism, whether fascist or communist, it cannot be suicidal.

(3) Intensity of feeling creates activity. Now if the human and environmental forces operate at a certain pitch of intensity, there will be state activity whether the politicians and statesmen, all those officially occupied with politics, desire it or not. It depends upon the intensity of the feeling, and upon the insensitiveness of the official legislators, how long the transmutation of social forces into state activity can be retarded.

(4) Without social conviction the state fails. If the state undertakes any activity which is not based upon the necessary intensity of conviction in a sufficient number of people, it cannot be successful for long.

The duration of successful state activity depends upon the duration of the convictional energy nourishing it, and as conviction flags, state activity deteriorates. Thus, it may be possible to get almost perfect success for a time, when the people are excited, as in a war or after extraordinary events like earthquakes or epidemics or upon the accession to power of a man or woman whose personality is abnormally compelling. But eventually, such conviction, born of excitement, dies. Again and again, the Italian Fascist government complained that the Fascist party and administration were lukewarm and lax. And the speeches of Stalin and other Soviet leaders to the Russian Communist party are full of reproaches that the Plans are not fulfilled in quantity or quality, that managers show lack of initiative, and that the building of categories of administrators by efficient promotion is a failure as the result of slackness or favoritism. When conviction does not naturally reach an intense pitch, and when it is short-lived, successful state activity is impossible without a special process of stimulating feeling and spreading knowledge, the latter being frequently a means to the first.

Those most sensitive to these latent forces are obliged to stimulate them to a point which will produce activity. To this end they try to disengage the lineaments of the forces to be promoted or controlled. As the common phrase goes, they are obliged "to bring home" the matter to those who have the psychological and physical power at their disposal. This process of stimulation, otherwise known as propaganda, promotes the disposition to obey when the orders are given as soon as the "movement" is under way, and thereafter when a settled administration is established.

Democracy itself is kept alive only by constant demonstrations in its support; a high percentage of voters is maintained only by canvassing and propaganda. People are worried into keeping the nation healthy by meetings presided over by prominent persons and by "Health Weeks," and, even so, thousands of lives

<sup>4</sup> Cf. Ernest T. Simmons (ed.), *U.S.S.R., A Concise Handbook* (Cornell, 1947).

are lost in each month (especially in the United States) despite "Safety Weeks." For this process there is a technique which is appropriate to the psychology of the people to be convinced and is based on the apparatus of propaganda. Experience has shown that no great branch of state activity has been advocated or resisted without this technique's including an armory of lies. But the agitator and the zealot cannot perceive that their arguments are so exaggerated that the truth is continuously suppressed, while they stigmatize beyond the true limit the untruths of their opponents. So always and today in all political parties.

There is a relationship between propaganda and education, but those interested in education are really saying: "In my father's house are many mansions and you may choose whichever you wish to dwell in. I have truthfully described them all." The propagandist's doctrine is: "In my father's house there is only one mansion, and it is ruled not by my father but by myself: and, in fact, I am my own father!"

*Failing Conviction, Coercion and Reward.* If the state commences to act before sufficient feeling has been generated, and before knowledge has adequately been spread, or if it tries to act when conviction has dissolved, it cannot be successful save by special coercion or special rewards. It has to fine or imprison or sometimes even to kill the dissentients, lest conviction be further weakened by imitation, and in the case of the dissentients themselves, it has to compel behavior by sanctions other than the intrinsic value of the conviction itself. As a rule, the convinced are so enraptured by the importance of their conviction that they go to great lengths; they shame, bully, ostracize, and often torture and kill, in order to make others conform. Indeed, given the nature of man and society today, government is impossible without some incidental violence. Thus, in the Nazi state, coercion was, and in the Soviet state is, used crushingly to the uttermost; the Gestapo in the one and the N.K.V.D. and "forced labor" camps in the other are the most conspicuous sign of homicide as

government.<sup>5</sup> In democracies there is still some coercion, but it is drastically limited. Theory does not condone it, and institutions reduce both its necessity and prevalence. In order to mitigate the pains of unconvinced obedience and yet obtain success, the state has often had to organize the education of its citizens by formal public teaching, and by the issue of proclamations, preambles to laws, instructions on official forms and cards, and detailed memoranda and orders to local governing bodies. Indeed, within the last quarter-century, the problem of public relations has become outstanding in public administration, and all governments are now equipped very elaborately "to project" to their citizens the nature of the work they are doing.<sup>6</sup>

*Material Resources the Sinews of the State.* If the factors already indicated are present in society, the state may still not be successful unless there are available for it the appropriate material resources. There is rarely an activity of the state which does not require material resources for its support, and this may mean one of two things, or both of them: either (1) there must be an adjustment of the constituents of expenditure, less being spent on other things in order to make a fund for the new; or (2) a greater aggregate amount must be somehow produced in order to pay for the new activity and yet maintain the other lines of expenditure unimpaired. In the former case, the material sacrifice will lie in the decrease of other satisfactions; in the latter case, in the need to work harder to produce more. We may be asked to spend less in our own spontaneous way in order that something called

<sup>5</sup> Cf. David Dallin, *The Real Soviet Russia*, 2nd edition (New Haven, 1946); John Fisher, *Why They Behave Like Russians* (New York, 1947).

<sup>6</sup> James L. McCamy, *Government Publicity* (Chicago, 1939); Francis Williams, *Parliament, Press and Public* (London, 1946). It is not surprising that in fascist Italy and Nazi Germany (and still in the U.S.S.R.) this instructional or propagandist function of government was carried to the highest degree and was, of course, concentrated in various government offices or the parallel organizations of the one political party allowed to operate.

the Empire or the Commonwealth or the Republic or the Soviet State may flourish or be better prepared for war. The normal way adopted by the modern state to bear the burden is to tax—that is, to deprive us of part of our material resources. But this is not the only way in which members of the state are made to bear material burdens; for every activity of the state, even when there is no direct visible tax, alters economic conditions to the advantage of some and to the disadvantage of others. The tax, if we care to use that term, exists though it is not visible. The question is, can we, and will we if we can, give up other satisfactions for the satisfaction the state is to afford by its activity?

This question applies to democratic states, in which to a very large degree private enterprise and private property still prevail. In the Soviet Union practically all property and enterprise are under public ownership and management, and the decision is made by the central planning body as part of the annual or quinquennial arrangements of production. The quantities and qualities of goods and services to be produced by authority impose directly the material burdens the citizens must bear. The ability of the rulers to coerce the citizens is almost absolute.

The activity which demands more than the utmost amount possessed or borrowable must obviously fall short of perfection. Yet there are schemes of state activity occasionally suggested which are seen to depend for their efficacy upon more than society possesses or can acquire. But it is also true that some schemes, like the nationalization of railways or mines or hydroelectric power or housing or medical service, might cause an increase of the available resources. This is the uttermost limit of success which depends upon material resources. Further, society may desire not one but a number of state activities. In such a case, the resources to be spent upon any one activity are limited by the demand for resources for others, and this means that the success of one activity is limited by the intention to secure success in others. Those states are in the aggregate most capable where resources have been

carefully portioned among the whole series of desires.

*Definition of Purpose.* Given conviction, coercion, and resources, success is attainable only in proportion to the clarity and precision with which the purpose of the activity is defined. The appropriate machinery and expenditure cannot be devised unless the aim is clearly defined; and the enterprise of officials either goes beyond the purpose or is stultified by uncertainty. In the modern state the following authorities are responsible for definition: the groups which advocate the purpose; the public, which is canvassed for its support; political parties, which organize the electorate and offer them satisfaction in return for votes; the legislative bodies, which discuss the proposal with more detail and state the intention in law; the cabinet, which initiates and guides this discussion; the technical experts like the civil service and special commissions of inquiry and official planning agents, who bring exactly recorded science to the solution of problems where these are soluble only by such application; and the civil service and courts of law, who must interpret the purpose in its relation to specific cases. If these define and fix the purpose well, state activity is successful; if not, their shortcomings are translated into its failure through confusion, ambiguity, inconsistency, vagueness regarding who is responsible, and so on.

*The Executive Apparatus.* Nor is this all. The state must have at hand an executive machine. It must solve the problems of (1) its personnel, (2) its technical apparatus, and (3) its territory.<sup>7</sup>

(1) It must secure officials sufficient in

<sup>7</sup> Cf. Dwight Waldo, *The Administrative State* (New York, 1948), for an uncommonly gifted treatment. Cf. also John M. Gaus, *Reflections on Administration* (Alabama, 1947); Woodrow Wilson, "The Study of Administration," *Political Science Quarterly*, 1941, pp. 481 ff. (a reprint from 1887); Leonard D. White, *The Federalists* (New York, 1948); and, currently, the journals *Public Administration Review* (Chicago) and *Public Administration* (London); Francis Hekking, *Reflexions sur la Mécanique Administrative* (New York, 1943) and *Point d'Administration, Point de France* (New York, 1944).

## THE CONDITIONS OF STATE ACTIVITY

zeal, honesty, knowledge, and numbers, and it must establish material and spiritual rewards which will produce the qualities needed when they are not spontaneously available. Now, there are not many men or women in the world who have the ability to fulfil the extraordinary demands of the difficult offices; or, again, other satisfactions may pre-empt their energies. This is true of every branch of administration, and of all arts, crafts, and sciences. While we recognize in everyday life the truth that the world is a place in which the average of ability is low, and that genius is rare, we seem to expect more of these qualities in state activity than elsewhere, or, at least, we tend to expect such a quality of enterprise by the state that more genius than the world's actual supply would be required to produce it. It should not be forgotten, however, that there is no reason to expect more ability in the private administration of business than in public administration.

The great administrators have recognized the need of making their colleagues and subordinates in their own image, by embodying the results of their own inspiration in rules, and of adapting rewards and punishments to the incitement of those whose natures are unprompted by a native and undying flame. For it may happen that even a Hitler, a Mussolini, a Lenin, or a Stalin cannot transfer to his immediate followers, still less to the millions of average people throughout the territory, the intensity of his own convictions and the corresponding incessant devotion and activity necessary to their fulfillment.

Every activity requires its special technique, and the success of the administrator depends upon its possession. To secure the success of state activity, the same rule must be followed as in any other individual or social activity, officials who have the necessary technique or the capacity to acquire it must be appointed. It would not be necessary to insist upon this quite simple truth if it were not that the generality of mankind talk as if they believe that government is exempted from submission to this rule, and as if rulers had not for

centuries attempted to get along with friends, relations, kinsmen, coreligionists, or class comrades, instead of simply, with the able.

(2) The state must acquire the appropriate apparatus to overcome distance, time, force, and gravity—it must climb mountains, cross seas, receive and send messages, overtake runaway offenders, install natural-science laboratories and telephones, provide guns, organize armies, and shout with a radio voice.

(3) The state must properly dispose its officers, and distribute its powers territorially, at the center and at the extremities. Moreover, this machine must be properly adjusted to the organs of public opinion and lawmaking, in order that they shall propel and control it and that it shall be able to serve them with technical skill. The organization of public opinion and legislation themselves need to be delicately responsive, wise, and dutiful. The appropriate form of administrative arrangements for each activity, and their relationship to other parts of a system, require exceedingly subtle judgment for success.

*Wholesale Administration and Efficiency.* Finally, when all this is at hand, there is still a possible defect in the perfect scheme. Where all-inclusiveness is an essential condition of success, the state may not be able to treat every case upon its individual merits, making allowances for idiosyncrasies, aberrations, and abnormality. It may have to operate by one rule which, though it elevates the nature of the subnormal, incidentally wounds the feelings and depreciates the morality of citizens of average or more than average standard. For though size is essential to success and yields grand benefits, it has inherent possibilities of occasional maladministration. This has been seen where, in the large number of the social services the state has taken over, the responsibility was formerly fulfilled by voluntary societies—education or unemployment compensation, for example.

Yet, in the end, even these dangers may be avoided by devising a machine of the appropriate complexity and sensitiveness.

*The Distant Result and the Immediate Success.* Still there may be unexpected and unwanted effects of state activity, due to the imperfect prescience of mankind, so that its relative value may be much less than its immediate face value because it is being bought with costs which, though not immediately visible, are nevertheless expensive in the long run. For example, the imposition of uniformity of religious behavior in Spain through the Inquisition contributed to Spain's economic impoverishment, to the loss of its world status, and to the stifling of its scientific development. The mercantile system helped to impoverish and disaffect Ireland in the British Common-

wealth, and partly caused the American secession. The Prohibition laws in the United States were put into execution at the cost of the creation of habits of violence and disrespect for law and majority rule. Social welfare administered by the state and paid for from taxation may sap individual enterprise and thrift if the known safeguards are omitted for the small proportion which investigation shows to be lax. The institution of measures to secure full employment must have some limiting effect upon certain civic liberties; the balance must be struck.

These large problems always lie in the background of state activity and ought to be counted in among its conditions.

*Federalism: Germany: 1918-39*

Yet this objection which the men of democracies make to forms is the very thing which renders forms so useful to freedom; for their chief merit is to serve as a barrier between the strong and the weak, the ruler and the people, to retard the one, and give the other time to look about him. Forms become more necessary in proportion as the government becomes more active and more powerful, whilst private persons are becoming more indolent and more feeble.

—DE TOCQUEVILLE

When we are dealing with words that are also a constituent act, like the Constitution of the United States, we must realize that they have called into life a being the development of which could not have been foreseen completely

by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in the light of our whole experience and not merely in that of what was said a hundred years ago.—J U S T I C E

## *Forms of Government, Especially Democracy*

### THE DEMOCRATIC SPIRIT

WE have seen that the state may be expressed in many activities and operate in many diverse forms; and also that the success of the activity depends upon the appropriateness of the mechanism to the purposes sought. In the countries which concern us, the social power relationship has embodied itself in a general form of the state called *democracy*. But this term, literally, conveys no more—but no less—than that government is, or ought to be, carried on *by the people*. “Democracy” has come to mean so many different things, some very hostile to each other, that it needs careful analysis if misunderstanding and idle controversies are to be avoided, and if the possible and quite legitimate differences of connotation and its very varied institutional arrangements are to be revealed. We intend to deal with the subject only generally and briefly, for the particulars are considered in subsequent chapters; and some, indeed, we have already casually described.

Political science has, since the earliest times, occupied itself with attempts to classify the forms of government, but to little purpose. For the facts to be classified were too many and too diversely combined to allow of a few simple and informative categories. Thinkers have, indeed, been sorely exercised by a difficulty which leaps to the eye: are we to classify upon the basis of the *legal* residence of authority, or upon our judgment of the *actual*

sources of power; and, whatever our decision, are we to qualify our classification by consideration of the actual manner, the purpose, and the temper of the governors? For example, is an intolerant exercise of power by the majority to be considered as democratic government? Such a difficulty already assailed Aristotle, for he thought it insufficient to say simply that the forms of government were three, monarchy, aristocracy, and the city or polity. He felt that he must go on to say that monarchy is tyranny, aristocracy is oligarchy, and the city is a democracy, when the purpose, instead of being the benefit of the whole community, is that of the individual, or the few, or the many, respectively. Hobbes thought this improper and wished to exclude the question of purpose and temper from the definition.<sup>1</sup> That difficulty has dogged political science throughout the centuries, and there are many to-day who urge that Rousseau, the great prophet of the sovereignty of the people, is no democrat but a pre-Fascist or pre-Nazi because there were no limits to the associated authority of this democracy over the individual!

We need not insist upon a consummate classification. It is enough if we know that such have been attempted and that they

<sup>1</sup> Cf. *Leviathan*, Chap. XIX: “There be other names of Government, in the Histories, and books of policy: as *Tyranny* and *Oligarchy*: But they are not the names of other *Formes* of Government, but of the same *Formes* misliked. . . .”

are not of much value owing to the different personal prejudices which have gone to their construction. Enough, also, if we remember that no monarchy or dictatorship has been allowed to govern, excepting *de facto*, for a short span of time (until some, or the majority, of the citizens have discovered the threat to their interests or beliefs), without the cooperation, control, or passive consent of the few rich or of the able or of the many poor.<sup>2</sup> An enormous apparatus of force had to be used by the fascist states and is still maintained by the Soviet government. Enough, again, if we recognize that the purpose of the governors and the consequences of their rule have ever been of the essence of the definition and title of the form of government, and that its mere machinery, ruled by one, or by an aristocratic council, or by all, has hardly ever been considered enough to deserve the name of government.<sup>3</sup>

*Democracy as a Doctrine of Protest.* Accordingly, democrats are united in principle but divided on most details. They were and are united in a negation: that is, in their antagonism to arbitrary government by a monarch or a very few. Positive proposals, however, find them widely divided; for some desire no government at all,<sup>4</sup> while the bulk, who admit the necessity of some degree of government, offer a large variety of solutions and patterns: ranging from the Whig ideal of a balance of authority and power between kings and lords and middle classes, to the German *Rechtsstaat* (explained below, Chap. 36), to the queer, alleged "democracy" of the Russian Soviet system.

The truth is that European monarchy was attacked and overcome by hosts who kept a rendezvous with different motives and aspirations. The task accomplished,

the original interests continued to assert themselves, others arose by the way, and the machinery of each new government was cast in a mold fashioned by the peculiar and complex forces of those interests. These values were different; they are different; and they continue to differ; and since this is so, democratic institutions, hopes, and principles of criticism are necessarily of many kinds, so that democrats sometimes seem to each other either stupid or malevolent.<sup>5</sup> Yet all are right, granted their spiritual point of departure; and we must examine the phases of that process which has its end in democratic institutions and the democratic temper. We must find the ultimate spiritual values sought by democrats, the concrete social and economic changes demanded in the name of democracy, and the resultant machinery of government.

*Liberty as an Ideal versus other Ideals.* For the sake of convenient exposition, as also because the division corresponds broadly to the facts, I divide democrats into those who seek liberty as the main end of government, and those who seek other values, like equality, which have seemed to require the democratic form to produce them. If we follow out the meaning of these ideals from their origin, we shall find that quite different forms of government result from each. The ideal of liberal democracy is expressed in a variety of familiar phrases, such as "Just government is government by consent of the governed," or "Self-government," and it implies, in the works of various authors, voluntary association for unhindered establishment and operation of political parties, freedom of opinion, the subjection of government to popular control, the limitation of the sphere of government, and the universal possibility of active participation in the process of government. Essentially what is sought is, for its own sake, the possibility of unhindered initiative and self-developing enterprise, and an

<sup>2</sup> Cf. David Hume, *Essays* (London, 1875), Vol. I, Part I, Essay IV; A. V. Dicey, *The Relations between Law and Public Opinion in England* (London, 1905), Lecture I.

<sup>3</sup> Cf. James Bryce, *Modern Democracies* (New York, 1921), Vol. I, p. 176. De Tocqueville defines the form of government by reference to its temper. Montesquieu also defines by temper as well as by machinery.

<sup>4</sup> Cf. Kropotkin, *Mutual Aid* (London, 1904).

<sup>5</sup> For example, in the controversies regarding proportional representation and in the controversies between the Bolsheviks and the milder schools of socialism. Cf. Leon Trotsky, *Where is Britain Going?* (London, 1926).

element, more or less large, but self-determining, of dissociation from the groups who make and control the state: a No-State Land. In proportion as men have wanted this, for itself and for its unbounded inherent possibilities, they have insisted on those institutions, and those alone, which offer the measure of that liberty, and their central purpose has been to contrive limits to governmental action. They were not insistent upon universal franchise, provided there were a large enough measure of popular control to make government responsible; they did not press for *direct*, but only for *representative*, government; and it was enough if representatives were but generally and not minutely bound to follow their constituents.

Yet this ideal was never held for long by any man or class without other aspirations crossing it, which decelerated and deflected its original urge. Humanitarian feeling, patriotism, and loyalty to one's social circle shaped and limited the expression of the ideal, so that to the middle classes of the nineteenth century it was enough if such liberty were theirs and not the laborers', while in Russia since 1917, liberty is conceived as proper for rulers but not for middle-class businessman, free labor, or peasant.<sup>6</sup> In other words, the ideal was not and never is quite disinterested. It has been evolved, and is still in evolution, under the pressure of one class after another, each of which reinforces the assault upon sovereign power. Those who have been utterly convinced of the supreme value of liberty have been ready to take grave risks on its account; like Kant<sup>7</sup> and Herbert Spencer they have contemplated the prospect of misery and death, in the faith that human perfection would ultimately result. For what might come upon that upward path—oppression,

social inequality, and generations of human cruelty—they had small regard; they looked to the end, and believed that it would be so good that the rest must be stoically accepted. Such thinkers necessarily conflict with others who seek some such immediate good as economic equality, or what has been called a "democratic society," in which class privileges and distinctions have been abolished or murderously kept suppressed.

*Passion in Government.* Liberty, in short, is claimed by some on its own account, while to others it is a means to some other end. The end determines the means, and the end has not always been such as to produce democratic or freer institutions in the sense we have already assigned to them. The service of God in Calvin's sense, for example, required freedom of the church from the commands of the state, and was, therefore, in a sense democratic; it also required democracy within the church. Yet so passionate a conviction was expressed in the importance of deeds and of obedience to God, that government was supremely necessary to enforce them, and the civil authority was required to be very severe in its support of a comprehensive theocratic regimentation of transgressors. Not only at Geneva but in Boston, these very postulates formed the basis of veritable tyrannies, though the rulers (like John Cotton) governed for the good of the people. Calvinism gave birth to theocracy, the rule of the godly, and not to democracy, which came later with the tide of revolutionary feeling against Britain. For, ultimately, the Old Testament taught that only the elect are saved and the rest are damned; it inverted the order which really urges men to demand freedom, for it asserted predetermination and therefore excluded perfectibility, and if men are slaves of the Supreme Will and not masters of their own fate, what basis remains for a doctrine of political self-determination? Again, the ultimate moving force of Rousseau's faith was hatred of oppression, and therefore of economic inequality, and thus the belief that to secure harmonious, unoppressive, and "natural" civilization, economic equality was

<sup>6</sup> Cf. F. R. Schlesinger, *Soviet Legal Theory* (London, 1943); Sidney and Beatrice Webb, *Soviet Communism* (London, 1941), 2 vols.; J. Towster, *Political Control in the U.S.S.R.* (New York, 1948); Andrei Y. Vyshinsky, *The Law of the Soviet State* (New York, 1948).

<sup>7</sup> *Principles of Politics*, ed. and trans. by W. Hastie (Edinburgh, 1891), Essay I, "The Natural Principle of the Political Order."

essential.<sup>8</sup> His democracy was made for this purpose, but to level men requires a mighty force, and this clearly threatened his freedom. Hence Rousseau's institutions culminated in the unqualified rule of the majority, with a perfect, unlimited sovereignty,<sup>9</sup> carried out by representatives who were strictly accountable mandatories of the people and intolerant of any gospel which conflicted with the end of the state as declared by the majority. Equality may be the result, but the liberty sought by Humboldt, Kant, Jefferson, de Tocqueville, and Mill is abolished unless men should, from that very equality, once more learn liberty's allurements.

*Patience and Impatience in Government.* We have arrived at the essence of the differences among those who say they hold the democratic faith, and who yet diverge at once when they propose or actually establish their institutions. The essence of the difference lies in two things: (1) the compatibility of the interests pursued with government by consent of all, and (2) the patience and toleration of those who govern (and let us always think not in terms of the government, but in terms of the individuals and groups who ultimately govern). The nature of the end of government may be such as to exclude such corollaries of the ideal of liberty as a limited sphere of government, freedom of opinion, meeting, and association, and dependence of government upon universal suffrage. These may not be altogether excluded; they may be qualified in various degrees. Thus when intoxicating liquors are prohibited, liberty is partially extinguished; no tuberculosis or diphtheria "contact," perfectly detected, can legally avoid quarantine; the parliamentary system can be maintained only if members limit their powers of invective and denun-

ciation. In fact, examination of the tenets of various groups and classes who have demanded democracy reveals that their notion is largely (not wholly) the product of their values: they are willing to go to the margin needed to satisfy these and no further.<sup>10</sup> So much freedom, and freedom for such and such groups; beyond that, arguments are discovered to prove the unfitness of others to govern.

Further, and this seems to be the cause of modern anxiety regarding democracy, the governors or would-be governors or social philosophers urgently, passionately, immediately demand vast reforms. The inevitable result is to override the very things which democratic theorists, who regarded liberty as their principal purpose, have held to be the essence of the democratic faith: namely, government by discussion (that is, persuasion of the governed), and gradual concessions by the governing groups to the governed, with toleration for minorities, localities, and the individual and with a tender regard for conscience and property. Often between 1919 and the aftermath of World War II, men have been faced with the alternatives of a job or democracy.

Modern states are actually faced by this formidable task: to secure speedily, and thereafter to maintain, a number of reforms in the direction of greater economic and social equality, while excluding coercion and certainly bloodshed, and while still maintaining democratic institutions. There is the stress and strain.

*The Social Contract.* The roots of modern democracy lie in the Protestant Reformation of the sixteenth century, in the New Learning begun in Italy, in economic changes, and in geographical discoveries. The New Learning awakened the critical spirit by offering men the political models of classical antiquity with which to compare and condemn their own system, while scientific discoveries, if they did not yet make the old cosmogony and its religious superstructures quite unten-

<sup>8</sup> E. H. Wright, *The Meaning of Rousseau* (London, 1929).

<sup>9</sup> I am willing to allow that Rousseau was uncertain of this; but I would urge that the uncertainty arose from the desire to have the best both of the world of equality and the world of freedom without the surrender of the necessary hostages. Generous and emotional people often talk and write in this way; they are much more generous than Nature.

<sup>10</sup> For example, in France before the Revolution of 1818—the *pays legal*. Cf. Lowes Dickinson, *Revolution and Reaction in Modern France*, 2nd edition (London, 1927), p. 116.

able, at least raised doubts.<sup>11</sup> Economic changes, caused partly by catastrophes and partly by new agricultural and commercial pursuits, changed the balance of property. Geographical discoveries brought knowledge (or legends) of other civilizations, offered new outlets for adventurous energy, and set men marveling and thinking. The old certitude—incorporated in religious and social myths and popular ways, and thence subservient to government—was gone. Europe was dowered with Bibles in a tongue which the crowd could understand, and men like Erasmus, Luther, and Calvin thundered not only at ancient religious institutions—which were then almost indistinguishable from the other arm of society, kings and princes—but at beliefs.

The political essence of the Reformation was, on Luther's side, the equal worth of all Christians (not "all men"), the unique value of their individual consciences, and the freedom of the religious conscience and behavior from the dictates of the secular prince.<sup>12</sup> Calvin reinforced the doctrines of the priesthood of the laity, went some way toward government of the church and of the state (which in Geneva was only another aspect of the church) by a representative council of the more considerable of the citizens, and returned again and again to the theme of men united with each other and with God by a covenant. Here were all the materials of democracy: government by the people, because (quoting from various of Luther's tracts) each believer was "spiritually lord of all" and "faith is a voluntary matter which cannot be forced" by any one else, for "neither Pope nor Bishop nor any man has a right to dictate even a syllable

to the Christian without his own consent" and for the people but (in a Christian way), for "we may not become the servants of men." And what was the quintessence of the freedom of Christian men, the spiritual value behind all? It was the uncompromising, absolute conviction that since only the individual person can discover the meaning of existence, he ought to be free to live it, for his "inward sense of judging concerning doctrine is a sense which, though it cannot be proved, is nevertheless absolutely certain." I should rather say that precisely *because* it cannot be ultimately proved or disproved in any one, or by any one, it is accepted by the democrat to be as certain as any other person's "inward sense of judging."<sup>13</sup>

*The Democratic Temper.* This attitude may have either of two results according to the temper of the person: absolute certainty may lead to an attempt to impose it upon others, or it may lead to readiness to accept another's truth to be as good as his own, and therefore to enter into community, so far as it is possible, to secure a reconciliation.<sup>14</sup> The Certain have, in the flame of righteous indignation, created marvelous things, and they have broken states into bloody fragments (for example, in the American Civil War and the Russian Revolution of 1917) and have violently and remorselessly taken life. The Patient have maintained peace, harmony, and unity, but in so doing they have annihilated incongruous (perhaps creative) emotions, beliefs, and hopes. The one has caused battles between men; the second, battles of will within them. One may eradicate more than it intends; the other may kill, by its gradualness, the things whose survival and development it desires. This contrast of temper always arises, even on the rare occasions when men are unanimous as to their destination. Thus the democratic form of government—the simple idea of government by the people

<sup>11</sup> Cf. Jacob Burckhardt, *Civilization of The Renaissance in Italy* (London, 1945); H. O. Taylor, *Thought and Expression in the Sixteenth Century* (New York, 1920); W. E. Lecky, *History of the Rise and Influence of Rationalism in Europe* (London, 1865); A. Wolf, *History of Science, Technology and Philosophy in 16th and 17th Centuries* (London, 1935).

<sup>12</sup> Cf. James Mackinnon, *Luther and the Reformation* (London, 1927-30), 4 vols. I do not forget Luther's part in the peasants' rising, or his hostility to the Anabaptists. He discriminated; but the people did not.

<sup>13</sup> On the political theories of Calvinists, see H. D. Foster, "Political Theories of the Calvinists before Exodus to America," *American Historical Review*, XXI, 481-503.

<sup>14</sup> Cf. R. B. Perry, *Puritanism and Democracy* (New York, 1944).

—is expressible in many different and complex ways. Let us remember, too, that the realization that life is short may have, broadly, one of two effects, according to the temperament: it may make men so impatient for reform and advancement that they even include assassination in their policy; it may cause resignation and a patient contemplative pity for the race of men and women condemned, alas, so soon to perish, while all is vanity.

Perhaps the best illustration of the difference of temper is to be found in the constitutional conflict of the seventeenth century in Britain, of which American development was a beneficiary as well as being a contributor (in the eighteenth century). The constitutional conflict began as a religious conflict between Nonconformist sects and the Crown as the head of the Church of England. But gradually there entered into that conflict considerations of taxation and property which sharpened the desire for control of the executive, and ultimately, the people who lent force to the claims of the parliamentary leaders, began to demand power for the common people. Though all professed much the same religion, and were brothers in arms to maintain the covenant of God, as soon as the question of the distribution of political power was raised, those who now represented the established and prosperous order—the middle- and upper-class landowners—were quick to detect and rebut the implications of complete democracy. The classic discussion of 1647 between Ireton and Cromwell and the representatives of the common soldiers of the army—the Levellers—reveals the effect upon democratic institutions of different tempers and aspirations. Broadly speaking, the soldiers (represented by John Wildman and Colonel Rainborow) maintained that the battle was “not to be enslaved”; Ireton that it was “against despotism,” and Cromwell that it was for the “equality of consciences.” The difference between the first and the latter two is vital, for the first meant abolition of enslavement of all kinds, political and economic, while Ireton’s demand was consistent with the mere establishment of

safeguards which would certainly redound to the religious advantage of everybody, but would redound more to the economic advantage of the prosperous than of the poor. Cromwell’s formula was certainly a sound answer to royal pretensions and would make for some popular participation in government, but if consciences were equal, then those who possessed had an equal right to continue in possession, and the poor had not a better right to dispossess them.

The soldiers attempted, as almost all radical democrats have done (and, indeed, as almost all rebellious people, even the rich and powerful, do), to avoid the argument from the social consequences, and to insist only upon the argument from natural right—that is from the assumption that civil institutions did not yet exist—and that a primal sense of justice was consciously a political constitution for society. This way led to universal suffrage in the interests of the people.

To this Ireton replied, fundamentally, that he meant to enjoy his own property and to safeguard the institution in general. To this end only those with some property—a forty-shilling freehold, for example—not being domestics or servants of others, should be permitted to vote, for these alone could have an independent political opinion and a permanent “interest” in the country’s welfare. But, to him, a kind of liberty was paramount even to property—“a peaceable spirit which is suitable to the Gospel,” a “Kingdom wherein I may live in godliness, and honesty, and peace and quietnesse.” For these things he would yield his property, if all others desired it.

The ultimate issue then was this: should we move all at once from one constitution to another, on the passionate convictions of some men, or remain under the old state on the equally passionate convictions of others? Where was the spirit of God?—with the former or the latter? There was suffering either way if it were entered upon without regard for the other; for the first must cause the disruption of society as it was, and the second the continued misery of the poor,

The solution is that if national existence, the continuance of the sense of political community, is desired, the temper of both parties must be qualified by the recognition that the truth does not rest with either party, but in all together. God, Truth or the Ultimate Good, is discovered only in the assemblage of unique qualities in all persons. There is the ultimate axiom of the democratic system, for, men being different, conflict (perhaps breakdown) is inevitable if the temper or the intellect of self-governing individuals is permitted to work unhindered by conscious regard for, or partnership with, others.

Both Ireton and Cromwell—not uninfluenced, I think, by their social and economic position—urged this theory. Ireton said: "I thinke every Christian ought to beare that spirit in him, that he will nott make a publike disturbance uppon a private prejudice." <sup>15</sup> Cromwell constantly intervened in debate to urge the cultivation of "a uniting spirit." <sup>16</sup> and when matters reached a point when it was decided that an adjournment for prayer might result in the return of the delegates with a fresh and more conciliatory idea of God's will, Cromwell asked "that they should nott meete as two contrary parties, butt as some desirous to satisfie or convince each other." That, experience has since taught, is the essential principle of democratic government by the party system. Cromwell pierces even further into the psychology of practicable democracy. True it is that God may speak through any man, high or low: "I know a man may answer all difficulties with faith, and faith will answer all difficulties really where it is." Yet there must be pause, for "we are very apt all of us to call that faith which perhaps may be but carnall imagination and carnall reasonings." <sup>17</sup> Difficulties must be considered. If any one is at liberty to produce his scheme of a constitution

founded upon natural right, "and not onely another, and another, butt many of this kinde, and if soe, what doe you think the consequence of that would bee? Would it not bee confusion? Would itt nott be utter confusion?" <sup>18</sup>

More, who knows God but all? Not *each*, let the term be marked, but *all*!

Nol though we must watch for the manifestation of God in ourselves—and God is that which must move the conscience after earnest rational consideration <sup>19</sup>—we must beware lest we act precipitately. "I would wee should all take heede of mentioning our owne thought and conceptions with that which is of God." <sup>20</sup>

These two things are needful: (1) a tolerant watchfulness for the godliness in others, mixed with a strict interrogation of what wells up from our own inwardness; and (2) a disposition to live peaceably together. That is, there must be a readiness to create and utter the result of our creation—no passivity—and also a censorship of our own and other men's conceptions; and further, no temper of disunion.

Yet all men optimistically believe that their perception of God, or the Good, or the Best Self is a satisfactory dispensation for all. Wildman was as sure as Cromwell, and Lenin, the despotic Socialist, as Karl Kautsky, the democratic Socialist. And, thus, Cromwell asserts that God is not the author of contradictions, that these are more as to means than ends.

Even these optimistic beliefs, however, are proven wrong by daily experience, and democratic institutions become properly a compromise, with considerable conflict and suffering, between them all; for however sternly we restrain the impulses in us, which we call God, some of it will out—as in Cromwell's theses—in its own pristine character. The full impulse of the democratic temper might disrupt society; and to the extent that peace is desired, men produce liberalism by reducing democracy. This purpose has had to come about by the creation of institutions of restraint because men have not yet

<sup>15</sup> C. H. Firth, *Clarke Papers* (London, 1891), p. 324.

<sup>16</sup> *Ibid.*, p. 250.

<sup>17</sup> *Ibid.*, p. 238. Cf. a similar train of reasoning in Junius Brutus, *Vindiciae contra Tyrannos*, historical introduction by H. J. Laski (London, 1924), p. 112.

<sup>18</sup> *Clarke Papers*, p. 237.

<sup>19</sup> Hegel's doctrine is similar.

<sup>20</sup> *Clarke Papers*, p. 378.

learned enough, or deliberately do not choose, to set up the restraints within themselves. Democracy might operate perfectly if the condition laid down by Cromwell for satisfactory discussion were present:

that wee may all of us soe demeanne ourselves in this businesse that wee speake those thinges that tend to the uniting of us, and that we none of us exercise our parts to straine thinges, and to lett thinges to a longe dispute, or to unnecessary contradictions, or to the stirring uppe of any such seede of dissatisfaction in one another's mindes as may in the least render us unsatisfied one in another. I doe not speake this that anybody does doe itt, butt I say this ought to *become* both you and mee, that wee soe speake and act as that the end may be unison and a right understanding one with another.<sup>21</sup>

In proportion as this spirit does not exist, in proportion as it cannot exist owing to uncontrollable impulses in man's thought and behavior, a democratic form of government cannot but be turbulent, intolerant, violent.<sup>22</sup> The less passionate, willful, and fanatical reformers have recognized this, and have in the last two hundred years postulated certain institutions to act as restraints until the time shall come—if ever it does—when by some means, individual self-control shall be a sufficient guarantee of social creativeness and the satisfaction of appetites and interests, by the method of peaceful discussion.<sup>23</sup>

We shall now indicate briefly the fundamental spiritual impulses toward democratic government, the groups of people interested in this form of government, and the various devices suggested as proper to it.

*The Spiritual Impulses.* We have al-

ready spoken of the changes in the fifteenth and sixteenth centuries contributing to a movement of revolt against authority and to an assertion of individuality. It is interesting to search out what it was believed this liberty would produce, and we may do it by exploring the works of those who have contributed to the democratic tradition. Two things, to begin with, are clear. *First*, the great theorists took certain claims for granted, not seeking to justify them, perhaps because they were considered sufficiently ultimate as values to be impossible of justification. The spirit of this I think, is rather what one finds in such a passage from John Locke's *On Civil Government*: "Since a rational creature cannot be supposed, when free, to put himself into subjection to another for his own harm. . . .";<sup>24</sup> Consequently, only a bald statement, without psychological analysis, is made.

*Secondly*, the values were stated by people who, as a rule, were not in authority but fighting against it, and were therefore obliged to discover or invent some rule to justify their revolt and their positive claims. Or they were people who had acquired authority so recently, and usually by battle, that they still had to continue to encourage themselves and their followers. Once the battle for democracy was substantially won, as by the 1830's, even those—I might say, especially those—who were already in possession of its benefits and whose social predecessors battled in original terms, because, as it were, revisionists. That is, finding, like de Tocqueville, that liberty had not come with democracy but was actually threatened by it, they claimed safeguards against the product they had conjured up—impediments to produce *liberal* democracy. Thus, not all the views we shall presently read led necessarily to government of the people by the people for the people; to that they led only when the grouping of society, the character of its activities and its temper, were propitious.

*Third*, almost all felt resentment

<sup>21</sup> *Ibid.*, p. 201.

<sup>22</sup> Cf. Harrington, *The Commonwealth of Oceana* (edition of 1887), p. 67: "To the commonwealthsman I have no more to say, but that if he excludes any party, he is not truly such; nor shall ever found a commonwealth upon the natural principle of the same, which is justice . . ." etc.

<sup>23</sup> Ireton, as in G. P. Gooch, *English Democratic Ideas in the Seventeenth Century* (edition of 1927), pp. 139, 140.

<sup>24</sup> Book II, para. 164.

against tyranny. Some, like La Boétie, were sensitive to the cowardice of people who lived under it,<sup>25</sup> and compared their degradation to that of beasts.<sup>26</sup> Others, like Milton, inveighed against the results of a tyrant's power, terrible because it was "boundless and exorbitant."<sup>27</sup> Paine said that the principle of kingship caused man to become the enemy of man since royal ambitions incensed them to hostilities.<sup>28</sup> There was the ultimate unwillingness to be sacrificed unless for reasons which satisfy: "I am against the King or any power that would destroy God's people, and I will never bee destroyed till I cannot helpe myself. Is itt nott an argument, if a pylott run his shippe uppon a rock, or if a Generall mount his cannon against his army, hee is to bee resisted?"<sup>29</sup> Could any one person be relied upon, asked Junius Brutus, to safeguard another's life and welfare? Any one man was too mutable, too unruly and weak against his passions, to be so trusted.

(To perpetrate an anachronism, but a very useful analogy: observe that when, in 1924, it was proposed in the United States Congress to sell the Muscle Shoals hydroelectric development to Henry Ford, who would then use it to produce fertilizer, the proposal was resisted on the ground that although the first Henry Ford might be an administrative genius, there was no guarantee that when he died and his property passed to his heirs, they would equal or surpass their father in managerial ability. Hence, it was argued, let the public authorities own, manage, and appoint.)

A fourth, and a more powerful tend-

ency, was the denial that any one person or arbitrary grouping could be so certain of the righteousness of their values that control over their government was unnecessary. This tendency began with Lutheran doctrines and found its way, as a crude and nonrationalized enthusiasm, into the sermons and tenets of the new Nonconformist sects. They spoke of "conscience," "grace," and the "light of nature," which informed individuals and gave them a sovereign validity. But in the hands of men like Cromwell, Locke, and Milton, and afterwards of Paine, Humboldt, and J. S. Mill, the red-hot enthusiasms were molded by circumspect reason into weapons less cumbrous, if at once more destructive of tyranny and constructive of liberty, in their fine logic. Cromwell, as we have seen, urged "equality of consciences." Locke averred that every church is orthodox to itself: to others, erroneous or heretical. Whatsoever any church believes, it believes to be true; and the contrary thereunto, it pronounces to be error.<sup>30</sup> (The Nazi and communist doctrines are strongly of this nature.)

But the quintessence of doubt, and therefore of the argument for freedom,

<sup>30</sup> *Letters on Toleration* (London, Warde, Locke edition), p. 11: "So that the controversy between churches about the truth of their doctrines, and the fruits of their worship, is on both sides equal; nor is there any judge, either at Constantinople, or elsewhere upon earth, by whose sentence it can be determined. . . . The decision of that question belongs only to the Supreme Judge of all men, to whom also alone belongs the punishment of the erroneous. . . . There is only one of these [the ways of the Churches] which is the true way to eternal happiness. But in this great variety of ways that men follow, it is still doubted which is the right one. Now neither the care of the commonwealth, nor the right of enacting laws, does discover the way that leads to heaven, more certainly to the magistrate, than every private man's search and study discover it unto himself. . . . if I be not thoroughly persuaded thereof in my own mind, there will be no safety for me in following it. No way whatsoever that I shall walk in against the dictate of my conscience will ever bring me to the mansions of the blessed. . . . Whatsoever may be doubtful in religion, yet this at least is certain, that no religion which I believe not to be true, can be either true or profitable to me."

<sup>25</sup> *Discours de la Servitude Volontaire*, ed. by Paul Bonnefon (Paris, 1930), p. 57.

<sup>26</sup> *Ibid.*, p. 61.

<sup>27</sup> *Prose Works* (London, edition of 1900), Vol. II, *The Tenure of Kings and Magistrates*, p. 18.

<sup>28</sup> *Rights of Man*, ed. by H. B. Bonner (London, 1913), p. 75. According to Hobbes *Leviathan*, Part 2, Chap. 17 (Oxford edition, 1909), p. 130: ". . . amongst men, there are very many, that thinke themselves wiser, and abler to govern the Publique, better than the rest: and these strive to reforme and innovate, one this way, another that way" . . .

<sup>29</sup> *Clarke Papers*, p. 273.

toleration, and democratic government, is this: that men have not the faculties for perfect and unchallengeable conviction regarding their ultimate beliefs:

The articles of my religion, and of a great many other such shortsighted people as I am, are articles of faith, which we think there are so good grounds to believe, that we are persuaded to venture our eternal happiness on that belief: and hope to be of that number of whom our Saviour said, "Blessed are they that have not seen, and yet have believed."<sup>31</sup>

According to Milton, the truth is as divided among all men, who have no ability but to see according to the peculiar fashion in which they have each been shaped.<sup>32</sup> "Twenty capacities, how good soever" are insufficient to contain "all the invention, the art, the wit, the grave and solid judgement" of England.<sup>33</sup> "Neither is God appointed and confined, where and out of what place these his chosen shall be first heard to speak. . . ." <sup>34</sup> And yet in our own day, there are political doctrines and systems sanguine enough to locate this capacity for speech and government exclusively in a few self-chosen.

We could quote similar passages from the other authors we have mentioned, except that these belonged to an age when God had been replaced by Nature or Man or Science as a political standard; when, accordingly, politics were no longer discussed in Biblical terms. But religious feeling is indestructible: only the objects of worship are different, and behind all

lies the mystery which human faculties cannot understand; and hence for most men, the essence, if not the verbal vesture, of the arguments of Locke and Milton are of abiding validity.

The overwhelming tendency, however, moved not exclusively by resentment of tyranny and doubt of truth; it soared upon the wings of man's positive creativeness and was impelled by the overwhelming consciousness of individual worth. All other things might be doubtful, but this was certain, that God or Nature had implanted the seeds of good in every one and meant that they should freely bear their proper fruit. Evidence? Let each one search his soul and apprehend the message of his feelings, or cast the mind back to a time when government did not yet exist, or reason a little. There was evidence enough. And in truth, if that evidence did not suffice, let those who believed otherwise, supporting tyrants, find a sufficient rebuttal; for none of them could have been stupid enough to have desired the government under which they groaned. Thus La Boétie:

All sensible things, as soon as they possess consciousness, feel the evil of subjection and run after liberty . . . what accident was that which was able to denature man, the only being born, really, to live in freedom, and to make him lose the memory of his original being and the desire to regain it?<sup>35</sup>

And so many others.

All this was systematized by John Locke—"a rational creature cannot be supposed, when free to put himself into subjection to another for his own harm"—and his *On Civil Government* exercised a tremendous influence upon the Continent and in the American colonies. Indeed, to quote Locke is with certain differences of style and passion to quote Rousseau, Patrick Henry, and Thomas Jefferson.

The early impulse which expressed itself in theological terms as the spirit of God freely moving and developing itself in human beings, which it was sinful to confine or injure, became gradually more rational: the ends in Locke are self-main-

<sup>31</sup> *Ibid.*, p. 292: "But we neither think that God requires, nor has given us faculties capable of knowing in this world several of those truths which are to be believed to salvation. For whatever may be known, besides matter of fact, is capable of demonstration; and when you have demonstrated to any one any point in religion, you shall have my consent to punish him if he do not assent to it."

<sup>32</sup> *Areopagitica*, in *Prose Works* (London, 1900), Vol. II, p. 66: "God uses not to captivate under a perpetual childhood of prescription but trusts him with the gift of reason to be his own chooser. . . . He [God] left arbitrary the dieting and repasting of our minds; as wherein every mature man might learn to exercise his own leading capacity."

<sup>33</sup> *Ibid.*, pp. 80, 81.

<sup>34</sup> *Ibid.*, p. 98.

<sup>35</sup> *Op. cit.*, p. 64.

tenance and development; in Rousseau, conservation and development of our "natural," our good, selves; and in Paine, development of the "dormant mass of sense."<sup>36</sup> In freedom Milton sought the value of fully developed virtue,<sup>37</sup> and the progress of faith and knowledge. Jefferson emphasized the involuntary nature of belief (a most important point, linking this discussion with the theme in chapter 1 concerning man's unconscious drives), and urged that uniformity of belief was as undesirable as uniformity of face and stature.<sup>38</sup> With Humboldt the joy in variety of human development was even more emphatically expressed and systematically treated. John Stuart Mill borrowed from him the motto, "The grand, leading principle, towards which every argument enfolded in these pages directly converges, is the absolute and essential importance of human development in its richest diversity," and then continued, but in a different age, its expansion and institutional form. To Kant, free activity was the only condition for a life at all worthy of man, for this alone, the separatist spirit—exhibited in his envious jealousy, his vanity, his insatiable acquisitiveness, and desire of power—awoke and fostered the development of his excellent capacities unto the day of the perfect society. Given liberty and equal conditions to what may not man aspire? There never was a social contract; but the legislator ought to act as though there were!<sup>39</sup>

The essence of the democratic tendency

<sup>36</sup> *Op. cit.*, p. 92: "There is existing in man a mass of sense lying in a dormant state, and which, unless something excites to action, will descend to him, in that condition to the grave. As it is to the advantage of society that the whole of its faculties should be employed, the construction of government ought to be such as to bring forward by a quiet and regular operation, all that extent of capacity which never fails to appear in revolution."

<sup>37</sup> *Areopagitica*, p. 75: "For God sure esteems the growth and completing of one virtuous person, more than the restraint of ten vicious."

<sup>38</sup> *Notes on Virginia* (1781): "The error seems not sufficiently eradicated, that the operation of the mind, as well as the acts of the body, are subject to the coercion of laws."

<sup>39</sup> *Principles of Politics: Principles of Political Right* (trans. Edinburgh, 1891), Proposition 4.

to the end of the eighteenth century is a denial of inherent royal rights, the assertion of individual sovereignty, the growth of belief in equality of consciences and religious toleration, the development of the idea of beauty in variety, and the faith that nature, acting unimpeded in self-governing individuals, would produce works of the highest and holiest value. Only where this faith could reasonably be demonstrated to have failed ought authority to intervene, and authority could not be constituted except by the joint will of the people. We possess great goods, said men, of their mental and physical faculties. Why then should they not have their fullest development? All in all, the supreme good lay in liberty—that is, to interpret the many sayings, *the exemption of men from any burdens other than those imposed by the rationally proven nature of environment or men, assuming we were to begin life anew, with all the results of irrational tradition abolished.*<sup>40</sup>

Certain more immediate practical considerations weighed with democratic theorists—for example, the physiocrats or Harrington—who showed how a democratic form of government would draw the best talents into leadership, diminish the causes of sedition, promote eugenic marriage by the reduction of large fortunes, and give strength to empire. Others, like Paine, argued that popular government was the only form which could assemble the practical knowledge of "the various parts of society," while, also, it was often remarked how nonrepresentative government imposed the burdens of obedience and taxation upon those who had no say in government, since even when men knew all there was to know they could not do others justice owing to their "interest-begotten prejudices."

It is just to say, I think, that this evolution of political theory, and of sentiment, was protestant, revolutionary, and negatory, and only vaguely conscious of what would be established in the place of that

<sup>40</sup> The student is referred to G. Ferrero, *The Principles of Power* (New York, 1942), an historical and analytical study of the nature of legitimacy.

which was to be swept away. It took the future of man, if he were free, on faith. It was thought sufficient to furnish a dissolvent of ancient irrational laws and institutions, and to insist on the criterion that all men ought to be free and equal according to the promptings and designs of nature. Freedom and equality were, of course, endowed with different meaning by the different men, social classes, and groups who used them, according to the interests of their time and place, for the question naturally arose: "When we admit the free power to evolve, what direction will each take?" The full drift of this question was not apprehended until about 1848, for until then the immediate tasks of demolition of privilege and absolutism fully occupied men's minds and energies. Then the far-reaching purport of the doctrines began to be perceived, and their force politically harnessed; and we may say that one generation after 1848, democracy as liberty only ended and socialism also took a seat on the throne.<sup>41</sup> We have treated this in the chapter on state activity and will come upon it again at a later stage. Let us now briefly consider what institutions the democratic theorists suggested.

#### DEMOCRATIC INSTITUTIONS

THERE were (1) a written constitution; (2) with a declaration of rights implying a limitation of the sphere of government; (3) majority rule, usually control of a government by an elected legislature; (4) the separation of the powers of government so that each power might check and balance the other; (5) public education to produce the knowledge and spirit appropriate to democratic government.

*Written Constitutions.* These naturally had their origin in the ideas of a state of nature followed by a compact among

the natural individuals creating a political association. They followed either from the purely rational natural law associationism of men like Althusius, Harrington, Spinoza, Locke, Rousseau, Kant, Paine, and others, or from the covenants between men and God as elaborated from the material of the Old Testament by such thinkers as Junius Brutus and the Puritans.<sup>42</sup> Hence, too, the evolution of the idea of special constitutional assemblies, and popular ratification and a difficult amending process.<sup>43</sup> The end, as Harrington said, was a commonwealth, "a government of laws and not of men."<sup>44</sup> What was the result of this current, and the nature of constitutions, we discuss in Chapter 7.

It may be said at this point, however, that constitution making in the earlier part of the eighteenth century was a simpler process than it came to be in the twentieth century, when a longer experience of government, diversification, and marked rigidities of organized economic and spiritual groupings made a majority-supported constitution more difficult to attain.

*Declaration of Rights.* A declaration of rights laid certain positive limitations upon government. These were already formulated in a very broad way by the army in its draft treaties with Parliament in 1647.<sup>45</sup> Harrington urged the limitation of the sovereignty of the great association, asking "whether power, not confined to the bounds of reason and virtue, has any other bounds than those of vice and passion?" The whole of Locke's work reposes upon this notion, that only specifically transferred powers can be legitimately executed by the government. And we shall see how the constitutions of

<sup>42</sup> Cf. Charles Borgeaud, *Rise of Modern Democracy in Old and New England* (London, 1894).

<sup>43</sup> Cf. Charles Borgeaud, *Adoption and Amendment of Constitutions in Europe and America*, trans. by C. D. Hazen (New York and London, 1895).

<sup>44</sup> *Op. cit.*, p. 42.

<sup>45</sup> S. R. Gardiner, *The Constitutional Documents of the Puritan Revolution, 1628-60* (Oxford, 1889).

<sup>41</sup> For other discussions of the nature of democracy, see A. D. Lindsay, *The Modern Democratic State* (Oxford, 1943); Reinhold Niebuhr, *The Children of Light and the Children of Darkness* (New York, 1943); Charles Merriam, *New Democracy and New Despotism* (New York, 1939); Max Ascoli, *The Power of Freedom* (New York, 1949).

the independent American colonies, and hence most written constitutions, were based on the same idea: namely the greatest possible exemption of individuals from associative control.

It is not inappropriate to observe here that less happy countries, like the German states, which suffered absolute or almost absolute government until 1919, found a certain relief in the principles of the *Rechtsstaat*. The *Rechtsstaat* means a state in which the activities of the executive are permanently subject to legal rules that are implemented and safeguarded by independent and impartial law courts. Its great protagonists were originally Kant and Humboldt, but later and with more system the German liberals of 1848 elaborated it in their written constitution, the idea culminating in the work of the jurists von Mohl and von Gneist.<sup>46</sup> The substance of the rules is, of course, of as much importance as their guarantee, and many could have no validity unless they were not merely executive decrees but laws made with the cooperation of representative parliaments. Ideally, they would embody such limitations of governmental power as are implied in the rights declared in free constitutions, such as tolerance of religious differences, equality before the law, and others. But between the *Rechtsstaat* of the Germans (a notion of great value, as we shall see in discussing the idea of the separation of powers) and the constitutional limitations in free states there was this immense difference: In the *Rechtsstaat* the state was represented by the sovereign monarch and his bureaucracy; in the democratic state, the state was represented also by a popularly elected parliament. The limitation was thus drastically different in nature.<sup>47</sup> We

later examine the constitutions and the meaning of the rights they declare, and we shall see that strong modern forces constantly encroach upon them, in some cases to their utter destruction. This is, as we have noticed, because some freedoms of the individual have been found, in modern environment, to be on the whole noxious, not only to other goods but even to the general freedom itself.

Recently the idea of declaring rights superior to the parliamentary assembly, and therefore shackling the electorate itself, has been resuscitated by opponents of even mild degrees of state activity, of which one example, Hayek, will suffice (to Lippmann's *The Good Society*<sup>48</sup> we have already referred). Hayek, while admitting that "whatever form the [rule of law] takes, any such recognized limitations of the powers of legislation imply the recognition of the inalienable right of the individual, inviolable rights of man,"<sup>49</sup> seems to believe that the purpose is to safeguard against a majority vote the system of capitalistic enterprise.

It is amazing also to see that two constitutions drafted in our own time—e.g., the U.S.S.R. constitution of 1936 and the French draft constitution of 1946 (the finally accepted one), widely divergent as they are regarding the basis of authority, the former being dictatorial and the latter democratic—contain long and substantial lists of rights. In the former the rights are given by grace of the Communist party and its leaders; in the latter they are guaranteed by the working of the majority principle in government.

Thus the new Soviet constitution in chapter 10 (Articles 118–129), "Basic Rights and Obligations of Citizens":

Citizens of the USSR have the right to work . . . to rest . . . to material security in old age as well as in the event of sickness and loss of capacity to work . . . to education. . . .

Women in the USSR are accorded equal rights with men in all fields of economic, state, cultural, social, and political life. . . .

<sup>48</sup> Walter Lippmann, *The Good Society* (New York, 1936).

<sup>49</sup> F. Hayek, *The Road to Serfdom* (Chicago, 1944), p. 84.

<sup>46</sup> Rudolf von Gneist, *Der Rechtsstaat* (Berlin, 1879). Cf. George Jellinek, *System der Subjektiven Rechte* (Freiburg, 1902).

<sup>47</sup> The German doctrine of "auto-limitation," that is, of the self-control of the sovereign, goes some way in form toward the securing of individual rights; and a democracy might in fact be no better. Yet all depends on the comparative "temper" of a monarchical and a popular system. Normally the latter will be more moderate.

## FORMS OF GOVERNMENT, ESPECIALLY DEMOCRACY

The equality of the rights of citizens of the USSR, irrespective of their nationality or race . . . is an irrevocable law. . . .

To ensure to citizens freedom of conscience the church in the USSR is separated from the state and the school from the church. Freedom to perform religious rites and freedom of anti-religious propaganda is recognized for all citizens.

In accordance with the interests of the toilers and for the purpose of strengthening the socialist system, the citizens of the USSR are guaranteed: (a) freedom of speech; (b) freedom of assembly and meetings; (d) freedom of street processions and demonstrations. . . .

In accordance with the interests of the toilers and for the purpose of developing the organizational self-expression and political activity of masses of the people, citizens of the USSR are ensured the right of combining in public organizations: trade unions, cooperative associations, [etc] . . . and, for the most active and conscientious citizens from the ranks of the working class and other strata of the toilers, of uniting in the All-Union Communist Party, which is the vanguard of the toilers in their struggle for strengthening and developing the socialist system and which represents the leading nucleus of all organizations of the toilers, both public and state.

The citizens of the USSR are ensured the inviolability of the person. No one may be subjected to arrest except upon the decision of a court or with the sanction of the prosecutor.

The inviolability of the homes of citizens and the secrecy of correspondence are protected by law.

The USSR grants the right of asylum to foreign citizens persecuted for defending the interests of the toilers or for their scientific activity or for their struggle for national liberation.

In the first-draft French constitution, rejected in the referendum of May 5, 1946, there is a lengthy list under the title "The Rights of Man." Twenty-one articles are noted as "The Freedoms" and eighteen as "Social and Economic Rights." In the new constitution, approved by the electorate on October 13, 1946, the preamble is considerably shorter. Reaffirming the Declaration of Rights of 1789 and the basic principles embodied in French laws, it states "as most vital in our time" these fundamentals:<sup>49a</sup>

<sup>49a</sup> In its preamble, the Constitution of the Fifth Republic explicitly reaffirms its belief in the principles expressed in the Bill of Rights of 1789 and in the Preamble of 1946.

The law guarantees to women equal rights with men in all domains.

Anyone persecuted because of his activities in the cause of freedom has the right of asylum within the territories of the Republic.

Everyone has the duty to work and the right to obtain employment. No one may suffer in his work or his employment because of his origin, his opinions, or his beliefs.

Everyone may defend his rights and interests by trade-union action and may join the union of his choice.

The right to strike may be exercised within the framework of the laws that govern it.

Every worker through his delegates may participate in collective bargaining to determine working conditions, as well as in the management of business.

All property and all enterprises that now have or subsequently shall have the character of a national public service or a monopoly in fact must become the property of the community.

The nation ensures to the individual and the family the conditions necessary to their development.

It guarantees to all, and notably to the child, the mother, and the aged worker, health protection, material security, rest, and leisure. Every human being who, because of his age, his physical or mental condition, or because of the economic situation, finds himself unable to work has the right to obtain from the community the means to lead a decent existence.

The nation proclaims the solidarity and equality of all Frenchmen with regard to the burdens resulting from national disasters.

The nation guarantees equal access of children and adults to education, professional training and culture. The establishment of free, secular, public education on all levels is a duty of the State.

In addition, there are some unique constitutional provisions about France's international and colonial relations (these were not included in the first draft of the constitution). "On condition of reciprocity, France accepts the limitations of sovereignty necessary to the organization and defense of peace." With respect to members of the French Union, the ultimate goal of democratic self-government is proposed.

The unaccepted constitution had contained not only the quoted statements but also these rights: sovereignty in the

hands of the people; freedom as not acting contrary to others' rights; equal access to all rights; inviolability of home and correspondence; arrests only within the law; no *ex post facto* laws; "every accused person is presumed to be innocent until declared guilty"; right to justice regardless of wealth; "identity of jurisdiction" within a territory; "no one can be disturbed because of his origin, his opinions, or beliefs in religious, Philosophical, or political matters"; freedom of speech and publication and assembly; right to petition government; eligibility to hold public office dependent on capacity and ability; right to join an association; limitation on the suspension of rights in emergencies; maintenance of a public force subject to the people; "when the government violates freedom and rights guaranteed by the constitution, resistance in all its forms is the most sacred of rights and the most imperious of duties"; the right of "full physical, intellectual, and moral development"; state-supported health program; the right to just remuneration; "guarantee of [means of existence] is insured by the institution of public organisms of social security"; removal of private property rights only "by cause of public usefulness legally confirmed and on condition of fair indemnification fixed in conformity with the law"; "the right of ownership must not be exercised contrary to the social good"; progressive taxation; "no one must be placed in a position of economic, social, or political inferiority contrary to his dignity or be allowed to be exploited by reason of sex, color, nationality, religion, opinions, or racial or other origins." To protect all these rights, "citizens must serve the republic, defend it at the price of their lives, share in the charges of state, contribute to common welfare by their work, and aid each other fraternally."

The value to the citizen of the rights guaranteed in the French constitution depends on the continuing loyalty thereto of freely constituted majorities but in the Soviet system the rights are at the mercy of the dictators. Hence the proposals that the United Nations establish a court of

appeal to which the aggrieved could repair against their own government, and the need for an executive power outside the dictatorship to enforce remedies.

*Majority Rule.* The philosophical basis of the democratic theory leads to government by all the people together: that is, unanimity. It was seen that however the "people" was defined, unanimity was impossible in practice, and therefore a majority must suffice. Thus Locke,<sup>50</sup> and thus also Rousseau.<sup>51</sup>

Some convention must be at the base of associated activity; upon what, then, is that of majority rule founded? *First*, waiving the impossibility of an objective measure of the importance of such person or group, it is clear that, normally and in the long run, the majority possesses overwhelming power, physically and mentally. (It always gets the army on its side in the end.) However, with the advent of modern arms and inquisitorial and repressive police with Gestapo and NKVD techniques, that end may be very hard to arrive at, and take a long time to reach.

*Second*, since, on the democratic assumption, every conscience is as worthy as any other, and there is eternal doubt as to who is right, the majority has a sound claim to rule. *Third*, unanimity is impossible to achieve. *Fourth*, to admit the right of a minority to rule involves the difficulty—which minority? It gives all minorities equal right—that is, it destroys the integration of society.<sup>52</sup> Majority rule serves as an integrative associative force—you must overcome your differences and unite in order to rule. *Finally*, there is enormous political power in the general tendency of the average person to believe that the majority must be right.

Yet minorities accept their situation

<sup>50</sup> *On Civil Government*, Book II, para. 140.

<sup>51</sup> *Social Contract*, Book IV, Chap. II. Cf. also Heimberg, "History of the Majority Principle," *American Political Science Review*, 1926, XX, 52-86.

<sup>52</sup> Cf. Hans Kelsen, *Vom Wesen der Demokratie* (1929 edition); and Rudolf Smend, *Verfassung und Verfassungsrecht* (1929). Cf. also Willmoore Kendall, *John Locke and the Doctrine of Majority Rule* (Urbana, Illinois, 1941).

only on certain terms—(1) where the chance is open to them one day to become part of the ruling majority and to contribute to its dictates (permanent, unrelieved minority rule produces revolt), and (2) where they are not oppressed while in a condition of minority. It will be manifest that the minority, in conceding the right of the majority to rule, is surrendering the freedom of itself, and submitting to the goodwill and sense of right-doing of the majority. This is a very considerable act of self-abnegation, and it could not be expected to be accomplished or sustained unless it were on implied terms of forbearance by the majority, and unless experience showed that the terms were steadily honored. Of course, at no time did a minority make systematic pacts on this subject with the majority, and day by day the composition of the minority (as of the majority) undergoes internal change in its constituent groups, objects, and size. The democratic theory and system can be strained to death, and subverted by revolt, if the various temporary majorities do not compensate the minorities for the implied surrender to the majority of rights which are truly the rights only of the whole community in unanimity.<sup>53</sup>

It is, of course, extremely difficult to maintain the assumptions of majority rule in a state where there are obtrusive and persistent racial, class, or cultural differences, and where some groups—Negroes, Jews, Communists, or paupers—are excluded from political life.

The sacrosanctity of majority rule has, of course, been subject to the most violent and even corrupt challenges by men or groups who wish to dominate society for reasons good to themselves. Mussolini claimed that basic national necessities were concentrated in a single man, the Duce, he being one of the rare individuals

whom nature had inspired with singular perception and responsiveness to historic reality.<sup>54</sup> Popular participation, therefore, would be actually harmful. Hitler's dogma, as expressed in *Mein Kampf*, was:<sup>55</sup>

The best State constitution and State form is that which, with the most natural certainty, brings the best heads of the national community to leading importance and to leading influence. . . . The State in its organization, beginning with the smallest cell of the community up to the highest leadership of the entire Reich, must be built upon the principle of personality. . . . There must be no decisions by majority, but only responsible persons . . . at every man's side there stand councillors, indeed, *but one man decides . . . authority of every leader towards below and responsibility towards above.*

Lenin emphatically stressed the virtue of the minority: the doctrine that a small, well-organized, and well-informed group, the party, should be the controlling power over the proletarian movement. Thus:<sup>56</sup>

We are the party of a class and therefore almost the entire class should act under the leadership of our Party, should adhere to our Party as closely as possible. But it would be smug and complacent . . . to think that at any time under capitalism the entire class, or almost the entire class, would be able to rise to the level of consciousness and activity of its vanguard, of its Social Democratic Party. . . . To forget the distinction between the vanguard and the whole of the masses which gravitate toward it, to forget the constant duty of the vanguard to raise ever wider strata to this most advanced level, means merely to deceive oneself, to shut one's eyes to the immensity of our tasks, and to narrow down these tasks.

In outlining the characteristics of the Soviet form of government, he noted:<sup>57</sup>

<sup>54</sup> Herman Finer, *Mussolini's Italy* (London, 1935), p. 257.

<sup>55</sup> Hitler, *Mein Kampf* (New York, 1940), pp. 669-670. (Permission Houghton Mifflin Co.)

<sup>56</sup> Lenin, *Collected Works*, Vol. VI, pp. 205-206; quoted from *Short History of the Communist Party*, by a commission of the Central Committee of the Communist Party of the Soviet Union (Moscow, 1939), p. 46. See also Stalin, *Leninism* (New York, 1942), pp. 9-36, and M. Werner, *Stalin's Kampf* (New York, 1940).

<sup>57</sup> Lenin, *Selected Works*, Vol. VI, pp. 263-264.

<sup>53</sup> Cf. Jefferson's *First Inaugural Address*: "All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, principle, to be rightful, must be reasonable; that the minority possess their equal rights, which equal laws must protect, and to violate which would be oppression."

. . . it provides a form of organization of the vanguard, i.e., of the most class-conscious, most energetic, and most progressive section of the oppressed classes, the workers and peasants, and thus constitutes an apparatus by means of which the vanguard of the oppressed classes can elevate, train, educate, and lead the entire vast mass of these classes. . . .

DEMOCRACY AND LIBERALISM

Now, democracy disturbs the liberals, for if the right of the majority is sacred, what becomes of the freedom of the minority? This question assumes a more critical importance in Rousseau's views than in Locke's; for, whereas Locke sets strict limits to the powers of the state, and checks them by the separation of executive from legislative power, Rousseau recognizes no limits to society's power once the contract is made,<sup>58</sup> and jeers at Montesquieu for pretending that sovereignty is divisible.<sup>59</sup> Government without safeguards for minorities has seemed to the fathers of the American constitution, and to men like Mill, the negation of liberty; indeed, to all who have some spiritual or material good which they would zealously retain, pure majority rule has seemed a peril. Hence comes the demand that the force of the rule be limited, by such devices as proportional representation, property and educational qualifications for the franchise, state representation in a federal state, local self-government, and, more recently, group or vocational representation, bicameralism generally, the separation of powers, and support of the rights of parliamentary or congressional opposition by a solid basis of procedure.<sup>60</sup>

<sup>58</sup> Rousseau was contradictory on this subject. Thus: "As nature gives each man absolute power over all his members, the social compact gives the body politic absolute power over all its members also; and it is this power which, under the direction of the general will, bears, as I have said, the name of sovereignty." . . . *Social Contract* (Everyman edition), Book II, Chap. IV, p. 27.

<sup>59</sup> *Ibid.*, Book II, Chap. II, pp. 23, 24.

<sup>60</sup> Sir Henry Maine's phrase may be recalled: "Liberty is secreted in the interstices of procedure."

In addition, as we have noticed, some strongly urge bills of rights to limit the power of majority rule. Calhoun supported his federal theories upon such a general basis, and his thesis is, essentially, that of all minority parties:<sup>61</sup>

There are two different modes in which the sense of the community may be taken: one, simply by the right of suffrage, unaided; the other, by the right through a proper organization. Each collects the sense of the majority. But one regards numbers only and considers the whole community as a unit, having but one common interest throughout; and collects the sense of the greater number of the whole, as that of the community. The other, on the contrary, regards interests as well as numbers; considering the community as made up of different and conflicting interests, as far as the action of the government is concerned; and takes the sense of each through its appropriate organ, and the united sense of all, as the sense of the entire community. The former of these I shall call the numerical, or absolute majority; and the latter, the concurrent, or constitutional majority.

Now, he says, in popular thought, these two kinds of majority are confounded, and this causes the rights, powers, and minorities of the whole people to be attributed to the numerical majority. This is not the government of the people; it is but the government of the major part over the minor. This is force, and the only way to meet it ultimately is force. Yet this, again, would produce anarchy. Then anarchy must be avoided by a balance of power provided in the constitution; only this is godly.<sup>62</sup>

<sup>61</sup> John C. Calhoun, *A Disquisition on Government*, ed. by R. K. Cralle (Columbia, S. C., 1851), p. 28. (Cf. Herman Finer, "Action as Historian and Political Philosopher," *Journal of Politics*, August, 1948, for a discussion of the reservations of a Catholic liberal on absolute democracy.)

<sup>62</sup> "Traced to this source, the voice of a people—uttered under the necessity of avoiding the greatest of calamities, through the organs of a government so constructed as to suppress the expression of all partial and selfish interests, and to give a full and faithful utterance to the sense of the whole community, in reference to its common welfare—may, without impiety, be called *the voice of God*. To call any other so, would be impious." —*Ibid.*, p. 39.

*The Social Contract is an Unequal Contract.* The experience of government in the nineteenth century, in short, rapidly and brusquely called attention to the fact that the mass of individuals, free and equal, did not, as Rousseau said and as Locke and others vaguely suggested, give to society an equal amount and receive from it the same amount.<sup>63</sup> That would have been true only if Rousseau had proved his hypothesis that all men were naturally equal. There is some excuse for such an abstraction where industry and agriculture are in a relatively primitive stage and where men are largely equal, if only in their misery. We know, however, that the differences between men's capacities are tremendous, and between their economic and spiritual values prodigious. We know also that government commends itself to them not on uniform grounds, but on grounds as diverse as their nature and interests. We know, or ought to know, what is much more important, that as a rule they attempt to subject each other in return for a price lower than the good they hope to obtain, and that their sovereign-subject relationship is not a predetermined, static, and authoritative one, but that the social contract between millions of diverse individuals and groups is overthrown and reformed every day and every minute, and that its terms are subject to the fluctuating fortunes of a ferocious and incessant battle. It may be that each man and woman gets from the state more than he gives, owing to the tremendous advantage given by associated action in so large a community. That, in fact, keeps it as stable as it is. Yet many give less in proportion to what they receive than others, while great multitudes contribute much more in proportion to what they receive than other people do. Some are plain exploiters, bandits.

<sup>63</sup> "Finally, each man, in giving himself to all, gives himself to nobody; and as there is no associate over whom he does not acquire the same right as he yields others over himself, he gains an equivalent for everything he loses, and an increase of force for the preservation of what he has."—Rousseau, *Social Contract*, Book I, Chap. VI, p. 15.

One of the defensive and offensive weapons in that passionate scramble is the "special safeguard of the minority." In proportion as government has enhanced its mighty power, the safeguard is the more anxiously sought; and differences among citizens are championed rather than social uniformities. Both in practice and theory the legend of the sacredness of the majority is steadily being challenged. As a major expediency (Burke called it "violent"), interests always seek to subvert the majority principle: either by systematic restraints or by the convention that though it has the power it should use it with a sense of obligation to the minority. The theory of toleration, which began with religious differences, has now extended to general civil policy, for this has swallowed up religion. Men have, in the last few generations, become extraordinarily sensitive to the advantages of toleration for churches and for minorities of all kinds, of federalism, pluralism, and local self-government.<sup>64</sup> For they claim equality of consciences in a day when political conscience comprehends almost all of man's interests, and when inequality, therefore, is fraught with the gravest consequences. What has become of the principle of the majority we shall see in a later part of this work (Part III).

*Separation of Powers.* Next, a long line of theorists (including Locke but commencing principally with Montesquieu) have sought the liberty of the individual in the separation of powers—that is, in such an arrangement of the various institutions of government that each should prevent the other from having sufficient power to act tyrannically. Montesquieu suggested the separation of the legislative, executive, and judicial institutions, the American federal and state constitutions included it, and the French Revolution

<sup>64</sup> Harold J. Laski (*The Grammar of Politics* and other works) was the foremost living exponent of this trend, until the influence of the development of the Soviet Union on him left his theoretical position too mixed for clear comprehension. Cf. *Reflections on the Revolution of Our Time* (London, 1941).

went so far as to say that without it there is no constitution.

Later liberals, like Benjamin Constant and his generation and de Tocqueville, and more recent theorists have elaborated Montesquieu's doctrine to include the division of power between the central and the local authorities. The object is plain: to render government as nearly powerless as is compatible with the most urgent dictates of associated activity. It is obvious that democracy thus organized has different intentions and consequences from democracy as the plain unchecked government of the majority. It is founded, in fact, upon a distrust of any sovereignty, of the one, the few, or the many, unchecked by formal restraints. The kernel of de Tocqueville is: "Forms safeguard Liberty." Seeking, ostensibly, the good of all individual men—namely, their dissociated, and therefore free, development—it denies the good of government by all, unless the counsels of government are protracted, and its will divided. This is a useful theory for those who have something to guard, but a wasteful obstacle to those who have urgent wants. Consequently, democracies based on universal franchise, especially those where the leaders are in a hurry of reformatory passion, tend to overthrow the separation of powers, even that which is vested in the rights of a parliamentary opposition.<sup>65</sup> Naturally, neither the fascist nor the Nazi nor the Soviet systems tolerate the separation of powers, and the Soviet has been particularly direct about its rejection. The Revolution dominates all the powers of government and the Communist party unites them.<sup>66</sup> The French Communist

party in the Constituent Assembly of 1945 and 1946 fought bitterly against the separation of powers.<sup>67</sup> But the next chapter is devoted entirely to the study of the separation of powers, and we do not need any further to anticipate its conclusions.

*The Spirit of Democratic Government.* Finally, all save the earliest religious enthusiasts have recognized the need for the existence, even the inculcation, of a special spirit in democratic government. For, as we saw in our analysis of the debate between Ireton and the Levelers, if the principle of the independent grace of men is pressed, as it very easily is, beyond the principle that men are equal before the Lord, then the constant expectation prevails that men's hands will be raised against each other. This is also obvious in Calhoun's argument. Consequently, more circumspect thinkers have sought to define the spirit appropriate to the continuance of an association of individuals, and they are not concerned with continuance alone: they think, if they do not speak, of a creative continuance. Harrington says:<sup>68</sup>

A man is a spirit raised by the magic of Nature; if she does not stand safe, and so that she may set him to some good and useful work, he spits fire, and blows up castles; for where there is life, there must be motion or work; and the work of idleness is mischief, but the work of industry is health. To set men to this, the commonwealth must begin betimes with

ing to bring the Government apparatus into still closer contact with the masses, for the purpose of realizing democracy more fully and strictly in practice, by making Government officials responsible to, and placing them under the control of, the masses."

And in the new Soviet constitution of 1936: "The supreme executive and administrative organ of state power in the USSR is the Council of People's Commissars of the USSR [Article 64]. . . . It has the right in respect to those branches of administration and economy which fall within the jurisdiction of the USSR, to suspend decisions and orders of the Councils of People's Commissars of the USSR." [Article 69]

See, especially, A. Y. Vyshinsky, *The Law of the Soviet State* (New York, 1948), p. 312 ff., for a characteristically perverse "history" of the separation of powers—a contemptuous denunciation.

<sup>67</sup> Cf. p. 106 below.

<sup>68</sup> Cf. Harrington, *op. cit.*, p. 202 ff.

<sup>65</sup> Cf. later chapters on parliamentary procedure, especially Chap. 20.

<sup>66</sup> In the program of the Communist party, adopted in 1919, it was stated: "The Soviet Government, guaranteeing to the working masses incomparably more opportunities to vote and to recall their delegates in the most easy and accessible manner than they possessed under bourgeois democracy and parliamentarism, especially the separation of legislative and executive powers, the isolation of the representative institutions from the masses, etc. . . .

"The aim of the Party consists in endeavor-

them, or it will be too late; and the means whereby she sets them to it is education, the plastic art of government.

And he spends many pages discussing the appropriate education for the various orders in the commonwealth.

Montesquieu's discussion is perhaps more famous. Every form of government has its special principle, that is "that by which it is made to act—the human passions which set it in motion."<sup>69</sup> In a monarchy, the state is maintained by honor, ambition, glory, and love of applause; in an aristocracy, by moderation as between the aristocrats—that is, by a virile recognition of equality among the rulers, not indolence or pusillanimity. But in a democracy to maintain the state "one thing more is necessary, namely, virtue."<sup>70</sup> Why? Because here the "person who commands the execution of the laws feels that he himself is subject to them and that he must bear their burden." When a king is indolent or ill-advised, a remedy may be found; when the people are such, the state is necessarily lost, for the ill is general. What then is virtue? Montesquieu defines it first negatively, by imagining what happens when virtue is banished and later, positively:

When virtue is banished, ambition invades the minds of those who are disposed to receive it, and avarice possesses the whole community. . . .<sup>71</sup> It is in a republican government that the whole power of education is required. The fear of despotic governments naturally arises of itself amidst threats and punishments; the honour of monarchies is favoured by the passions, and favours them in its turn; but virtue is a self-renunciation, which is ever arduous and painful.<sup>72</sup>

This virtue may be defined as the love of the laws and of our country. As such love requires a constant preference of public to private interest, it is the source of all private virtues; for they are nothing more than this very preference itself. This love is peculiar to democracies. In these alone the government is intrusted to private citizens. Now a govern-

ment is like everything else: to preserve it we must love it.

One thing alone has Montesquieu omitted: to preserve democracy we must not only love it, but sacrifice other things we love to its preservation. Democrats can maintain democracy only by renouncing some of the fruits of perfect freedom; for their machine, and the fruits also, may be destroyed altogether by too severe a strain. It means that some of our desires must be altogether suppressed, and some put off to the future; that we must be content with lesser mercies than we would like; that "gradualness is inevitable." Our impatience must be assuaged by the belief that in the eternal sweep of time, more good will come of this partial renunciation than from the demand that others shall be subjected to us. In proportion as such a belief is not natural to man, or is incapable of being inculcated, democracy may reign but not freedom, and, in its extreme form, democracy may become a form of government more intolerable than any other.

Rousseau treats of the subject, though not very profoundly, in the *Social Contract*, saying,

There is therefore a purely civil profession of faith of which the sovereign should fix the articles, not exactly as religious dogmas, but as social sentiments, without which a man cannot be a good citizen or a faithful subject.<sup>73</sup>

But then Rousseau only gives a bare indication of the content of this faith.<sup>74</sup> In an earlier chapter he admits that though the state, in making the laws, can do no wrong, yet the judgment of the people may be unwise. The inference is that to make the sovereign wise, a process of education is necessary. We have seen how the physiocrats came to believe in freedom plus public education. The line of such beliefs could be traced through the utili-

## THE STAGES OF DEMOCRATIC DEVELOPMENT

tarians down to the present, and it is a vital part of the democratic form of government, of urgent practical importance in our own day.

### THE STAGES OF DEMOCRATIC DEVELOPMENT

ONLY one more task remains to be accomplished in this chapter, and that is, to indicate the stages of democratic development.

*The Demand for Tolerance.* The first stage was the demand for tolerance of non-conformity in religion and the rise of self-governing sects like the Independents, the Separatists, and the Presbyterians.<sup>75</sup> They cannot be entirely identified with the middle classes and the small commercial men. In the American colonies, the small and middling people who had torn themselves out of the English agricultural background formed the center of the movement. The very rich and the fairly rich held with bishop and king; they were the nobles, the great landowners, and the governors of their counties.

Though an undercurrent of social criticism, beginning with Wycliffe and John Ball, came out again in the Levellers and the Diggers, these were not the classes to triumph in the English Revolution. They helped the commercial classes of the towns and the prosperous yeomen to claim rights of Parliamentary control over taxation and regulation of trade, but they helped for the attainment of general liberties, "to assert and vindicate the just power and rights of this Kingdome in Parliament for those common ends premised against all arbitrary power, violence, and oppression, and against all particular parties or interest whatsoever."<sup>76</sup> They did not know

what the experience of two hundred and fifty years has since taught, that Parliamentary leaders might speak in the same terms as the common man, but that they necessarily meant something quite different, due to "interest-begotten prejudice." The peasants in all lands had sporadically revolted, and had been used by the Crown, the nobles, and the towns for their liberties; the day of the rank and file was not yet, for while their leaders were organized, armed, and disciplined, they themselves were not.

A potent impetus was given to the democratic movement by the revolt of the Netherlands and the creation of a republic, for English observers much envied Dutch institutions, and had, as they have today, especially jealous admiration for any country that is rich. In fact, freedom and commercial power are correlated, for commercial power depends upon the ability to buy and sell in the best market, regardless of religious or social differences.

*The Demand for Representative Government.* In France and England the townsfolk led the movement for representative government. Their commercial and industrial interests urged them to make of the legislature the executive instrument of their policy and social ambitions; and the very existence of numbers of people in close proximity and constant intercourse caused the growth of freer manners and a regard for the essential man. In Germany the proverb was coined: "The atmosphere of the town makes a man free." In France the Third Estate was a much more definite class than in England: not clergy, not noble, it stood between these and the peasantry. By the last *États Généraux* in 1614 it had shown itself exceedingly pretentious; after their suppression it still held some governmental power in the *Parlements*—that is the semilegislative, semijudicial bodies which checked and controlled the power of Crown and intendant—and it permeated the bureaucracy with its sons. The French Revolution was its revolution, although as in the English Revolution the poor of the towns and the countryside followed them, partly for certain definite benefits

<sup>75</sup> Cf. Acton, *Essays on Freedom and Power* (Boston, 1949) Chaps. I, II, and V. Acton disposes of the most recent heresy of some laissez-faire economists—whose disposition to follow Marx in relating all human activity to an economic cause is amazing—the heresy that men of commerce first established modern liberty. Acton shows that religious belief played by far the most dominating part. Acton, of course, wrote first, before these economists.

<sup>76</sup> C. H. Firth, *Clarke Papers* (London, 1891), XXXV.

(like fair taxation, guarantee of property, equality before the law, and the right to participate in government administratively and legislatively) and partly for the general benefits of free and settled rule. At a sad but perhaps unavoidable moment, the practical elaboration of the revolutionary principles was checked by the necessity of defense against the more feudal countries; Napoleonic genius was needed, but it converted France into a barracks, the opposite of a democracy, and later the forces of "legitimacy" triumphed. The main benefits of twenty years of struggle accrued to the returned nobility and the rising commercial and industrial families, who alone were the "*pays légal*," and their leaders produced the philosophy of liberalism—namely, neither uncharted monarchy nor unlimited democracy, but government of Reason, represented by the wealthy, with a restricted franchise, restricted centralization, judicial restriction of the executive, and political parties balancing each other.

The balance of power seemed, as Harrington said, to follow the balance of property. Those who had the material means, or were nearest to their attainment, sought liberty for themselves, and having obtained it, by revolution or its threat, did not share it until they in turn were frightened or forced.

America,<sup>77</sup> a new country, settled (though not entirely) by people with strong democratic convictions, gave the first great opportunity for popular government. Even here, however, different spiritual and economic interests had been brought from Europe, and the path of democracy was neither open nor smooth. The nonexistence of remarkable inequality in estates made it very difficult to maintain other social distinctions for long, though wherever the influence of the British Crown

penetrated, it brought swarms of aristocratic parasites around the governor's palace or the chief seats of the Anglican Church. Where, however, land was cheap and freehold, a property qualification was not a serious limitation upon democracy. Government of town and church were even more democratic. Little by little, however, a cleavage arose between the people of the coast and tidal rivers, interested in commerce, industry, and finance, and the yeomen of the hinterland, and by the time of the American War of Independence, this gulf was most marked, so that the constitutional debates of the time are full of the difference between the agrarian and the manufacturing "interests." More, the Revolution had been very largely a war of trade and commerce, though we may add thereto the spirit of pride, independence, and, as James I once called it, the "gust of Government." The practical drive was there. But all classes were drawn in by cries like those of Patrick Henry—"Give me liberty or give me death!" Where people are excited by such talk and are flattered by those who need their help to fight battles, they are apt to continue to believe what they have been told long after their leaders have forgotten their promises. What were they told? This:

that all men are created equal, that they are endowed by their Creator with certain inalienable Rights, that among these are Life, Liberty, and the pursuit of Happiness—That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed—That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their Safety and Happiness.

The royal executive and the nominated council had fled, and government was conducted by elected assemblies representative of agrarian interests. These began to govern in their own interests, putting off payment of debts and issuing paper money. The separation of powers and checks and balances suddenly became of vital impor-

<sup>77</sup> V. Parrington, *Main Currents of American Thought* (New York, 1927 and 1930), 3 vols. in one, especially I and II; Louis Hacker and others, *The Shaping of the American Tradition* (New York, 1947); and Merle Curti, *Growth of American Thought* (New York, 1943), and especially D. J. Boorstin, *The Lost World of Thomas Jefferson* (New York, 1948).

tance to those who feared such movements, and Montesquieu was acknowledged to be to political science what Homer had been to Greek literature. America expanded westward, and the equalitarian aspect of democratic thought was ever renewed, and constitution after constitution embodied the early Puritan principles, now vivified by the morality of the pioneers. The day has not yet come for the deliberate abandonment of the separation of powers, but it will come; to-day America is so well off that we see there the spectacle of a nation which has its cake, democracy, and yet eats it, by the separation of powers, in three slices.

The rise of manufactures in England urged forward the commercial and industrial middle class to obtain Parliamentary reform, and this they accomplished in 1832 with the aid of a threat that the working classes would revolt. These classes soon realized that they would get nothing unless they obtained it for themselves, and the Chartist movement was organized. Its political points are worth repetition. They were:

- (1) Franchise for all adult men.
- (2) Voting by ballot.
- (3) Three hundred constituencies, divided as equally as possible on the basis of the last census; to be amended after each census.
- (4) Annual Parliaments.
- (5) No property qualification for Parliamentary candidates.
- (6) Members of Parliament to be paid.

Similar things were happening abroad. In France and Germany<sup>78</sup> the upper and middle classes were enjoying the fruits of the liberal revolutions, especially since manufactures required *laissez faire*. It is true that the liberal intelligentsia furnished the theories which redounded to the ultimate advantage of the workers, but the power to move the bourgeoisie was beyond them; to do this required the exertion of one interest against another.

*The Demand for Universal Franchise.* By 1848 the interests below were already grappling with those above, but already a

new element had entered, destined to end the struggle by a victory for universal franchise, and to change the nature of democratic government. The peculiar economic claims of the working classes, arising out of the nature of factory industry and the capitalistic system, resulted in the conversion of the claims for a rather abstract political freedom—the freedom of governmental negation or political disassociation—into the claims for economic equality. The Chartists in England, Lassalle, Marx, and Engels in Germany, and Fourier, Saint-Simon, and Proudhon in France preached more or less consciously, not *dis*-sociation, but its extreme opposite, socialism. No cry or demand could have been more effectual in an age of acquisitiveness (or, as Montesquieu expresses it, of the "desire of having") to call the non-enfranchised to the conquest of political power, and it brought the people in.

Further, the existence of the franchise for some citizens necessarily brought about an extension of it for all: for the enfranchised had different interests, and in order to win power by a majority of votes, they were bound to compete with each other for popular approval by campaigns of political excitement. They brought in outsiders to win their battles for them, just like the tyrants and parties in Athens, and the Catholics and Protestants during the wars of religion; and here as there, the strangers stayed, to become masters.

Finally, the liberal and the rational mind could not help, in the long run, admitting the right of women to political power.

*Clarification through Conflict: Democracy.* The foregoing institutions of democracy we have listed and explained were proposed over the centuries by the pioneers of the democratic movement, some of them being more interested in one or more rather than all of them as being the most certain guarantee of what their authors wanted in the social and individual results of government.

The years since 1917 have been full of a world-wide ideological debate of the most fervent and bitter kind, between the exponents and practitioners of fascism,

<sup>78</sup> In 1848 election manifestoes.

nazism, and communism (and specifically the official and unofficial defenders of the régimes of Mussolini, Hitler, and Stalin) and the defenders of democracy in the countries of western Europe and the western hemisphere. The result has been added clarification of the Lincolnian tenet that democracy is "government of the people, by the people, for the people," with the dividing line between the genuine and the imposters seen to reside altogether in the phrase, "by the people." The main principles for establishing this after World War II had to be formulated for the government of the German states in the American occupation zone. These are the principles the United States required the new constitutions to embody:<sup>79</sup>

All levels of German government in the U.S. Zone must be democratic to the extent that:

- (a) All political power is recognized as originating with the people and subject to their control;
- (b) Those who exercise political power are obliged to regularly renew their mandates by frequent references of their programs and leadership to popular elections;
- (c) Popular elections are conducted under competitive conditions in which not less than two effectively competing political parties submit their programs and candidates for public review;
- (d) Political parties must be democratic in character and must be recognized as voluntary associations of citizens clearly distinguished from, rather than identified with, the instrumentalities of government;
- (e) The basic rights of the individual including free speech, freedom of religious preference, the rights of assembly, freedom of political association, and other equally basic rights of free men are recognized and guaranteed;
- (f) Control over the instrumentalities of public opinion, such as the radio and press, must be diffused and kept free from governmental domination;
- (g) The rule of law is recognized as the individual's greatest single protection against a capricious and willful expression of governmental power.

<sup>79</sup> Cf. *Constitutions of Bavaria, Hesse and Württemberg-Baden*, United States Office of Military Government for Germany (Berlin, February 15, 1947), p. 3.

German governmental systems must provide for a judiciary independent of the legislative and executive arms in general and of the police activity in particular. U.S. policy does not demand the rigid separation of legislative and executive powers. It has no objection to the cabinet or parliamentary type of government in which the executive and legislative branches are inter-dependent. Where a governmental system does provide for a separation of the executive and legislative, there must be no provision which would enable the executive to rule without the approval and consent of the legislative branch.

#### DICTATORIAL AND DEMOCRATIC LEADERSHIP

SOCIAL dissensions in the recent interwar period resulted in the severest trial democracy has undergone, forcing a restatement of its merits compared with totalitarian alternatives, and a reorientation of some of its social policy. Basically the two systems are antipodal in two respects—with respect to freedom, and with respect to the individual's prerogative in political activity.

In a political system where one man or group has created an omniscient image of itself, the individual is expected to receive guidance from the state, to follow, even submit to, the leader. Civil rights and freedom are excluded, for otherwise the position of the dictator might be challenged. Closely related to freedom is the question of responsibility; for without liberty for the individual, the ruling power is answerable to no one but himself. Democracy, however, challenges the infallibility of the dictatorial doctrine, which claims to be the transcendent and dominating truth. Rather, it desires and expects continuous enrichment of social life with equal opportunities for all citizens to contribute, recognizing the difficulty of discovering final solutions to the fundamental problems of human existence and destiny. Hence arises the requirement that the agents of government be responsible to the electorate, who must make the final decisions about the progress of their society.

Political participation in a democracy derives from the principle of equal rights. Since there are many alternative ways of

discovering and achieving the best in public welfare, and since there is no objective way of determining which particular individual might most acceptably discover and utter them, all are entitled to formulate their opinions with equal right. This political equality gives the maximum encouragement to criticism of public officials, keeping them aware of popular needs and desires, and obliging them to answer. Equality also encourages, because it flatters, popular leadership in political affairs. Under a dictatorship, equality of rights is excluded; participation means carrying out orders without question.

Totalitarianism has four main features: (1) the use of propaganda, (2) the monopolistic party, (3) the "facade" legislature, and, finally, (4) a high degree of centralization.

*Propaganda.* Since the dictator acts as the mind and conscience for all his subjects, he must have an extremely well-organized, highly effective machine for implementing his orders. The device of attempting the complete and unquestioning transfer of conviction without regard to truth and its processes was highly developed by Goebbels.<sup>80</sup> A steady spate of words streamed from the Ministry of Enlightenment, serving up the same idea in many flavors (since so many varied publics had to be reached), oversimplifying, and resorting to a multitude of rational and irrational appeals. Such a technique is most effective over a short period of time, since truth, given time, has the unquenchable quality of being extricated from compromising situations. (In marked contrast are democratic attempts to educate—the presentation of alternative points of view, with the selection of the most satisfactory left to the individual.)

*Role of Party.* Next to and serving the leader, the party is the chief instrumentality of the dictatorship, supplementing the democratic executive and legislature. A small, extremely well-organized band of fanatically loyal members, it maintains national discipline, keeping the rest of the population emotionally aroused and obe-

dient. Further, since it has at its command the monopolistic disposal of all positions in the country, and since it controls the entire social and economic as well as political life of the nation, not a single person can escape the weight of its authority. As the élite, the exemplars of the highest virtues of their particular system, the party members are expected to undergo severe self-sacrifice for the cause of the state, as interpreted by the leader, and to give him unquestioning obedience.

Within the Russian Communist party, however, an element of self-criticism is encouraged. "Democratic centralism" allows the local periodic election of the members of the executive units of the party. But centralization requires final and unconditional obedience to the orders of the top officials.

(In contrast, political parties in democracies are highly competitive agencies; the plurality of parties spurs each one continually to enlarge its membership, since a majority gives power until the next election. Here the democratic parties activate political thought and may convert the individual's political desires into law.)

*The Legislature.* In the police state, the parliament is merely a facade, since there is no spontaneous popular choice of candidates or free decisions by the electorate. The dynamic and only element of sovereign decision is the party. The party is above all so significant in democratic states, because at this level the conflicting aims of pressure groups become digested on their way to conversion into law.

Since dictatorial responsibility focuses in one individual, in conjunction with a few hand-picked lieutenants, a marked degree of centralization exists. The party is a vast hierarchy permeated by complete control from the top layers, and there is no recourse from the decisions imposed from on high.

Little pretense was made by the nazis that their government was popular government. They scoffed openly at "the people," and each individual was cheated by the device of causing him to think that the jeering was not at him, but at his neighbors! The Soviet, however, claims

<sup>80</sup> Paul Goebbels, *Diaries* (New York, 1948).

## FORMS OF GOVERNMENT, ESPECIALLY DEMOCRACY

to be democratic. Stalin declared, in a speech reporting the draft constitution of 1936 to the Supreme Soviet:<sup>81</sup>

... another group of critics ... accuses it ... of not granting freedom to political parties, and of preserving the present leading position of the Communist Party in the USSR. And this group of critics maintains that the absence of freedom for parties in the USSR is a symptom of the violation of the principles of democratism. I must admit that the draft of the new Constitution does preserve the régime of the working class, just as it also preserves unchanged the present leading position of the Communist Party of the USSR. ... We Bolsheviks regard it as a merit of the Draft Constitution. ... In the USSR there is ground only for one party, the Communist Party. In the USSR only one party can exist, the Communist Party, which courageously defends the interests of the workers and peasants to the very end. ... They talk of democracy. But what is democracy? Democracy in capitalist countries, where there are antagonistic classes, is, in the last analysis, democracy for the strong, democracy for the propertied minority. In the USSR, on the contrary, democracy is democracy for the working people, that is, democracy for all. ... That is why I think that the Constitution of the USSR is the only thoroughly democratic constitution in the world.

It will be seen that Stalin has accomplished the conjurer's trick by omitting the "individual" in his talk of "classes"; by suppressing the value of democracy for all individuals; and by arguing virtually that the one party which is "leading" can be trusted to reconcile all antagonisms as the antagonists would see them, and to give them the benefits which the party thinks they ought to have. This is a travesty of "democracy," and such chicanery must be exposed. Soviet government may or may not be "good" government and may or may not be historically explicable. But if we are to keep our thinking correct, it cannot be accepted as "democratic" in the sense of government *for* the people and *by* the people. The distinction between *for* and *by*, with all its consequences, must be firmly grasped. What

must never be forgotten, is that in a dictatorial system the good of the people depends on the accident of whether the dictator and his assistants *for the time being* are benevolent, wise, and responsive.<sup>82</sup> The democratic system alone offers the permanent guarantee of these values.

*Doubt and Certainty.* It will have been appreciated that deep inside the animating heart of the democratic idea is a feeling of doubt whether any man knows or can know enough about the past, the present, and the future to attempt to fasten his personal theory of the meaning of nature, the universe and human destiny on to other people, with so sanguine a temper as to be willing, and even more than prompt, to use coercion. Democracy admits reasonable doubt on these three decisive phenomena.<sup>83</sup> But dictatorial systems admit not such doubt, or at any rate do not admit it openly to those who are governed. They may joke about their own certainties, as proclaimed and enforced on others, when they are among themselves—my personal experience is that they do. This sanguine temper is the soul of Stalin's system, as it was of Lenin's and of Marx's. Similar certitudes governed the spirit of Mussolini and Hitler. Stalin's is very reminiscent of the century from which it sprang, the nineteenth, when the positivists and other schools of sociology and philosophy believed it possible to formulate the laws of society with the perennial firmness and precision found possible in the natural sciences. The monopolistic party is founded on a monistic and total creed with a temper of certainty.<sup>84</sup> Stalin's version is:<sup>85</sup>

Hence social life, the history of society, ceases to be an agglomeration of "accidents," and becomes the history of the development of

<sup>82</sup> Therefore, see David Shub, *Life of Lenin* (New York, 1948); Boris Souvarine, *Stalin* (New York, 1937); and Bertram de Wolfe, *Three Who Made a Revolution* (New York, 1948).

## MYSTIFICATION VERSUS MYSTERY AND DEMOCRACY

society according to regular laws, and the study of the history of society becomes a science.

Hence the practical activity of the party of the proletariat must not be based on the good wishes of "outstanding individuals," not on the dictates of "reason, universal morals," etc., but on the laws of development of society and on the study of these laws.

Further, if the world is knowable and our knowledge of the laws of development of nature is authentic knowledge, having the validity of objective truth, it follows that social life, the development of society, is also knowable, and that the data of science regarding the laws of development of society are authentic data having the validity of objective truths.

Here is an iron law which, as Stalin's lieutenant, Bukharin (later executed) declared, furnished the party with "the sword of history." It is also the guillotine of democracy.

### MYSTIFICATION VERSUS MYSTERY AND DEMOCRACY

Stalin's declaration of faith is a declaration that a few social scientists may take mankind into tutelage. By a remarkable paradox, it is the latest, but we must hope not the final, fruit, of the empirical method in the natural sciences, which, in its early decades, was a most powerful stimulus to the rise of modern democracy. The amazing onset of the scientific method in the seventeenth century, whose potent and poetic champion was Francis Bacon, tended to the overthrow of socially functionless absolutisms and oligarchies, because it taught people that it was right to question all traditional authority, and to seek a pragmatic answer to the relationship between tools, instruments, modes of thought, procedures—and ends. From a consideration of the efficiency of instruments to doubt about the ends—that is, political authority and the churches—was only a short step. Political science (and the term comes from the seventeenth century) was pursued with an eye to a science complete in coverage of man's history and nature (Hobbes is an especially fine example of this) and in power of conviction.

In the long run a Karl Marx and an August Comte<sup>86</sup> were bound to arise to dot the *i*'s and cross the *t*'s, and make a continuous generalization of the uniformities in man's history, from his very beginning (though they could not find it) and passing on to eternity, with the same rigidity of cause and effect, as the chemist can know the properties and predict the behavior of sulphuric acid. They set on its head the tricentennial influence of the natural scientific state of mind on the liberation of man from tyranny: for it is that in man which is *not* subject to scientific generalization that entitles him to freedom and quashes the pretensions of irresponsible government. The search for a religious foundation of democracy is a search into life's mystery; the declaration of consummated discovery by dictatorships deliberately turns its back on mystery and exploits pseudo-scientific mystification.<sup>87</sup>

<sup>86</sup> It is time that attention was redirected to August Comte, *System of Positive Polity*, 4 vols. (London, 1875).

<sup>87</sup> John Stuart Mill's break with Comte is a most important part of democratic theory. He wrote: "I had fully agreed with him when he maintained that the mass of mankind, including even their rulers in all the practical departments of life, must, from the necessity of the case, accept most of their opinions on political and social matters, as they do on *physical* [present author's italics], from the authority of those who have bestowed more study on those subjects than they generally have it in their power to do . . . But when he exaggerated this line of thought into a practical system, in which philosophers were to be organized into a kind of corporate hierarchy, invested with almost the same spiritual supremacy (though without any secular power) once possessed by the Catholic Church; when I found him relying on this spiritual authority as the only security for good government, the sole bulwark against practical oppression, and expecting that by it a system of despotism in the state and despotism in the family would be rendered innocuous and beneficial . . . as sociologists we could travel together no further. M. Comte lived to carry out these doctrines to their extreme consequences, by planning, in his last work, the '*Système de Politique Positive*,' the completest system of spiritual and temporal despotism which ever yet emanated from a human brain, unless possibly that of Ignatius Loyola . . ."—*Autobiography* (World's Classics, Oxford, 1924), pp. 179-80.

## *The Separation of Powers: False and True*

### FROM THE EIGHTEENTH TO THE TWENTIETH CENTURY

THE theory of the separation of powers meant little to political science until the issue of political liberty became urgent. It began to acquire meaning in the seventeenth century; and in the eighteenth, with critical times, it came to the forefront of discussion. It is an important subject, for, like other things, it has fallen into the hands of partisans and needs rescue; and impartial analysis of it vividly reveals the nature of the modern state. Let us then attempt an answer to these questions: Who invented the theory? What is the theory? What does it mean? What was its historical setting? What was its derivation? What are its practical consequences?

*Montesquieu's Primary Contribution.* The theory of the separation of powers was first fully formulated by Montesquieu, and appears in *L'Esprit des Lois*, Book XI. But the full meaning of Book XI is obtainable only when it is read together with the rest of the work, for Montesquieu's own spirit appears in one continuous emanation all through the work. Further, the theory was Montesquieu's own, although there are traces of it in John Locke's *Civil Government*, for with him the theory was a conscious generalization linking the machinery of government to its purpose, while with Locke the theory was rather casual. Of that later.

The theory is this:

In every government there are three sorts of power: the legislative; the executive in respect

of things dependent on the law of nations; and the executive in regard to matters that depend on the civil law.

This is not very intelligible, and the definition is therefore elaborated.

By virtue of the first, the prince or magistrate enacts temporary or perpetual laws, and amends or abrogates those that have been already enacted. By the second, he makes peace or war, sends or receives embassies, establishes the public security, and provides against invasions. By the third, he punishes criminals, or determines the disputes that arise between individuals. The latter we shall call the judicial power, and the other simply the executive power of the state.

Even this is not very clear, since the executive power surely includes more activities (and it did in Montesquieu's time) than are stated. So far Montesquieu has not sufficiently thrown off Locke's casual definitions. However, as soon as he gets into his own stride, Locke is forgotten, and he marches along entirely in his own manner toward political liberty, an object he had in common with Locke, but conceived somewhat differently. He says:

When the legislative and executive powers are united in the same person, or in the same body of magistrates, there can be no liberty; because apprehensions may arise, lest the same monarch or senate should enact tyrannical laws, and execute them in a tyrannical manner. Again, there is no liberty if the judiciary power be not separated from the legislative and executive. Were it joined with the legislative, the life and liberty of the subject would be exposed to arbitrary control; for the judge

would be then the legislator. Were it joined to the executive power, the judge might behave with violence and oppression. There would be an end of everything, were the same man or the same body, whether of the nobles or of the people, to exercise those three powers, that of enacting laws, that of executing the public resolutions, and of trying the causes of individuals.

Montesquieu proposes two theses which are not in necessary combination: (1) that there are different *sorts* of powers in government; and (2) that to obtain liberty, power must not be concentrated. The first it is convenient to discuss at a later stage (Chap. 7). We are concerned with the idea that the separation of the powers will secure liberty. The whole of Montesquieu's work rests upon his profound persuasion that liberty is the highest human good. (I do not say passionate persuasion, for Montesquieu was more meditative than active.) To understand the separation of powers one must understand what Montesquieu meant by political liberty, and fortunately, he explains himself clearly enough. Once there is a state, "liberty can only consist in the power of doing what we ought to will, and in not being constrained to do what we ought not to will."<sup>1</sup> That is, liberty is behavior not outside the law but within the law. There, within the law, there ought to be no constraint, no unauthorized behavior by anyone. To be independent is not to be at liberty.<sup>2</sup> Does he not mean that independence from law is dissociation from other citizens? I think so; for his distinction between it and liberty is:

Liberty is a right of doing whatever the laws permit: and if a citizen could do what they forbid, he would be no longer possessed of liberty, because all his fellow citizens would have the same power.<sup>3</sup>

We may infer from this that all citizens must recognize the reasonableness of the restraints of law; if they do not, there will be the restraints of arbitrariness. We may go further. To Montesquieu, law is not

only written law, or even written law with the addition of customary law and traditions. It is much more. It is the principle, the *spirit* of any particular form of government desired—even, we might go further and say, the spirit of the civilization desired. That spirit governs the customs and the traditions and should govern the written law. More, it should govern the form of government. Machinery does not make a government free. "Democratic and aristocratic states are not in their own nature free."<sup>4</sup> Where then is liberty secured? In the spirit of government—that is, in something which is as fundamental as liberty in Montesquieu's system: in moderation. "Political liberty is to be found only in moderate governments. Yet it is not always found in these. It is there only when there is no abuse of power."<sup>5</sup>

Now comes a fresh contribution to the theory. Its presence can be detected throughout the *Esprit des Lois*, but it more frequently appears in the form of ancient history than of plain statement.

But constant experience shows us that every man invested with power is apt to abuse it, and to carry his authority until he is confronted with limits. Is it not strange that we are obliged to say that virtue itself has need of limits?<sup>6</sup>

How many philosophers and active statesmen, both before and after Montesquieu, have subscribed to this observation? It is, in fact, the central reason for separating powers. "To prevent this abuse, it is necessary, by a proper disposition of things, that power should be a check to power." Is this possible? Yes! "A constitution may be such that no one shall be compelled to do things to which he is not obliged by law, or not to do things which the law permits."<sup>7</sup>

What does Montesquieu mean? That bodies of people must be set up, the one confronting the other, with the implied threat that should any go beyond its prescribed sphere it will be challenged by

<sup>1</sup> *Esprit des Lois*, Book XI, 3.

<sup>2</sup> Cf. Locke, *On Civil Government*, Book II, para. 22; Hobbes, *Leviathan*, Chap. XXI.

<sup>3</sup> *Esprit des Lois*, loc. cit.

<sup>4</sup> *Esprit des Lois*, Book XI, 4.

<sup>5</sup> *Idem*.

<sup>6</sup> *Idem*.

<sup>7</sup> *Idem*.

the other; that each shall have a right to certain powers, which it will presumably, and out of its own desire for power, maintain against encroachment.<sup>8</sup> It means that before will can be translated into its ultimate application to citizens, all the bodies concerned must, at least implicitly, have agreed that the will is just. This is nothing other than saying that though sovereignty exists and must exist, yet it ought to consist in the agreed cooperation of several factors, none of which can exercise functions assigned to the other.

This theory does not depend essentially upon the nature of the power exercisable by each authority, or upon whether Montesquieu has accurately described that nature; and this is partly shown by the fact that he includes an extra check by dividing the legislature into two chambers. The distribution among possibly rival authorities is the virtue of his system.

*Montesquieu's Purpose: Moderation.* What will this system achieve? It will achieve, as in England, political liberty: that is, "a tranquillity" of mind arising from the opinion each person has of his safety. In order to have this liberty, it is requisite the government be such that one man need not fear any other. . . .<sup>9</sup> "It [political liberty] consists in security, or in the opinion people have of this security."<sup>10</sup> "When the subject has no barrier to secure his innocence, he has none for his liberty."<sup>11</sup>

Now, even as all governments, monarchic, aristocratic, or democratic, may be intemperate and may act despotically, so may any form of government, even a monarchy, be free in Montesquieu's sense if it observes the rules of separated powers, where none shall grow overmighty. There is nothing more in the separation of powers, and nothing less. So much did

Montesquieu say and no more, though he gave examples from the English constitution (see chapter 9 below) and from antiquity.

Certain points need completion and emphasis. (1) His riveted insistence is upon moderation, however sovereign power is divided. This is the ultimate object of the separation of powers. Separation is not necessary *per se*, but is a product of Montesquieu's desire, and his judgment of the measures necessary to shape human nature thereto.

(2) His judgment of human nature is that whoever has unrestrained power will abuse it. What does "abuse" mean? He does not say, but we may infer that he believes that men are inclined to exert more power than is really necessary with rational regard to the nature of the rights or duties prescribed by law, or that the power will be exerted along paths entirely unwarranted by the law. In other words, the sheer (not necessarily the malevolent) spontaneity of human life results in a ruthless urging forward until it is stopped. I repeat, the intention may not be bad; it may even be noble; but if it is unchecked, the result is too much of one man or body of men, and too little of the others. Is it not part of the liberal creed that all consciences are equal? Here is the everlasting difficulty of government which wishes to remain free: to admit the right and the necessity of spontaneous development, and yet to find the norms which shall provide regulation without suppression. We are back once again to the essence of the discussion on democracy.

Next—and this is exceptionally important of modern democracy—a secondary but essential use of all separation of power is that it imposes upon each power the need to explain itself; but this, again, is valued not simply because it illuminates the mind of those to be conciliated, but because, in the course of accounting for its attitude, an authority may discover flaws in its own information, logic, and principle and become convinced that a new synthesis is truly necessary. Nothing so imperatively causes a mind to question and remake itself as the obligation to ac-

<sup>11</sup> *Ibid.*, Book XII, 2.

count to someone else. (The lack of external compulsion on the will of the dictator in prewar Italy, in prewar Germany, and the Soviet system exemplifies this injurious deficiency.)

(3) The instruments of restraint sought for in Montesquieu's time could be no other than those within the machinery of government. There is no trace in his writings of the moderating effects of party government. There could be none. With all his leaning toward a republic, he never reckoned in terms of popular government; otherwise he would never have conceived of the people, even as Rousseau did (who copied out an enormous part of Montesquieu's best work), as a vast body of equal units acting either isolatedly or as a solid phalanx called the People. We know today, however, that outside the machine, the legislative body, the bureaucracy, and the judiciary, there are great organized bodies of electors in a permanent state of tension, mutually restraining one another, and that the problem of moderation is, in our own day, formulable and soluble only in terms of them.

Here again dictatorial governments, by establishing the monopoly of a single political party and forbidding voluntary associations, accentuate the consequences of a lack of separation of powers inside the internal organization of the organs of the state and render themselves at once capable of swift action and of arbitrary and irresponsible decisions.

Montesquieu, like the rest of that splendid line of liberal thinkers who preceded him, thought in terms of the state, or all the people, or the king, or an aristocracy, as a distinct entity confronting an individual, the citizen. This antithesis resulted from a temporary historical situation when governments were still in the coercive and exploitive states, and from the ascription to these badly understood entities of a power which, in fact, they mainly executed as the agents of other men and groups. Nevertheless, it was a convenient, a striking, and a useful antithesis; nothing could be better calculated to win the support of every man against despotism. But it had a bad effect, be-

cause of its untrue basis, in converting all discussion of government into one of despotism, and in making freedom from the state—*dissociation*—appear the beneficent ideal. It was an effective solvent, but as a creative agent it was deficient. It served well, however, in Montesquieu's time and for three quarters of a century thereafter.

*The Historical Setting of Montesquieu's Theory* need not occupy us long, although it invests the subject with more significance. France was a monarchy, in which authority was shared between a hereditary king and the *Parlements*. The *Parlements* were superior courts of justice with administrative functions, and they had the power to *register*: that is, officially to take cognizance of, royal decrees, as the basis of their judgments and executive acts, and to remonstrate with the Crown if such decrees, of general or fiscal nature, displeased them. The king and his friends insisted that the power of the *Parlements* was bestowed by, and held at, the royal grace; the *Parlements* argued that their power was at least as old as the king's, having been derived from the original meetings of followers with elected chieftains on the *champs de mars* or *de mai*. No one knew or knows the real truth, as with any institutions which have invisibly added power to power in the course of a thousand years and through vicissitudes during which other institutions have insensibly declined. Each of the pretenders caused its own history to be written, and it is enough that the *Parlements* were a check upon the Crown. The *Parlements* were not parliaments; that is, they were not full legislative bodies with the power to propose, discuss, and make laws or, as in England, openly to control the activities and purse of the executive. Nor were they popularly elected. They were, in the main, courts of justice and controllers of certain aspects of administration (like the censorship), with powers of protest against the Crown's legislative activities, but without the power to ask for an account from the Crown's ministers. Moreover, they were composed of judges, notaries, and

other officers who had purchased their offices.

Now these were the only barriers between monarchy in Montesquieu's sense—that is, the moderate rule of one—and despotism—or the reckless willful rule of one. They were not quite so liberal as Montesquieu, they were not specially competent, they were not representative by election, and they had no general community of interest with the people, not even with the general body of the Third Estate. They were of the middle and the upper nobility—the Nobility of the Robe. But they were men fully conscious of their worth, of their power, and of the need for a restraint upon despotism, and they were the natural representative of the upper strata of the Third Estate, whose members gravitated from their rich bourgeois commercial and industrial life into a powerful, brilliant, and respected profession. As such, they, when fighting against the king, sometimes fought for the people, and at least promised the security and exemption from anxious uncertainty provided by a settled procedure based upon uniform, if not excellent, principles. Montesquieu's family was of the magistrature,<sup>12</sup> and he himself was presented with a "parliamentary" living.

Montesquieu was searching for means to limit the Crown; to make a constitution; to build canals through which, but not over which, power should stream; to create "intermediary bodies;" to check and balance probable despotism and yet he did not wish to fly to the extreme of democracy. Hence he saw great value in these *Parlements*, and especially defended the purchase and inheritance of offices, because they created a really independent body—independent in interest, not seeking to rise—but resolved upon its privileges. In these terms, also, did the magistracy defend themselves, liberally borrowing from Montesquieu when their privileges were attacked by Maupeou and Louis XV.<sup>13</sup> Montesquieu's spiritual need,

his environment, and his travels and study in England produced the solution we have just discussed. But a *threefold* separation was not essential to his plans; nor was he trying to discover scientifically the nature of each different power; nor did he define them once and for ever. As with all thinkers who are concerned to influence action, everything was grist to his mill, but the product was not of permanent value.

Indeed, we know that it was fostered by an inquiry into English government in the middle of the eighteenth century, and tintured with Locke's theory of government. English government seemed to Montesquieu to offer the guarantees of individual freedom. Locke was devoted to it, and passage after passage of Locke and Montesquieu read word for word almost the same.<sup>14</sup>

Montesquieu follows Locke, but with more system, and it is important to observe that he never thinks to separate the powers completely, but rather to modify the concentration of powers. Moreover, to have insisted too emphatically upon complete separation would have meant, in his France, surgical action upon the *Parlements*, similar to that undertaken on the County Quarter Sessions by the County Councils Act of 1888 in England and Wales; a severance of judicial from administrative functions. But for Montesquieu, the executive convenes the legislature, states its duration, and restrains its encroachments; it may veto legislation lest it be stripped of its prerogative. The legislature has the right of impeachment: "If it has no power in a free state to stay the executive, it has the right and ought to have the means of examining in what manner its laws have been executed." It may not arraign the chief of state—but, "as the person intrusted with the executive power cannot abuse it without bad counsellors, and such as have the laws as ministers, though the laws protect them as subjects, these men may be examined and punished." He has thus not gone be-

<sup>12</sup> A. Sorel, *Montesquieu* (Paris, 1921).

<sup>13</sup> Cf. Ernest Lavisse, *Histoire de France . . . Jusqu'à la Révolution* (Paris, 1900), Vol. IX, Part I, Book I, Chap. I; E. Carcassonne,

*Montesquieu et le Problème de la Constitution Française au XVIII<sup>e</sup> Siècle* (Paris, 1926).

<sup>14</sup> *Esprit des Lois*, Book XI, 6.

yond the idea of impeachment to that of the political responsibility of ministers.

Now Montesquieu had laid weight upon institutions: but he had equally declared that these were only the product of a free and moderate spirit. The institutions, however, were crystallized in a book, and indiscriminately adulated by liberty lovers. The object is addled, but people continue to adulate. Allowing twenty years for the general vulgarization of the *Esprit des Lois*, it would be in 1768 or thereabouts that educated people were reading it as a conscious part of education. To people born soon after that time, it would already be assuming the importance of a classic, without yet being left on the shelves as taken for granted. Small wonder that it had such an influence upon the Frenchmen of the Revolution and upon the Fathers of the American Constitution. They seized upon the institutional arrangement, but did not, and could not, recapture the spirit which had brought it to Montesquieu's attention and caused its creation in its native land, where it was supposed to work such daily wonders. Of this, more presently.

It seems to me that Montesquieu gazed upon his work and found it pretty rather than practicable. For he suddenly ex-

These three powers [here he means only the two parts of the legislative plus the executive] should bring about a state of repose or inaction. But since, by the necessary movement of things, they are obliged to move, they will be forced to move in concert."<sup>15</sup>

That second sentence sounds like an improvisation which skips many difficulties to save the trouble of disturbing a handsome scheme. Every honest political scientist will admit such temptations; and sometimes their very beauty utterly arrests thought. Let us observe that Montesquieu has avoided the problem of whether the speed and the direction of governmental movement will be appropriate to the needs of society. Nor does he explain exactly how the harmony among the powers, admittedly so necessary, will be produced.

<sup>15</sup> *Idem*.

Perhaps the small amount of creative governmental work of his time in comparison with our own did not raise these problems; and certainly he was a supporter of free industry and commerce. If that is a good excuse for his failure, it is also one for treating it very critically in relation to our time. For it drew the United States into a system of government of which one may say at the best that the people are happy in spite of it, and it has produced a crop of erroneous theories in relation to other countries. One thing we may add to palliate that abdication of Montesquieu's: at any rate he recognized that government must act "by the necessary movement of things."

*The United States and Montesquieu's Theory.* We shall never know whether the Fathers of the American constitution established the separation of powers from the influence of the theory, or to accomplish the immediately practical task of safeguarding liberty and property. They positively desired liberty in the sense enunciated by Montesquieu, and they also desired limits upon despotism; certainly they were permeated by his theory. And just as certainly property played a greater role with them than it did to the more spiritual and moderate Montesquieu, who had conceived of political well-being as based upon equal properties of small dimensions, used frugally. Whatever the respective weights of the influence of the antidemocratic and antidespotic tendencies in the Philadelphia Convention, the American constitution was consciously and elaborately made an essay in the separation of powers and is today the most important polity in the world which operates upon that principle.

As we shall presently indicate, the American constitution did not generally declare that powers ought to be separate. It had not, in the American phrase, a "distributing clause,"<sup>16</sup> nor did it produce a

<sup>16</sup> As was done in some state constitutions of the time: for example, Maryland, Virginia, Massachusetts, New Hampshire. Cf. Massachusetts constitution of 1780, article XXX: "In the government of this commonwealth the legislative department shall never exercise the

## SEPARATION OF POWERS: FALSE AND TRUE

clean severance, for that would have been to make government impossible. However, by certain internal checks and balances the constitution succeeded in making government next to impossible. The demands of those who believed they saw in the constitution the rise of a new despotism called forth a famous reply from James Madison, which we must analyze.<sup>17</sup> He pays his tribute to Montesquieu, "the oracle who is always consulted and cited on this subject," and then observes that in numerous and important ways, the departments of government in the British constitution are, by Montesquieu's "standard," not totally separate and distinct from each other, and concludes that a partial agency was permissible and not subversive of liberty, though a concentration of power in one body was. That "power is of an encroaching nature" was admitted; but in the present case was not the legislature to be more feared than the executive? In fact "the legislative department is everywhere extending the sphere of its activity, and drawing all power into its impetuous vortex."<sup>18</sup>

This is where the shoe pinched in the American states: this should be the object of fear and control. For a representative body can feel the passions which actuate a multitude and is small enough to be able rationally to make the plans to satisfy those passions.<sup>19</sup> The other powers, the executive and judiciary, can by their nature be carefully described; not so the legislature, for who can precisely define legislation? Further, legislatures can acquire power over executive officials through their control of the purse. Proofs are given from a number of states. Thus, there must be real, as distinct from mere paper, checks upon encroachment. What

executive and judicial powers or either of them; the executive shall never exercise the legislative and judicial powers or either of them; the judicial shall never exercise the legislative and executive powers or either of them: to the end it may be a government of laws and not of men."

<sup>17</sup> *The Federalist*, XLVII.

<sup>18</sup> This was a universal complaint of the time in America.

<sup>19</sup> Cf. *The Federalist*, XLVII (Everyman edition), p. 253.

can these be? Jefferson suggests an appeal to the people when any two of the three branches consider that there is need to correct a breach of the constitution. Madison, however, fears that frequent appeals to the people to correct defects in government must deprive it of veneration and stability, that ordinarily men acting in large masses will cause ignorant prejudices to rule, that the public tranquillity would too often be disturbed, and, finally, that the legislature would triumph in all contests by the same influences which won it its election.

What then? What expedient can be devised to maintain, in practice, the necessary partition of power among the several departments?

The only answer that can be given is, that as all these exterior provisions are found to be inadequate, the defect must be supplied, by so contriving the interior structure of the government as that its several constituent parts may by their mutual relations, be the means of keeping each other in their proper place.<sup>20</sup>

The principle to be followed is to contrive that "each department should have a will of its own." From this it follows that the members of each department should have as little share as possible in the appointment of members of the others. But this cannot be pressed too far; otherwise it will end in election by the people, manifestly bad in the case of judges, who, in any event, became independent by their permanent tenure.

The principal means against the concentration of powers is to provide the constitutional means and the personal motive necessary to each department's self-defense. The truth may grieve, but the truth is that ambition inexorably threatens. Nor can mere popular control suffice.

You cannot give each department an equal power of self-defense. As the legislative authority predominates, divide it, give the two chambers different modes of election and different principles of action! Give the executive a negative on the legislature, but not an absolute negative! It

<sup>20</sup> Cf. *The Federalist*, LI, para. 1.

must be remembered also that in a federal government, the associated governments control each other. More, a popular suffrage combined with the vast extent and varied range of the territory of the United States provided that different interests shall check each other and prevent the easy formation of a homogeneous, and hence a tyrannical, majority.

In a free government the security for civil rights must be the same as that for religious rights. It consists in the one case in the multiplicity of interests, and in the other in the multiplicity of sects. The degree of security in both cases will depend on the number of interests and sects; and this may be presumed to depend on the extent of country and people comprehended under the same government.<sup>21</sup>

Madison's argument has been proved true by the experience of the United States. Only one doubt arises: whether it has not proved to be too true; for it has, indeed, thrown government into alternating conditions of coma and convulsion. It is possible to have so many and various interests included in a single state that a majority can never be obtained, while forceful and cunning minorities always rule. This inability to act swiftly, and sometimes not at all, was one of the very effective arguments of the growing Nazi movement against the Weimar constitution, to which reference is made further in chapter 8.

In the United States constitution, powers were thus distributed: legislative powers ("herein enumerated") were vested in Congress, the executive power in the President, and the judicial in the courts. Congress was divided into two bodies, each elected for different periods and by different modes, the first having a biennial tenure with complete renewal, the second six-yearly tenure with partial renewals every two years. Their powers are different and check each other. The executive was to be dependent upon neither the legislature nor the people, nor was it to be fortified by popular election: hence a special electoral college was created. His own sphere was not to be his alone, for

the Fathers feared the executive, especially a *national* executive. Hence, the power of appointment of the chief officials was to be shared by President and Senate. Nor was the executive to have a free hand in treaty making; hence the assent of the Senate was required thereto. War and peace were to be declared by Congress. Officers with a place of profit under the United States government were excluded from membership of Congress; and though the executive may appoint officers who may act as a cabinet to him, neither he nor they may, by a convention of the constitution, appear on the floor of Congress.

Not all the objects which the Fathers<sup>22</sup> had in view have been realized, but their main intention, effectively to separate the powers, has been achieved; for they destroyed the concert of leadership in government, which is now so important in the present age of ministrant politics. They separated the executive sources of knowledge from the legislative center of their application; severed the connection between those who ask for supplies and those who have the power to grant them; introduced the continuous possibility of contest between two legislative branches; created in each the necessity for separate leadership in their separate business; and made this leadership independent of the existence and functions of the executive. Legislative procedure has come to differ essentially from that in Britain and France; financial procedure is worlds apart; there is no coordination of political energy or responsibility; but each branch has its own derivation and its morsel of responsibility. All is designed to check the majority, and the end is achieved. At what cost? This we shall calculate, but not, unfortunately, in dollars, later.

#### UNITED STATES: PROBLEMS AND READJUSTMENTS

The problems arising in the United States as a result of the constitutionaliza-

<sup>22</sup> Cf. B. F. Wright, "Origin of the Separation of Powers in America," *Economica* (London, May, 1933), where American experience is correctly emphasized and theoretical influence perhaps overdisparaged.

<sup>21</sup> *The Federalist*, LI, p. 263.

tion of the theory of separation of powers have been very obstinate and have frustrated the modern social will. Particularly with the growth in extent and marked change in the technical nature of government control of the economy, have the legislative and executive arms of the government waged battles of jurisdiction. Congress, which in Franklin D. Roosevelt's administration was more cooperative than usual, constitutes a regular brake on executive policy. Where President and Congress are of different party or political philosophy, stalemates and compromises continually occur, the weapons being the executive veto power and Congressional refusal to legislate policies.

The independent regulatory commission<sup>23</sup> is the Congressional device to maintain a continuous expert appointed group in quasi-legislative authority over a specific segment of government economic control: for example, the Interstate Commerce Commission. Independent of the executive, the commission's purpose is to formulate in detail and enforce the standards set in the law, following its own uniform policy regardless of the President in office. Consequently, a President can be faced with a hostile commission which will stifle his plan of action or will frustrate his attempt to coordinate the commission's sphere with the rest of government policy.

Violent criticism and extensive litigation have revolved around the scope and powers wielded by these agencies and the departments. These administrative agencies, apparently, make their own laws, for in addition to rule making they have been empowered to judge and command individuals held to violate these same regulations. However, the courts have been particularly strict in requiring due process of law in procedural matters. They have considered as essential the parties' right to adequate notice, fair hearing, and the "findings" of fact as a basis for decision.

In addition, they have required "standards" to be established by Congress to

limit the powers vested in administrative agencies. It is judicially considered unconstitutional for Congress to delegate the legislative powers delegated to it in article I, section 1, of the constitution. On this ground the Petroleum Code, for example, and, shortly afterward, the entire National Industrial Recovery Act, were declared invalid. The Supreme Court said in *Panama Refining v. Ryan* (293 U.S. 388) in 1935:

The Congress in section 9(c) [the clause held unconstitutional] thus declares no policy as to the transportation of the excess production. So far as this section is concerned, it gives to the President an unlimited authority to determine the policy and to lay down the prohibition, or not to lay it down, as he may see fit....

And in the *Schechter Poultry (NIRA)* case:

Here is an attempted delegation not confined to any single act nor to any class or group of acts identified or described by reference to a standard. . . . This is delegation running riot.

However, the Court's subsequent policy has been to permit administrative rule making, provided the terms of the law are reasonably specific.

Such organizations as the American Bar Association, and commercial interests anxious to be free of government regulation, attempted to restrict administrative lawmaking and were influential in securing passage of the Walter-Logan Bill in 1940. Its main provisions were:

(1) Administrative rules were to be issued only after formal public hearings and were to be subject to judicial review through petition to the District of Columbia Court of Appeals.

(2) Regulatory agencies were to establish three-man interagency boards for formal quasi-judicial action on request of anyone aggrieved by any measure taken by an agency.

(3) Judicial review was to be expanded and systematized for all administrative orders.

President Roosevelt, who decisively vetoed the bill, declared that it would "place the entire function of government at the

<sup>23</sup> Cf. R. E. Cushman, *The Independent Regulatory Commission* (New York, 1941).

mercy of never-ending lawsuits and subject all administrative acts and processes to the control of the judiciary." <sup>24</sup>

Nor did the Administration overlook the Supreme Court's adverse decisions on administrative procedures or the outcries of the industrial and commercial interests. The Attorney General's Committee on Administrative Procedure was appointed in 1939 to analyze current procedures and make recommendations, and published its report in January 1941. Later in this volume (Chap. 36) its proposals are noted, as well as the general significance of the Federal Administrative Procedure Act of 1946.<sup>25</sup>

About the time that the Walter-Logan Bill was being cogitated and discussed by Congress, Justice Harlan Stone, speaking for the Court majority in the first *United States v. Morgan* case (298 U.S. 468) in 1936, said:

In construing a statute setting up an administrative agency and providing for judicial review of its action, court and agency are not to be regarded as wholly independent and unrelated instrumentalities of justice, each acting in the performance of its prescribed statutory duty *without regard to the appropriate function of the other* in securing the plainly indicated objects of the statute. Court and agency are the means adopted to obtain the prescribed end, and, so far as their duties are defined by the words of the statute, those words should be construed so as to attain that end through coordinated action.

In the second case in 1941 (313 U.S. 409) Justice Frankfurter, speaking for the Court, said:

It will bear repeating that, although the administrative process has had a different development and pursues somewhat different ways from those of the courts, they are to be deemed collaborative instrumentalities of justice and the appropriate independence of each should be respected by the other.

This is very sound doctrine, and, perhaps because it seemed "that the Court now respected the finality of administra-

tive action" <sup>26</sup> the drive for statutory restraints of such action was resumed and to a large extent triumphed in the Act of 1946.

Perhaps no one has more clearly stated the case for the finality of action, and the immunity from judicial frustration, of the public official, acting of course in accordance with the statutes duly passed by an awake legislature, than President Roosevelt in his veto message on the Walter-Logan Bill. He said:

In addition to the lawyers, who see the administrative tribunal encroaching upon their exclusive prerogatives, there are powerful interests which are opposed to reforms that can only be made effective through the use of the administrative tribunal. Wherever a continuing series of controversies exists between a powerful and concentrated interest on one side and a *diversified mass of individuals, each of whose separate interests may be small*, on the other side, the only means of obtaining equality before the law has been to place the controversy in an administrative tribunal.

As the demands upon governmental machinery have changed since the end of the eighteenth century—and we have amply analyzed and accounted for that change—majorities instead of being detestable have become essential. As Montesquieu said: <sup>27</sup>

These three powers should bring about a state of repose or inaction. But since, by the necessary movement of things, they are obliged to move, they will be forced to move in concert.

The necessary movement of things in the United States has obliged the three powers to move. They cannot but move in concert since men abhor discord. And if concert cannot be obtained within the constitution it must—if movement is

<sup>26</sup> For example, Justice Brandeis in *St. Joseph Stock Yards v. U.S.* (298 U.S. 38) said: "But supremacy of law does not demand that the correctness of every finding of fact to which the rule of law is to be applied shall be subject to review by a court. If it did, the power of courts to set aside findings of fact by an administrative tribunal would be broader than their power to set aside a jury's verdict. The Constitution contains no such command."

<sup>25</sup> See Chap. 36.

## SEPARATION OF POWERS: FALSE AND TRUE

really necessary—be obtained by something outside it, whether with complete or partial success. The indispensable institution has been found in the party system. That has tended to redistribute the authority divided by the constitution. Of its success and failure we speak later (part III).

Yet the mere existence of a separation of representative assembly, executive, and judiciary itself acts to disintegrate party government, which can never be sure of being in complete command of the three agencies of government at any one time. How much the party strains to achieve such a union of policy we have already observed earlier, in the close connection between political participation and the union of powers in the Soviet system.

The American system, which has been called "Congressional" government, is in very strong contrast to *European democratic systems, which have tacitly rejected the separation of powers, and indeed, deliberately coordinated them in the "cabinet system."* Briefly, the elements of the cabinet system are these. Functions are broadly divided between legislative, executive and judiciary. The judiciary is appointed, even as in the United States, by the executive, but on terms which render it practically an independent branch. The executive then falls into two parts—the ministerial or cabinet council, and the Crown or the presidency of the state. The latter has little independent political power. The cabinet is the creature of the legislative, but a creature which leads, nay, drives, its creator. It is not forbidden, but on the contrary is expected, to enter the legislature, and is often commanded to do so. There is thus a direct link between people, legislature, and executive: and as a rule they act in general unison, moved by the same tide of political feeling. The legislature is responsible to the people; the cabinet is responsible to the legislature and to the people. They are one body at different stages of leadership but in the straight line of ascent from the people. In the United States popular sovereignty operates by bifurcation and even trifurcation; it divides into channels

which run parallel to each other but do not fully meet or mingle, but are connected by drawbridges.

### THE SEPARATION OF POWERS: EUROPE AND BRITAIN

Yet the Continent and England have not been and are not without an interest in the separation of powers. The theory began in France, and we can show that, though Rousseau moved the French towards revolution, Montesquieu governed the elaboration of France's early constitutions.<sup>28</sup> The French National Assembly of 1789 laid down the principle and divided the legislative from the executive power.<sup>29</sup> No compromises were permitted<sup>30</sup>—the decree-making power was refused to the executive—and it was resolved that no member of the National Assembly or future Parliaments should be made a minister within four years of the termination of his membership, or accept any office, gift, pension, salary, or commission from the executive. We need not, however, trace all the consequences of the principle in these constitutions. They broke down in 1793 before the onslaught of passionate revolutionary zeal which could not do its work quietly without a central control of all powers in the capital and at the extremities; they were readmitted in 1795; they fell at Napoleon's touch; and they were resuscitated in different forms in 1816, in 1830, in 1848, but not in 1875. But the revolutionary belief in the separation of powers has had one enduring result upon France—it caused her to deny, in her constitutions, the power of the courts of justice to declare a law made by the Chambers constitutionally invalid, and the power of the court to judge executive officials for a fault committed in and by reason of the public service; and the latter led directly to the creation of special administrative courts for such cases. Somewhat similarly in Germany; but quite otherwise in England.

<sup>28</sup> Cf. Robert Redlob, *Le Régime Parlementaire* (Paris, 1924).

<sup>29</sup> 1791, article III, §, 4.

<sup>30</sup> Articles III, IV, VI, Sect. I.

Throughout the nineteenth century, there were those who argued that without the separation of powers there was no liberty. The clauses of the French constitution are not important to us, except that we may remember that in the constitution of 1875 the principle was no longer declared, and that in fact, that constitution adopted the cabinet system. The reason why the separation of powers was in various ways laid down until 1875, and the reasons why it is still demanded by some writers are, however, important. It is not that there was or is any special interest in the possibility of exactly and scientifically defining and severing the elements of governmental power. This occupation was strictly subordinate to the essential object: to secure such a balance and direction of governmental energies as comported with their social ideals. For let us be clear about one thing: the theories of the separation of powers are ultimately instrumental to some particular social design—the purpose of an individual reformer or of interested groups of classes—and theories of government, especially where they concern institutions, are the centers of will: desire produces will, and will is prior to institutions.

In France the idea of the separation of powers was soon used as a defense of the libertarians against the egalitarians. The difference between the consequences of the principle of liberty and of equalization forms the almost deliberate thesis of de Tocqueville's political philosophy. Considering democracy in America, he is tempted to this reflection: "Men desired to be free in order to be able to make themselves equal, and, in proportion as equality established itself with the aid of liberty, it made liberty more difficult for them." For equality being their principal care, they allowed the state to aggrandize itself, and men permitted their own degradation. How terrible the possible despotism! <sup>81</sup> Now, more than ever, is liberty

the salvation of society,<sup>82</sup> not to destroy the democracy which reposes upon equality, for that is obviously the fulfillment of God's design, but to temper it, to make it a beneficent and not a fatal dispensation.<sup>83</sup> How secure liberty? Through legislature, liberty of the press, education, judicial independence, the recognition and guarantee of individual rights, and local and cultural corporations—institutions which will do in democracies what certain historical corporations had done in the old monarchy.

Nor has this strain disappeared from French political thought. The separation of powers has been demanded as a check upon the usurping tendencies of the parliamentary assemblies, which threaten both executive and society, but the arrangement is not now always called either independence or separation, but reciprocity. There was obviously a desire to exalt the executive in order to stay the equalitarian legislation of the Chambers. To another writer the problem appeared as that of the individual against the state, "that is to say, the great question of liberty itself," and the solution—the abolition of executive and legislative influence in the administration of justice, and the establishment of judicial control of the constitutionality of laws and administration (on the American model)—was reiterated after twenty-five years' experience of French politics.<sup>84</sup> Another, who was but a single example of many, deploras "parlementocratie" and the "confusion of powers"—and this was because parliamentary powers and behavior were feared as "anarchic," while the nonexistence of a popularly elected executive was said to offer no check to the "fatal enslavement of the people to the assemblies."<sup>85</sup> What was behind this? We once more come upon the struggle between economic equality and political liberty.

## SEPARATION OF POWERS: FALSE AND TRUE

Nothing is more contrary to the spirit of the French Revolution, to the unanimous conception of the Republic, from its origin down to the recent times, when the retrograde spirit of Socialism commenced to pervert and ruin it, to substitute for the noble and fecund principle of liberty, of initiative, of individual responsibility, a truly collective regime, in anticipation of an absolute collectivist despotism which draws near.<sup>36</sup>

In the sessions of the constitutional committee and the debates of the constituent assemblies of 1915 and 1946, the French Communist party took an extreme course on every topic concerning the separation of powers, while the other parties were moderate on the subject, becoming strongly in favor with the M.R.P. and the Radical-Socialists, rightwards. On the supremacy of the party over its members, the supremacy of the legislature over the executive, the right to recall the deputies, the powerlessness of the titular chief of state, the right of pardon, and the supreme control over the judiciary, the Communist party expressed the most decided sentiments in favor of the unlimited domination of the legislative body, one and indivisible, not even accepting popular recall but leaving the latter to be exercised by the party's discipline over its members. The Communist party, with the aid of the Socialist party, was largely successful in securing the practical predominance of the National Assembly over all powers: its steady argument was reminiscent of the Russian Communist cry, "All power to the Soviets!", and its slogan was "All power to the people, through their party and the National Assembly!" The flavor of the majority's view, expressed by the *rapporteur*, a member of the M.R.P., may be gauged from this quotation from his report:<sup>37</sup>

To a presidential system founded on the absolute separation of powers [he was thinking of the United States constitution] is opposed government by the assembly established on the basis of the confusion of powers. It is said by some, that sovereignty is one; it resides wholly in the people: and as in so big a country as

France, the people cannot themselves possibly exercise their sovereignty; it is unavoidable that they delegate it to their representatives. Sovereignty being one, it cannot be delegated except in its entirety. Therefore, the three functions, legislative, executive, and judicial, must in their integrity be delegated to a single-chambered and sovereign assembly which the people is called on to elect.

"Such a system of government," as the *rapporteur* of the draft of April 19 wrote, "is adapted to the exigencies of revolutionary action because it is in some sort destined for revolutionary periods, and because France does *not* find herself in a revolutionary period, there cannot even be a question of proposing it to the constituent assembly. To repeat Robespierre's words, the France of 1946 needs a constitutional government."

Opposed to this is a phrase of the leading Communist member of the constitutional committee—he let it slip and wished later to retract. He said: "I think, differently from M. Capitain, who believes that certain principles exist over and above national sovereignty—that above this sovereignty there is nothing."<sup>38</sup>

[\* See *Addenda*, p. 959.]

It might be added here that in the Vyshinsky treatise on Soviet constitutional law (referred to above, p. 85), it is truthfully asserted that in the United States and Europe, the separation of powers had always masked but never prevented the real predominance of the executive—a deliberate bourgeois trick!

When dealing with American practices arising out of the theory of separation of powers, we noticed the comparative recency of agencies (the independent regulatory commissions) which, not being law courts, have nevertheless been given a judicial kind of authority over the interpretation of the law. Yet it should be noticed that one consequence of the theory of separation of powers in France was the establishment of administrative courts culminating in the *Conseil d'État*, which for many decades have had exclusive jurisdiction over actions by citizens against misuse of official power by local or central officials, extending to *ultra vires* cases as

<sup>36</sup> *Ibid.*, p. 197.

<sup>37</sup> *Assemblée, Séance*, August 2, 1946, *annexe*.

<sup>38</sup> *Séances, Commission de la Constitution*, p. 36, December 5, 1945.

well as actions where the public authorities—for example, municipalities—are in conflict among themselves or with the central government. The subject is pursued further in later chapters.<sup>39</sup>

It is not necessary to multiply examples. The facts are clear. Many people and political parties<sup>40</sup> are afraid that without checks and balances in government, liberty will disappear. A similar development is apparent in German constitutional history<sup>41</sup> and in English. What caused the creation of the theory and the political demand? In every case there is a specific reason or group of reasons for fearing the intervention of government. Up to and in the eighteenth century it was fear of monarchical despotism, by the upper and lower classes. In the nineteenth century it was for the same classes in Germany the only hope of fettering absolute monarchy. In all countries today it is the desire of the economically prosperous classes or of private enterprise and its academic and other defenders to preserve themselves against the collectivist, egalitarian, and regulative tendency of democracy, and of the more patient, bourgeois, working-class leaders to attempt a synthesis of the liberal with the socialistic state. They desire at once dissociation from the state and an ordered regular procedure (preferably judicial) for the determination of the extent of their political obligations, whether merely imposed by the state or self-acknowledged.

But there is no such enthusiasm for checks and balances among those who are impatient to create a new social order, or sternly to maintain an old one, where, for example, the courts of justice show themselves imbued with a spirit of opposition to the executive. The bolshevik theory confounded all powers: so equally did the fascist system; so did the nazi system. The latter, like the Soviet system, destroyed

the separation of powers by reducing legislation to a formality, by seizing power to make ordinances which had the force of law, even if such laws amended the constitution. Further, it seized the power of the appointment of and pressure on the judiciary and the complete subordination of the civil service system to the *Führer* himself.<sup>42</sup> All civil service associations were forcibly made a wing of the Nazi party. It is interesting to note that it was difficult for the Nazi government entirely to subjugate the judiciary.

Without any doubt, a powerful connection subsists between the economic and social status of the writer's group and his theories. Some people attempt to escape governmental control, and therefore demand the accumulation of courts of appeal of all kinds before they can be seized. Others, needing the help of government, can prove from that hypothesis that there ought not be any scruples about swift and immediate action. Everything depends upon what kind of moral sovereign good is worshipped. It is not necessary for the political scientist to have inquired into the separation of powers further than to have arrived at this result: whether we wish a separation of powers, and in what particular institutional form it is to be embodied, depends upon what general political needs we feel to be really urgent. That is to say, there is nothing absolutely inherent in the nature of different functions, nothing eternal and unchangeable, which will settle the question whether there ought to be a separation of powers, and if so, in what it should consist. The answer is relative to one's needs, and to the organization, procedure, and mentality of the institutions as they actually function. Yet even after conflict has removed hereditary coercions and privileges, by destroying or permeating the separated powers when these are hostile to those at a disadvantage, and even when society embodies more equal law, the newly desired relationship of the individual to the whole community will im-

<sup>39</sup> See Chap. 36.

## SEPARATION OF POWERS: FALSE AND TRUE

pose some newly appropriate separation of powers.

*The Fall of the Triad of Powers.* We cannot, however, leave the subject at this point, for there are two questions to consider. The *first* is the possibility of separating powers distinctly by reference to their specific qualities, and the *second* is, how are powers actually differentiated—not separated!—in modern democracies?

I will not answer the first question by detailed examination of the old triad of powers. In recent years the triad has been much attacked by theoretical writers, and has been proved by actual experience to be untenable. It has been shown, broadly, that the legislature does not always concern itself with the establishment of general policy, but often makes exceedingly detailed and specific rules concerning departmental and local organization and functions, and thus performs work to which only the technical knowledge of professional civil servants is adequate. Again, it is shown that the legislative body allows more and more scope to the executive to fill in large empty areas in the statutes, and that this rule making is no more or less than "secondary" or "sub-ordinate" legislation—that is, general rules with the supreme binding authority of statute.

With the growth in the quantity and technical nature of the subject matter of legislation, and the need for flexibility and continuity in administration of the program, delegation of extensive powers to administrative agencies has become widespread. Quasi-legislation has two basic variants: the promulgation of general rules and regulations, sometimes called sublegislation or rule making; and the issuance of orders, entailing application of the standards to specific cases of enforcement.

The administrative departments are given judicial powers by statute—powers to judge of complicated situations of fact and public policy as they concern indi-

viduals and associations—from which there may or may not be appeal to the law courts. And, finally, the law courts add to or take away from the statutory law, or from the executive power, by their judgments. The analyses have proceeded to considerable depth, and we need not reproduce them.

The principal criterion is regarding the danger to individual liberty of allowing an administrative system—the servants of the chief executive—to undertake the functions of lawmaking and the administration of justice, with the finality which the responsibility entrusted to the administrative branch requires if the law is to become a social force.<sup>43</sup>

That is the sum and substance of the modern interest in the supremacy of law and in administrative law, and it is a direct consequence of the development of state activity since the 1870's. Originally the despotism of the Crown was feared and attacked; later the despotism of Parliaments and Congress was feared and attacked; now, in the twentieth century, the alleged enemy is the mighty corps of civil servants sometimes maligned as the "bureaucracy."

There is no longer any virtue in the triad, except as a provisional scheme. We must discover some other rough differentiation of the functions and organs of government. When we have done that, we may inquire briefly into their nature and into the extent to which modern policy demands their interaction. Let us always remember also that the political utility of any power—legislative or executive or judicial—does not depend upon its own nature but upon the mentality and procedure of the body which exercises it, and that this mentality depends upon its appointment, its training, and its working conditions.

<sup>43</sup> Cf. Milton Katz, *Cases in Administrative Law* (St. Paul, 1947), pp. 752 ff.; and James K. Hart, *Introduction to Administrative Law* (New York, 1940), Chap. 16.

## *A More Scientific Understanding of Powers*

IF we observe the operation of modern government, regardless of any division of powers among different organs, we see that to a complete act of government two things are necessary: to resolve and to execute: that is, to determine that certain things shall be done and then to cause people to do them. If we apply this division to political activity, we see that the centers of the first—the resolving branch—are the electorate, the political parties, the legislature (Parliament or Congress), the cabinet, and the chief of state; and that the centers of the second—the executive branch—are the cabinet, the chief of state, the civil service, and the courts of justice. That is to say, there are seven main centers of political activity, the co-operation of which is necessary to produce a complete act of government.

The seven are, in practice, interlocking and essential to each other, though there may be jealousy and distrust among their actual personnel. Without the parties, the electorate would be a mass of men and women in a nasty state of nature, though I am far from saying that even with them the electorate is in any country as yet much beyond such a state. The electorate has its contact with the legislature through the constituencies, by-elections, lobbyists, and deputations. Legislatures today are little more than the political parties in conference specially organized by party meetings, caucuses, and the whips. The cabinet is, on the resolving side, interlocked with the electorate, with the par-

ties, and with the legislature, and obtains from the civil servants the expert material for initiating or handling discussions and resolutions. On the executive side, it is in touch with the chief of state; it controls, and is guided by, the professional administrators; and it appoints the judges of the law courts, having, also, its own legal counsel from bar and bench. The chief of state is (with the exception of Great Britain) in touch with the electorate, being elected either directly or by the legislature. The civil service is not entirely out of touch with the public: it is reached by deputations and aided by consultations, advisory councils, and its public relations departments. The courts of law are not entirely out of touch with the development of civilized needs, and for a very large part of their time they apply laws made by the factors we have already indicated; yet they also exercise a moderating effect upon the law, because they apply certain extrastatutory juridical principles, substantive and interpretary. In practice, the interlocking relationship we have sketched is even closer than indicated; but these are the main elements which cooperate in government.

*The Electorate.* This is an amalgam of individuals and groups, a seething mass of uncoordinated and often hostile wants. It is now recognized as the sovereign body in most constitutions and political theories; some deny that it ought to have limits, while others—the minority—urge that it ought not to be despotic, and they

demand its self-limitation by reference to some moral standard. Whatever the literary theory of popular sovereignty, the power of the people is, in fact, limited by their ignorance, their conventions, their monetary resources, their apathy or their nonpolitical preoccupations, and the constitutional forms through which they operate, established before the advent of popular sovereignty and limiting it.

It is idle to speculate upon what this power—the electorate—would be without restraint and without the existence of party organization to lead, educate, and control it. This, however, is certain: democracy would be either impotent or destructive. And by destructive I mean that it would force men and things to actions which would cause their breakdown, so that not only would the objective not be obtained, but the energies and powers would be dissipated: the usual fate of ignorant attempts to use a complex machine. If we reflect upon the intricacy and worldwide range of modern government, domestic and international, we can understand at once that even the present amount of common sense and education in the majority, and even the present state of morality, including such things as popular notions of justice, decency, and prudence, need a remarkably long, careful, and intensive cultivation before the people will be able to do more than choose between two or three broad alternatives put before them in the form of party candidates. The demonic mightiness of the Sovereign People, combined with the relative incompetence of mere men and women, leads those who care for equity, order, and certainty to require specialized and skilled institutions to obstruct and sift the awful avalanche of its intentions. None more than the people themselves desire this.

*Party and Legislature.* The institution most immediately and continuously in contact with the people is the party. Its function is to organize the voters in the hope of a majority, or at least of a formidable opposition, and to control the creation and execution of policy, principally through legislature. Competition between

parties already imposes upon them a certain amount of discipline and training for their task. In proportion as the plenitude of sovereignty is open to their acquisition, each vote is of supreme importance, none can be ignored, and since the achievement of power is frequently contingent upon the turnover of a small proportion of votes, here is a powerful tonic to political organization and energy. Conflict and contact with other parties fosters a knowledge of others and reveals one's self. Some technical knowledge of the whole field of government must be obtained. It is impossible to distort the truth either as to past services or future promises beyond certain bounds, for fear of public exposure. Reciprocity in debate leads to settled and rational rules of procedure. Corporate life and personal contacts in an assembly produce a conciliatory attitude, which is fostered by the traditions and usages of the assembly. The payment of members has made it possible for the less acquisitive to devote themselves entirely to their legislative duties. All these things promote party and legislative competence, and rational, considerate, and even tolerant principles.

Yet parties and legislatures are still in their infancy, and they have not yet solved those difficulties which now prevent them from being the proper center of all law and administration. The process of election depends upon the people, and despite the rivalry of the parties, which tends to lift the level of candidates, we are still far from a satisfactory solution of the main problem: to provide wise and competent representatives in a sufficient number and with sufficient time to fulfill their function as its technique demands. We have but said that within the electoral process of competition there are advantages obtainable by the operation of the party and the legislative system, but the level of the electorate and of the bulk of the members of different parties may cause, and in modern states in varying degrees does cause, such imperfections in the legislative body that if one more straw were put upon its back, disaster would follow certainly and swiftly.

What the elected representatives of the people may do, or ought to do, depends very largely upon what they *can* do. This is the clear lesson to be drawn from the hearings and report of the Joint Committee on the Reorganization of Congress, of 1945-46;<sup>1</sup> from the decade of the 1930's in France; and from the British Committee on the Procedure of the House of Commons of 1945.<sup>2</sup> To judge representatives now, and for a generation hence, they can no more than legislate by stating their personal, group, and local opinions of the projects of their leaders. Neither they nor their leaders are able to make the technical calculations and surveys upon which bills are founded, nor are they able to throw a bill into the form which will express their intentions with the least vagueness, having regard to the trouble which would follow if the clauses were not phrased conformably to other laws and the meanings already accepted by the courts and in common transactions. Nor, if the repeal of other laws is consequent upon the new statute, do members know enough about either the statute book or the state of the law, as made and administered in the courts or by the administration, to be able to act without skilled guidance. Further, it is of course possible within limits for representatives to inquire into administration: the function is important and possible, and one, furthermore, which can with advantage be extended beyond present limits, for to question is to alarm, and to alarm is to control and reform. They may also educate the public by their debates, and may express the doubts and aspirations of all interests. However, all this can be done only generally: for time is pressing, and numbers, for the sake of reasonable discussion in a full assembly, must be small. It is quite certain that when it comes to the constant and daily application of these general rules and intentions to a multitude of objects and citizens, the member has neither the necessary time, technique, patience, application, or interest. Some

other bodies must assist until such time as the legislature is appropriately constituted.

The chief function of legislatures is to establish statutes. A statute is a stage in the process of government, midway between the original desires of the people for social change and the governmental effectuation of those desires. If the statute concludes the legislative stage, it opens the administrative. A statute is a vital contribution to the process of administration, for it defines the permissible range of discretion and power available to the administration, and if it does not do this with clarity and precision, the administrative process itself is confused and both the public and the legislature may consequently be frustrated.

*The Cabinet and President.* The cabinet in the United States (the President and his advisers) or the Council of Ministers, as it is called in the Continental systems, consists of a small number of people: usually members of the legislative assembly (though not so in the United States system) and the leaders of the majority party or parties, acting as the supreme chiefs of the various administrative departments. It is at this point that the legislature comes into direct contact with the administration and with the law courts, exerting its guiding and creative influence freely upon the one and in a much lesser degree upon the other, superintending the conversion of laws into behavior in accordance with the wish of the majority, and using the administration as aid and counsel in the technical preparation of policy for introduction, explanation, and defense before the legislature and the country. Through this body the legislature and the electorate are improved by expert knowledge, and the permanent officials are energized and controlled.

*The Administration and the Courts of Justice.* On the other side of the cabinet looms the vast apparatus of administration, the machine for the concrete application of general principles to particular cases. There is nothing in the nature of administration which demands that it shall be divided into several departments or

<sup>1</sup> See Chap. 20.

<sup>2</sup> *Idem*.

that it shall be divided between the centers and the localities or, let us say, between departments and law courts—nothing at all, except considerations of utility depending upon the nature of the various subjects of administration, and the character of men's desires. Did we not observe that Locke's division of power was into legislative, executive, federative, the last being but executive action in foreign relations? This division was confusedly followed by Montesquieu, and the cause of his confusion was that he *wished* the law courts, much as he saw them in contemporary England and in France, to be bodies independent of the executive. Montesquieu's wish, however, cannot be our law, unless we find it convenient and proper for our own purposes. In fact, we see that the executive work of the state is divided broadly into the administrative and the judicial, but in no country was this (until the end of the eighteenth century in France and Prussia) the result of a conscious and systematic separation.

Our present institutions are the result of certain historical disputes about political power, in which the parties who wished to limit autocracy were able to secure, mainly by force or its threat, *first*, the creation of a special council of deliberation and resolution (the legislature) on a representative basis, and *second*, a special branch office to state the law when its meaning was vague or in dispute between individual and individual, and between individuals and the state. What was done is what some modern reformers wish to do: to institute special boards of appeal to which they may turn when they are troubled by the state (or by other people), and which are likely to be favorable to their claims, by virtue of their mentality, their deliberately designed opposition, their corporate conceit, and their forms of procedure. This was all the more necessary since the law is a special study, peculiarly difficult in the ages when practically all was customary law. We know why the executive grew so strong in the sixteenth century: men could not do without its strength, but they attempted—at least the powerful attempted—to confine

the executive to what was strictly necessary to its admitted function. They could not allow the claims of policy—the *raison d'état*—to a fitful, uncertain, and secret prerogative. The executive must show due cause. How, and where? The answer was: before judges who were free from executive (royal) control.

It is clear that the execution of law involves two duties: judging the facts of a situation, and judging the relationship to the law. But what if the law is vague? Who shall judge between state and subject? That is one difficulty. A second is that the greater part of the law is concerned not with judging the state as a party, either as a recipient of duties from its members or as a donor of benefits to them, but with judging the claims of individuals and groups against each other. This was by far the largest part of the early jurisdiction of the courts, and is so even today.

Now, by a historical development which is of amazing interest but which is also so complex that we cannot follow it here, the courts in England and America (but not to such a degree in France or Germany) attracted to themselves: (1) all judgment between individual and individual, (2) judgments of crimes against the state, and (3) judgments rendered by the executive or by privileged corporations whenever these were challenged as outside their legal power. The courts obtained the power to challenge and rectify such judgments. The English method was extended to the United States, and even on the Continent, where the executive was much more resistant and where the administration had its own final jurisdiction, the courts of justice went far toward securing an extensive supremacy. This development proceeded until the last two generations, when the state assumed positive services and consequent duties were demanded from its citizens.

Little by little the latent and essential contest between the two branches of administration was revealed, for while the strictly administrative branch sought speed and efficiency, the courts were still the resorts of appeals, or the people—not

yet having learnt that social duties are the price of social benefits—considered that they should be. By the “necessary movement of things” the courts were reviewing administration, and the administration was sitting in judgment, and each became resentful of the other’s intrusion into a domain which had been existent long enough to be deemed “sacred,” or which was considered so necessary to social salvation as to be “holy,” while citizens were alternately terrified by stories of the “new bureaucracy” or the “new despotism” or “trial by Whitehall,” and exalted by such policies as the demolition of slums, the stamping out of contagious diseases, and the extension of social services at lower than cost price.

What, in essence, is the dispute between the judicial and administrative branches?<sup>3</sup> It is a dispute about the comparative governmental merits of administrative action and judicial action, and the comparison (in England and America, at any rate) is usually made between the worst administrative and the best judicial practices. That, however, is not a scientific treatment of the problem, which is to compare the nature of the present work to be done and the best machinery which can be discovered to do it, and not to compare it simply with the machinery which has existed or now exists. Let us consider the two sorts of executive action as they now operate, and compare their merits and defects.

The administrative departments work within the broad limits set by the legislature, but these are today so broad that a large discretion resides in the departments. They exert a mighty power, for often the only appeal which can be made against the decision of an official is either to some higher official in the department itself, where the case may not be fairly judged, or to the courts, where the procedure may

be so complicated and costly in money and time that it is cheaper to the complainant to suffer the wrong than seek the remedy. Or, again, a question might be asked in the legislature, but lack of time, as well as ministerial equivocation fertilized by departmental ingenuity, may cause the denial of justice. An unaccountable power may be an unnecessarily cruel power.

What contributes to the possibility of departmental injustice? *First*, the personal desire to dominate, since what is to be done is a personal duty of the office and officers, to be carried through successfully. In their discussion of this question—namely, whether departmental powers and the rule of law were being strained—the famous British Report of the Committee on Ministers’ Powers (1932), based upon an investigation into the charges of despotic behavior, made much of the potential trouble which might result from the very zeal of officials. Thus:

Indeed, we think it is clear that bias from strong and sincere conviction as to public policy may operate as a more serious disqualification than pecuniary interest. . . . No honest man acting in a judicial capacity allows himself to be influenced by pecuniary interest; if anything, the danger is likely to be that through fear of yielding to motives of self-interest he may unconsciously do an injustice to the party with which his pecuniary interest may appear to others to identify him. But the bias to which a public-spirited man is subjected if he adjudicates in any case in which he is interested on public grounds is more subtle and less easy for him to detect and register.

*Second*, the career depends upon success or failure, not quite so often as in private industry, but to an extent which is important here. *Third*, corporate defensiveness and sense of collegialship take away from the value of an appeal to a superior officer. *Fourth*, administration is at present a rather secret process, some things not being recorded at all while other things are recorded but not published. Hence decision may be arbitrary, and secrecy, in any case, produces a reputation for arbitrariness. *Fifth*, there is

<sup>3</sup> Cf. C. K. Allen, *Law and Orders* (London, 1946); W. A. Robson, *Justice and Administrative Law*, 2nd edition (London, 1947); John Dickinson, *Administrative Justice and the Supremacy of Law* (Harvard, 1927); Charles E. Wyzanski, “The Trend of the Law and its Impact on Legal Education,” *Harvard Law Review* (1944), p. 51 ff.; and J. M. Landis, *The Administrative Process* (Yale, 1938).

lacking a body of rules for training officials, and a code of duties and behavior, obligatory, certain, public, and enforceable, to secure the proper poise between efficient innovation and scrupulous regard for the rights of individuals and groups. The elaboration and establishment of such a theory and code is only in the process of being considered.

But those who sit in judgment, especially when there is no right of appeal, should be circumspect, wise, considerate, scrupulous in regard to every trifle of evidence, and personally disinterested, save to secure an equitable result as between complainants or defendants and the large body of citizens and social groups who, though they do not appear, are, in effect, the other party.

Finally, the judgment is often not made by the person or persons who have conducted the investigation of the evidence, but by some other officer, upon report.

*The Courts of Justice.* These qualities the courts of law have in most cases possessed and displayed, for their whole procedure has been built up on the basis of impartial umpireship between two parties. They have had no personal interest in the result, for they are irremovable, exempted from suit for any fault; there is little question of promotion; and the acceptance of gifts is forbidden. (Exception must be made for certain elective judgeships in the United States.) Procedure makes the discovery and presentation of all evidence fully possible, and gives all parties the opportunity of stating their case with expert help. Proceedings are public; reports are published; records are kept; and precedents have weight. Moreover, the principles of the law, as they are taught, include these things; they are revered; and though (in Britain, America, and the British Domains) there is no special training for judgeships, there is in the law. In the use of this law for attack or defense, counsel comes before a court with strict etiquette, presided over by justices who jealously guard the traditional morals of the profession. These things produce definite principles which all may know with considerable certainty, and a

process and convention of impartial and impersonal attention to the claims of the parties.<sup>4</sup>

When, however, the administration of justice is considered simply as a branch of government, these very advantages are observed to hide certain disadvantages. *First*, the courts move only as a remedial and not as a preventive machine, being concerned with cases when they arise and are presented, and not with the wholesale calculation and independent prevention of future contingencies. Control of trusts in the United States was weakened until recently by the attempt to administer control through the courts. In the judicial process, the initiative which sets the train for authoritative decision belongs to individuals and may never come or may come too late; in the administrative process, it is vested in officers definitely charged with forethought. *Second*, insofar as "public policy" is concerned, the court of law either may not be able to judge properly of the issues concerned, as it does not know the nature of various governmental factors involved, or may not be equipped to measure the facts with the quantitative exactness necessary for certain decisions. Chief Justice William Howard Taft, of the Supreme Court of the United States, believed he could find a "yardstick" to measure "unfair" competition; experience showed he was wrong. *Further*, the method is not sufficiently elastic, for it is bound overmuch by precedent and the need for uniformity (to secure certainty) and so cannot meet every situation which confronts it with specific appropriateness and yet maintain its great virtue: namely, continuous uniformity and equality of application. *Finally*, the substance of the law administered by the British and American courts, largely the common law, is the produce of a bygone age, when society did, and needed to do, much less with and for the life of the individual than it does today. Almost, the common law was born to resist government authority; in the United States it was deliberately set above

<sup>4</sup>Cf. Lord Chief Justice Hewart, *The New Despotism* (London, 1929), p. 25 ff.

the Congress and the executive to resist them; it still resists. That is precisely why it now meets with the favor of the groups who wish to be defended from the hand of the government.

It is not desired to suggest that judges have no bias in social matters. When Justice Oliver Wendell Holmes referred to "the inarticulate major premise," he had in mind the judges' personal outlook on life. That is the product of their social and economic class, their education, and the company they keep. Nevertheless, their judgments are to a large extent controlled by their training and the other factors to which we have referred. Professor Harold Laski has commented: <sup>5</sup>

They [the canons of historic method] make the task of considering the relationship of statutes, especially in the realm of great social experiments, to the social welfare they are intended to promote one in which the end involved may easily become unduly narrowed, either by reason of the unconscious assumption of the judge, or because he is observing principles of interpretation devised to suit interests we are no longer concerned to protect in the same degree as formerly. . . . Legislation construed by the historic canons of analysis which our courts adopt is too often so interpreted as to defeat the real intention of the legislature.

Cases which he cites from English practice to demonstrate a political bias in judges do not, on careful reading, show this at all. They show, rather, an insistence by the courts that public authorities will not be credited with powers to spend unless

they have indubitably been given the statutory power to do so and to raise taxation for the purpose. Furthermore, it is doubtful whether his suggestion that the control of judicial interpretation could be secured by a preamble to each statute stating its objects could be effective. If the words of the statute are insufficient to direct a judge, why should it be thought that the language of a preamble would do better? If the language of the preamble were more general than that of the statute, there would be much more opportunity for judicial discretion. If the legislature is clear in its intentions and accurate in its language, the judge loses his opportunity of bias.

From this study of the separation of powers, we have derived these conclusions: that the doctrine has ever been made to defend certain spiritual and material values from the control of government; that Montesquieu's division was but rough and depended largely on local and temporary circumstances; that he himself realized that it could not be carried out with any exactness, and that such exact and distinct severance would mean entire inanition; that since all government is a single process, its division into parts, and their relative power, depend upon the purpose of government and the relative technical capacity of the various bodies of men and women who are employed in its realization. As we proceed further we shall see more clearly, because in more detail, the real nature of the various instruments of government. And first, of constitutions.

<sup>5</sup> Annex V, "Note on the Judicial Interpretation of Statutes," pp. 135-137.

## *Constitutions—The Institutional Fabric of the State*

THE state is a human grouping in which rules a certain power relationship between its individual and associated constituents. This power relationship is embodied in political institutions. The system of fundamental political institutions is the constitution. As we have already said, a constitution is the autobiography of a power relationship.

### DEFINITIONS

THIS definition of "constitution" leaves open the question of its form and substance, and it is well that the question should be left open, for modern constitutions exhibit such a wide variety of forms, and so marked a difference in their substance, that no definition of reasonable length can include the main facts. The discussion is, for convenience, to hinge upon the two principal terms of the definition: *system* and *fundamental*.

"*System*."<sup>1</sup> The term *system* denotes that the fundamental political institutions are vitally connected with each other and vitally related to the nature of the society in which they exist. As for their connection with each other, it is clear that each

institution lends significance to its neighbors. Institutions are obliged to cooperate, and in the long run their jagged edges are worn down until harmony prevails. What, for example, the legislature gains, it gains at the expense of the people, or of the executive or the courts of law.

When the Parliament Act of 1911 decreased the power of the House of Lords, the power of the House of Commons was relatively increased, but this gain was partly offset by a reduction of its term from seven to five years. In France, in 1934, the proposal to restore to the executive the power of dissolving the Chamber of Deputies was designed to reduce the personal power of individual deputies and parliamentary groups. Again, in the Weimar constitution, control wielded by Prussia in the old *Bundesrat* was greatly diminished in the *Reichsrat*, and the *Reichstag*, popularly controlled, became the chief legislative power. What the civil service gains, perhaps, legislative committees lose; what is taken from individual property may accrue to the social welfare; the institution which finally decides the appropriation of money goes far toward deciding the power of all others. Where, as in the United States, there is a separation of institutions which, for effective operation, should be in close contact, the political-party system secures value as a connecting link. Each part of a constitution, in short, must be read together with all the others if its real meaning is to be discovered; and all parts must, and do in

<sup>1</sup> Cf. Henry St. John, Viscount Bolingbroke, *Dissertation On Parties* (London, 1733), p. 108: "By Constitution we mean, whenever we speak with Propriety and Exactness, that Assemblage of Laws, Institutions and Customs, derived from certain fix'd Principles of Reason . . . that compose the general System, according to which the Community hath agreed to be governed."

## DEFINITIONS

practice, have regard to each other in the course of operation. The human energy which floods into them and makes them move abhors waste, and little by little reduces it to a minimum until they act as a system.

The fundamental political institutions are a system not only in relation to each other but in relation to their social environment. Every constitution is the product of the accumulated material and spiritual circumstances of its time. That lesson has been literally thundered out by Burke and Hegel. Although in its narrowly formal aspects it may (like the British constitution) be the product of an earlier time, or although, owing to the doctrinaire notions of some of its makers, it may (like the German constitution of 1919) seem to have application only to a possible or impossible future, its meaning in operation, as distinct from its meaning on paper, is fairly responsive to contemporary necessities. There is always an institutional lag in the state; it takes time, as we shall see, for institutions to overtake the necessity for them. But sooner or later that which is wanted is made in proportion to the intensity of the want, and that which is no longer wanted is dropped, formally or by simple disregard. That we learned, too, from a consideration of the conditions of state activity.

The working constitution will approximate what a written constitution would be if it were contemporarily established. Doctrinaire enthusiasms may adorn a constitution, but if they are out of tune with the existing power relationship, they are no more than an ornament. And by "power relationship" is meant not merely a situation where the naked force of so many people in the country could overcome that of the minority, or where an armed and more homicidal minority could dictate to majority, but also the spiritual values, awake or habitual, prevailing among the various groups which dwell together within a single nation.

"Fundamental." What is meant by fundamental? Is fundamentality a matter of detail or a question of which institutions to include? All countries insist that fun-

damental institutions do exist, and they have invented the word "constitution" or its equivalent. In Great Britain, at least since the seventeenth century, constitution has meant something more set and determined than ordinary law. In Germany, where *Gesetz* means law, emphasis is given to that which is even more basic, more "set," by the words *Grundgesetz*,<sup>2</sup> the ground or basic law, or *Verfassung*, that which is set, which grasps, holds together, causes coherence, fastens. Similar distinctions are observable in France (*loi: constitution*) and Italy (*legge: statuto*). We will leave the meaning of "fundamental" to unravel itself, but before entering upon that stage we may ask why, in general, men seek to establish certain institutions as fundamental.

They do so because they desire to reduce uncertainty to a minimum. The world is full of uncertainties, and to meet the problems which spring from them requires constant vigilance, constant effort. Physical and nervous strain are produced by uncertainty, and the more involved the complexity of human environment and human relationships, the greater the possible uncertainty, and, therefore, the heavier the strain.

The insecurity of human life is an inextinguishable factor in causing men to seek certainty and order. It is a matter of course that human beings should attempt to reduce the uncertainties, especially in the arena where these may cause conflicts of a radical and painful kind, that is, in political life. Your liberty, your property, your family, your religion, your town, province or country, the association of your fellow-workers—can these be put into daily jeopardy? It is enough, perhaps too much, in so short a lifetime of some sixty years, if they are endangered once

---

<sup>2</sup> Cf. F. Lassalle, *Über Verfassungswesen* (1863): *Reden und Schriften*, Vorwärts edition, Vol. I, p. 470 ff. Discussing the force of the term *Grundgesetz* he shows that its principal significance is that it is the *foundation* and that a foundation is based on *necessity*. "In the conception of a foundation there is the idea of a concrete *necessity*, and operative power, which of necessity makes that which it supports that which actually prevails."

or twice, but it is intolerable not to know from day to day or year to year the conditions of your subordination or superordination in the community. We need not even add to this simple human sentiment the consideration of the obligations imposed by modern economic technique, or the mass of anxieties already confronting the professional politicians and lawmakers, to realize how important men feel it that limits should be set to the mutability of things, that stability be established and serenity bestowed. This becomes clear from a study of the form and substance of constitutions.

#### FORM OF THE CONSTITUTION

THE chief problems arising out of the forms of constitutions are three: (1) whether they are written or unwritten; (2) whether they are flexible or rigid; and (3) whether special arrangements secure their supremacy. Paramount over these technical questions is the essential one: what influence is exerted by these differences of form upon the political thought and behavior of the state possessing them?

*Written and Unwritten Constitutions.* The difference which has been paraded until the mind is tired of contemplating it is that between written and unwritten constitutions, and the difference is illustrated by contrasting the conditions of almost the only country in the world with an unwritten constitution, Great Britain, with those pertaining in all other countries. What is this difference?

The fundamental political institutions of Great Britain, those in which the very sap of authority flows, are not set down in writing in any formally accepted document or documents. They are regulated by (1) judicial decisions; sometimes founded on ancient promises of kings; sometimes founded on more or less vague "immemorial rights and liberties," such as freedom of public meeting and freedom of person and speech, which are corollaries of ordinary common-law rights; and sometimes founded on agreements, resolutions, and laws made by rebellious Parliaments. The occasions have been conflicts for power, and concessions have been made

or withheld by kings according to their personal character or according to monetary administrative and fiscal difficulties.<sup>3</sup> Then (2) there is a number of statutes made with more deliberateness and wider participation (like the Act of Settlement, the Franchise Acts, the Parliament Act of 1911, and The Crown Proceedings Act of 1947).<sup>4</sup> And (3) there is a series of understandings or "conventions," political usages of piecemeal growth, which regulate perhaps the most important part of the constitution: the sovereignty of Parliament, the responsibility of the cabinet to Parliament and so to the people.<sup>5</sup>

Judicial decisions form a body of written constitutional law; the statutes certainly do; and the utterances of Parliament on various supreme occasions are also authentically existent. These, taken together, are as explicit as, and usually more explicit than, the "written constitutions" of other countries. But the "conventions" are not so recorded by an institution with such authority as the courts of law or Parliament. Nevertheless, they are understood with fair exactness, and have been recorded by ministers in their correspondence and political speeches, accepted with inappreciable dissent by politicians and scholars, and even written down in great detail by such authorities as Hearn, Bagehot, Dicey, May, Anson, and Jennings.<sup>6</sup>

Where, then, is the difference between the British "unwritten" constitution and the "written" constitution of other lands? The difference, I think, is twofold. *First*, the British constitution includes impor-

<sup>3</sup> E.g. Magna Carta; cf. W. S. McKechnie, *Magna Carta* (Glasgow, 1905).

<sup>4</sup> Other examples are the Habeas Corpus Acts, the Bill of Rights, the Re-election of Ministers Act (1919), etc.

<sup>5</sup> Cf. A. V. Dicey, *The Law of the Constitution*, 9th edition (London, 1945), p. 24: "The other set of rules consists of conventions, understandings, habits or practices which, though they may regulate the conduct of the several members of the sovereign power, of the Ministry, or of other officials, are not in reality laws at all, since they are not enforced by the Courts."

<sup>6</sup> Cf. for example the position of the cabinet and the chief of state, Part V, below.

tant sections—the conventions—which are taken for granted, but not formulated, save occasionally by individuals; and does not include many of the fundamental institutions of the country, as, for example, trade unions and political parties, free public education, and religious freedom, which are formally included in the constitutions of other countries. *Second*, and more important, is that no body of people was deliberately called together and entrusted with the establishment of a constitution, as in other countries. Everywhere else there have been constituent assemblies or conventions,<sup>7</sup> but England has never possessed a formal *pouvoir constituant*—but only the ordinary legislature and executive. In England the constitution has not been the work of a specially designated body; it is the incidental accumulation of doctrines and practical arrangements formulated, piecemeal, for the righting of particular wrongs. At a point of time when a settled and deliberately planned constitution was appropriate—that is, after events had made possible the execution of Charles I—there was not sufficient homogeneity of opinion in the country to permit the establishment of fundamentals, for on the basis of religious authority and political authority the country was sorely divided.

Comparatively, then, and not absolutely, the adjective “unwritten” when applied to constitutions, in the chief example thereof, means: (1) that all is not included in writing which might be, while some things are altogether excluded which in other constitutions are included; and (2) that it is not the result of deliberate establishment and adoption as a whole, with the result that no external sign marks off a constitutional from an ordinary law. Let us again insist that the differences are not absolute, but relative; that they are a matter of “more or less” when compared with written constitutions. Dicey, for example, greatly exaggerates the differ-

ences when he fails to look behind the law at the social forces which sustain both written constitutions and the conventions of the British constitution.

*The Rise of Written Constitutions.* Written constitutions have developed from two causes. *First*, where an old social power relationship has collapsed, usually in violence, a definite and coherent assertion of a new power relationship has been embodied in written form. *Second*, where political and administrative waste and friction can be avoided, and where hitherto unattainable purposes are brought nearer realization, the conditions of united action among a number of states (as in the United States, the Swiss Federal Union, and the Commonwealth of Australia) are laid down in a constitution.

The Weimar constitution of 1919 arose out of both these causes: downfall of an old power, and recognition of the wisdom of better federal arrangements. The Soviet constitution of 1936 was formulated peacefully, but it represents the completion of a constitution following an overt change of an old power relationship in 1917. The difference between the 1925 and 1936 constitutions is marked: the tone of the one is belligerent; the other expresses acceptance of the new *status quo*. The RSFSR Fundamental Law of 1925, in stating the Republic's general principles, indicated that “its object is to guarantee the dictatorship of the proletariat for the purpose of suppressing the bourgeoisie, of abolishing the exploitation of man by man and of bringing about Communism, under which there will be neither division into classes nor state power.” But in the new constitution the Revolution is an established fact: “The economic foundation of the USSR consists in the socialist system of economy and socialist ownership of the implements and means of production, firmly established as a result of the liquidation of the capitalist system of economy, the abolition of private ownership of the implements and means of production, and the abolition of exploitation of man by man” (article 4).

The first attempt at a written constitu-

<sup>7</sup> Cf. Charles Borgeaud, *Adoption and Amendment of Constitutions in Europe and America* (New York, 1895); and J. A. Jameson, *Constitutional Conventions*, 4th edition (Chicago, 1887).

tion was made in England in 1649<sup>8</sup>—the Agreement of the People, a document drawn up and approved by the council of officers of the Parliamentary Army. Its purpose, as stated in its preamble, was to show why written constitutions are desired: "to take the best care we can for the future, to avoid both the danger of returning into a slavish condition and the chargeable remedy of another war." "We are fully agreed and resolved [there is the stuff of written constitutions!], God willing, to provide, that hereafter our Representatives be neither left to an uncertainty for times nor be unequally constituted, nor made useless to the ends for which they are intended. In order where unto we declare and agree. . . ." The Agreement never became effective.<sup>9</sup>

The one instance of a written constitution in England, the "Instrument of Government" made by Cromwell and his officers in 1653 was short lived, and the Restoration put an end to written constitutions in England. The very Parliament that was chosen under it repudiated it, alleging Parliament's supremacy, calling forth Cromwell's classic dictum on constitutions.

The country which was to be the most conspicuous example of an "unwritten" system was, however, the mother of written constitutions. For the religious and political struggle which had caused the Puritan Revolt caused many of the same antiepisopal, antiroyalist citizens to forsake their native country and found colonies in North America. It was in these colonies that the written constitution had an infancy, not cut short as in England, but robust enough to determine the later political life of their surroundings and to be a very potent example to Europe. For two conditions existed in the New England colonies which did not exist in the old country. *First*, the people who founded

them were Puritans, and therefore they were predisposed in favor of democratic government. *Second*, since they had broken away from the old foundations and were in an entirely virgin country, a basis of cooperation had consciously to be formed.<sup>10</sup>

The immediate progenitors of modern written constitutions were, however, the constitutions made by the American colonies when they threw off the authority of Great Britain. The Congress of Philadelphia, organizing resistance, adopted this resolution on the motion of the New England representative, John Adams:

That it be recommended to the respective assemblies and conventions of the United States, where no government sufficient to the exigencies of their affairs hath been hitherto established, to adopt such government as shall in the opinion of the representatives of the people best conduce to the happiness and safety of their constituents in particular and America in general.<sup>11</sup>

This resolution was adopted in May, 1776. Already two colonies, New Hampshire, and South Carolina, had adopted such a constitution. In June, Virginia followed suit, and her constitutional activities are most famous because they set up the first declaration of rights, a model not only for America, but for Europe also.<sup>12</sup> By the spring of 1777, all states but Massachusetts

<sup>10</sup> In 1639 Connecticut adopted the Fundamental Orders and in 1641 Rhode Island adopted a decree defining its fundamental institutions. The preamble to the Fundamental Orders clearly indicates the ultimate purposes of a fundamental law: the key words are "peace and union," "orderly and decent." For the other colonies, royal charters supplied constitutions. Cf. Benjamin Poore, *The Federal and State Constitutions of the United States* (Washington, 1877), Vol. I, p. 249; S. G. Fisher, *The Evolution of the Constitution of the United States* (Philadelphia, 1904), Chap. II, p. 41 ff.

<sup>11</sup> Charles Borgeaud, *op. cit.*, p. 17.

<sup>12</sup> See the Virginia "Declaration of Rights" of June 12, 1776. Its sixteen articles, including such basic concepts as human equality and the principle of separation of powers, should be known by all American students, as its reputation greatly influenced our own history and was well known in Europe. These are easy to find.

<sup>8</sup> Originally drawn up in October, 1647. Cf. S. R. Gardiner, *Constitutional Documents of the Puritan Revolution* (Oxford, 1889).

<sup>9</sup> Cf. J. Tanner, *English Constitutional Conflicts of the 17th Century* (Cambridge, 1928); and D. L. Keir, *Modern Constitutional History* (Oxford, 1938).

had promulgated new constitutions or appropriately amended the old. Massachusetts completed the series in 1780, and its constitution vies closely in importance with that of Virginia for the completeness with which it expresses the political theory of the day.

Here were deliberate acts to secure a firm basis for political life. The beliefs of the day as to what institutions were fundamental were written down and endowed with solemnity by their adoption by special conventions and by the grave declarations of intention and faith put at the head of the documents. The constitution of Massachusetts begins with an epitome of John Locke's *On Civil Government* and a thanksgiving to God—"the great Legislator of the Universe"—for the opportunity to form a constitution peacefully and honestly. Soon there were thirteen written constitutions, deliberately composed and recorded arrangements by which men declared their lives bound for the future.

The center of interest then shifted to France. That country had been ruled until the Revolution by a system which was arbitrariness itself. The elements which disputed for political authority—the Crown, the *Parlements* (half-judicial, half-legislative assemblies), the nobility, the municipalities, all the leaders of the Third Estate—all had need of something more bracing to their claims than the mere power to get themselves obeyed, and members of the bodies sought the sources of stable authority in so-called fundamental laws: laws which, for example, set bounds to the arbitrary authority of the Crown, or at least laws which should establish a set order in which this authority should predictably operate. This hankering after a *loi fondamentale* is a most interesting phenomenon, and it is understandable that in the absence of a written constitution, men should pretend, with little authentic evidence, that fundamental laws did exist, which, when appealed to, would abolish confusion and terminate disturbing controversies.

Discussions of this kind were older than Montesquieu, but his *De l'Esprit des Lois*

stimulated discussion and contributed a historical analysis of French monarchy which led to the conclusion that the monarchy of France was limited, since authority must be certain and stable, and, that monarchy required limitation by "intermediary powers," the nobility, clergy, and magistrates. Two quotations from Montesquieu will make this clear. Monarchical government differs from despotic government thus: the former is "that in which one person governs, but by fixed and established laws; while in a despotism there is a single ruler, without law or regulation, led only by his will and caprices." And again: "The intermediate, subordinate and dependent powers constitute the nature of a monarchical government; I mean of that in which a single person governs by fundamental laws. . . . These fundamental laws necessarily suppose the intermediate channels through which power flows; for if there be only the momentary and capricious will of a single person to govern the State, nothing can be fixed." Montesquieu was only one, though perhaps the most eminent, of many who sought to establish the proper fundamental laws of the French monarchy, and the metaphor he used for the intermediary powers, namely, "channel," indicates very well the binding, restricting quality of a fundamental law. And though there were numerous conclusions reached, these varying with the interests and social class of the theorists, all sought guarantees.

The American Declaration of Independence and state constitutions phrased and legalized the aspirations of the French. Through the work of John Adams and Franklin, these constitutions were made known in France and were translated and published there before the American Revolution closed. The German scholar Jellinek has shown that the French Declaration of Rights of 1789 had its direct model and stimulus in American events:<sup>18</sup>

<sup>18</sup> Georg Jellinek, *Die Erklärung der Menschen-und Bürgerrechte*, 3rd edition (Berlin, 1919). On the whole, later research, even French research, agrees with the views expressed in this study.

that Rousseau's social-contract theory cannot have been the forerunner thereof; that mere natural-rights theories were insufficient, without a precipitating cause, to bring about their legal formulation. The very terms coined by the American revolutionists became part of French revolutionary vocabulary: declaration of rights, national conventions, committees of public safety, and so forth. Thus, on October 2, 1789, the French Constituent Assembly voted the Declaration of the Rights of Man and Citizen, and in its preamble is to be found all the essential reasons for a written constitution:

. . . in order that this declaration, being constantly present to the minds of members of the body social, they may for ever be kept attentive to their rights and their duties: that the acts of the legislative and executive powers of government, being capable of being at every moment compared with the end of political institutions, may be more respected<sup>14</sup> and also that the future claims of the citizens, being directed by simple and incontestable principles, may always tend to the maintenance of the constitution, and the general happiness.

This Declaration was declared to be "solemn" and the rights "sacred," while the timely and obliging presence of the Supreme Being at its acceptance was acknowledged and His blessing and favor solicited. In 1791 followed the first full written constitution: and then, at intervals until 1875, others, until by that year twelve immutable constitutions had vanished into the limbo of past years.

In 1875 the thirteenth constitution organized the Third Republic. Unlike the previous constitutions, it is not a compact and complete document headed by a declaration of rights, but three separate laws, together covering the main constitutional problems of the day—the status and authority of the executive, and the composition and relative authority of Chamber of Deputies, Senate, and the executive. It

is fragmentary—omitting a guarantee of rights, and any mention of the organization of the judiciary, the civil service, and the local government. But the "principles of 1789" were held by most constitutional lawyers to apply to the constitution of the Third Republic,<sup>15</sup> while the Fourth has supplied itself with a modern version.

France set the example of written constitutions in Europe, and the soldiers of the Revolution and the Empire carried the notion into Italy, Belgium, Spain, and the South German states. And the "Founding Fathers" welded by peaceful conferences and compromises the constitutional bonds that have held in "perpetual union" the mighty Republic of the West.

*How Strong Can Twentieth-Century Constitutions Be?* A new question is posed for the constitutions of the twentieth century: is a bill of rights, granting social and economic rights on a substantial scale, feasible?

The establishment of a written constitution by the free will of a democratic vote is a peculiarly difficult operation, because it concerns the assignment of fundamental rights and of the authority to use supreme power. Agreement on these matters, to be embodied in a document especially guarded against easy change, can hardly be secured in a measure which gives confidence in the endurance of the constitution. Some reflections on the experience of America, France, Weimar Germany, and the U.S.S.R. make this clear.

The United States was, indeed, fortunate to have established its constitution in the eighteenth century, for it enjoyed advantages not available to constitution-seeking nations in our own day. In the first place, it had the passion of a people recently emerged from ordeal by battle for their joint emancipation from alien rule. In the second place, neither political parties nor special interests had coagu-

<sup>14</sup> Cf. Baron Grimm's saying that all the rules of government could be put in a few pages. This, of course, is simply a reflection of late eighteenth-century optimism in general, the Age of Reason.

<sup>15</sup> Cf. Léon Duguit, *Traité de Droit Constitutionnel* (Paris, 1924), Vol. III, Chap. VI, p. 564; Maurice Hauriou, *Précis Élémentaire de Droit Constitutionnel* (Paris, 1930), p. 81; and A. Esmein, *Éléments de Droit Constitutionnel* (Paris, 1921), Vol. I, pp. 560-61.

lated into hard organizations. No one would wish to minimize the factional and ideological differences prevailing, nor the strength of the regional and economic interests in collision. They were immense, and almost disastrous. But it will also be admitted that American colonial society was simpler, the general spiritual outlook more unified, and the functional and party organizations less conscious and firm and pressing and insistent than anything like what would have been encountered within fifty years from that time, and even more so, one hundred and fifty years afterward. Even so, the great compromise between the small and the large states was made in a form which does injustice today (and could hardly be produced today, *de novo*), and made it impossible to settle the slavery problem inside the margins of the constitution.

Even so, it has to be remembered that the people of the United States did not in any real sense give themselves their constitution. "We, the people . . ." may be metaphorically true, but it is far from really true. For the delegates to the convention were chosen without any popular awareness of what they were to accomplish. As for ratification, it has been estimated that between a fifth and a third of the adult males were unfranchised in the states;<sup>16</sup> and, also that not more than five per cent of the population voted.<sup>17</sup> Beard has called the Convention's resolution that the constitution go into effect when nine of the states had ratified, a *coup d'état*, and his remark may well be compared with Hume's description of the making of the Glorious Revolution in England (1689) by "the majority of seven hundred."<sup>18</sup>

The revolutionary constitutions and governments of France were unmaintainable. When the National Assembly of 1871 met, it was composed of 738 members,

of which half had come from areas still under German occupation. A heavy conservative majority had emerged as the result of the conservative policy of ending the war—450 seats, including 200 noblemen. A constitutional monarchy on the British model was favored by a majority of the assembly. But the monarchists could not agree on which branch of the royal family to call to the throne, and the man they finally accepted refused to be king unless his family colors were established as the national flag. Month after month, with a provisional government of Thiers, various by-elections increased the republican strength. A law of 1871 used the title of President of the French *Republic*, without a clear majority intention then to install the republic; but it stuck. In November, 1873, a new President, Marshal MacMahon, was made President for seven years—hence the septennate came into existence—long enough, the conservatives thought, to keep the place warm for a king later. In January, 1875, a law was accepted further committing France to a republic, and a parliamentary republic at that: "The President of the Republic is elected by absolute majority of the Senate and the Chamber of Deputies meeting in joint session as a national Assembly." This fundamental commitment was adopted by a majority of one vote: 353 to 352. The majority had been made possible by the shift of 26 votes from moderate monarchists, who were afraid that further delay in installation of a constitution would provoke radical disorder in the country. A later vote on the same test brought the affirmative votes up to 425, though some of the converts voted in the hope that the republic would fail! Thereafter, various laws filled out the details of the executive power, the Senate, and the Deputies. But, significantly, no bill of rights was proposed, and none was passed. This constitution was "the constitution that divides us least."

It must be remembered that difficult as it was to get this constitution passed, and slight as was the loyalty to it, it was passed in an age when the masses were less conscious politically than they are today;

<sup>16</sup> Cf. J. F. Jameson, *The American Revolution Considered as a Social Movement* (Princeton, 1940), p. 242; cf. also A. C. McLaughlin, *Constitutional History of the United States* (New York, 1935), Chap. XV.

<sup>17</sup> Charles Beard, *Economic Interpretation of the Constitution* (New York, 1913), p. 16.

<sup>18</sup> In *Essays*, "Of the Originall Contract."

when they were less organized in their interests and occupations than today; when the economy of France was much simpler; and when there was no referendum to follow the act of the assembly.

The latent insincerities and the fissures emerged with disastrous effect in May and June of 1940, and led to the overthrow of the constitution in July and its replacement by the Vichy dictatorship. When France, after World War II, set herself to making a constitution to replace that of the Third Republic, conditions were not propitious for a political consensus. The parties were firmly attached to ideologies nourished on the European battlefield of ideas between 1919 and our own day, and they were impassioned by the humiliating experiences of the capitulation and the heroism of the Resistance. The masses were more conscious of political realities than before. The economy was more complicated. The future had become a field of planned political life. The vote of the masses for a constituent assembly and a referendum on its work were taken for granted.

These were the strengths of voting for the respective parties for the Constituent Assembly of October 21, 1945: Communists, 26.1 per cent; MRP, 23.9 per cent; Socialists, 23.4 per cent; Left Association (including Radical Socialists), 10.6 per cent; Conservatives, 15.2 per cent . . . and various other smaller groups. Only about 80 per cent of the voters voted. A referendum on whether the assembly should be constituent gave 15.66 million for; over half a million against; and 8 million abstentions. We need not here dwell on other votes for the Constitutional Assembly of June 2, 1946—the scattering of opinion was roughly similar. But the first draft was rejected by 52.8 per cent of the votes at the referendum, with 47.2 per cent affirmative and 21.3 per cent of the electorate abstaining. At the referendum of October 13, 1946, the fresh, slightly amended draft was approved thus: 53.3 per cent of those voting were in favor and 46.7 per cent against, while 31.3 per cent of the voters abstained: thus actually only 35.9 per cent of the whole

electorate favored the constitution. Out of a total of the register of 26.2 million voters, 9.25 million said "yes" to the constitution; 8 million said "no"; and 8.5 million did not even vote.

[\* See *Addenda*, p. 959.]

The Weimar constitution also suffered from this feebleness of sincere reception by the electorate. It was not submissible to a referendum, but the voting for the Weimar Constituent Assembly was ominous of troubles ahead. *First* of all, the extreme Left-wing, Communist-inspired groups, if not in a Communist party, were insurgent and had to be repressed by the Social Democratic provisional government assisted by remnants of the Right-wing Army elements. *Second*, the nationalistic groups were in a minority only for the time being. *Third*, the terror in Russia induced moderation in the German Liberal and Socialist parties, and took much of the virility out of their revolt against authority. The distribution of seats was: Social Democratic, 165; Independent Workers Party (left-wing socialist), 22; Democrats, 74; Center Party (based on Catholicism), 89; German People's Party, 22; German Nationalist Party, 42; various small parties, 9. The constitution was sponsored by the parties on the Left and by the Center. The vote received for the constitution was 262 in favor out of a total of 423—considerably more than one half, but still hardly enough to support with an ardent spirit so new and radically different a constitutional structure through the inevitable turmoils which the defeated nation had to undergo. The Right wing voted against it, as also did some of the extreme Left, and the rest abstained.

Thus, a modern constitution, however wise and reasonable it is, contains so many stipulations that a community, freely organized as it is into numerous self-assertive and self-protective groups, finds a sincere consensus difficult if not impossible to attain, against at least one substantial group's dissent from some important part of the document.

How much easier was constitution making in the Soviet Union between November, 1917, and 1936! Here there were

a single leader; a well-knit political tenet: the abolition of classes combined with ownership of all the means of production and distribution by the state; the rights of the revolutionary minority; the denial that incompetent and nonrevolutionary masses were capable of exercising the highest political judgment and will; the right to overcome social contradictions and set the course by unlimited force, since the means justifies the end; the right to remake the consciousness by remaking the economy which, as Marx had said, determines the consciousness; materialistic reasons for denying the justification of doubt on spiritual grounds. How easy to make a constitution, aided by ruthless terror under these conditions! But under such conditions, what is a constitution?

It is a constitution somewhat in the same sense that Hitler's *Reich* was a constitution—the embodiment of the caprice of the dictator, which is no constitution, since it reposes on no explicit consent freely expressible by all. Hitler's theory of his state was that the Weimar constitution remained unless repealed by his ordinances and laws but beyond that by his speeches, which represented his will and therefore were incumbent upon the courts and the administration. He was able to establish this position by having received from the *Reichstag* of March, 1933, an Enabling Act giving him the power to make laws by cabinet decree, even if they amended the constitution: he obtained his two-thirds majority by the imprisonment of some Communists, the dispersal of the others, the terrorization of some Social Democrats, and the acceptance of his assurances by the Catholic Centre party, the Social Democrats voting against. The doctrine of the supremacy of his will was preached by his jurists, his political science teachers, and his attorneys before the courts.<sup>19</sup> Thus:

National life needs a container in order to be able to utilize forces active within it . . . this foundation of national being is the con-

stitution . . . the fundamental order in which a political people forms itself in a state. . . . A constitution is not a number (or assemblage) of individual constitutional laws but an enclosed whole made up of all the principles, the spirit and the nature of the national being. . . .

The Weimar constitution was no longer appropriate to the new idea. Therefore,

In the programme of the Movement, we possess a catechism of political world outlook which provides a criterion and principle in the decision of questions of constitutional law.

We are left to contemplate (not with envy, however) the ease with which modern dictatorships can establish "constitutions," as though by a magic wand, whereas free men find it almost impossible, through their heightened consciousness and freedom of conscience, freely to subject themselves to a mesh of basic rules of social ethics, which a constitution essentially is. Yet the democracies represent humanity in a more civilized condition, while the dictatorships are regressions to barbarism.

*The Political Effects of a Written Constitution.* The question we may now ask is: what is the political effect of the form of the constitution? Is the country with a written constitution capable, by that fact, of better government than the country with an unwritten constitution? Is there any substantial balance of advantage one way or the other? The comparison is necessarily between the British unwritten constitution and written ones which are otherwise universal.

If the effect of expression in writing alone is considered, the written constitution has little, if any, advantage over the unwritten.

First, the written constitution is not more revered as more solemn and fundamental than the unwritten constitution. In the countries of written constitutions people endeavor to stimulate reverence for them by urging their antiquity (none actually goes back before 1776), the dramatic struggles which gave them birth, and the character and ability of the men

<sup>19</sup> Cf. R. Stödter in *Archiv für öffentliches Recht. Neu Folge*, Band 27 (Berlin), p. 166 et seq., especially p. 178.

who promulgated them. But all these things with even greater force can be said of the British constitution; and if the essence of the constitution is its unalterable character, then written constitutions have the grave disadvantage of production by a deliberate and demonstrable—and therefore a disparageable—operation. All constitutions have a conservative effect, like all things, whether matter or concepts, which exist, but those which are written are not noticeably more or less conservative simply because of their expression in writing.

*Second*, are written constitutions more decisive of controversy than the British constitution? Is their meaning more certain and definite? Experience shows that they are not; or if they are, then only to a very small degree. For no constitution is so detailed that interpretation, or "construction," as it is technically called, is unnecessary. Only the broad principles can possibly be laid down by a constituent assembly unless it is to sit permanently; and were it to do this, its reputation would be no more exalted than that of the ordinary lawmaking body. Even the most detailed written constitutions like those of some American states and the German constitution of 1919 do not yield their meaning without much interpretation (every article of the 170 in the Weimar constitution gave rise to a voluminous literature). This occurs in various forms, chief of which are legislation and the decisions of the courts of law when cases raise problems. The latter is discussed presently in the analysis of the supremacy of the constitution. Yet we may say at once that the constitution of the United States is contained in the official edition in thirty-one pages; but the clauses when set down with the chief cases fought upon them need more than a thousand pages,<sup>20</sup> and then it must be remembered that in most cases there is a dissenting opinion; and finally, that students may even dissent from both the

majority and the minority (in all, over forty thousand actions have been fought).

What, then, does the constitution say? Statutes are made to give the clauses of the constitution precision and body. For example, the French Declarations of Rights contain explicit warnings that the articles shall have effect according to laws yet to be made. Freedom of opinion and the security of private property are instances of this. Then others—like the "career open to the talents," the position of the churches, and public education—mean little or nothing without concrete elaboration. So, too, in the German constitution of 1919 article after article ends with the phrase "a law shall state the details" or "within the general laws." Thus, the constitution cannot be accepted as the sole evidence of what is constitution—it must be taken together with the laws which further define it. The truth of this was emphatically exemplified in the unratified proposed French constitution of 1946. Its twenty-one articles of freedoms and its eighteen articles of social and economic rights raised at least as many doubts as they were intended to put down regarding the position of the individual in society. A written constitution, then, is the product of the constitution itself plus the laws and decisions subsequently made on its basis.

In Britain, however, constitutional principles are directly embodied, explicitly or as implied, in particular statutes. If it is desired to find the general principles of the British constitution, it is necessary to generalize from a vast body of particular legal decisions, resolutions, statutes, and biographies. A written constitution, however, yields up its general principles upon direct reading. But *only* its general principles; and they are, as a rule, so general that they are contradicted by the statutes defining them or by the behavior of political institutions apparently acting in virtue of them. If they are general, they are nebulous.

How, indeed, could agreement be reached on fundamentals were not those fundamentals so broad that most objec-

<sup>20</sup> *Constitution of the United States of America*, revised and annotated, 1938; Document 232, 74th Cong., 2d Session.

tions could be covered? Therefore, no written constitution, not the French, nor the German, nor the American, nor the Australian, nor any, can stand by itself. It needs completion: for the virtue of the law resides in its detail. And the laws which give it completion are not different from the laws passed in a country with an unwritten constitution.

Further, even though the constitution is written in some detail, and though it is completed by statutes and judicial construction, complete certainty as to its meaning is not attained. There is as lively a controversy over every article, even sentence, of the constitution in France, Weimar Germany, and the United States, as there is in Great Britain; perhaps more, because the British constitution consists of specific instances. The intentions of the founders, the social conditions of the country at the time of the establishment, the new problems which have arisen in a new era: all are explored with aggressive attention to every word and comma.

There is little advantage in mere writing or proclamation. Is there any at all? At the most, the written constitution is a standard of reference, and it is valuable only in proportion to its clarity and the extent to which it has not been altered by interpretation. As no constitution satisfies these conditions for more than a decade after it has issued from the constituent assembly, the advantage approaches nil.

A distinction, in short, must be made between the quality of a constitution as derived from its being written, and the difficulty of amendment, and these two things must not be confused.<sup>21</sup> It is not the writing which safeguards, but the obstacles to amendment.

<sup>21</sup> Such a confusion might arise from H. J. Laski's *Grammar of Politics* (London, 1925). He says (pp. 304-6): "There are notions so fundamental that it is necessary in every state to give them special protection. . . . It [the legislature] ought not, in a word, to be able to alter the basic framework of the state except under special conditions, direct access to which is rendered difficult. . . . This implies, I think, a written constitution."

## AMENDMENT

INDEED, the essence of a constitution is its inflexibility as compared with ordinary laws. We might define a constitution as its process of amendment. For to amend is to deconstitute and reconstitute. That is the respect in which all other constitutions differ from the British constitution. Broadly speaking (and we shall have to make some modifications later), in the British governmental system any institution, whether or not it is considered to be fundamental and whether or not it is stated by past Parliaments or judicial decisions to be fundamental, is alterable to the extent of abolition—formally—by the ordinary process of lawmaking; that is, by a bare majority of the House of Commons and the ordinary collaboration of the House of Lords as laid down in the Parliament Act of 1910. An act to abolish important powers of the House of Lords, or to restrict the power of trade unions, may be passed by the same procedure as an act relating to widows' pensions or a minor field of public health or education. This is considered to be the extreme of flexibility. Other constitutions—those of the United States, France, Australia, Switzerland, Weimar Germany, and the U.S.S.R.—are rigid in various degrees.

*Amendment in the United States.* The United States constitution was purposely made most difficult to amend. The amending section, article V, prescribes two possible processes of proposal and two of ratification of amendments: (1) two thirds of both houses shall propose amendments; or (2) the legislatures of two thirds of the several states shall petition Congress to call a convention for proposing amendments, and ratification shall take place by (3) three fourths of the legislatures of the several states, or (4) by conventions of three fourths of the several states. In practice, only one amendment has been made by convention instead of by proposal by Congress and ratification by the legislatures of the states, and that was the 20th amendment, which repealed the 18th amendment which had prohibited the sale of liquor. Further, two thirds of Congress

means two thirds not of the legal membership but of a quorum,<sup>22</sup> according to Congress and decisions in the national Prohibition cases.<sup>23</sup> Other questions of detail arise, such as whether there is any limit upon the time for ratification,<sup>24</sup> for, theoretically, the states could take a century over this;<sup>25</sup> or whether a state can withdraw once it has ratified action, which has several times been threatened.<sup>26</sup> These things serve to show that even a written constitution can cause as much perturbation and doubt as an unwritten one, and there is one even more important point: whether there are implied or intrinsic limits to the amending power. This we discuss later.

The main point, however, is this: What is the political effect, the effect upon the power relationship in society, of this amending process? It was intended to make change difficult; it has made change almost unattainable. It was apparently intended to make change difficult because in the fundamental political institutions were included these things: the indestructibility of the states, the strength of the federal authority, the central management of interstate and foreign commerce (the

immediate stimulus to the union), the maintenance of the sanctity of contracts, care for the soundness of paper currency, and distrust of democracy. These, and other considerations, in different degrees commended the constitution to the ruling classes: the men of big business (merchants, manufacturers, land speculators, bondholders), the lawyers, and the clergy.<sup>27</sup> But it was admitted that though "too mutable" a system was dangerous, the error of the previous Articles of Confederation, which made amendment well-nigh impossible, must not be imitated, since "extreme difficulty might perpetuate its [the Constitution's] discovered faults."<sup>28</sup>

The United States constitution has been formally amended twenty-one times. The last or 21st amendment, proclaimed as in force on December 5, 1933, repealed the 18th or the Prohibition Amendment: a novel instance. Evidence of excessive rigidity is that of the four thousand proposals<sup>29</sup> only twenty-one have actually been adopted, twenty by state legislatures, one by conventions of the states. But such

<sup>22</sup> Constitution, Article I, sect. 5, para. I: "A majority of each [House] shall constitute a quorum."

<sup>23</sup> *Ohio v. Cox*, 257, Fed., 334, 348 (1919); 253, U.S., 350, 386 (1920).

<sup>24</sup> Congress is coming to realize the need for time limits in completing the amending process. Accordingly the 18th, 20th, and 21st amendments provided a seven-year limitation. It should be noted that such a stipulation was held to be within Congressional rights by the Supreme Court. (*Dillon v. Gloss*, 1921). See also *Coleman v. Miller* (1939), 307 vs. 433.

<sup>25</sup> C. K. Burdick, *The Law of the American Constitution* (New York, 1922), p. 43. Another problem has arisen in the process of ratifying the proposed amendment: Can a state reject, and later ratify a proposal? In 1939 the Supreme Court in *Coleman v. Miller* (307 U.S. 433) ruled that the Kansas legislature's rejection of the Child-Labor Amendment in 1925 and approval in 1937 was a political question which was in the jurisdiction of Congress and not the courts. Congress took no action against Kansas; consequently it must have approved. This decision can also be applied to a Congressional refusal to allow a change once ratification has occurred.

<sup>26</sup> Burdick, *op. cit.*, pp. 43-44.

<sup>27</sup> Cf. Charles E. Beard, *An Economic Interpretation of the Constitution of the United States* (New York, 1939) and *Economic Origins of Jeffersonian Democracy* (New York, 1915); R. L. Schuyler, *The Constitution of the United States* (New York, 1923); Max Farrand, *The Framing of the Constitution* (New York, 1913); and O. G. Libby, *The Geographical Distribution of the Vote of the Thirteen States on the Federal Constitution* (Wisconsin, 1894).

<sup>28</sup> *The Federalist*, No. XLIII (by Madison). The theory that amendment was made intentionally difficult is founded upon the theory that the aristocratic and mercantile interests desired stability. Cf. J. A. Smith, *The Spirit of American Government* (1919), Chap. III. In fact, the records of the Federal Convention do not show the intention to make amendment difficult; rather the contrary. See *Documentary History of the Constitution* (Washington, U.S. State Department, 1894), Vol. III, pp. 64, 123, 403, 711 ff. Further evidence is to be found in Jonathan Elliot, *Debates in the Several State Conventions on the Adoption of the Federal Constitution* (Washington, 1901), 5 vols. Vols. II, pp. 169, 201; Vol. III, pp. 26, 304, 305, 629; Vol. IV, pp. 130, 178.

## AMENDMENT

evidence is not entirely relevant to the problem of rigidity, for many resolutions were thrown out because of their intrinsic valuelessness<sup>30</sup> and would have been rejected in a country where amendment is easier than in the United States.

The twenty-one amendments which have so far (1948) been adopted fall into three main groups. The first includes the first ten amendments. They add to the constitution that which had been omitted by the businesslike convention of 1787: a bill of rights.<sup>31</sup> These ten were added while the constitution was still plastic and novel. They were accepted by the states almost at once and constituted a "strict constructionist" program of those who, in light of the first three years, were alarmed at the strength of the new government.

The 11th amendment, ratified in 1795, was to prevent the states from having their sovereignty challenged by being liable to suits instituted by citizens of other states or foreign countries. The 12th amendment cured the ambiguity of the constitution as to the election of the President and Vice-President. The second group—the 13th, 14th, and 15th amendments—being made between 1865 and 1870, registered the principal constitutional results of the Civil War.<sup>32</sup> Though mainly directed to securing the complete emancipation of the slaves, and the security of their citizenship on a basis of equality with all other citizens, these articles have been liberally interpreted and

have come to mean vastly more in the life of all Americans than was intended.<sup>33</sup> So much for the certainty of a constitution which is written! The terms which specifically apply to slavery had previously not been obtainable by the process of amendment, or by the voluntary action of the slave states. The regular amending process was insufficient to regulate such a great spiritual and economic change. Negotiation followed negotiation, and war was the only exit.<sup>34</sup>

It should be noted that due to the nullification of congressional legislation, there are several amendments effecting "Recall of Judicial Review," as when the 14th amendment repudiated the doctrines of the Dred Scott case and the 16th released Congress from the limits set by the Pollock case. The 16th amendment made possible a federal income tax. This, according to the Constitution (article I, sec. 9, par. 4, and sec. 2, para. 3), was impossible, and in 1895 a judicial decision<sup>35</sup> declared congressional legislation<sup>36</sup> on the subject unconstitutional. Thenceforward, until 1909, political agitation and congressional activity were necessary until the proper majorities were obtained, and in 1913 the clause was ratified.<sup>37</sup> The 17th amendment changes the composition of the Senate and establishes state-wide elections; this also was the result of long agitation.<sup>38</sup> Then came the 18th amendment, introducing national prohibition of alcoholic liquors, and, in 1920, the 19th amendment, establishing universal suffrage, especially to include women. The 20th amendment fixed the dates for the end of Presidential, Vice-Presidential and Congressional terms of office, and the 21st repealed the 18th (Prohibition) amendment. The long-pro-

<sup>30</sup> The impractical nature of some of these proposals is evidenced by the following examples: a resolution frequently introduced since Repeal of Prohibition, banning alcoholic liquors and forbidding drunkenness in the United States; a prohibition on intermarriage of certain races; a limitation on the peacetime public debt. Many, however, have concerned fundamental rights. An "equal rights" amendment for men and women is now being discussed, and a referendum before war can be declared has often been suggested. It has also been proposed to abolish the electoral college.

posed Child Labor amendment has been ratified by only twenty-eight of the required thirty-six states, and since it was presented to the states by joint Congressional resolution in 1924, it is dubious whether it will ever be passed. By its terms, Congress would be empowered to control the labor of children under eighteen.

We have already indicated the means adopted to secure Prohibition. Enough political energy, in the special degree required by the constitution, was stoked up in the Congressional electorate and in thirty-six states to overcome the opposition of other electors and of representatives themselves. Extraordinary exertions, and abnormally powerful means of propaganda, were needed to overcome the obstacles to amendment: such excitation was practiced that the mind of the voter was unbalanced (and regret followed in saner moods), and the idea that power of any kind is properly employable in such a task was made current. To all action there is a reaction, and their strength is reciprocally proportioned. The difficulties of amendment being especially great, their conquest requires an intensity of application and therefore other things being equal an unscrupulousness beyond that which is normal in political campaigns. In this order of ideas, war, civil or international, is the extreme example. In the matter of woman suffrage, too, there was an undignified and ugly struggle, although to the leaders of the women's party, the campaign was heroic and the leaders heroines. The historian of that movement says: <sup>39</sup>

It is one way of describing their system to say that they worked on Congress by a series of electric shocks delivered to it downwards from the President, and by a constant succession of waves delivered upwards through the people. This pressure never ceased for a moment. It accumulated in power as the six years of this work went on. There were all the episodes of sensational misdemeanors for advertisement purposes, picketing, arrests, mass meetings, forcible feeding, the martyr's defiance of au-

thority and suffering, and such a condition of excitement that strong men roared that they would burn jails! Tremendous pressure was exerted on the States, and none so great as that on Tennessee, when it seemed likely to be the thirty-sixth State to ratify. The campaign was, in the words of the campaigners, a whirlwind. The atmosphere of Nashville, the capital, grew rapidly more active . . . tense . . . hectic. Suspicions of bribery, charges, and fears that members were renegades; and then victory—by a majority of 49 to 47!

Presently we shall draw some conclusions regarding the difficulties of the amending process as it emerges from the theory and practice of the constitutions. But one point can be stated at once: that if one man—that is, the dictator—can stay an amendment, the impetus toward assassination is immense. But there is another result, the importance of which ought to be recognized. Amendment necessarily requires such political behavior as to bring settled, composed, and rational government under a severe strain every few years. It is this or quiescence. If the amending process were less difficult, it would not be necessary to convince people by methods which make opponents and even supporters of a change ultimately feel betrayed and cheated. Obedience is not likely to be given wholeheartedly when there is such a feeling; and the law loses its sanctity as a moral obligation, for this depends not only upon its being part of the constitution, but upon the sentiment of fairness in the process of its creation. Then, when the amendment is made, it is impossible to modify it as a result of valid second thoughts produced by experience, without the same quantity and quality of propaganda used to secure its acceptance.

There is, however, a measure in all things: and the more important each vote, the fiercer the strain on the passions. An amendment can be defeated if those against it control a bare majority in thirteen states. In the Prohibition, as in the Woman Suffrage, amendment, if the thirteen states with the smallest Senates had been selected, the control of those 159 state Senators could have blocked ratifi-

<sup>39</sup> I. H. Irwin, *Story of the Women's Party* (New York, 1921), p. 31.

cation. If the thirteen wettest states had been selected, the control of less than 250 state Senators could have defeated ratification. Each vote becomes of critical importance, for and against amendment. The logic of this argument reaches its extreme exemplification if 100 per cent of the voters—that is, all—were required for amendment.<sup>40</sup> There is a theoretical point where, since the vote is of permanent and unalterable significance, elections would cease to be fought by rhetoric and where murder would be instituted as the only effective electoral procedure under the circumstances. Too difficult an amending procedure necessarily requires, if not the killing of the body, then the killing of mind.

As we show below, since the constitution of a dictatorship is bound up with the physical constitution of the dictator, the only way to amend the constitution is to amend the dictator's constitution; that is, to get rid of the dictator. The closer the democratic constitution gets to being a millstone around the necks of a growing society, the more violent the impulses against frustration.

*Amendment in Third Republic France, Australia, Switzerland, Weimar Germany, and the U.S.S.R.* No other democratic constitution is so difficult to alter as that of the United States. In Third Republic France the method was fairly simple.<sup>41</sup> The Chambers proposed an amendment by separate resolutions, and by an absolute majority of votes (that is, an ordinary unqualified majority). Negotiations between the political leaders of both houses settled the form and scope of the propositions. The initiative could be Parliamentary, or Presidential. The resolutions

voted, the Chambers met together in National Assembly. An absolute majority of the numbers—that is, in this case, the legal numbers composing the National Assembly—was required for acceptance.

The constitution went under revision thrice normally: once in 1879,<sup>42</sup> again in 1884 and again in 1926; and once in the abnormal circumstances of the downfall of 1940. In 1884 there were four amendments, of which only two have first-class importance. The organization of the Senate was deprived of constitutional character, a wise act.<sup>43</sup> The amending clause was itself amended: "The republican form of government cannot be made the object of a proposition to amend."<sup>44</sup> In 1926 sinking-fund arrangements which had hampered the government fiscal plans were amended.<sup>45</sup> On this occasion there was once more raised the question which agitates the theorists: is the National Assembly limited to amendments proposed by the Chambers, or once convoked, has it a general constituent power? There was disagreement on this question in France: Duguit argued that the Assembly could proceed without limitation,<sup>46</sup> Esmein that the Assembly was bound.<sup>47</sup> The only practical precedent on the matter was the revision of 1884, in which the Assembly went beyond the scope of the amendatory proposals and decreed that "members of families which have reigned in France are ineligible for the Presidency."<sup>48</sup> In 1926 people were much afraid that the executive power would be strengthened.

Subsequently France suffered under a strong executive. The Vichy regime of Marshal Pétain was a despotic government. Pétain had become Premier with the resignation of Paul Reynaud on June 13, 1940. After the capitulation, he called the Chambers to Vichy, and on July 9,

<sup>40</sup> Article V contains one clause in which this is actually decreed: "Provided . . . that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate." If a time should come, and it is possible that it will come, when the rich and populous states like New Jersey, New York, Pennsylvania, feel that they cannot any longer yield equal authority in the Senate to smaller and poorer states, there is likely to be extraconstitutional violence to settle the question.

<sup>41</sup> *Law* of February 25, 1875, article 8.

<sup>48</sup> *Law*, August 14, 1884.

1940, their remnants voted a new constitution, subject to formulation by Pétain and ratification by the people. (The votes are given in Chap. 16 below.) By 569 to 80, the joint session adopted the following text:

The National Assembly confers full powers on the Government of the Republic under the authority and signature of Marshal Pétain with a view to promulgating in one or several decrees a new Constitution for the French State. The Constitution must safeguard the rights of labor, family, and native land.

It must be ratified by the Nation and applied by the Assemblies which it shall create.

The method of amendment in Australia, Switzerland, Germany and the U.S.S.R. exhibits interesting variations on what we have so far observed of the United States and France. In each of these countries, with the exception of the U.S.S.R. arrangements are made for reference of the amendment to the people for ratification or rejection. In the first two countries, such referenda are obligatory; in Weimar Germany they were optional. In Switzerland and Weimar Germany, further, a proposal to amend could come directly from the initiative of the people, and in the case of the Soviet Union there are other phenomena which deserve notice.

In Australia the process is as follows: <sup>49</sup> the amendment must be passed by an absolute majority of each house of Parliament, and between two and six months afterward must be referred to the electors in each state. In order to overcome any difficulty arising out of disagreement between the houses as to the amendment (quite possible in France until the necessary coincidence of views is produced by informal bargaining), the house proposing the amendment may re-pass it after an interval of three months (in the same or the next session) with or without amendments offered by the dissenting house, and it is submissible to the people whatever the attitude of the other house. The ratifying vote is a majority of all the electors voting; and a majority of states must approve. This is a simpler process than that of the

United States, yet it preserves the quality of distinguishing the process of amending the constitution from the process of amending the ordinary laws, it provides for deliberate popular assent and state rights, and it makes for stability without stultification. It gives a fundamental quality to fundamental laws, yet avoids, by its moderation, the demoralizing effect of overmuch rigidity.

And yet, from the inception of the Australian Commonwealth in 1901 down to 1945, only three proposed constitutional amendments have been accepted of a total of nineteen put to the electorate by nine referenda. This is a most conservative use in quantity, and appears even more so when measured by the desperate unwillingness to allow the Commonwealth to assume powers in economic and social matters urgently needed for the welfare of all the states considered together. The clash of interests between the more sparsely inhabited pastoral areas and the more heavily populated urban commercial and manufacturing areas has obstructed beneficent centralization.<sup>50</sup>

The democratic element, which is also an element lending distinctiveness to the constitution, was in European constitutions first used by Switzerland, where the referendum is indigenous, and where more importance is still accorded to it than elsewhere.<sup>51</sup> The first Helvetic constitution (1797) made arrangements for ratification by the primary assemblies. In a few years, tragic events wrecked the Republic. Thenceforward to 1830 there was a slow building up which included the popular constituent power. It was merely a matter of time for this to be more thoroughly organized and embodied in the amending process of the cantons and the federation. To speak of the federation only, political evolution since 1848 has

<sup>49</sup> Cf. Gordon Greenwood, *The Future of Australian Federalism* (Melbourne, 1946); and Kenneth Wheare, *Federal Government* (New York, 1946).

<sup>51</sup> The history of the cantons and the Federation is sketched in detail in Charles Borgeaud, *Adoption and Amendment of Constitutions in Europe and America* (New York, 1895), Book III.

<sup>48</sup> *Constitution*, Chap. 8, article 128.

## AMENDMENT

resulted in this method of amendment:<sup>52</sup>

(1) A distinction is made between total and partial revision. Either council, by the ordinary legislative procedure, may pass a resolution for total revision, and if either council does not agree to the question whether there ought to be amendment, it is referred to the people; or the question is referred if fifty thousand voters demand a total revision. If the vote is in the affirmative, then new elections of both houses to prepare the revision take place. (2) Partial revision—i.e., amendment proper—is proposed by the two houses acting under their ordinary procedure, or by petition of fifty thousand voters. (3) The revised constitution, or amendments, must be referred to the people and accepted by the majority of voters, and by a majority of the cantons. The constitutional initiative may occur in the form of separate general suggestions or completed bills: if the former, then the Federal Assembly, if it agrees with the sense, must draft an appropriate amendment and refer to the people. If the Assembly disagrees, it must first refer the question whether there shall be a revision to the people; and if the answer is affirmative, the revision must be carried out by the Assembly. Should the petition be already fully drafted, the Federal Assembly may at once refer it to the people; or, disagreeing with it, may submit an alternative or a motion to reject, along with the petition, to a referendum.<sup>53</sup>

What is the net effect of this method of amendment? (1) It gives the Swiss constitution a majesty higher than that possessed by the ordinary laws. But the difference, when compared with Swiss legislative methods, is not so great as when this method of amendment is compared with that which prevails in other countries.

<sup>52</sup> *Constitution of Swiss Republic, 1874* (as amended in 1891 to introduce the constitutional initiative, Chap. III, articles 118-23).

<sup>53</sup> The matter is discussed in some detail in F. Fleiner, *Schweizerisches Bundesstaatsrecht* (Tübingen, 1923), pp. 396-98. Cf. also Jacob Burckhardt, *Kommentar zur Schweizerischen Bundesverfassung* (Berne, 1931) and W. E. Rappard, *L'Individu et l'Etat* (Zurich, 1936).

For the referendum and the initiative are an important part of Swiss democracy, frequently used for ordinary legislation: except that in federal constitutional matters the referendum is compulsory, but in ordinary legislation it is optional, while the initiative requires a support of fifty thousand voters for constitutional matters and only thirty thousand for ordinary legislation. That is to say, it is more difficult to interfere with what we considered the more fundamental law.

(2) Fifty thousand voters is about only one in eighty of the population of Switzerland,<sup>54</sup> and is not a large number to organize with modern methods of transport and communication. Thus there is combined with the extra majesty and the solemn consultation of the people, the organized possibility of easy change. Advantage has been taken of this, for, since 1874, fourteen amendments have been offered by the popular initiative, of which five have been accepted.<sup>55</sup> In the same time, some thirty amendments have been proposed and submitted to the people by the Assembly; and of these, twenty-four have been accepted. The possibility of the initiative has stimulated the enterprise of the Assembly, and the enterprise of the Assembly has reduced the need for the initiative.<sup>56</sup> Nor has the fear of constitutional rashness been warranted by Swiss experience. Though it has been possible to undo, as easily as to establish, an amendment, there has been no reversal and little modification. The process is deliberate, not difficult, and its value is partly created by a set of conditions peculiar to Switzerland: long experience in democratic institutions, comparative simplicity of its problems, and the smallness of the country, which sets much easier problems in propaganda techniques than in larger countries.

The use of the amendment in Switzerland is in marked contrast to the conservatism prevailing in the United States and Australia. Between the general re-

<sup>54</sup> Fleiner, *op. cit.*

<sup>55</sup> *Idem.*

<sup>56</sup> Cf. F. Bonjour, *Real Democracy in Operation* (London, 1920), pp. 142-43.

visions of the Swiss constitution in 1874 and 1944 there have been eighty-three constitutional referenda; thirty-four out of forty-one proposals presented to the voters by the federal legislature were approved; of thirty-five plebiscites initiated by at least fifty thousand voters, seven became law; six amendments offered by the general legislature as substitutes for those introduced by initiative were passed of seven offered. Not only in numbers but also in enlarged jurisdiction over vital economic problems in particular was the central government strengthened. The taxing power especially was extended, and with it implications for further controls. Thus, the Swiss example shows how the alteration process need not act as a deterrent in effecting social and economic reform.<sup>57</sup>

The German constitution of 1919 was obliged to draw its amending process directly from foreign experience and reason, for the constitution of 1871 was based upon such a peculiar set of circumstances that it could afford no guide. The constitution of 1871 being designed to secure the hegemony of Prussia and at the same time to offer safeguards to the large states of South Germany (like Bavaria and Württemberg) and being, too, an arrangement of princes and not of peoples, the effective amending power was in the Federal Council, the *Bundesrat*. More particularly, the constitution ordained that:

Alterations in the Constitution take place by way of legislation. They are considered as rejected if they have fourteen votes in the Federal Council against them. Those provisions of the Constitution of the Empire, by which certain rights are established for separate States of the Confederation in their relation to the community, can only be altered with the consent of the State entitled to those rights.<sup>58</sup>

Since Prussia had seventeen out of fifty-eight votes in this *Bundesrat*, she was able always to veto any constitutional amendment, but several of the larger states could

also gather fourteen votes and so block amendments.

The constitution of 1919 had a strongly democratic character, acquired by the revolutionary manner of its foundation and embodied in its substance. It also contained a comprehensive bill of rights. It was necessary to provide for movement and also for stability. There were consequently mingled the ideas of special majorities in the representative assemblies, and of the initiative of the people.

Let us first consider the problem as it presented itself to the framers of the constitution. The essential problem still lay, as before, in the position of the states forming the federation. The first impulse of Professor Hugo Preusz, in his original draft of the constitution, was to make amendment slightly more difficult than ordinary legislation. While this required but a majority of a quorum (one half the legal membership of *Reichstag*), the amending process required a two-thirds majority in a quorum of two thirds of the legal membership of both houses: *Reichstag and State Council*. Besides this, amendments were to be ratified by a popular vote.<sup>59</sup>

After the representatives of the states had discussed this original draft, the amending process was slightly altered by the omission of the compulsory referendum, and its use was limited to cases of disagreement between the *Reichsrat* and the *Reichstag*.<sup>60</sup> This was apparently due to the attitude of the states which desired a less unitary system than Preusz had prescribed in his project, for Preusz had intended to overcome resistance to a future extension of federal power by providing that, in the ultimate resort, the decision should lie with the whole people. Two things in fact weighed with Preusz. The first was the necessity of greater difficulty in amending the constitution in a democracy than in an autocratic state: "experience shows that every people is the more jealous and cautious in the matter of constitutional amendments, the higher

<sup>57</sup> W. E. Rappard, *Government of Switzerland* (New York, 1936); K. Wheare, *op. cit.*; and Report of the Royal Commission on the Australian Constitution (1929).

<sup>58</sup> *Constitution*, 14, General Stipulations, Sect. LXVIII.

<sup>59</sup> Article 51, *Entwurf: Reichsanzeiger*, January 20, 1919.

<sup>60</sup> Articles 23, Part 4, and 54.

## AMENDMENT

it sets the protection of its freedom by the constitution." The *second* was the federal relationship. The extra difficulty of amendment tended to thwart the grasping of more powers by the federal authority. Preusz patently regretted this:<sup>61</sup>

But on the other hand the National Assembly must not disregard the fact that those powers which are not now constitutionally transferred to the Reich will be more difficult of attainment later by the amending process. What, therefore, remains to the States in this constitution, is much more secure than hitherto. But it is also important for the Reich to keep in mind this difficulty of extending its powers when it now proceeds to lay down what powers it is to have.

Little more was said in the Assembly on the question, excepting that a few interesting remarks were made by Dr. Hans von Delbrück on the importance of easy amendment, for without ease the amending process, he said, became a "*manoeuvre de force*."<sup>62</sup> But the Eighth Committee on the Constitution took away from the *Reichsrat* (the Federal Council) equality of power with the *Reichstag* (the Popular Assembly) in the matter of passing amendments. The power was reduced to one of initiation, or of objection to a *Reichstag* resolution. But the *Reichstag* might override either the initiative or the objection of the *Reichsrat*. In the finally accepted form (article 76) of the constitution, it was arranged that if the *Reichstag* overrode the *Reichsrat's* objection, this body could press its objection within two weeks, and demand a referendum. This arrangement, giving the *Reichsrat* the power to impose a referendum, was introduced in the Assembly, whereas the Committee's draft had arranged to leave the President a discretion in the matter of the referendum. Finally, the Assembly, at the last moment, and hurriedly, voted the inclusion of the initiative for constitutional amendments, as, apparently, a corollary of the referendum and the initiative in ordinary legislation: "If a constitutional amendment is to be decreed by a referendum conse-

quent upon the popular initiative, the assent of the majority of qualified voters is necessary." This provision made amendments by the initiative more difficult than the popular decision in ordinary legislation, since in that case no more than a simple majority of actual voters is required. The number of voters needed to initiate legislation, constitutional or ordinary, was one tenth of the total qualified.<sup>63</sup>

Thus, in fact, three things had been accomplished: (1) Additional difficulty and majesty were lent to the constitution. (2) A mobile element was introduced in the form of the constitutional initiative, whereby one tenth of the voters, that is, about four million voters, might legally put the *Reichstag* on its mettle, causing it, if it disagreed with the suggested amendment, *nolens volens* to put it to the country, though with a statement of its own views thereon. And (3) the constitution offered the states a special safeguard against federal encroachment.

This last element in the amending process is of special importance in a federal constitution, and all federal constitutions pay special regard to the fundamental nature of federalism by such arrangements.<sup>64</sup> We have already seen this in the case of Weimar Germany and in the case of the United States. Switzerland demands that there shall be a majority of cantons as well as of voters for constitutional amendments, and so does Australia.<sup>65</sup>

*The Subversion of the Weimar Constitution and the Hitler Substitute.* In order to gain control of the governmental machine, Hitler and his agents at the outset utilized tactics which were barely within the letter of the law. In 1928 Goebbels said: "We enter Parliament in order to paralyze the Weimar system with its own assistance. If democracy is so stupid as to

<sup>61</sup> Article 73, regulating the referendum and the initiative.

<sup>62</sup> Although the U.S.S.R. is regarded as having a federal constitution and even allows the right of secession, no special protection, as by a referendum, is provided for.

<sup>63</sup> *The Constitution of the Commonwealth*, Chap. VIII.

<sup>61</sup> Heilfron, *Die Deutsche Nationalversammlung von 1919*, Vol. II, pp. 698-99.

<sup>62</sup> *Ibid.*, Vol. II, pp. 954-55.

give us free tickets and salaries for this bears' work, that is its affair . . ."

When Hitler was appointed Chancellor in 1933 after a series of *Reichstag* dissolutions and coalition cabinets (nineteen in thirteen years), he came as leader of a firmly anticonstitutional party, and consequently Hindenburg's action was unconstitutional in effect. The questionable origin of the *Reichstag* fire one month later served as excuse for a decree suspending constitutional guarantees. Article 48, section 2,<sup>66</sup> permitting such a step in time of emergency, provided pseudocostitutionality.

*Constitutional Amendment in the Fourth and Fifth Republics of France.* Two main changes have been introduced in the Fourth and Fifth Republics, which both tend to more rigidity, although the constitution of 1958 is somewhat more flexible than that of 1946.

Firstly, qualified majorities and, in some cases, the use of the referendum become necessary. In the Fourth Republic, there were three possibilities: the revision could be passed by three-fifths majorities of both chambers, or by a two-thirds majority of the National Assembly, or by referendum. In the Fifth Republic, there are two procedures: either the bill is adopted by both chambers and also approved by referendum or, in the case of a bill introduced by the President of the Republic only, it is approved by a three-fifths majority of both Houses sitting together in Congress. The text (art. 89) reads as follows:

The initiative for amending the constitution belongs concurrently to the President of

the Republic on the proposal of the Prime Minister and to members of Parliament.

The bill must be voted by the two Houses in identical terms. The amendment becomes effective after approval by referendum.

However, the bill initiated by the President of the Republic is not submitted to a referendum when the President of the Republic decides to submit it to Parliament convoked in Congress; in this case, the bill is approved only if it obtains a majority of three-fifths of the votes cast. The *bureau* of the Congress is that of the National Assembly.

No amendment process may be initiated or proceeded with when the integrity of the national territory is impaired.

The second important change was made by art. 95 of the constitution of the Fourth Republic and is reproduced in the last paragraph of art. 89 of the constitution of 1958:

The republican form of government is not subject to revision.

*Amendments and the Establishment of the New Russian Constitution.* Once the original draft of the new U.S.S.R. constitution of 1936 was completed, it was widely circulated for discussion and criticism. Approximately 527,000 meetings were held throughout the country between June and December of 1936, with the attendance estimated at 36,500,000 people. Altogether about 154,000 proposals for amendment were made, of which 43 were acted upon. The most important of these provided direct, in lieu of indirect, elections in the selection of the Council of Nationalities, and a right of inheritance. The remaining alterations were primarily in terminology.<sup>68</sup>

## AMENDMENT

*ain*. The chief distinction, then, between constitutions, from the standpoint of form, is in the amending process. Who has the power to alter the constitution is master of the state, and the amending clause gives this power. Everywhere except in England this has been made exceptionally difficult; and difficulty is established to provide the advantages of conservation of a set order of social relationships, and to secure deliberateness, in the hope that from this will issue respect; and both respect and growth are sought for in popular ratification and initiative.

Is Great Britain the worse off for making no special rules concerning constitutional amendments? Now, any state in which care is not bestowed on the reform of fundamental institutions wastes its well-being, physical and spiritual. Care is fundamental: not writing, nor a difficult amending process. If care, a rational weighing of all factors, is possible and probable without artificial compulsion, then difficulty of amendment is unnecessary. None of the fundamental institutions is, in fact, treated without due circumspection. The great constitutional changes of the past century in Britain have, indeed, come slowly rather than rapidly, and what is more, they have all been preceded by long years of consideration and party maneuvers, and even by collaboration between the parties. In recent years this constitutional conservatism has even taken the form of a tentative convention. The reform of the House of Lords in 1911 was preceded by two elections, and in 1923 a special appeal was made to the country on the question of protective tariff. At other times, legislation of special importance has been introduced at the end of a session in order that the country might have the opportunity to reflect before the vital debates occurred: examples of this are the Health of Towns Bill in 1847 and the Education Bill of 1917. Further, other legislation, like the Local Government Act of 1929, is introduced only after all the interests have been consulted and have had the opportunity to urge amendments to the original project. The recommendations of royal commissions usually pre-

cede the drafting of laws, and these recommendations are made only after exhaustive inquiries. All in all, by its practice the British constitution has gone far toward providing for extra deliberation in matters of fundamental importance. The Home Rule Bill of 1912 was, in some of its stages, the object of a round-table conference of the political parties; the Government of India Bill of 1936 was the subject of a joint select committee and special interparty conferences; the Parliament Bill of 1947 and the Representation of the People Bill of 1948<sup>69</sup> were the subject of complicated extra-Parliamentary negotiations.<sup>70</sup> Finally, in many cases, especially those relating to the electoral system, foreign affairs, and imperial organization, the government of the day seeks the cooperation of the opposition.

In 1946, when it was necessary to amend the rules of procedure of the House of Commons in order to enable it to cope with the flood of reconstructive measures, the number of the standing committees was increased from five to seven. However, the rule (number 46) by which bills at committee stage were automatically sent to the standing committee included the proviso that bills of *constitutional importance* should remain with the whole House of Commons.

Thus, in the British system it is almost impossible to do damage to the "liberties of the subject" on the one hand, or disregard the "necessities of state" on the other, without so much advertisement and open discussion of a protracted nature that injustice and unwisdom are sure of detection, since it is a fundamental convention that no Parliament can bind its successors.

Yet the possibility remains that in abnormal times, when excitement has been roused to an uncontrollable intensity, unwise things may be done, or acts commit-

<sup>69</sup> Cf. on this for arguments about "the permanent will" of the nation, p. 418 below.

<sup>70</sup> Cf. especially House of Commons *Debates*, February 16, 1948, where Mr. Churchill charged the government with breaking the pledge made in biparty negotiation. See also *Debates*, March 16, 1948.

ted which sting by their injustice and leave a mood of smoldering resentment. Occasions may arise like the General Strike of 1926 which produced the Trades Disputes Act of 1927; the law was, in fact, repealed in 1946, but for the nineteen years it lasted it unjustly crippled the financing of the Labour party.

The advantage of the British constitution is that errors may be reversed by an ordinary majority. What is fundamental, in short, is left to the people to decide, and they are also left to decide whether this shall be amended. They are expected to control themselves rather than to be controlled by the constitution.

When, in 1945, the British Labour party was returned by a large majority with a program of quite extensive specialization, it was left to that party alone to gauge what was proper, subject only to its own sense of propriety, to the technical possibilities, and to the consideration of whether it could continue to carry the country with it sufficiently so as not to risk reversal of its measures in the future. Whether its program was wise or unwise is not the question. No external obstruction troubled the exercise of the government's wisdom.

It is as easy to remedy mistakes as to make them. Is it worth while, then, to (1) set up a special amending process which implies (2) a distinction between fundamental and other laws, which implies (3) a written constitution, which involves (4) the possibility of some external authority to declare Parliament's resolutions invalid? This would have serious effects upon the whole tenor of English political behavior and organization. And yet there are some people so obsessed with the need for securing some basic rights against the power of the majority that they would be prepared to go this length. My personal view is that it is not worth while to go to these extremes in order to safeguard against remote and rare possibilities. It is good that the responsibility

should rest squarely upon Parliament; that it should therefore bear heavily upon the political parties; and that it should therefore press sharply upon the people themselves.

Such an issue was raised during the debates on the Parliament Bill in 1910. The House of Lords, it was said, was the only existing defense against interference with fundamental institutions by a chance majority in the House of Commons. Since the powers of the Lords were reduced to mere suspension for two years in the case of ordinary laws and were practically abolished for money bills, no safeguard at all remained against the rashness of the lower house. Two alternatives were suggested: either the reform of the composition and fortification of the powers of the House of Lords or, failing that, the institution of the referendum.<sup>71</sup> It was said that until that time the House of Lords had, indeed, acted as an assembly for referring bills of fundamental importance to the people; for were these bills mutilated or rejected by the House of Lords, the result was their reinclusion in the party program and their further discussion in election campaigns. This argument did not prevail, since it was clear that the only fundamental institutions which the House of Lords had until then safeguarded were those attacked by the Liberal party as being unjustly fundamental and ripe for amendment, if not for abolition. The issue is still open. It is to be noticed that the House of Lords during the tenure of the British Labour party has used its power to modify slightly some of the nationalization proposals, particularly the Coal and Transport Nationalization Acts (see p. 416).

<sup>71</sup> Cf. J. A. Spender, *Life of Sir Henry Campbell-Bannerman* (London, 1923), Vol. II, pp. 351-55. Cf. Sir William Harcourt's protest, on February 14, 1894, cited in A. C. Gardiner, *Life of Sir William Harcourt* (London, 1923), Vol. II, p. 256.

## *Constitutions: Supremacy and Contents*

If one element in the fundamentality of the constitution is its paramountcy as a regulator of political behavior, how is this paramountcy secured? The constitution ceases to be fundamental unless its principles are impressed upon the legislative, the executive, and the judiciary. How is this supremacy organized? States fall into two great classes, in one of which constitutionality is ultimately interpreted by the courts of law, while in the other, political institutions—of which the representative assembly is the most important, as the lawmaking and executive-controlling institution—themselves determine the constitutionality of their actions. In the first group fall, principally, the United States, Australia, Canada, and Switzerland; in the second, Great Britain, France, and Weimar Germany (although the latter showed, after 1919, a tendency to enter the first group). For the sake of convenient exposition, we will examine England and the United States as archetypes, and will introduce any consideration of other countries but briefly. We wish to know: (1) what is the nature of the difference, (2) how it arose, (3) what is its meaning in terms of political institutions, and (4) what is the effect thereof upon the general character of political behavior.

### DIFFERENCE BETWEEN UNITED STATES AND BRITISH CONSTITUTIONS

*Nature of the Difference.* The difference, broadly, between the two countries is

this. In Great Britain, no body has legal authority to declare an act of Parliament or of the executive invalid, or to overrule Parliament's clearly expressed opinion as to its meaning; whereas in the United States, any act passed by Congress or any executive act, upon challenge by an interested party, is compared with the constitution and if in conflict therewith is declared unconstitutional, and, as such, of no effect.<sup>1</sup> In England (and France) there is in effect parliamentary sovereignty; in the United States the constitution is supreme, and that supremacy is maintained by the power of judicial review. Parliament is not legally bound to respect anything, but Congress must respect the limits set by the constitution: the eighteen articles giving it power and prescribing the rights of individuals and states. The ultimate guardian of these limits and rights is the judiciary, whose summit is the Supreme Court of the United States. How did this difference arise, and what are its effects?

*How it Arose.* It is easier to explain the manner in which American development began to diverge from English than to say *why* it did. It seems natural that where there is a written constitution, its binding power must be proclaimed and guarded by some institution; and if there is to be a binding force at all in a constitution, it ought to bind the legislature as well as

<sup>1</sup> Oliver Field, *The Effect of an Unconstitutional Statute* (Minneapolis, 1935).

other organs. Yet, in fact, this logic was not adopted in the French Third Republic, which possessed a written constitution, and though there were eager champions of it there were as vigorous opponents; nor were the courts of justice in Germany before 1919 permitted to review legislation. Nor does the Swiss Federation submit to judicial review, but only the cantons.<sup>2</sup> Why, then, the United States? In spite of the efforts of American historians and political scientists and constitutional lawyers, the matter remains a little obscure.

There are two main possibilities: that the courts at a certain point of time simply took this power and expediency caused its confirmation, and (or) the Fathers of the Constitution really intended that there should be judicial review. The first is demonstrably true. But the question of intention is still obscure; and the best that has so far been done to review the situation at the time of the framing of the constitution has yielded these results:

(1) Both the English constitutional conflicts of the early seventeenth century and the American colonial case against England rested upon the notion of a Fundamental Law. (2) In England, the struggle resulted in the establishment of Parliamentary supremacy, but, in America, constitutions were actually created by the people in whom sovereignty inhered; legislatures were the creatures of this sovereignty, and therefore subject to the law which created them. (3) The Constitutional Convention of 1787 was called partly—very largely, in fact—in order to create a defense against the crude state legislatures which were pursuing a jealous separatism, and which threatened, moreover, private rights like the keeping of contracts. (4) Some of the states had already tentatively commenced judicial review,<sup>3</sup> and the most notable figures of the

Convention actually desired it.<sup>4</sup> (5) Virginia had even suggested that the federal legislature should have power to review the constitutionality of state laws and to call forth the force of the Union against any state that failed to keep its obligations, and that acts of the federal legislature should be subject to the review of a council of revision composed of the executive and a part of the judiciary.<sup>5</sup> (6) The belief that the separation of powers would secure the liberty of the subject, by preventing either legislative or executive encroachment, was one of the most compelling ideas in American political philosophy, and it was given point by the fear of contemporary legislatures and the reputation of the courts, which, trained in the common law, were assumed to be dependable guardians of private rights. The judicial power was therefore a definite and separate power; and this definiteness and separateness were expressed in the words of a Massachusetts representative as a maxim than which none was better established: "that the power of making ought to be kept distinct from that of expounding the laws." This view was shared by the leading and most eloquent members of the Convention.<sup>6</sup> Yet in Third Republic France and Switzerland the same doctrine, the separation of powers, has been and is used as an argument not for, but against, judicial review.<sup>7</sup> (The law in

<sup>5</sup> Max Farrand, *Records of the Federal Convention*, Vol. I, *passim*.

<sup>6</sup> E. S. Corwin, *Court over Constitution* (Princeton, 1938).

<sup>7</sup> Cf. M. Hauriou, *Principes de Droit Constitutionnel* (Paris, 1929), p. 279. Hauriou, however, is in favor of judicial review. Léon Duguit, *Traité de Droit Constitutionnel* (Paris, 1924), Vol. III, p. 673 ff., is strongly of the opinion that the separation of powers theory requires judicial review.

<sup>2</sup> Fleiner considers this to be unfortunate. See F. Fleiner, *Schweizerisches Bundesstaatsrecht* (Tübingen, 1923), p. 442 ff. All federal acts are compulsory on the High Court.

<sup>3</sup> See E. S. Corwin, Note V, on "Alleged Precedents for Judicial Review," in *The Doctrine of Judicial Review* (Princeton, 1914), p. 71 ff.

Fourth Republic France is very different from before 1945—it is discussed presently.)

The argument has also been advanced that the overriding of colonial legislation by the Privy Council, and of the colonial courts by the Judicial Committee of the Privy Council, sustained the idea that the organs of government were not absolute. This may have been the case, though this kind of executive and judicial review is not on all fours with the review of constitutionality by the courts.\*

No article whatsoever in the United States constitution expressly declares that it shall be interpreted by the courts, and by them alone. The only articles relative to judicial review are those on the constitution of the judiciary, and it is argued that the general principles of judicial review were so much a matter of course, owing to the various factors indicated above, that the articles *must be assumed* to embody them. When, therefore, the convention adopted article III of the constitution, vesting "the judicial power of the United States in one Supreme Court and such inferior Courts as the Congress shall from time to time ordain and establish," it must be regarded as having expressed the intention of excluding Congress altogether from the business of law interpreting.<sup>9</sup> Further, section II of the same article provides that, "The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution . . ." Therefore it must extend to the law-making powers of Congress. And, finally, article VI, paragraph II of the constitution runs:

This Constitution, and the Laws of the United States which shall be made in Pursuance

thereof; and all Treaties made or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the contrary notwithstanding.

The constitution is made supreme law. Even in the states, and even if state constitutions are contrary, the constitution shall prevail, its guardians being the judges! This latter section was proposed by the New Jersey plan, the project of the smaller states in the convention, as the alternative to the Virginia plan, which would have subjected the states to the Federal Congress, and it follows the New Jersey plan almost word for word. The constitution, then, is by this article, the supreme law of the land, and by article III the judicial power shall be vested in one Supreme Court, etc. It is argued that this conclusion was intentional. But all that we have today is a proof of the contemporary need for judicial review, and some proof of its desirability.<sup>10</sup> Unfortunately, no express resolution was taken on this matter in the convention: nor was there a direct discussion upon it. We are in the realm of conjecture: and all that can be said is that *probably* the convention desired it.<sup>11</sup>

In commending the constitution to the states for ratification, Hamilton is definite and emphatic about the power of judicial

<sup>10</sup> Cf. Charles Beard, *op. cit.*, p. 55. In P. L. Ford (ed.), *Pamphlets on the Constitution* (Brooklyn, 1888), there is hardly a mention of judicial review, and where it is mentioned there is no sign at all that the authors had in mind what it has come to be. But see the stalwart rejection of even this by L. B. Boudin, *Government by Judiciary* (New York, 1932).

<sup>11</sup> See the hearings in 1937 before the Judiciary Committee of the Senate on Reorganization of the Federal Judiciary (75 Cong., 1st sess., 1932, pts. 1-6), noting especially the testimony of Professor Corwin. With reference to judicial review he stated: "These people who say that framers intended it are talking nonsense; and the people who say they did not intend it are talking nonsense. There is evidence on both sides. Why not deal with the question as it stands in the year of grace 1937?" (Part II, p. 176.)

\* For an examination of the analogies, see E. B. Russell, *Review of American Colonial Legislation by the King in Council* (Harvard, 1915); L. W. Labaree, *Royal Government in America* (New Haven, 1930); and Arthur M. Schlesinger, "Colonial Appeals to the Privy Council," *Political Science Quarterly*, 1913, pp. 279 and 433.

<sup>9</sup> E. S. Corwin, *Doctrine of Judicial Review* (Princeton, 1914) p. 42.

review.<sup>12</sup> Nothing could be clearer or more uncompromising than his statement. Its trenchant terms do seem to take for granted the law of the matter as implied in the constitution—and Hamilton was a delegate to the convention which made it—but that point is less important than his stern opposition to the “imprudence” of the people, his aversion from “the majesty of the multitude.” Popular sovereignty he had been unable to check with his proffered but rejected proposals for a very strong executive and a senate appointed for life. His way to check the unsteadiness of the masses, and their almost certain attack on the rich, was the check of rights maintained by the judiciary, which was not elected by the people. Hamilton’s theory reveals in the most graphic fashion the enormous gulf between the American and the British Constitutions.

Is it not an ironic commentary upon the supposed definiteness of written constitutions that the most characteristic feature in which the American is different from most other written constitutions—its radical distinction—is placed so uncertainly in the constitution and has to find its rightful position by an appeal to what *may* have been in the minds of those who framed it?

The law was hammered into its place in two famous cases decided in the Supreme Court under the chief justiceship of John Marshall, a strong supporter of the federation against the states, and a vigorous upholder of judicial review. The first was

*Marbury v. Madison* (1803),<sup>13</sup> and the second *McCulloch v. Maryland* (1819).<sup>14</sup>

The opinion delivered in the first case deserves extensive quotation, because it is not merely an essential part of the development of this peculiarity of the American Constitution, but is also a commentary upon written constitutions. This case was an issue between Marbury, who claimed title to a commission of justice of the peace, and James Madison, then Secretary of State, who should have delivered the commission to him. Marbury asked the Court for a mandamus commanding the delivery of the commission. Marshall gave judgment, refusing the writ on the ground that the Supreme Court had appellate jurisdiction only, and that this action was original. The action had been brought under the Judiciary Act of 1789, passed by Congress and empowering the Court to issue writs of mandamus to any courts or officers of the United States. This clause Congress had not the right to make, for the constitution limited the Supreme Court to appellate jurisdiction excepting in four instances. Thereupon, Chief Justice Marshall asserted the supremacy of the constitution and the power of judicial review.<sup>15</sup> These are the weightiest passages:

Certainly all those who have framed written constitutions contemplate them as forming the fundamental paramount law of the nation, and consequently the theory of every such government must be, that an act of the legislature, repugnant to the constitution, is void.

This theory is essentially attached to a

<sup>13</sup> *Marbury v. Madison*, 1 Cranch, 137 (1803).  
<sup>14</sup> *McCulloch v. Maryland, et al.*, 4 Wheaton, 316 (1819).

<sup>15</sup> In view of recent attacks on judicial power, Marshall “welcomed the opportunity of fixing the precedent in a case in which his action would necessitate a decision in favour of his political opponents.” Charles Warren, *The Supreme Court in United States History* (Boston, 1922), Vol. I, p. 243. “It must be noted that to contemporary opinion the importance of the decision lay in its alleged invasion of the Executive prerogative (i.e. that the Court might issue mandamus to a Cabinet official who was acting by direction of the President).” (*Ibid.*, p. 232.) Cf. also A. J. Beveridge, *Life of John Marshall* (New York, 1919), Vol. III, Chaps. 2 and 3.

<sup>12</sup> *The Federalist* (Everyman edition), No. 78, p. 397. “The interpretation of the laws is the proper and peculiar province of the courts. A Constitution is, in fact, and must be regarded by the judges, as a fundamental law. It therefore belongs to them to ascertain its meaning, as well as the meaning of any particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity ought, of course, to be preferred; or, in other words, the Constitution ought to be preferred to the statute, the intention of the people to the intention of their agents.”

written constitution, and is consequently to be considered, by this court, as one of the fundamental principles of our society. It is not therefore to be lost sight of in the future consideration of this subject. . . .

These principles were reinforced and applied to the supremacy of the federation over the states in a second famous case, *McCulloch v. Maryland*. But the principal importance of this case is its statement and application of the doctrine of interpretation known as "implied powers." The issue was this: Congress had passed an act in 1816 incorporating the Bank of the United States. A branch was established in Maryland, which imposed a tax upon notes issued by any bank or branch thereof established without its authority. *McCulloch*, the cashier of the Maryland branch, appealed against the judgment of the Maryland courts. The Supreme Court, speaking through Chief Justice Marshall, ruled that Congress had the right to incorporate such a bank, and therefore the states must not thwart the use of this power by taxation. There was, indeed, in the constitution, no specific power given to the United States to establish such a bank. But this was merely because everything could not possibly be expressly included in the constitution. Nothing excluded from the constitution "incidental or implied powers."

Thus leaving the question, whether the particular power which may become the subject of contest has been delegated to the one government, or prohibited to the other, to depend upon a fair construction of the whole instrument. . . . A constitution, to contain an accurate detail of all the subdivisions of which its great powers will admit, and of all the means by which they may be carried into execution, would partake of the prolixity of a legal code, and could scarcely be embraced by the human mind. It would probably never be understood by the public. Its nature, therefore, requires, that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves. That this idea was entertained by the framers of the American constitution is not only to be inferred from the nature of the instrument, but from the

language. . . . It is, also, in some degree, warranted by their having omitted to use any restrictive term which might prevent its receiving a fair and just interpretation. In considering this question, then, we must never forget, that it is a *constitution* we are expounding.

Very well: of what general power is the power to establish a bank a fair corollary? Of the power of the sword, the purse, external relations, and the government of industry.

It may with great reason be contended that a government, entrusted with such ample powers, on the due execution of which the happiness and prosperity of the nation so vitally depends, must also be entrusted with ample means for their execution. The power being given, it is the interest of the nation to facilitate its execution. It can never be their interest, and cannot be presumed to have been their intention, to clog and embarrass its execution by withholding the most appropriate means. . . . It is then, the subject of fair inquiry how far such means may be employed.

Indeed, to the enumeration of Congress's powers is added that of making

all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Of the degree of necessity, said Marshall, Congress is properly the judge, not the courts.

Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional.

Well over a century has elapsed since these judgments were rendered. The doctrines were often disputed, but judicial interpretation survived them, and the power of the courts to review the constitutional validity of laws is the most striking feature of the American political system. From 1789 to the present over 40,000 cases have come before the Supreme Court, judgment upon which decided the valid-

ity of the laws and the meaning of constitutions. Of these, eighty federal laws were ruled unconstitutional.<sup>16</sup>

Schools of judgment have been synthesized in the brains of political and constitutional theorists: there are "strict constructionists" and "liberal constructionists," "conservatives" and "liberals," those who lean towards "states' rights" and those who subserve "national centralization." The doctrine of "implied powers" has given special scope to the discretion of the courts. "To make all laws which shall be necessary and proper . . ." has been called the "elastic clause," and where there is no warrant at all in the constitution, a doctrine of the "inherent powers" of government has been enunciated.<sup>17</sup> What, then, is the import of this political arrangement?

Consider the simplicity of the decision in the *Butler Case*,<sup>18</sup> invalidating the AAA, as set forth by Justice Owen J. Roberts:

Every presumption is to be indulged in favor of faithful compliance by Congress with the mandates of the fundamental law. Courts are reluctant to adjudge any statute in contravention of them. But, under our frame of government, no other place is provided where the citizen may be heard to urge that the law fails to conform to the limits set upon the use of a granted power. . . . If the statute plainly violates the stated principle of the Constitution we must so declare. . . .

The expressions of the framers of the Constitution, the decisions of this court interpret-

<sup>16</sup> No estimate of the importance of judicial review can be based only upon these or any figures. It can be judged only by the significance of the cases reviewed and reviewable. We show later that some of these are of supreme political significance. See W. C. Gilbert, *Provisions of Federal Law Held Unconstitutional* (U.S. Government Printing Office, 1936).

For a careful examination of the "political" tendency of Supreme Court judges, see C. Herman Pritchett, *The Roosevelt Court* (New York, 1948). For the feelings which suffuse a Justice, Cf. Charles E. Hughes, *The Supreme Court of the United States* (New York, 1928), and Robert H. Jackson, *The Struggle for Judicial Supremacy* (New York, 1941).

<sup>17</sup> Cf. *Missouri v. Holland*, 252 U.S. 416, 40 S. Ct., 382 (1920).

<sup>18</sup> *U.S. v. Butler*, 297, U.S. 1, 56 S. Ct., 312 (1936).

ing that instrument, and the writings of great commentators will be searched in vain for any suggestion that there exists in the clause under discussion or elsewhere in the Constitution, the authority whereby every provision and every fair implication from that instrument may be subverted, the independence of the individual states obliterated, and the United States converted into a central government exercising uncontrolled police power in every state of the Union, superseding all local control or regulation of the affairs or concerns of the states."

Justice Harlan F. Stone replied in the dissenting opinion:

The power of courts to declare a statute unconstitutional is subject to two guiding principles of decision which ought never to be absent from judicial consciousness. One is that courts are concerned only with the power to enact statutes, not with their wisdom. The other is that while unconstitutional exercise of power by the executive and legislative branches of the government is subject to judicial restraint, the only check upon our own exercise of power is our own sense of self-restraint. For the removal of unwise laws from the statute books appeal lies not to the courts but to the ballot and to the processes of democratic government. . . .

. . . interpretation of our great charter of government which proceeds on any assumption that the responsibility for the preservation of our institutions is the exclusive concern of any one of the three branches of government . . . is far more likely, in the long run, to obliterate the constituent members of "an indestructible union of indestructible states" than the frank recognition that language, even of a constitution, may mean what it says: that the power to tax and spend includes the power to relieve a nation-wide economic maladjustment by conditional gifts of money.

The so-called "Brandeis brief" was like a minister's speech or report recommending legislation to a legislature!

#### GOVERNMENT BY JUDGES

*The United States.* In the United States, the constitution is superior to the judgment of the authorities it creates, and the courts interpret the constitution: in other words, the courts are superior to the judg-

ment of all other institutions, including Congress. Chief Justice Hughes once asserted: "We are under a constitution, but the constitution is what the judges say it is." Now, there is no set rule of construction which will unify the judgment of the nine men who at any one time constitute the Supreme Court, or the many inferior judges throughout the country. The logic of construction is created by the judges; it governs their mind and it is not something external to them. For logic is procedure and no more, but the decision of a judge depends upon the nature of the premises from which he proceeds. If by nature or the conviction of learning and experience the judge is individualist (as Herbert Spencer might have been) or favors small states (as William James might have done) or (like millions of socialists) believes that the community has large rights of control over the individual, or is conservative (as Chief Justice White and Justices Field, Sutherland, and Van Devanter were), these convictions enslave juristic logic and unavoidably emerge in the judgment. Thus, two things are of importance in the power of the courts: their rules of construction, and the nature of their membership.

There is no indisputably authoritative system of interpretation: nothing which is universally accepted. That which exists is a synthetic production of commentators and law schools. It is a collection of sayings and reasons extracted from judgments rendered. But the judges contradict each other. They contradict themselves—not always on different occasions. Their real motives do not always square with their expressed reasons. Obviously the rules are general and vague: and just as obviously their number complicates the issue and trammels the conscience. A fresh case is liable to call for a fresh rule, or such an application of an old one that it becomes unrecognizable without the services of intricate casuistry, as consideration of some of these rules show.<sup>19</sup>

*British Judges No Authority over Parliament.* It has already been suggested that in the British constitution, no body has legal authority to declare an act of Parliament or of the executive unconstitutional. In Britain there is in effect Parliamentary sovereignty. Parliament is not legally bound to respect anything, whereas Congress must respect the article giving it power, and the court will see to it that Congress does, and Congress acknowledges, even if it happens to be irked by the invalidation of its work. In the British constitution, when Parliament has indubitably stated its will in the unmistakable terms of a statute, that statute is sovereign, and the judges have nothing to do but to apply it to the case before them. If the words are unmistakable, no ground is left for judicial bias in interpretation, no loophole for the introduction of extraneous doctrine or philosophy.

Suppose, however, there is an ambiguity or vagueness in the language of the statute. Since the judges must fulfill their function of interpretation, how will they interpret? The principles of common law guiding the British judiciary on this question of constitutionality have been indicated by Keir and Lawson:<sup>20</sup>

(1) The state is not liable to suit unless by express legislative provision.

(2) Fundamental rights are not to be withdrawn by other than direct legislation; thus there is to be no deprivation of the common-law rights of individual freedom, or property without compensation, unless expressly stated, and penal and taxing legislation is to be strictly construed.

(3) Any change in the process of government which is the unintentional result of legislation on other matters will not be permitted.

(4) Wide latitude will be granted the executive in questions on the extent of its powers during periods of national emergency.

In 1610 Justice Coke introduced the

<sup>19</sup> *Annotated Constitution of the United States of America* (U.S. Government Printing Office, 1928), p. 57-77, "General Principles of Interpretation." Cf. also E. Levi, "Introduc-

tion to Legal Reasoning," *University of Chicago Law Review*, April, 1948.

<sup>20</sup> Keir and Lawson, *Cases on Constitutional Law* (Oxford, 1928), Chap. 1.

doctrine that the common law is above the House of Commons—in the celebrated *Bonham's case*—but the supremacy of Parliament prevailed. Note the statement of Justice Willes in *Lee v. Bude and Torrington Junction Railway Company*:<sup>21</sup>

I would observe, as to these Acts of Parliament, that they are the law of this land: and we do not sit here as a court of appeal from parliament. It was once said,—I think in *Hobart*,—that, if an Act of Parliament were to create a man judge in his own case, the Court might disregard it. That dictum, however, stands as a warning, rather than an authority to be followed. We sit here as servants of the Queen and the legislature. Are we to act as regents over what is done by Parliament with the consent of the Queen, lords, and commons? I deny that any such authority exists. If an Act of Parliament has been obtained improperly, it is for the legislature to correct it by repealing it: but, so long as it exists as law, the Courts are bound to obey it. The proceedings here are judicial, not autocratic, which they would be if we could make laws instead of administering them.

Thus in Britain, fundamental issues are decided by Parliament, which means they are decided almost by direct democracy.

*American Judges and Statesmen.* It will be seen how many opportunities occur for the personal prejudices of the judges to have effect as part of the constitution of the United States. Indeed, little else could be expected where a constitution of twenty-eight articles and some eight thousand words was made substantially, to fit a ruder society and is expected to serve the highly complicated one of today.<sup>22</sup>

The transient problems of less than 4,000,000 people at the end of the eighteenth century seemed permanent and necessary, and the thirteen sparsely populated agricultural communities could not but be altogether blind to coming

things. How shall a constitution chiefly made to serve such a small society serve a nation of forty-eight states, spreading over a diversified continent, with a 145,000,000 inhabitants, and these not of a primitive agricultural but of an ultra-modern industrial and agricultural civilization?

Now, the lawmaking activity of parliaments in Britain and Western Europe in the nineteenth and twentieth centuries has been directed to three main ends: (1) to regulate commerce and manufactures; (2) to mitigate the evils arising from the reign of *laissez faire* in social and industrial relationships, and (3) to establish a new relationship between the legislature and the executive, in which the executive receives a substantial discretion to elaborate the law by the formulation of orders, decrees, and rules.

In all other countries but the United States, the scope and substance of state activity has been determined in general by the unchallenged discretion of representative assemblies. In the United States alone has it been defined and often seriously limited by the courts.

They have been untrammelled in their use of political power and in the making of social and economic legislation, and they have, at their own discretion, delegated sublegislative and judicial powers to the executive. What they could do and did depended rather directly on what the electorate desired and was prepared to stand, and not on what the judiciary would validate. For Congress has been obliged to respect constitutional clauses which were made before large-scale enterprise or capitalistic industry had shown its characteristic signs, and those clauses are peculiarly rigid, since the amending process is so difficult. The whole tone of the constitution is *laissez faire* and local government: it safeguards liberty and property and state rights, whereas the developments of the nineteenth century have been towards collectivism and centralization. All the chief clauses of the constitution have had to be interpreted under the pressure of these problems. But the three which have caused most anxiety,

<sup>21</sup> *Law Reports* 6, "Common 582.

<sup>22</sup> Felix Frankfurter and J. M. Landis, *The Business of the Supreme Court: a Study in the Federal Judicial System* (1928); and see Association of American Law Schools, *Selected Essays of Constitutional Law* (Chicago, 1938), 4 vols.

most difficulty, and most controversy are the commerce clause,<sup>23</sup> the due-process clauses, and the general-welfare clause.

In the interpretation of the due-process clauses, the term upon which the courts fall back is "reasonable." If the law is "reasonable," the process of its creation is "due," and it is constitutional; if the law is "unreasonable," it does not represent a "due" process, and the law is unconstitutional. Here the discretion left to the Supreme Court is tremendous.

For many years it succeeded in emasculating federal and state legislation in which the police power was invoked for regulating economic activity, working conditions in particular. In 1905, in the case of *Lochner v. New York* (198 U.S. 45), the Court held

... that there can be no fair doubt that the trade of a baker, in and of itself, is not an unhealthy one to that degree which would authorize the legislature to interfere with the right to labor, and with the right of free contract on the part of the individual, either as employer or employee.

(However, in 1917, Oregon legislation providing for a ten-hour day for all workers in industry was upheld in *Bunting v. Oregon* [243 U.S. 426].) Justice Holmes, dissenting in the *Lochner* Case, had indicated that he thought "reasonableness" should be what a

... reasonable man might think a proper measure on the score of health. The Fourteenth Amendment does not enact Mr. Herbert Spencer's *Social Statics*. . . . A Constitution is not intended to embody a particular economic theory, whether of fraternalism and the organic relation of the citizen to the state or of laissez-faire. It is made for people of fundamentally differing views, and the accident of our finding certain opinions natural or familiar, or novel and even shocking, ought not to conclude our judgment upon the question whether statutes embodying them conflict with the Constitution of the United States.

The Court was even slower in admitting the constitutionality of minimum-wage legislation. In 1923, *Adkins v. Children's*

*Hospital* (261 U.S. 525) invalidated a minimum-wage law for women, saying:

If, in the face of the guarantees of the Fifth Amendment, this form of legislation shall be legally justified, the field for the operation of the police power will have been widened to a great and dangerous degree. A law to fix a maximum wage might one day follow.

The majority also objected to the fact that the minimum was supposed to be sufficient "to supply the necessary cost of living to women workers" and failed to consider the value of their services. Holmes stated in his dissent:

When so many intelligent persons (Congress, many States, and governments from which we have learnt our greatest lessons), who have studied the matter more than any of us can, have thought that the means are effective and are worth the price, it seems to me impossible to deny that the belief may be held by reasonable men.

In 1933, when New York State provided for a minimum-wage law for women and children, it stated specifically that the wage should be no greater than the reasonable value of the work. Again, in 1936, the Supreme Court held that the law involved deprivation of the liberty of contract as provided by the due-process clause of the 14th amendment (*Morehead v. Tipaldo*, 298 U.S. 587). Finally, in 1937, the Court upheld a Washington minimum-wage law; delivering the majority opinion in *West Coast Hotel v. Parrish* (300 U.S. 379), Chief Justice Hughes declared:

The Constitution does not speak of freedom of contract. It speaks of liberty and prohibits the deprivation of liberty without due process of law. In prohibiting that deprivation the Constitution does not recognize an absolute and uncontrollable liberty. Liberty in each of its phases has its history and connection. But the liberty safeguarded is liberty in a social organization which requires the protection of law against the evils which menace the health, safety, and morals of the people. Liberty under the Constitution is thus necessarily subject to the restraint of due process, and regulation which is reasonable in relation to its subject and is adopted in the interests of the community is due process.

<sup>23</sup> Article I, sect. 8, para. 3; Amendments V and XIV, article I, sect. 8, para. 1.

The future use of the due-process clause may well be confined primarily to procedural issues and questions of the power of administrative agencies, rather than to the constitutionality of laws. The famous "switch in time" in the Court's decisions in 1937 resulted in the upholding of far-reaching economic legislation on the basis of new and more liberal constitutional interpretations. National legislative power under the commerce clause was particularly affected. In 1937, in the case of *National Labor Relations Board v. Jones and Laughlin* (301 U. S. 1; 1937), upholding the validity of the National Labor Relations Act, the Court said:

When industries organize themselves on a national scale, making their relation to interstate commerce the dominant factor in their activities, how can it be maintained that their industrial labor relations constitute a forbidden field into which Congress may not enter when it is necessary to protect interstate commerce from the paralyzing consequences of industrial war?

(In the *NIRA* case it was held necessary to show direct effect on interstate commerce for the federal government to have jurisdiction.) In 1937 in *Helvering v. Davis* (301 U. S. 619), the Social Security Act was upheld as a proper exercise of the taxing power for the general welfare, since an evil, like unemployment, might spread from one locality and affect the general welfare of the whole national area: a far-reaching doctrine indeed. The Supreme Court's mind had, indeed, undergone a great transformation.

Thus, as we suggested, the three chief clauses of the constitution have been the focus of judicial policy making. There is an additional aspect, for which, however, there is no specific constitutional clause. It is the dictum *delegatus non potest delegare*: "When power is delegated, power cannot be delegated further by the delegate." These were not issues for the courts in other countries. There the legislatures were supreme in setting and defining law.

The commerce clause empowers Congress "To regulate Commerce with foreign Nations, and among the several States.

..." It is clear that in so far as interstate commerce is concerned, the elastic terms are "commerce" and "among the several States." What is commerce? Does it include telegraph messages which move, substanceless, through wires; correspondence sent by correspondence colleges; passengers on railways; women in white-slave traffic; manufactures not yet moved, but intended to be moved, into other states? At what point do commodities of commerce acquire the character interstate, and when do they cease to fit into this classification? Where is the margin between regulations which affect only interstate conditions and those which, in fact and with intent, govern the domestic industrial conditions within each state?<sup>24</sup>

*The Political Consequences of Judicial Review.* We are now in a position to realize the full distance between the American and British constitutions and between the former and European written constitutions. In America, there is a tribunal superior to Congress. In Great Britain there is none superior to Parliament. It may be and often is said that it is not the Supreme Court which is superior to the Congress, but the constitution. This, however, is only a verbal quibble, for the constitution does not speak; within the oracle are men, who construe the constitution. Nor do they know what the constitution originally meant—nor even were all its makers agreed upon what it meant.<sup>25</sup> It was, indeed, a favorite idea of the Fathers, excellently expressed in the Massachusetts constitution, that "this shall be a government of laws and not of men." Vain delusion! For whatever speaks through the mouth of man, speaks through his mind, and of all that molds

## GOVERNMENT BY JUDGES

it; and this, in a developing civilization, steadily supplants the original law.

What, then, is the fundamental difference between the American and the British constitutions? It is this. The British Parliament, democratically elected, is the ultimate authority over the appropriate principles of the constitution at any given time. The American Congress is only the court of first instance in such decision, and is overrutable by five members of a Supreme Court of nine, not democratically elected. The fundamental issues are decided by a body of lawyers neither appointable nor dismissible by democracy. (No article and no law provides for removal of the justices!)

The only remedy against these ultimate lawgivers who, by the way, invalidate a law without bearing the responsibility of establishing a workable alternative, is a constitutional amendment by a process difficult and dangerous. James Hart has said:

The only effective means of overcoming defect of constitutional power is to amend the amendable. . . . We should not abolish or curb judicial review as such. . . . The remedy to try first is so to re-define the spending and commerce powers of Congress as to leave the Court no room to substitute its discretion in such matters for that of the national legislature.<sup>26</sup>

Since the amending process is so difficult, and yet amendment is necessary, the courts will be relied upon more and more to bring the constitution up to date by interpretation. In 1940, Justice Felix Frankfurter, in *Minersville School District v. Gobitis* (310 U.S. 586) very effectively stated a progressive approach to the function of the courts:

Judicial review, itself a limitation on popular government, is a fundamental part of our constitutional scheme. But to the legislature no less than to the courts is committed the guardianship of deeply cherished liberties. To fight out the wise use of legislative authority in the forum of public opinion and before legislative assemblies rather than to transfer

such a contest to the judicial arena, serves to vindicate the self-confidence of a free people.

Comparatively, not completely and absolutely, Great Britain is governed by politicians and America by lawyers, but by lawyers whose function is that of the politician in the highest degree. The issues to be decided by the judges are not merely technical issues, nor such as can be subsumed under a perfectly clear major proposition accepted by all; but in the end, they are moral values, and to answer them requires that men shall always be asking the question, consciously or unconsciously, "What judgment will make for the best civilization, granted my ultimate convictions about God, the Devil, Humanity, Progress, and the rest?" These judges are statesmen—and the lawyers, politicians, and teachers have put their recognition of this into terse terms: they talk of Government by Judges, Judicial Oligarchy, the Aristocracy of the Robe, Covert Legislation, Judge-made Law. (We ought to say that the executive authority, which is separately empowered by the constitution, is also subject to the same judicial control, but we have preferred to emphasize the legislative aspect.)

Since what shall be the law depends upon a majority of five judges out of nine, it is clear that the appointment of each judge is of great moment. It is not surprising, therefore, to find that on the occasion of a vacancy, the organs of opinion—press, party managers, Congress, President, "political circles" just on the fringe of official politics, the Congressional lobbies, the hotels of Washington, the seminars and common rooms of universities, passengers aboard crack railway trains and airplanes—excitedly discuss the prospect. There is almost as much ado about a Supreme Court appointment in the United States as there is in the choice of a new party leader—a possible prime minister—in parliamentary countries, with perhaps just a little less overt noise.<sup>27</sup>

<sup>27</sup> Cf. Warren, *op. cit.*, *passim*, for the struggles regarding appointments at various times; and see the following lives: C. Fairman, *Mr. Justice Miller and the Supreme Court* (Harvard, 1939); H. F. Pringle, *The Life and*

<sup>26</sup> "A Unified Economy and States Rights," in *Annals of the American Academy of Political and Social Science*, May, 1936, pp. 108-09.

The struggle for appointments has been specially urgent of recent years, for social legislation has been a source of keen dispute. In the matter of two appointments, at least, first-class political sensations were provoked.<sup>28</sup> For the appointments are made by the President by and with the consent of the Senate, and the President is under obligation to the party leaders in the Senate. The party "bosses" want the available offices for party friends.

Very recently leaders of the Republican party, for many years not having the power of appointment, hinted that the Supreme Court should not be controlled by members exclusively of one party. Perhaps (not certainly) in response to this, President Truman appointed Republican Senator Harold H. Burton to the Supreme Court. But three other considerations govern appointment; geography, professional fitness, and religion. The first is of considerable importance in a federation so extensive in area. The important religious minorities, the Catholics and Jews, are "represented" by one of their community: thus we have Butler followed by Murphy, and Brandeis and Cardozo followed by Frankfurter.

From 1897 to 1937, twelve of the twenty court appointees had served on other law courts, and twelve had had political experience in the federal administration or Congress. Since 1937, of ten appointments, only two had had some (little) judicial experience; all ten had been in "politics," and nine had held high office in the federal administration or Congress.

It is not surprising that in order to overcome the obduracy of judges who persist in deciding as they believe they ought, reforms have been broached of "recall;"<sup>29</sup>

*Times of William Howard Taft* (New York, 1939); C. Swisher, *Stephen J. Field* (New York, 1930) and *Roger B. Taney* (New York, 1935); and Lief, *Brandeis* (New York, 1936). See also Felix Frankfurter, *Law and Politics* (New York, 1939) and A. M. C. Ewing, *The Judges of the Supreme Court, 1789-1937* (Minneapolis, 1938).

<sup>28</sup> The reader may be referred to two sensational cases, those of Justices Louis D. Brandeis and Hugo Black. See also Robert K. Carr, *The Supreme Court and Judicial Review* (New York, 1942), Chap. X.

of establishing a special majority for constitutional invalidity;<sup>30</sup> of giving Congress power to override the Court's decisions,<sup>31</sup> or limiting any President to three Supreme Court appointments.

The most significant example of attempts at reform occurred in the clash of Franklin Roosevelt with the Supreme Court. Law by law, the New Deal program to alleviate the depression was invalidated. The NIRA, the AAA, the Frazier Lemke Act, the Gold Clause repeal, the Bituminous Coal Act, the Municipal Bankruptcy Act, the Railroad Pension Act, part of the Home Owners' Loan Act, the federal tax law penalizing illegality in liquor-business operations—all were declared unconstitutional between January, 1935, and May, 1936. In his Congressional address in January, 1937, the President said:

The vital need is not an alteration of our fundamental law, but an increasingly enlightened view with reference to it. . . . Means must be found to adapt our legal forms and judicial interpretation to the actual present needs of the largest progressive democracy in the modern world.

Later, Roosevelt proposed that the Supreme Court should consist of as many as fifteen members, one additional for each justice who did not retire within six months after reaching the age of seventy, and such a bill was introduced. This provoked a Congressional tempest, in part due to the purported challenge to the independence of the court; the court handed down a series of liberal decisions,

<sup>29</sup> Taft, Message to Congress Vetoing the Arizona Bill, cited in William Howard Taft, *Popular Government* (New York, 1913), pp. 169-70.

<sup>30</sup> See Charles Warren, *Congress, The Constitution and Supreme Court* (Boston, 1925), Chap. VI.

<sup>31</sup> It has also been suggested that Congress shall prevail over a judicial decision in the following manner: If a statute is held unconstitutional by the Supreme Court but is enacted a second time by Congress (at least by a two-thirds majority), it shall therefore be held constitutional. This plan would make Congress supreme and would dispense with the necessity of submitting any amendment to the constitution to the state legislature. (*Ibid.*, Chap. V.)

validating state minimum-wage legislation, the National Labor Relations Act, and social security laws, and the bill failed.<sup>52</sup>

Three problems are raised by the comparison of the American practice of judicial review with British and Continental practice. The American practice of judicial review of constitutionality undoubtedly transfers from Congress the fullness of sovereignty. What is taken from Congress is ultimately taken from the people, and whether this makes in the long run for good or bad government depends upon what value one attaches to democratic government. I may be permitted here to leave the general question open. But so much about the United States is certain:

*First*, that a great deal of substance and dramatic effect, as distinct from transient and superficial sensationalism, are extracted from American politics by judicial review, for no politician can make a promise of major importance with the ring of truth in his declaration. Short of promising the almost unattainable—a constitutional amendment—he has very little to offer. Nor, though he roar like a bull, has he much to deny. It is significant that nonparty organizations obtained the last three substantive constitutional amendments. When vital questions are taken from the hands of the party organizations, these are themselves devitalized. But in England and on the Continent, the plenitude of powers is in the hands of the legislature, the parties, and the people. Obtain a majority in the legislature and you may, legally, change the political and social fabric of the state. Burke, in his *Reflections on Revolution*, said:

A State without the means of some change is without the means of its conservation. With out such means it might even risk the loss of that part of the constitution which it wished the most religiously to preserve.

<sup>52</sup> Robert Alsop and Turner Catledge, *The 168 Days* (New York, 1938); E. S. Corwin, *Constitutional Revolution, Ltd.* (Claremont, California, 1941); James Farley, *My Story* (New York, 1948), Chaps. 9 and 10; C. Herman Pritchett, *The Roosevelt Court* (New York, 1948), Chap. 1.

That is a spur to parties and a spur to the people to attack or to defend; and both receive an education in political thinking and self-control. In the United States, Congress is in a perpetual state of nonage, and the people likewise are bound by a testament made by their forefathers. In the British and Continental democracies the people are simultaneously father and son. In the United States, responsibility for political behavior may be shifted on to the courts and the constitution. There is no such escape from responsibility in Britain and Europe.

*Second*, in the same line of criticism lies the fact that in the United States, political questions are discussed by Congress, the parties, and the electorate not merely on their merits, not as to their social advantages and disadvantages, but as to their constitutionality. This stultification of political discussion does not occur elsewhere.<sup>53</sup> The prior interest is in the merits of the proposition, and it not infrequently happens that whatever shows a balance of advantage becomes constitutional, if it is not so already. The discussions of constitutionality are, in the United States, always an interference with the direct consideration of political issues, and not seldom they establish a screen round the real questions. We might, indeed, add another phrase to the catalogue of logical fallacies: the *argumentum ad constitutionem*.

*Finally*, like all authorities which have great power, the courts, and especially the Supreme Court, are alternately abused and applauded. But courts of justice cannot afford the charge of error or bias. For the courts of justice are not only concerned with constitutional cases but with other cases, in which states, individuals, and corporations are in conflict: where people sue one against the other, where the state

<sup>53</sup> But something like it occurs. People often retreat from the immediate matters of argument to the broader basis that the "Senate" or the "Constitution" is either benefited or jeopardized. Cf. Jeremy Bentham, *Book of Fallacies* (*Works*, Bowring edition). However, in America the form of the constitution, the difficulty of its amendment, and the casuistical traditions of 170 years give a prior and principal importance to this method of argument.

sues citizens: where, in short, the whole mass of claims under admitted law is decided. The multitude does not minutely discriminate, and when it mistrusts for one thing it may mistrust for another, though the cases are poles asunder; especially, also, when political leaders are unguarded and intemperate in their legitimate business of acquiring votes.

*Judicial Review Unusual Elsewhere: France, Switzerland, Canada, Australia, Weimar Germany.* In general, Europe has not followed the American example. It was suggested in Revolutionary France by Siéyès and included in the constitution of the Year VIII, and later in the constitution of 1852 as a "conservative Senate" for constitutional vigilance. The Consul and the Emperor simply applied it to their own uses. But there was not a little advocacy for judicial review just before World War II, and the argument in its favor, however it may begin, always ends thus:

But these varied causes of resistance do not prevent the principle from existing and of slowly propagating itself, especially when one takes into account more and more the necessity of controlling parliaments, because their legislation, motivated by electoral purposes, has become a dangerous menace to liberties.<sup>34</sup>

This will be found even better expressed by the politicians of the Right than by the jurist. In Switzerland, the

constitution of 1874 gave to the federal courts the power to review the constitutionality not of federal laws but of cantonal laws. The referendum acts, it is suggested, as a check upon the courts—but this is not the same kind of check as judicial review.<sup>35</sup>

Canadian constitutional issues are resolved by the Judicial Committee of the Privy Council, which is attached neither to the central government nor the provinces but sits in London and is a British court. (In January, 1947, the Judicial Committee said it would no longer entertain appeals from the Canadian courts.) This body has limited the jurisdiction of the Canadian central government through sections 91 and 92 of the constitution. According to section 91, the Dominion is granted power "to make laws for the peace, order, and good government of Canada" over those subjects which are not specifically assigned to the provinces, and an enumeration is made of the types of subjects which may be included within its jurisdiction. In section 92 a classification of the matters over which the provinces have exclusive powers is established. However, there is no clear dichotomy. Dominion laws "for the peace . . . of Canada" will undoubtedly influence provincial powers, and vice versa. The Privy Council, in the frequent disputes that have arisen as a result of the overlap, formulated the principle (1896) that section 91 could be utilized for powers delegated to the provinces in section 92 *only* where the enumerated topics of section 91 were concerned or when "such matters as are of unquestionably Canadian interest and importance" were involved. Otherwise, it was felt that provincial jurisdiction would be greatly whittled down.

Narrow construction of section 91 and

<sup>34</sup> *In favor:* Cf. Maurice Hauriou, *Principes de Droit Constitutionnel* (Paris, 1929), p. 270 and p. 288 ff.; Léon Duguit, *op. cit.*, Vol. III, p. 467 ff.; A. Esmein, *op. cit.*; H. Berthélemy (*Revue politique et Parlementaire*, December, 1925) argues that control has already occurred in some cases. *Against:* Ferdinand Larnaude, *Bulletin de la Société de Législation Comparée*, 1902, p. 175 ff.; *Revue Politique, et Parlementaire*, February, 1926; Gaston Jèze, *Principes Généraux du Droit Administratif* (3rd edition, Paris), Vol. I, p. 344 ff. Jèze is not a blind admirer of the French parliamentarian but he thinks that, politically, judicial control is too dangerous and inconvenient. Paul Duèz, in *Mélanges, Maurice Hauriou* (Paris, 1930), p. 245, is against it for the interesting reason that "in spite of security of tenure the Government . . . holds the judges in its hands if they have not altogether given up promotion."

<sup>35</sup> F. Fleiner, *op. cit.*, p. 410. Compare also p. 448: "This constitutional judicability fulfils a special duty in the life of the Swiss Republic. In a democracy the ultimate bulwark of the constitution and law is the judge. The feeling that the law is safe is based on confidence in him. If in the narrow sphere of cantonal affairs political passion is at the helm, then the lowest citizen in the State knows that the way to Lausanne is open to him."

wide construction of section 92 followed, and only war and disease as permitting emergency legislation were sanctioned. Any economic problem not stipulated in section 91 is beyond reach of the Dominion government. On the grounds that the depression was not so severe an emergency that the general power could be legitimately invoked, the Bennett New Deal laws were invalidated in 1937 (*Attorney General of Canada v. Attorney General of Ontario*, A.C. 326 and 355). The court ruled that power to regulate trade and commerce did not include intra-provincial trade. Thus, judicial review hemmed Dominion controls. When the alternative of amendment was suggested, the provinces balked. Only for unemployment insurance (1940) were the provincial governments willing to amend the constitution to allow the Dominion nationwide control of an economic problem.

Australia, on the other hand, has had a far more liberal court, which has enabled it to circumvent the difficulties imposed by the almost insurmountable hurdle of passing an amendment. The High Court has jurisdiction in constitutional cases concerning the division of powers and, with its consent, appeals can be made to the Judicial Committee of the Privy Council. (This has occurred only once.) Although from its inception in 1903 until 1920, the High Court adhered to the principle that the Commonwealth and the states should not legislate in the other's sphere, in 1920 the court changed its position to allow the Commonwealth wider powers. Only where the constitution expressly prohibited the central government was it to be hindered.

Weimar Germany was the European country where the subject of judicial review was most likely to become practically important. Under the old constitution, hardly anybody supported judicial review; nor were the courts held to be competent. But it was always agreed that the laws acquired validity only if they were passed as formally ordained by the constitution and that state laws could not override but must fit in with federal law—*Reichsrecht bricht Landsrecht*—and that orders could

be invalidated by the courts if they were *ultra vires*, i.e. went beyond the statute. Anything further under the Bismarckian constitution would have been incompatible with the spirit of the constitution, for the supreme political authority—the body, indeed, which judged of interstate disputes, the disputes between the federation and the states—was the *Bundesrat*, and this could not acknowledge an authority higher than itself.<sup>36</sup>

The constitution of 1919 had various features which were more conducive to judicial review. There was popular sovereignty, there were fundamental rights, there was a well-expressed distrust of the legislature. Was the legislature, then, to be the ultimate arbiter of constitutionality? There was no express clause in the constitution establishing judicial review. The disputants were therefore thrown back upon hints obtainable from the proceedings of the constitutional committee of the National Assembly, and general, social, and political theory applied to German conditions. Meager results alone were obtainable from the proceedings of the National Assembly and its committee. In the latter the subject was debated by several of the most capable members, among them Hugo Preusz, the framer of the constitution, but it was impossible to secure agreement. Preusz was then in favor of judicial review, saying that it existed unconditionally wherever it was not expressly excluded, although some people had asked him for express exclusion and some for express inclusion of the power of judicial review, his own view was, and remained, that if nothing was said, then judicial review "went without saying." Preusz's opinion in favor of judicial review can be described as intending to secure the *Rechtsstaat*, that is, a government subject to the law as interpreted by the courts of justice. "And now I wish to say this, that I cannot conceive of judicial activity in the full sense, if the Court is to be forced to apply a substantially unconstitutional law against its clear conviction."

<sup>36</sup> Cf. below, Chap. 10.

The constitution therefore said nothing at all about judicial review. From its advent, jurists were much occupied with this problem, and the courts were not able to remain aloof. Broadly, opinion was divided among the jurists, and the division was based ultimately upon whether the lawyers trusted or distrusted the democratic process of government. Those who opposed unlimited democracy and mistrusted legislatures argued that the liberties of the citizen and the efficiency of the government ought not to be left to the absolute mercy of politicians, party organization, and the modern electoral process. Nor, they said, was the bureaucracy what it once was, meticulously law-abiding and public spirited, for World War I and its aftermath had shaken its morale, and democracy would cause its corruption.<sup>37</sup> These arguments came almost unanimously from the conservative and liberal camps, and from socialists other than those who favored full parliamentary and direct democracy. The jurists, with rather more unanimity than in France, disbelieved in the possibility of justice emanating from legislatures, and with anti-autocratic impulses still passionately moving them, they demanded, at least as strongly as the liberal thinkers of 1848, the realization of the *Rechtsstaat*. The only guarantee lay in judicial review: nothing was to be hoped from "power-hungry" legislatures,<sup>38</sup> parliamentary "absolutism."<sup>39</sup> It was plain, however, that law had nothing to do with the question. The constitution said nothing about it. The issues were political issues, and the real question of justification was begged by the lawyers. So much, once more, for the clarity of written constitutions!

The courts themselves were not able to avoid the issue, and, indeed, assumed the power of judicial review, but without the confidence or militancy of John Marshall.

In 1924 the united branches of the High Court (*Zivilsenaten*) left the question open, since there was great disagreement upon it—and this, though one branch<sup>40</sup> had declared its permanent competence to review constitutionality. In the Revaluation Law Case (1925), the power was asserted, with only the foundation that, since the judge is independent and "only subject to the law,"<sup>41</sup> he has the right and duty to give judgment about which legal provisions have the most commanding power: there was no attempt, as with Marshall, to found the utility of such a power upon the importance of maintaining the supremacy of the written constitution, because supremacy is a worthy thing. It seemed, however, that this declaration had, in the mind of most German lawyers at least, settled the matter affirmatively.<sup>42</sup> But opinion was opposed to the power of judgment being vested in the inferior courts: one supreme court for such cases was advocated to avoid uncertainty and waste of time and argument, both evident in the United States.<sup>43</sup>

*The Fourth and Fifth Republics Make a Change.* We have already observed that the French Fourth Republic came by its constitution by a difficult process, and that its basis of compromise was singularly precarious. We have noticed also that it has an extensive bill of rights, and that it has a fairly rigid amending clause.<sup>44</sup>

The Fourth Republic also introduced a special procedure for controlling the constitutional validity of laws made by the National Assembly. It created a Constitutional Committee of thirteen members composed of the President of the Republic, chairman, the Presidents of both Houses, 7 members elected by the National Assembly from outside its members and 3 members elected by the Coun-

<sup>40</sup> *Reichsgerichtszivilsenat*, p. 102, p. 161 ff.

<sup>41</sup> So runs article 102 of the constitution.

<sup>42</sup> Richard Thoma, in *Archiv des Öffentlichen Rechts*, Vol. 43, p. 272 ff., is a very good example of an opponent of judicial review on the ground that the constitution already contains sufficient guarantees.

<sup>43</sup> Cf. Gerhard Anschütz, *Die Verfassung des Deutschen Reiches* (Berlin, 1930), p. 326; *Verhandlungen des 33. und 34. Juristentages* (Berlin).

<sup>44</sup> Articles 90, 94, and 95. See above, p. 124.

<sup>37</sup> This is put very clearly by F. Morstein-Marx, *Variationen über Richterliches Zuständigkeit* (Berlin, 1927).

<sup>38</sup> Cf. Heinrich Triepel in *Archiv des Öffentlichen Rechts*, Vol. 39, p. 537.

<sup>39</sup> Cf. Theisen in *Archiv des Öffentlichen Rechts*, New Series, Vol. 8, p. 274.

cil of the Republic (upper House) also from outside its members. The committee could determine whether laws "implied amendment of the Constitution", subject to two important conditions: the preamble, which guaranteed the rights of the citizen, was excluded, and a bill could only be examined if the Council of the Republic, by an absolute majority vote, decided to send it to the committee: no one else could set the procedure in motion.

This very complicated procedure was accepted as a compromise among various proposals made by all the political parties for some external control over the Assembly, excepting the Communist party and a few Left-wing friends. The broad choice was among returning to the position of the Third Republic, in which there was no constitutional invalidation of anything the Chambers might deem it right to do; or adopting some form of judicial control on the American model; or finding some other way whereby the Assembly should be kept within bounds. Some Rightist groups, of small dimensions, then, were advocating judicial review, as one of them said, by a "court of independent personalities."<sup>45</sup> This found little encouragement elsewhere: the United States experience was plentifully commented on, it being observed that the very intention of some of the laws made by Congress (for example, the Sherman Act) had been perverted by the Court's interpretation.

All the deputies, with the exception of the Communist party, admitted the need for an outside control over the Assembly. The Communist party argued thus: The only acceptable control over the Assembly might be the people themselves, consulted in referendum. But to the referendum, the Communists said, there was the serious objection that it was reminiscent of the *plébiscite*, which under the Second Republic had been abused by a would-be dictator, Louis Napoléon, who manipu-

lated the plebiscite to convert the Republic into an Empire. The referendum, therefore, was totally inadmissible. This left the judgment of constitutionality either to the Assembly or to some outside body not the people itself. Further, said the Communists, there could not be conceived an organ outside the Assembly which could offer better guarantees of the constitution than the Assembly itself: any other organ would be at least as liable to violate the constitution as would the Assembly itself. All power to the Soviets!<sup>46</sup>

Both the Socialist party and the M.R.P. were strong for popular sovereignty, and the former, whatever its qualms about history, was willing to put its faith in the referendum. It seemed to both these parties that the Assembly ought not to be permitted to be judge in its own cause.

The Fifth Republic goes slightly further than the Fourth in this respect but it still does not institute judicial control. The constitution of 1958 creates a Constitutional Council, composed of the President of the Republic, chairman, of the ex-Presidents of the Republic and of nine other members, appointed for nine years, three by the President of the Republic, three by the President of the National Assembly and three by the President of the Senate. The Council has two distinct types of powers: *firstly*, it supervises national elections, i.e. the election of the President of the Republic, parliamentary elections, and referendums. General election disputes, previously settled by the National Assembly, are thus now settled by the Council. *Secondly*, it examines legislation and parliamentary standing orders to see whether they conform with the constitution. However, recourse to the Constitutional Council is still not open to individual citizens: the text of art. 61 reads thus:

Organic laws (these are dealing with a number of matters of quasi-constitutional importance), before their promulgation, and Standing Orders of the parliamentary Houses, before they come into force, must be submitted to the Constitutional Council, which decides upon their conformity to the Constitution.

To the same end, laws may be referred to the Constitutional Council, before their pro-

<sup>45</sup> *Séances, Commission de la Constitution*, December 19, 1945, p. 133.

<sup>46</sup> *Ibid.*, pp. 135 and 137.

## CONSTITUTIONS: SUPREMACY AND CONTENTS

mulgation, by the President of the Republic, the Prime Minister or the President of either House.

In the cases mentioned in the two preceding paragraphs, the Constitutional Council must give its ruling within the period of one month. However, at the request of the Government, if the matter is urgent, this period is reduced to a week.

In the same cases, reference to the Constitutional Council suspends the time-limit for promulgation.

In comparison with the British and U.S. Constitutions, the notable features of the French guarantee of constitutionality are these. The French Parliament's interpretation of constitutionality is subject to challenge: it is not supreme as is the British Parliament. The President of the Republic and the ex-Presidents of the Republic are given an *ex-officio* status: they are politicians of a special kind and are expected to have a more impartial and detached approach to current problems than ordinary politicians. The other members are chosen by the President of the Republic and the Presidents of the Houses of Parliament: they are not chosen from among members of Parliament and they may even not be politicians. However, these men do not have the same independent status than judges of the U.S. Supreme Court, although the Constitution states that they can only be appointed for one term of nine years.

It will be noticed that a difference is made between organic laws and Standing Orders, which *have to be* examined by the Council, and ordinary laws which *can be* sent for examination. Only four men, the three Presidents and the Prime Minister, can send such bills. Furthermore, they must be sent between the moment they have been passed by Parliament and the moment they are signed by the President of the Republic, a period which cannot exceed 15 days, according to art. 10 of the Constitution. Nevertheless, despite these limitations, the new Council has more powers than the Committee of the Fourth Republic: it is competent to decide, *proprio motu*, about the constitutionality of organic laws and Standing Orders; it also seems that, in contrast with the Fourth Republic, it is competent to decide about

the conformity of laws with the Preamble, since the Preamble is no longer explicitly excluded as it was in the Constitution of 1946.

### SURVEY OF THE GUARANTEE OF CONSTITUTIONALITY

If we sum up the main differences in the forms of constitutions, we may say that they arise from the attempt practically to secure the *fundamentality* of the constitution, and this is sought in three things: in writing, in the amending process, and in judicial review.

Mere writing does not secure the supremacy of the constitution, because the terms of the supreme instrument are not, and cannot be, sufficiently precise in detail and scope. Government is dynamic, and the most detailed of constitutions cannot meet all the cases which arise in an evolving society.

Supremacy is shown and maintained chiefly in the amending process, which everywhere save in England, is made formally and really more difficult, while in England itself, convention tends to make the process more difficult than ordinary legislation. Difficulty in amendment certainly produces circumspection and makes impossible the surreptitious abrogation of rights guaranteed in the constitution; and where such rights, individual or state, are believed to be easily capable of annulment without a special safeguard, a difficult amending process has thwarted furtive encroachment. Yet, if this is pressed too far, the constitution ceases to be plastically responsive, and the rights of some are safeguarded at the expense of those who ask for the creation of new rights, while the strength of new social forces may compel a substantial evasion of the constitution and its amending clause, by popular refusals to obey and by governmental inability to enforce its terms. Further, even if slowly, the body which is the interpreter of the constitution—Parliament or the courts—stretches and must stretch the meaning of the constitution until it fits the advancing facts. Too difficult a process, in short, ruins the ultimate

purpose of the amending clause, to maintain good government; causes the clandestine substitution of another fundamental law which is called by the old name; and, unfortunately, causes the demoralization of the electorate by propaganda, which, to overcome the obstacle to amendment, must be particularly ruthless. But the amending clause is so fundamental to a constitution that I am tempted to call it the constitution itself.

Finally, in the United States, and partially<sup>47</sup> and tentatively in other countries, the fundamental quality of the constitution is secured by the establishment of the judiciary as its interpreter. This device takes interpretation out of the hands of an elected body, which is liable extravagantly to assert its own supremacy over the constitution, and puts it into the hands of a number of judges, whose training and tenure do not, indeed, transform them into impersonal oracles but, in fact, secure the triumph of the general spirit of the constitution and the social theories of about a generation back. Where the constitutional issues are of grave import for the well-being of the state, the judges, doing the work elsewhere reserved to popularly elected statesmen, begin properly to be regarded as a unit in the struggle of partisans.

In other countries, the parliament and the party system decide how far the constitution shall be supreme over them and how far they shall be supreme over the written and conventional principles of the constitution. This places a dire responsibility upon parties and the electorate, and perhaps it is as well that these bodies should directly judge the gravest issues. The politicians are forced, at least, to think of improving their machinery and behavior. Thus Barthélemy and Duez in France sum up:

<sup>47</sup> In Australia and Canada, the High Court decides questions of constitutionality only in so far as the division of power between the federal and state authorities is concerned; for the constitution does not limit the plenitude of some government's powers. In Australia the ultimate appeal may be to the Judicial Committee of the Privy Council.

We think that the guarantees against parliamentary oppression should, in the existing state of our morals, be sought elsewhere than in the judicial review of constitutionality. We must organize Parliament so that we reduce the chances of the appearance of unconstitutional laws and develop the spirit of legality within it: since bicameralism, proportional representation, reform of procedure, the referendum, seem to us, in this respect, preferable to a too heavy arm put into the hands of an organ too weak to use it surely and securely.<sup>48</sup>

In England, the parties and the electorate have so far been quite as able to provide the needful political institutions as countries which have withdrawn the constitution from the direct judgment of the people: indeed, have they not done better?

Lastly, judicial interpretation has been for the American constitution the most effective way of making the rigid constitution flexible enough to work. The rigid constitution has lived only by judicial respiration.

The differences between democratic and dictatorial constitutions are particularly marked. In a democracy the constitution is established for popular protection, providing security along with guarantees of fundamental rights, at the same time enabling revisions. For a constitution in a democratic state may be defined as a pattern of applied scruples, an instituted philosophy of forbearance, a declaration of self-doubt. The constitution of a dictatorship, on the other hand, is entirely at the disposal and for the safeguard of the leader's monopoly powers, permitting changes to be made at his discretion alone, and placing the populace completely at his mercy. The amending process, although somewhat bloody, is by far simpler and swifter in a totalitarian state than in a republic, but it is more difficult for the people to find the opportunity to use it in the former since the government wields up-to-date means of physical repression.

<sup>48</sup> Cf. Joseph Barthélemy and Paul Duez, *Traité de Droit Constitutionnel* (Paris, 1933), p. 222; cf. also Paul Duez, in *Mélanges Maurice Hauriou*, p. 213 ff.

SUBSTANCE: HISTORICAL DEVELOPMENT

WHAT have constitution makers considered to be fundamental political institutions? It hardly needs to be insisted that the catalogue has changed with time. The power relationship in that great amassment of human beings called the state varies with every change in human resources and material inventiveness, and with every addition to the stock of ideas brought to mankind by the extraordinary of their race. These precipitate themselves into the constitution. But there is the acknowledged body of conventions, long-wrought and accepted by several generations, and there are the claims of the hour and the particular interests of the men who assemble to establish the tables of the law. These things mingle, and in the supreme instrument of government there may appear, side by side, the permanent and the transient. Yet all have the same theoretical validity. Let us glance at the development of fundamentals.

*To the Eighteenth Century.* (1) The constant factor, since the Agreement of the People of 1649 in England, has been the question of political authority.<sup>49</sup> Who shall be supreme? Shall there be direct or representative government, and whichever is chosen, how shall it be organized? In representative government, for how many years ought the assembly to be elected? Questions such as these have always been deemed fundamental, and what, indeed, could be more fundamental than the definition of legitimate power? What was decided was the substantial sovereignty of the people; the strict control of the source of all past anxieties, the executive; and a short term for the legislature.

(2) The second most constant written fundamental, though I hesitate to place its advent earlier than security from arbitrary taxation, was religious freedom.<sup>50</sup>

<sup>49</sup> If, of course, we go back as far as Magna Charta, we shall find that it is defense against arbitrary interference with property and personal liberty—of the barons in the first place.

<sup>50</sup> Cf. G. P. Gooch, *English Democratic Ideas in the Seventeenth Century* (London, 1927); John N. Figgis, *Studies in Political Thought from Gerson to Grotius, 1414-1625* (Cambridge, 1923).

This appears in the Agreement of the People; it assumed diverse and queer forms in the American colonies, and came to a well-nigh perfect maturity in the constitutions of the American states and the federation.

(3) The third is security of property. The earliest form of this fundamental was "no taxation without parliamentary consent."<sup>51</sup> It later assumed an importance, not as against an absolute king and in the form of taxation, but as the individual's right to do as he liked with his own, without regard to, and without control by, the community.

(4) There is liberty: meaning (a) freedom from arrest and detention unless on well-known principles and with safeguards against official arbitrariness;<sup>52</sup> (b) freedom of opinion, especially in the form of written utterances; and this was first proclaimed in the Virginia Declaration of Rights;<sup>53</sup> (c) trial by jury<sup>54</sup> and equality before the law.<sup>55</sup>

The French constitutions expanded

<sup>51</sup> *The Petition of Right* (1628): "that no man hereafter be compelled to make or yield any gift, loan, benevolence, tax, or suchlike charge without common consent by it of Parliament."

<sup>52</sup> For example: the 39th clause of Magna Charta, the Habeas Corpus Act of 1679, and the amending act of 1816.

<sup>53</sup> The press had by that time given a new problem to political society: could Milton's noble plea, "Give men the ability to know, argue, and utter freely," be admitted where opinion could be spread so widely and so rapidly?

<sup>54</sup> Cf. W. H. Holdsworth, *History of English Law*, 3rd edition (London, 1922), Vol. I, pp. 312, 320; the development of the system is treated at length in the subsequent volumes.

<sup>55</sup> E.g. in *Danby's Case*, Vol. II, S.T. 599 (1679), it was decided that a minister of the Crown cannot plead the orders of the Crown as an exemption from liability for an illegal action. In accordance with the Bill of Rights (1688), the Crown can no longer dispense with the provision of Acts of Parliament in favor of individuals. By the Act of Settlement (1701), a pardon by the Crown is not a bar to an impeachment in the Commons. The argument of "state necessity" and the distinction between state officials and others were dismissed by Lord Camden, C.H., in 1765. (*Entick v. Carrington*, 19 S.T. 1067): "The common law does not understand that kind of reasoning, nor do our books take any notice of such distinction."

these fundamentals, including new ones and reshaping the old.<sup>56</sup> State honors and employments were opened to all without any other distinction than that of their virtues and talents; privilege was banished from the administrative as well as the legislative branch. Taxation ought to be divided equally among the members of the community according to their abilities. The right to property being inviolable and sacred, no one ought to be deprived of it, except in cases of evident public necessity, legally ascertained, and on condition of "a previous just indemnity." Finally, "The society in which the guarantee of rights is not assured, and where there is no separation of powers, cannot be deemed to have a constitution at all."

*Eighteenth Century.* Until 1791 the dominant note of these fundamental political institutions was individual resistance to oppression, and the guarantee of individual rights. This tendency continues for a while. But already in 1793, the community and the *duties* of man make their quiet appearance, not indeed to cry down that obdurate expression of individual claims, but as a friendly visitor, of whom much may yet be heard. "Liberty," says the French constitution of 1793, "is the power belonging to man to do everything which does not encroach upon the rights of others: its principle is justice, its safeguard, the law; its moral limit is in this maxim: *Do not do unto others what you would not have them do to you.*" The right of property is expressed in a confident form: it is the right to "enjoy and to dispose of his goods, his income, the profits of his labor and industry at his complete discretion (*a son gré*)." And freedom to labor comes as a reaction from the police state. "No kind of work, crop, or commerce may be forbidden to the industry of citizens." There was added the article that poor relief was a sacred debt, that society owed assistance to poor citizens, either by providing work or by giving relief to those who were unable to

work. Public education was declared to be a social necessity and the state sworn to provide it.

Again came the harsh voice of duty into this fair land of fundamental rights: "There is oppression against the body social when one of its members is oppressed; there is oppression against every member when the social body is oppressed."

By 1795 the fundamental propositions included not only rights but duties; they were embodied in the Declaration of Rights and Duties of Men and Citizens.<sup>57</sup> All the rights we have so far read were reproduced, but attached to them was a little charter of nine articles entitled "Duties." They are, in fact, the indispensable basis of the rights if these are to be more than mere paper promises, but they fall with a leaden weight after the optimism of the earlier years.

*Germany, 1848.* Some extension of the scope of fundamental institutions was made in the abortive German constitution of Frankfurt, 1849. In the German states, individual freedom had been particularly repressed by the operation of the Metternichian system since 1815, and therefore the instinctive reaction of the Assembly and of various groups of liberals and republicans before the Assembly met was to declare those things which were more fundamental even than organs for the exercise of sovereignty. They were interested, first, in the substance of state activity, its direction and purpose, and only secondarily in the division of power between monarch and people, parliament and bureaucracy, states and federation; and so they spent the first six months—almost the only six months of their authority—in discussing and promulgating the Fundamental Rights of the German People.<sup>58</sup> The fact that there were 107

<sup>57</sup> Constitution of September 23, 1795.

<sup>58</sup> *Die Grundrechte des Deutschen Volkes* ("Grundrechte" being used for the first in this Assembly). The argument in the Assembly is naturally to be found without bias only in the *Stenographische Bericht über die Verhandlungen der deutschen Konstituierenden Nationalversammlung zu Frankfurt a. M.*, by F. Wigand, 9 vols. (Frankfort, 1849).

<sup>56</sup> The following are paraphrases from the Declaration of the Rights of Men and Citizens of 1789-91.

## CONSTITUTIONS: SUPREMACY AND CONTENTS

professors and teachers and 182 lawyers in an assembly of 541 doubtlessly determined the pedantic attention to these fundamental rights.<sup>59</sup>

Individual freedom and the need for civic order were very consciously balanced. The chief formulas were: free movement and equal civic rights over the whole territory of the *Reich*; the abolition of capital punishment; the inviolability of private dwellings; secrecy of post; freedom of opinion by word, writing, print, and pictorial representation; security of freedom of the press from censorship and denial of postal facilities; and trial by jury for press offences. Religious freedom was carefully defined; free education was publicly guaranteed, and the position of the churches thereto regulated; science and teaching were declared free; the rights of petition (for corporations as well as for individuals), of peaceable assembly without special permission, and of association, were guaranteed; intellectual property was to be protected; landed property was subjected to a most complicated set of clauses, to free land for use from ancient prohibition and obligations, and to rid small proprietorship of the feudal obligations. More freedom was to be given to local authorities, and administrative law was set about with proper safeguards by the appropriate differentiation of justice and administration.

The new things that entered into this constitution can be classed under four heads: those issuing (1) from the onset of capitalism, (2) from government by public opinion, (3) from the antibureaucratic trend of thought, and (4) from the growth of rationalism. It is interesting to see the constitution slowly catching up with developing civilization. Manufactures needed factory workers, and for these, combination was the first condition of freedom. The people and the press were becoming a power; they needed freedom to attain their fullest development. The antibureaucratic creed was based on local self-government, and as the powers of the

state grew, this was considered more and more important both for liberty and efficiency; and justice was considered in jeopardy while in the hands of departments whose professional bias and interest it was to judge in their own favor.<sup>60</sup> Finally, rationalism and the notion of progress made for the separation of church and state, religious tolerance, and public education.

The Assembly and its constitution were swept away; but some clauses were included in the ordinary laws of some of the German states, and many were put into the constitution of 1919. The episode is interesting in this context only for the instinctive recognition of the necessity of fundamental principles and for the evidence of responsiveness to the social life of the nineteenth century.

*The Weimar Constitution.* The next stage in the development of the substance of written constitutions took place after World War I, when old hierarchies fell and national entities embodied in alien states were withdrawn therefrom and given an independent state life. In the new constitutions could be seen the unmistakable impress of the Industrial Revolution and the political institutions which have issued from it, hitherto hardly noticeable, even if at all inscribed in the documents. The German constitution of 1919 was the fullest: it had the most complicated social life to serve.

(1) First, then, the organizatory parts of the constitution. The states which make up the federation were empowered, and in some cases obliged, to amalgamate in order the better to serve the economic and cultural welfare of the whole nation.

In Parliamentary organization the (three-generations-old) movement for the representation of minorities bore its fruit in the establishment of proportional representation for all elections, federal, state and local. A particular obstinacy is revealed in the declaration that members of the Parliament are representatives of

<sup>59</sup> Cf. L. Rosenbaum, *Beruf und Herkunft der Abgeordneten, 1847-1919* (Berlin, 1923), p. 51 ff.

<sup>60</sup> Upon this see further chapters 6 and 7 on the separation of powers, and chapter 36 legal remedies against public administration and administrative law.

## SUBSTANCE: HISTORICAL DEVELOPMENT

the "whole people," and bound by their consciences and not by instructions. (This pronouncement first appeared in the earliest French constitution and has been slavishly imitated by most European constitutions since.)

Experience in other countries having shown that between Parliamentary sessions, the day-by-day administrative work is unwatched, a Parliamentary supervisory committee was established to sit between sessions to act as administrative invigilator.

Then, foreign affairs were controllable more closely than elsewhere by Parliamentary committees; cabinet government was regulated to an unusually fine degree; arrangements were made for a state of emergency when internal or external dangers threatened; direct government was introduced as a corrective of Parliamentary omnipotence; the budget system was elaborately organized; and exceptional attention was paid to the maintenance and administration of railroads and canals (subjects of importance to all modern countries, but of special importance to Germany owing to her position as the railroad station and seaboard of central and northwestern Europe).

A branch of the constitution which was elaborated with a detail and care seldom observed in other constitutions was the civil service, and this for two reasons peculiar to Germany: to preserve the capacity of the service, the best legacy of centuries of absolutism; and to make the service democratically sensitive and responsive. Incidentally, there was in article 130<sup>61</sup> one of the very rare allusions to political parties, which in fact, though not in law, constitute the central engines of modern politics.

(2) The second part of the constitution, on the fundamental rights and fundamental duties of Germans was of exceedingly wide range, and was divided into five sections: I. The Individual; II. Social Life; III. Religion and Religious Associations; IV. Education and Schools; and V. Eco-

nomic Life. These were totally contrary to Hitler's *Reich*, and in order to establish the *Reich* it was necessary to destroy every one of the rights.

The principal novelties of Section I were the equalization of the status of women with that of men, the guarantees for cultural minorities, the extension of secrecy of the mail to the telegraph and telephone, and the uncompromising proclamation of freedom of opinion.

In the light of the later nazi régime, Section II is of special importance, dealing as it does with the whole matter of family life. The constitution made family health and the social welfare of the family a supreme obligation and a primary care of the state, but the nazis perverted this to their nefarious purpose. Of the same intense interest was Section III of the constitution, dealing with religious associations and guaranteeing freedom of worship.

Section IV was an educational code. It began with a declaration which was very dear to German teachers since it had so rarely been practiced: "Art, science, and their teachings are free. The State guarantees their protection and participates in their promotion." This was first declared in the Frankfurt Assembly's abortive declaration of 1849—very naturally, since its most eminent members were professors, lawyers, and journalists—when Treitschke spoke in its favor. Apart from its accidental relationship to German conditions, the aspiration is significant as an expression of confidence in the modern deities: invention and science.

The general aim of the educational system is peculiarly germane to a discussion of the modern state. When so many hostages are given to the individual and to religious and economic associations, some provision must be made for a consensus. It is not here maintained that these articles can achieve this, nor that the reverse may be the result: but the necessity is patent. Article 148 says:

All schools shall try to achieve moral training, civic conscience, personal and professional competence, in the spirit of the German people and international friendship. In educa-

<sup>61</sup> "Officials are servants of the community, and not of a party."

## CONSTITUTIONS: SUPREMACY AND CONTENTS

tion in State schools care must be taken not to wound the sensitiveness of the unorthodox. The curriculum must include instruction in civics and economic organization. Every student receives a copy of the constitution at the end of his school years.

Finally, Section V, on economic life, went further than any other constitution and was an interesting reflection of those fundamental aspects of modern economic life analyzed in previous chapters. The keynote was set by the first article in the section, 151, which ran:

The ordering of economic life must correspond to principles of justice with the aim of securing an existence worthy of human beings. Within these limits the economic freedom of the individual is to be secured. Legal compulsion is only permissible for the realization of threatened rights or in the service of the paramount necessities of the common good. The freedom of commerce and trade is to be guaranteed in the measure laid down by federal laws.

The tone was maintained all through this section, and the subsequent articles were instrumental to the first. There was in these articles more than a reaction from *laissez faire*: there was also a conscious acceptance of positive principles of collectivism, in some cases attaining to the point of nationalization of industry.

Throughout this whole program ran suggestions of the limited nature of private rights, of the conditional and limited right of property. All mineral resources and all economically useful natural forces were placed under public vigilance, and private royalty rights were to be transferred to the state. A uniform labor code for the federation was to be created by law, its essential principle being that labor power was especially protected by the state and by a complete system of social security.

Then followed the inevitable consequence, whether written or unwritten: "that every German has the moral duty to engage his mental and bodily strength so as to promote the welfare of the community."

The final article in Section V on economic life, article 165, created a scheme of

representative bodies for the government of industry and agriculture, equally including employees and employers. All this was to find its summit in a great central body—the Economic Council—representative of workers, employers, consumers, and others.

*France and the Soviet Union and an International Bill of Rights.* We have already reproduced the elaborate bill of rights in the French Constitutions of 1946 and 1958 (p. 80) and that of the Soviet Constitution of 1936 (p. 79). The novelty of the latter is its apparent alliance of individual rights with submission to an economic system wholly authoritarian, resting on the almost complete community of the means of production and distribution.

It is of special interest to observe that apart from supporting the well-being of the individuals who compose the state, the rights and distribution of democratic authority, guaranteed in democratic constitutions, have an important value for international peace. For civil rights tend to break down the absolute solidarity of the nation; they make concrete the right to listen to the claims made by other nations and cultures; they allow of easy communication of ideas and moral feeling throughout the nation and across national boundaries; and by fortifying the right to associate voluntarily, to express dissent, and to press objections through the firm protections of procedure, they slow down the potentially precipitate decision of a government acting in the name of the nation as a unit.<sup>62</sup>

### THE SIGNIFICANCE OF CONSTITUTIONS

We have observed the development of the substance of the constitution from the time when there was no substance except the vague notion of royal absolutism to the point where it mirrors, if with some distortions and omissions, the multifarious convictions, habits, and social institutions of a very complicated civilization. Further emphasis of some aspects of this development is necessary.

<sup>62</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), Chap. XI.

## THE SIGNIFICANCE OF CONSTITUTIONS

*First*, what is fundamental is necessarily the result of evolving civilization. No fundamentals are capable of standing proof against time, except entities so vague as to be meaningless. If the principles which have been indicated were reduced by the abstraction of their temporary and local forms, we should arrive at the most primitive human instinct, such as the infant's hold upon its nurse for fear of falling, and the prerational resistance to physical constraint. Men will always search for the guarantee of the fundamentals in their own civilization, since these have insensibly taken on the urgent character of primary reactions. Stability and change, settlement and flux must then be expected, and men will constantly hover between the extremes and struggle for their fixture in constitutions. The lesson of it all is that there is nothing so fundamental that it may not change, and nothing so fundamental that it ought not to change; nor anything so fugitive that it may not be one day fixed and worshipped as an absolute dispensation.

*Second*, society does not wait until a constitution is written. In proportion as matters are urgent, it establishes fundamentals in the intervals between constitutions (when there is a series), by laws or by conventions; and what the written constitution does not include is provided outside its pages. The institutions created without constitutional benediction may be so embedded in the vital desires of men as to be able to persist as fundamentals, even when the paper fundamentals are swept away or even where these do not exist. In the United States the president has come to be elected directly by the people, and the party system is fundamental to democratic government; the former was virtually forbidden by the constitution, the latter is ignored by constitutions but nevertheless is everywhere the real center of government. British trade-union rights are not derived from any constitution, nor are freedom of speech, writing, and assembly; yet they are so fundamental that any attempts substantially to limit them meet with the strongest resistance. Constitutions do not

include all that is fundamental, while many of the declared fundamentals are silently ignored.

*Last*, are constitutions fundamental in the sense of being perfect traps? Are they really indestructible and inalienable? No constitution has shown that "fundamental" means this. They are destructible, alienable, and escapable, and the people, the parties, the parliaments, and the courts of justice have destroyed them, alienated them, and escaped them. They have appeared to be all these and more to their framers, because of mankind's desire for order, the impossibility of living in constant flux, the belief that it is possible to express the government of society in a few wise pages covered with pregnant words, and the recurrent human confusion of that which is characteristic of their generations and the past with that which can properly be for all time.

Constitutions do acquire a special stability and reverence, but the latter passes with time and the former depends entirely upon the factors forming civilization (now one aspect of man's nature, now another) being awakened by some fresh property of the spirit or nature. Constitutions remain unchanged *first* in proportion as the basic elements in human nature are socially acknowledged as good: *second*, in proportion to the completeness with which these socially valid elements are embodied in the constitution, and *third* in proportion to the generality with which these elements are described, since if they are described in detail, amendments are often required.

Many of the clauses are so generally worded as to have no effect until they are interpreted by the competent authorities or until laws are passed to give them more precise meanings, and it has happened that the interpreters have even perverted the intentions of the fathers—thus, article 48 of the Weimar constitution.

In one sense, constitutions are eighteenth-century phenomena. When constitutions were established after the revolutions in America, France, and then (within a few decades) in all the European coun-

## CONSTITUTIONS: SUPREMACY AND CONTENTS

tries that followed France, they were set up in countries not having great bodies of statutes made by popular legislatures, such as have since been enacted. They were written replacements, in a revolutionary sense, of custom or royal ordinances. Today, nations are governed by vast codes of statutes regulating the substance and procedure of rights and obliga-

tions. They are more detailed, more intensive, more concrete than constitutions. Yet it is the principles that regulate their making, their interpretation, and their application. Hence, we may once again underline both the importance and the difficulty of creating constitutions by the democratic process, since their fundamentals rule all of our life.

## *Federalism: The Central-Local Territorial Fabric of the State*

THE state necessarily occupies a territory. The problem at once arises how best to manage the area—whether to govern it undividedly from a single center or to disintegrate it and govern by a concert of central and local authorities; whether, also, the area of undivided rule should at any time be extended or diminished. These problems are not confined to the state; they arise in industrial and commercial concerns, in trade unions, in churches.

The problems have usually been discussed under the time-honored divisions of federalism and local government, but these are only subdivisions of the main problem of the territorial composition of the state. No issues different in kind can be raised in regard to the one or the other and, in fact, the same issues are traceable in and are determinant of such questions as regionalism, devolution (i.e., the transfer of powers from the center to the localities in a unitary state like Great Britain),<sup>1</sup> and international government. Here is a brood of difficulties and devices of state which are all of the same strain; they are differentiated by size, urgency, time, and place. Here we confine ourselves to the problem of federalism, which is at once a study in the efficiency of government, in the component factors of nationality, in the distribution of sovereign power, and above all, in the origin of

states. Interesting problems in world-federation analogies are suggested.

When the student contemplates a form of government such as the federal state, exhibiting a number of practical imperfections, his reforming zeal is aroused, yet he is faced with the fact of the historic realities out of which the federal state arose. Therefore, if he is critical of the federal state, which he may regard as a not yet perfected state, he may still be faced with the fact that his hands are tied. Yet, criticism began the federal state, and criticism may perfect it.

What we wish to discover is (1) the amalgam of motives and environmental factors which cause large states to be composed out of small ones, and (2) the organization adopted and its reasons.

The prevailing distinction between states is that between the unitary and the federal state.<sup>2</sup> In this distinction the

<sup>1</sup> Cf. for example, W. H. Chiao, *Devolution in Great Britain* (New York, 1926).

unitary state is one in which all authority and power are lodged in a single center, whose will and agents are legally omnipotent over the whole area, whereas a federal state is one in which part of the authority and power is vested in the local areas while another part is vested in a central institution deliberately constituted by an association of the previously independent local areas. Neither has the right to take away power and authority belonging to the other.

Once a general name is given to a number of particular things in order to distinguish them from others, these things acquire a reputation for a discreteness they do not in fact possess. For all unitary states relax the severity of the central government, while in some forms of federalism there is more centralization than the name originally implied. There is, in short, in actual states and in their constitutions, a wide range of systems, never ending in a completely unitary or Federal one, but ascending towards the one or other extreme type.<sup>3</sup>

Federalism is of extreme modernity. Its theory and practice in the modern state are not older than the American federation, which came into existence in 1787. The federal idea—that is, the plan of government of a number of contiguous territories in association and neither in separation nor in one compound—was ancient and had been practiced in Greece.<sup>4</sup> Although the Fathers of the American Constitution referred to Greek theories and experience, the Constitutional Assembly well knew that it was building for the first time. The next examples of federalism were Switzerland in 1802<sup>5</sup> and

Canada in 1837 and 1867<sup>6</sup>; Germany in 1867 and 1871; the Commonwealth of Australia in 1902,<sup>7</sup> and the Union of South Africa in 1905.<sup>8</sup> Much scholarship has been expended on the history of the establishment of these federations. We therefore abstract the quintessential motives and events, with the simple warning that they were not so well-ordered or always avowed as they appear to be in an organized summary. Our examples are Australia, Canada, the United States, and Germany, more attention being given to the two latter as we are more concerned with the operation of their institutions.

#### FEDERALISM IN AUSTRALIA AND CANADA

*Australia.* The Australian process of federation was vastly different from the American and German. By 1863, when England had completed the territorial reorganization of the six Australian colonies, their seaport cities were in keen rivalry with one another. Since the local legislatures sat in these key cities, an especially virulent brand of particularism resulted. Each of the colonies was divided from the others by tariffs and frequently by railroads of different gauge. However,

Victoria and South Australia, on the one hand, and New South Wales, on the other, had common interests.

Conferences on particular problems were held, but all proposals for federation were badly received. In addition to the economic rivalry, the small states were jealous of the large, and the poorer states feared increased taxes. Yet powerful forces encouraged federation. The need for defense was probably the strongest. France was attempting to expand in New Caledonia; a British war with Russia was possible; Bismarck was claiming part of New Guinea. Fearing a German neighbor, the eastern colonies were quite willing to contribute to the administrative expenses of British New Guinea. Britain refused to continue protection of the Australian colonies without cooperation from the colonies themselves. With the appearance of an imperial report discussing the exposed position of Australia in the event of a war and her inadequate defenses, alarm became widespread, and as a result of agitation led by the New South Wales premier, a general convention was held in 1891.

Economic issues also were involved. Some of the colonies were underdeveloped, because the expense of maintaining individual railroad systems made it difficult to bring new land under cultivation. Customs barriers discouraged commerce between the colonies. The economic issues were brought to a head in the panic of 1891 and 1892.

The general convention of 1891 produced a series of definite proposals: internal free trade, central control of fiscal and defense policy, and administration by a single federal authority. The urbanized states balked, however, and only after considerable crusading by the popular leagues to promote federalism in general, or for specific purposes, was another convention held—in 1897. Nor was the resulting constitutional draft accepted without amendment. But a second draft submitted to the legislatures obtained acceptance by all the states. Western Australia agreed only because it had been petitioned by its gold-field region for status as a sepa-

rate state. Considerably more freedom had been obtained in relations with England by a collaborative policy.

The Commonwealth came into existence on January 1, 1901. The constitution enumerated substantial powers for the federal government, the residue remaining in the hands of the states. The Senate was federal; the House of Representatives popular and in control of the purse. The main taxation powers were given to the federal government, with three quarters of the revenues to be returned to the states during the first ten years.

As the Labour party had been long in office in the central government, it became increasingly an advocate of unitary power, while the Liberals, in power in the state governments, were strongly opposed to the relinquishment of state functions. The need for more centralization, as in the United States, is very serious even today, as the record of attempts at constitutional amendment demonstrates (see p. 132).

*Canada.* Canadian federation was produced by a different combination of factors. After the Durham Report of 1839, Lower and Upper Canada, the present-day Quebec and Ontario, were combined in United Canada. In Lower Canada, the English traders and officials and the conservative French Catholics had been in constant and vehement disagreement. The Ontario region, however, was beset by conflict between the independent frontier farmers and wealthy officialdom.

The direct cause of the federation movement was the persistent racial conflict between the British and French "national" groups. The Durham Report had lamented "two nations warring within the bosom of a single state." After 1858 legislature and administration were deadlocked. Each bloc sought special legislation for itself, and although the British majority was growing, its representation remained static. The French had retained not only their language and their religion but also their laws and customs, and they constituted social islands wherever they settled.

Economic problems also plagued a divided Canada. A reciprocal treaty with

## FEDERALISM: CENTRAL-LOCAL TERRITORIAL FABRIC OF STATE

the United States, dropped in 1865, had been of great importance to the trade of eastern Canada. With the advent of English free trade, the Canadians lost their favored position in British markets. Union might make their bargaining strength far more effective.

Nor was defense unimportant. An undetermined boundary, together with an American policy of "manifest destiny,"<sup>9</sup> put much land at stake. English influence was particularly active on this score.

Finally, in 1864, a coalition government took office, pledging unification. As a result of a simultaneous move among the maritime states, the Quebec Conference of 1864 was convened. United Canada had twelve representatives; New Brunswick and Prince Edward Islands had seven each; Nova Scotia sent five delegates; and Newfoundland, two. They were successful in producing a plan containing seventy-two resolutions. However, the propositions were rejected by popular election in Newfoundland and New Brunswick and by the legislature in Prince Edward Island; Nova Scotia strongly opposed them. Only United Canada approved.

In spite of the hostile reception a conference was called by the British government in London; it was attended by representatives from Nova Scotia, New Brunswick, and United Canada. The outcome was the passage of the British North America Act in 1867, containing sixty-nine sections, representing only slight modifications of the original draft. It was never presented for acceptance by the colonies, and became the law without it.

Accordingly, the Dominion of Canada was established in 1867. United Canada (redivided into Quebec and Ontario), Nova Scotia, and New Brunswick were the component provinces. By royal order, other provinces were to be admitted in the future; and Manitoba (1870), British Columbia (1871), Prince Edward Island (1873), and Saskatchewan and Alberta (1905) were subsequently added. Some notion of the readjustment between Domin-

ion and provincial governments has already been given.

### THE RISE OF FEDERALISM IN THE UNITED STATES

*The Colonial Period.* Before 1789, the thirteen American colonies led an existence largely independent of each other; the colonies at the extremities of the Atlantic seaboard were months, and those between, weeks and days, away from each other. In 1776, it took about a week in good weather (not four hours as now) to travel from Boston to New York City.

The colonies were differentiated by their climate, by their commercial and industrial interests, and by religion, and these brought about secondary differences of culture.<sup>10</sup> But there was a substantial uniformity of cultural outlook and political tradition when compared with, say, the German states. The earliest tie was defense—against the Indians and European claimants to the "hinterland" of North America."<sup>11</sup>

Even in the late seventeenth century, William Penn wished to secure a common council to adjust differences and complaints among the colonies, as in commercial injuries and the mutual rendition of debtors and culprits who fled from justice, and to support the union and safety against common enemies. In Ben-

<sup>10</sup> C. and M. Beard, *The Rise of American Civilization* (New York, 1928); V. Parrington, *Main Currents in American Thought* (New York, 1929), Vol. I, "The Colonial Mind, 1620-1800."

<sup>11</sup> For example, as early as 1643 the New England confederacy was formed. Here was a solid block of colonies not overfar from each other and very similar in political organization and religious conviction. The union was "a firm and perpetual league of friendship and amity, for offence and defence, mutual advice and succour upon all just occasions both for preserving and propagating the truths of the Gospel and for mutual safety and welfare." (William Macdonald, *Source Book of American History*, New York, 1926, p. 45.) Cf. John Fiske, *Beginnings of New England* (Boston, 1889), Chap. IV; J. Scott Brown, *The United States: A Study in International Organization* (Oxford, 1920); A. H. Smythe, *The Writings of Benjamin Franklin* (Philadelphia, 1905-07) Vol. III, p. 210 ff.

<sup>9</sup> Cf. A. K. Weinberg, *Manifest Destiny* (Johns Hopkins, 1935).

jamin Franklin's scheme of the 1750's a further motive was the settlement of lands acquired from the Indians. The vast hinterland, full of disturbing penalties, was a factor of unique urgency in America as a problem whose menace demanded union for its peaceful solution.

The imperial theory, which assigned to the American colonies the position of plantations for the benefit of the mother country, was not violently challenged until it began to be applied with real energy by Grenville and Townshend.<sup>12</sup> Defensive resentment began to produce unity: "There ought to be no New England men, no New Yorkers known on the Continent, but all of us Americans."<sup>13</sup> England under Lord North persisted; war followed. The Second Continental Congress met in 1775 to conduct the struggle. The Declaration of Independence was promulgated.<sup>14</sup> The colonies drew together in common consciousness, and for defense of a righteous cause. They were now very self-conscious states and were not anxious to relinquish their government into the hands of a new central authority. The Congress, therefore, was lamentably weak.

*Confederacy and Weakness.* The Articles of Confederation were not ready until 1777 and were not ratified by all the states until 1781. Only extreme danger had brought them together, and the authors of the Articles apologized for the rickets of

their progeny.<sup>15</sup> The Confederation was announced to be a "firm league of friendship." It became a league of disgruntled independents. Sovereignty (legal supremacy) remained with the states; most illuminating was the fact that amendment of the Articles needed a unanimous vote. The powers conferred on Congress were few and strictly limited. Congress did not possess direct executive power over individuals everywhere to carry out its resolutions, but was obliged to rely upon the states for action. Most vital of all, Congress had no power to levy taxes or to regulate commerce.

The war ended, the remnants of the Congress silently dozed in an unheeded corner. But a few people, like Alexander Hamilton or Benjamin Rush, experienced the feeling that all America should be one—a feeling that was nourished on its own intrinsic merits and not on expectations of utility. "We are now a new nation," said Rush.<sup>16</sup> ". . . The more a man aims at serving America, the more he serves his colony. We have been too free with the word—independence; we are dependent on each other, not totally independent states. . . . When I entered that door, I considered myself a citizen of America." So also Hamilton.<sup>17</sup>

The weakness of the Confederation under the Articles and the failure of the attempt to govern by petitions, were invaluable in motivating the more effective scheme. Shay's Rebellion and virtual civil war over boundaries, the needs of organization in the western areas leading to the short-lived state of Franklin, and the Northwest Ordinance all argued convincingly that only a new federal system would supply a proper remedy.

<sup>16</sup> R. L. Schuyler, *The Constitution of the United States* (New York, 1923), p. 38.

<sup>17</sup> Cf. *The Federalist*, Nos. XV-XXII; and earlier in *The Continentalist*. M. Curti, *op. cit.*, gives many examples of such "American" sentiment. Above all cf. Weinberg, *op. cit.*

The actual existence of a confederation had already produced a literature of federalism, criticizing the old articles for *their weakness and advocating a stronger union*. The most brilliant and compelling series of essays, called *The Continentalist*, came from the pen of Hamilton in 1781-82, but there were others also. Exceptional men, like Hamilton, are always essential ingredients in the forging of states.

A few such men, foremost among them James Madison and George Washington, taking advantage of the unrest and distress and the growing expectancy of a "more perfect union," met in 1786 to consider commercial conditions and report an amendment to the Articles of Confederation.<sup>18</sup> The report read that: <sup>19</sup>

in the course of their reflections on the subject, they have been induced to think that the power of regulating trade is of such comprehensive extent, and will enter so far into the general system of the Federal Government, that to give it efficacy, and to obviate questions and doubts concerning its precise nature and limit, may require a correspondent adjustment of other parts of the federal system.

The invitation to a convention at Philadelphia in May, 1787, was now to consider not "commerce" but "the situation" of the American states. The old Congress, which was still the symbol of defensive fraternity and national independence, also recommended a convention "to render the federal constitution adequate to the exigencies of government, and the preservation of the Union."

*The Work of the Constitutional Convention.* We cannot analyze here the convention or the negotiations which produced the clauses of the new constitution. But it is of supreme importance that the finest minds and characters were then in American politics.

Little dispute was raised by the powers to be granted to the federal authority.

<sup>18</sup> Cf. Proposition of the General Assembly of Virginia, January 21, 1786 (reprinted in Elliot, *op. cit.*, Vol. I, pp. 115-16); and cf. Schuyler, *op. cit.*, p. 68.

<sup>19</sup> *Documentary History of the Constitution, op. cit.*, (U.S. Government Printing Office, 1894), Vol. I, pp. 1-8.

Their nature explains their ready adoption. Such powers as those over foreign and interstate commerce and commerce with the Indian tribes, over naturalization and bankruptcy; over currency and standards of weights and measures; over postal administration; over copyright; over crimes on the high seas and offenses against international law; over foreign affairs in general; over the declaration of war and maintenance of an army and navy—all such powers yield their greatest common utility with the least common effort when they are concerted over a large area. What that area shall be is determinable at any time by the existing state of invention, the organizing ability of mankind, and the strength of popular preferences for economic welfare and local independence. Uniformity in commerce brings the well-known economy of free trade; in currency it saves delay and the chaffering of exchange; in postal services it increases speed; in weights and measures it aids rapidity and certainty of calculation; in bankruptcy it enhances a sense of security; in copyright it facilitates protection, detective operations, and retribution. A single administration of diplomatic negotiations and the armed forces eliminates the waste involved in a number of separate armed forces, reduces the chances of domestic conflict, and adds weight and prestige in the world's balance of power.

These were the main utilitarian considerations that brought about the new union, as they have been of every federation since, and we shall later see that it was on the path of such utilities that the unitary element in federation afterward pursued its rapid way.

But just as decidedly, other powers were not transferred to the United States and remained with the states; indeed, the whole field of activity outside the transferred powers was left within their sphere.

The subjects of acute controversy were: state representation in the federal legislature; federal power to act directly upon the citizens instead of through the states as before; and the power to tax. The last two questions revolved almost entirely around the first. Supposing the power to

## THE RISE OF FEDERALISM IN GERMANY: TO 1848

tax were granted, or supposing the central authority were given the power of direct jurisdiction. What would be the position of the states in that policy? Would the power to tax be limited by their counsel as separate entities with a guaranteed life? Would they be enabled to withstand the direct power of the central authority, which was to be so crushingly enhanced? No final decisions, therefore, were taken about other questions till the supreme issue—the place of the states in the union—had been settled. The small states were afraid for their identity and preferred disruption of the Union to attenuation of their own sovereignty. (Since the example of American federation is frequently used to argue for world federation, it is essential to emphasize the factor especially favoring union: that in 1790, 82 per cent of the population was English, 7 per cent Scotch, 1.2 per cent Irish.)

"The states and the advocates for them were intoxicated by the idea of their sovereignty." A compromise was reached, and its character is considered later (Chap. 18 below).

### THE RISE OF FEDERALISM IN GERMANY: TO 1848

IN the rise of the German federation, second only to the United States in federal importance, the problems to be faced were vastly different. Geography, economics, local culture, and political organization and traditions profoundly distinguished Germany from the United States and, more imperious still, cut off one German state from another. Evolution, therefore, one of stress and violence, led to solutions expressly rejected in the American system. The differences serve the better to show the basic nature of federalism.

Foreign oppression was the earliest stimulus to the formation of a federal union of the Germanic states; and its consummation came after war against France in 1871 and 1919.

*Particularism.* Before Napoleon and the French overran these territories, there were 1,800 independent political jurisdic-

tions, including Prussia and Austria. Kings, spiritual and secular princes, imperial towns, imperial townships, dukes, abbots, divided up among them some twenty million subjects.<sup>20</sup> Within the loose tie of the Holy Roman Empire they were jealous and separatist. Critics of the small states (like Lessing, Schiller, Herder, Humboldt, Kant,<sup>21</sup>) sought the form of a large nation but world citizenship, *Weltbürgertum*. The small estate owners in the country, the peasants, the urban citizens, and handicraftsmen—the masses in short—lived in and for their immediate surroundings; the civil servants lived for their royal masters.<sup>22</sup>

Nor were the facts of the German political system propitious for the birth of a national feeling. For at the core of that system was state "particularism," an obstinate force which neither civil nor foreign war, nor yet persistent governmental debility have yet cast out (even in spite of the Nazi attempt brutally to do so).<sup>23</sup> Every frontier was an economic barrier; systems of coinage were different;<sup>24</sup> each state had its own variety of political absolutism. Particularism has grown out of the gradual assumption of power over a territory by prince or church, as the result of gifts, thefts, marriage portions, and conquests. It was not a popular emanation, or entirely the product of race or of climate and different modes of livelihood. All these were in parts of particular-

<sup>20</sup> Cf. James Bryce, *The Holy Roman Empire*, 13th edition (London, 1895) for the history of the political association of the German territories up to this time; and for an analysis of the situation at the beginning of the century, see Erich Brandenburg, *Die Reichsgründung* (Leipzig, 1922).

<sup>21</sup> For a good account of these thinkers in this particular respect, see Friedrich Meinecke, *Weltbürgertum und Nationalstaat* (München, 1919), Part I.

<sup>22</sup> Cf. Brandenburg, *op. cit.*, Vol. I, p. 55.

<sup>23</sup> A very interesting and acute account of the rise of German nationality is to be found in the Royal Institute of International Affairs, *Study of Nationalism* (London, 1943); see also A. J. P. Taylor, *The Course of German History since 1815* (London, 1946).

ism, but it was more. It was the deliberately established separatism of princes anxious for the security of their own acquisitions and the maintenance of the power of their dynasties. The princes had won their way free of the imperial majesty, owing to the accident that the imperial authority was exercised by no one line for more than a century. Established in the states, they reiterated that their own race, religion, interests, culture were different from and superior to those existent elsewhere. The good life was made to seem founded upon the political independence of the dynasty—which, alone, in those days, was the state.

*The Growth of Nationality.* Then the French Revolution (in which the French *pays* was transformed into the French for *patrie*<sup>25</sup>) excited Germany,<sup>26</sup> and Napoleon swept away the Holy Roman Empire, reduced the independent principalities from eighteen hundred to thirty-three, and showed Germany how willing every dynasty was to accept his gifts of land at the expense of national independence and unity. A genuine national feeling was generated, not only among statesmen, poets, and philosophers but also among the people. All classes were affected in blood and property, in the War of Emancipation, and all shared the common sufferings and final triumph.<sup>27</sup> Fichte's *Reden an die Deutsche Nation* expressed the spirit of the time.

Men and women in the different states were permeated by a wider "consciousness of kind," which is the essence of nation-

ality. Indeed, the social values and rewards, the esteem, the standards of right and wrong, the promise of immortality, which had hitherto been promised to men in the restricted area of the states, were now more brilliant and solid in the more extensive society! Vaguely, but effectively, their minds and feelings reached out to one another, to form the spiritual integument of a new fellowship. Old associations were revived with the inspiration of fresh meaning. Language and learning and religion were felt to be bonds that ought to produce a more general community. The very past—full of intellectual and artistic creativeness and of brave and golden events in men's physical struggles—urged men to remember that they had been of beneficial, if unconscious and unintended, service to each other, and that, though they were now members of separate political groups, their separateness must not violate certain understandings of associated existence, and that Germany as a whole represented a standard of political good to which statesmen and people of all states must expect, of themselves and each other, to pay the homage of subordination. Their inward and ultimate reasons for subordination did not matter; each must expect from and render to the other the regard due to common citizenship.<sup>28</sup> But even when this spirit burned its fiercest, the monarchs returned to their particularism, lest any should obtain an advantage over the rest, and lest national feeling should destroy the pillars of their autocracy.

Nor were the unitary plans clear enough to unite a sufficient body of supporters. There was, as in the United States, substantial agreement about the powers it was desirable for a central authority to undertake;<sup>29</sup> but the question of conceding political authority to a unifying element was not so easily answered.

*Prussia versus Austria—and the New Germany.* The analysis of unitary plans

<sup>25</sup> Cf. also J. M. Thompson, *The French Revolution*, Chaps. 6 and 7 (Oxford, 1944).

<sup>26</sup> Cf. S. P. Gooch, *Germany and the French Revolution* (London, 1920).

<sup>27</sup> As Goethe said years afterwards (*Gesprache mit Eckerman*, March 14, 1830): "We have no town, we have not even a countryside of which we can say decidedly: This is Germany? Ask in Vienna and people will say, this is Austria; ask in Berlin and people will say, this is Prussia! Over sixteen years ago, when we finally wanted to get rid of the French, Germany was everywhere; a political poet could have been universally influential. But he was not necessary. The general sentiment of shame seized the nation daemonically; the inspiring fire which a poet might have lighted, burned everywhere of its own self."

<sup>28</sup> Cf. Fichte, *Reden*, trans. in R. F. Jones and S. H. Turnbull, *Addresses to the German Nation* (London, 1922).

<sup>29</sup> Cf. M. Lehmann, *Freiherr von Stein* (Leipzig, 1903), Vol. III, *passim*.

brought to light the second difficulty in German federal development: the existence, side by side, of Prussia and Austria, jealous competitors and the feared and hated superiors of the smaller states. These large and long-standing rivals were immensely greater in size and resources than other states, and recognized each other as rival claimants for Germanic power. Could the German problem possibly be solved by a division of the territories into two: a South German confederation with Austria at its head and the North German confederation with Prussia at its head? This was to court war between the federations. Could they work together? Austria could not tolerate equality. Could there be a balance, even an association, between three systems: a triad of Austria, Prussia, and a federation of smaller states? This was merely to increase the prospects of war, for the intermediate federation could not but be the diplomatic battleground of the two senior states, maneuvering to press loyalty from the smaller states. There was only one solution possible: the decisive exit of either Austria or Prussia from the field. For while both remained, the smaller states could and did play one off against the other, thus enjoying defense against their dreaded neighbors without having to make the sacrifice of independence implied in a federal arrangement. When one great defender, Austria, broke down, the mutual fears of the small states and their general fear of Prussia caused cohesion around Prussia.<sup>80</sup>

The advantages swayed more and more to the Prussian side. Prussia was almost entirely German in composition, whereas Austria was less than half so; Prussia's defensive plans were almost identical with those of the rest of Germany, that is, against Russia and France; her religion was Protestant and tolerant, whereas Austria's was Catholic; her absolutism was enlightened; and though her local and individual liberties could not be com-

pared with England's, yet they were more generous than Austria's. Further, and this became plainer as the century advanced, Prussia was the dominant factor in the economic future of Germany, for she was planted where the lines of communication led to the great ports and river mouths of the north coast, and she was able to buy loyalty by the offer of roads and railway stations. Austria lay south, entangled in racial and national difficulties, and was almost landlocked.

Yet there were serious psychological obstacles to Prussia's march to pre-eminence. She had arrived at power by military violence; poetic, philosophic, and musical genius was less free and less warmly applauded than in other states; the pettier dynasties and courts looked with jealous disfavor upon the efficient hegemony; and the religious difference between her and the Southern states was enormous.

The military unity of the War of Liberation and the fears which persisted after its close had resulted in a queer kind of defensive confederation for "the maintenance of the external and internal security of Germany and the independence and inviolability of the individual German states." It was included in the Act of the Congress of Vienna. The Federal Act (*Bundesakte*) raised Prussia formally to equality with Austria (though Austria had the chairmanship of the Assembly) and seemed to give all that was necessary for the time being: external defense and the possibility of settling interstate disputes by peaceful methods.<sup>81</sup> It is hardly worth speaking of it except to mention that the votes of the states were differentiated according to their importance; that either a two-thirds vote or unanimity was required for resolutions; and that the small, though relatively larger, votes of Austria

Thoma (Tübingen, 1930), Vol. 1, p. 26 ff.

and Prussia compelled them to trick intrigue in order to secure action. The Diet produced a sense of united government in Germany, and nourished the federal sense of liberals by their disgust with its actual reactionary character.

*Confederation: 1815-48.* Between 1815 and 1848, the lifetime of the Confederation, these lines of development are observable: the concentration of federalist aspirations upon Prussia, the evolution of political parties and national sentiment over state lines, the planning of constitutions for a federation, the growth of economic unity, the Revolution of 1848, and the end of the first open conflict between Prussia and Austria in which the latter was victorious. They all revealed by the credible demonstration of facts, more certainly than by theories, the real nature of the difficulties.

*Early Plans for Federation.* An expectation arose that Prussia ought to lead the federal movement. The summons, however, was conditional, and the condition was one which was inseparably attached to almost every similar signal to Prussia, made then or since.<sup>32</sup> It was that Prussia in creating Germany should dissolve in Germany. But the Prussian Junkers were afraid of the social consequences to their class of inclusion in a larger body; their interests required monarchical absolutism and the independence of their own provinces. Moreover, only a liberal régime would attract followers to Prussia from liberals all over Germany and weaken state dynasticism. Yet too liberal a system would cause those liberals to side with the dynasties out of fear of democracy.<sup>33</sup> The existence of a large state like Prussia—approaching two thirds of the total area and population of Germany excluding Austria—must either draw all other states to it or provoke their positive hostility. So narrow a channel had Prussia to navigate to become the instrument of union. Every plan for the peaceful unification of

Germany under Prussian leadership was caught in the toils of such difficulties.

The problem was thus left to students, liberal civil servants, governments, and a few convinced and enlightened politicians; and federal schemes thrown off between 1840 and 1848 were indeed many. The influence of political awakening and experience was just beginning (since the early 1830's) to tell in the most important way: parties and learned societies whose conferences and programs were concerned not only with the government of their own state but with the affairs of Germany were being formed,<sup>34</sup> especially in the South and Middle German states.<sup>35</sup>

*The Economic Incentive.* An advance towards unity was made in the economic sphere, by the creation of a *Zollverein*, or customs union. The Prussian Tariff Law of 1818 began a system of economic consolidation and free trade which ultimately included all Germany, but not without the most spiteful obstruction by the Southern states and even the creation of a rival *Zollverein* by them in 1828.<sup>36</sup>

#### GERMANY: FROM ECONOMIC TO POLITICAL UNION: 1848 TO 1918

UP to 1848 the economic motive for union predominated. In fact, the *Zollverein*, being a Prussian invention, was now used by many particularists as a bogey to prevent full federalism. But the hopes of full union held by the liberals, to whom free trade was a fetish, were encouraged, especially in the Revolution of 1848, by this economic precursor.

*From 1848 to Bismarck.* Political passion now stirred in two directions. Constitutional monarchy, at least, was demanded; and the old Federal Diet, weak and conservative, impelled liberals to seek an alternative. Then, within a few weeks after the French Revolution of February,

<sup>35</sup> See on this the short but pregnant remarks of L. Bergsträsser, *Geschichte der politischen Parteien Deutschlands*, 4th edition (Berlin, 1926), p. 17, and the bibliography given there.

<sup>36</sup> Cf. M. Doeberl, *Bayern und das Deutsche Reich* (München, 1922).

<sup>32</sup> F. Meinecke, *op. cit.*, pp. 33, 336. Cf. also Lehmann, *op. cit.*, Vol. III.

<sup>33</sup> Even as at present the centripetal forces in Germany are nourished by the fear of Prussia's socialist bias.

1848, all state governments, even the Prussian, were being directed by Liberal ministers. Federal plans were busily canvassed. The princes, panic-stricken by the radicals, listened to them. Austria refused to join; and Bavaria consented reluctantly only when the Revolution had become victorious.<sup>37</sup>

A constituent assembly of 550 was elected on a very wide suffrage. Prussia had 141 delegates at this Assembly, Austria, partly owing to her difficulties with the revolution in Vienna, only two. Its success depended entirely on Prussian support. This would be of value only if Prussia were liberalized, if the King of Prussia was prepared to accept the leadership, and if Austria were to abstain. Prussia took the initiative, summoned the Diet (when Vienna succumbed to the Revolution) and declared the need for a federation.<sup>38</sup> But upon the slackening of the Revolution, the various Germanic princes called a halt to the King of Prussia. Revolutionary difficulties in Prussia put an end to her pretensions, for Frederick William IV simply dared not brave either Austria or democracy: the Junkers' desire for both political conservatism and Prussian separatism held them fast.

The Frankfurt Parliament lost itself in interminable discussions on the Fundamental Rights of Germans. It accepted a federal constitution which excluded Austria and provided for a Popular Assembly and for a Chamber of States with graduated voting power and a large sphere of federal authority. The constitution contained two other things of exceptional interest:

(1) In each large state the representatives were to be appointed, one half by the governments, the rest by the popular assemblies. And Prussia? Again, the motive to win Prussia for Germany, and Germany for Prussia: in any German state consisting of a number of provinces or counties with their own special constitution or administration, the representatives were to

be chosen not by the Parliament, but by the Provincial Assemblies or Estates.

(2) By a narrow majority (258 to 211) the chief executive was voted to be a German sovereign. Who this should be was not stated. But Prussia had the executive strength the federation needed. Frederick William IV was offered the supreme executive, but he refused because of the exclusion of Austria and the democratic source of the offer. Moreover, he desired unanimous invitation by the princes. Bavaria, Württemberg, Saxony, and Hanover ignored the movement and it collapsed.

What had it revealed? The *Gross-Deutsche* solution (which would include Austria) had been rejected by a small majority of federalists at Frankfurt in opposition to the Catholic South. Nevertheless, Austria did not accept this as a final judgment. Further, the South German states still wanted her guardianship, if from afar. Prussia had only two available methods of answering the call, each dangerous: to be liberal and risk domestic trouble and the vengeance of Austria and casual allies; or not to be liberal, and violently to expel Austria. There was a third way—to share power with Austria—but this Austria repelled.

Yet a number of states lay side by side, and each was the center of strong outward-running rays of aspiration and endeavor. Prussia had international interests and must reckon with France, Russia, and Austria. Austria had international interests and must reckon with Russia (for the Balkans), France (in regard to Italy), and Prussia. All the other Germanic states were reservoirs of men and money, and when combined, even as vague areas, were, as a friendly or a constitutionally associated unit, an asset in diplomatic relations. These, on the other hand, would have remained independent if they could: but if bigger neighbors had designs upon them, then they must play one off against another and attempt to obtain protection without loss of sovereignty. Yet all frontiers touch: and a touch upon sensitive frontiers injures, or appears to injure. the ganglia of spiritual and economic interests. The only alternative to warlike

<sup>37</sup> Cf. Doeberl, *op. cit.*; and for this and the following events cf. Brandenburg, *op. cit.*

<sup>38</sup> Ward, *op. cit.*, Vol. I, p. 437.

alarms is peaceful association. The federal association of Germany was impossible while Austria supported the South, and this prospect maintained the belief in all the middle and small German states that if ever an alarm developed into a real threat they could find a refuge. Association was possible only where none was secure without it. Then they would create their own security, not by looking to Austria or Prussia but by founding a federal state. Either Austria or Prussia must be excluded if international diplomacy were to be changed into federal cohesion. Given her geographical position and purely German composition, Prussia could not be excluded. Then Austria must be excluded. Why? Because some association was unavoidable, and the most feasible was prevented by Austria's presence.

The decision and deed were Bismarck's. From among all the plans he was able to choose the most feasible one. His courage and ruthlessness for his cause were perfect. Here was a man ready to sacrifice everybody and everything because his own sacrifice had lost all significance in face of the compelling nature of his ultimate aims. He who is without doubts is without scruples.

*Bismarck's Policy to 1866.* What did Bismarck believe about German federalism? He desired the greatness of Prussia. The conservative idea of the state was that it should be strong, dominant, and independent, and Bismarck shared this idea.<sup>99</sup> His congenital characteristics, his family history, the location of his estates, his friends, his caste (though he did not share in Romanticism), his country, and his king: all prescribed the channels of his energy. Prussia had to play a part in international affairs, independent of Russia, France, and Austria, all three hereditary and potential foes. For international power, Prussia needed united size. What rationality could be admitted to exist in this hodgepodge of states? Better for Prussia that there should be German unity; better for Germany that this should be so.

<sup>99</sup> Cf. Meinecke, *op. cit.*, Chap. XII, "Ranke und Bismarck."

On what terms could unification be accomplished? The solution must be monarchical. The princes must be kept; they were repositories of political power.

In his *Reflections and Reminiscences*, Bismarck declared:

In order that German patriotism should be active and effective, it needs as a rule to hang on the peg of a dynasty. Independent of dynasty, it rarely comes to a rising point, though, in theory, it daily does so in parliament, in the press, in public meeting. In practice the German needs either attachment to a dynasty or the goad of anger hurrying him into action: the latter phenomenon, however, by its own nature is not permanent. It is as a Prussian, a Hanoverian, a Württemberger, a Bavarian, or a Hessian, rather than as a German, that he is disposed to give unequivocal proof of patriotism. It is not difference of stock, but dynastic relations upon which in their origin the separatist elements repose. . . . The preponderance of dynastic attachment, and the use of a dynasty as the indispensable cement to hold together a definite portion of the nation calling itself by the name of the dynasty, is a specific peculiarity of the German Empire.

Indeed, if Prussia assented to the downfall of a princely sovereignty outside Prussia, could there be any permanent security for herself against the same thing? Admit an indestructible sovereignty in the princes, and Prussia was saved as well as they. Further, it was, after all, not necessary at the commencement, at any rate, to secure more than that amount of associated energy and machinery which would make Germany a strong entity for the purposes of international diplomacy and the abolition of economic and judicial absurdities.

The dynamic elements were: Bismarck's convictions; the creation of a conquering army even by the destruction of constitutionalism; the belief that "blood and iron" alone would settle the German problem, and the excitement of the country by its declaration; the use of the *Zollverein* to persuade or browbeat any too-independent German states; the disarming of liberal opinion by the grant of universal franchise; the formulation of such constitutional plans as should exclude Austria; and, finally, the deliberate pick-

ing of a quarrel with that country in order that the test of arms might decide the German issue.

The *Nationalverein*,<sup>40</sup> the political party of liberal-unitarists under Bennigsen, though distrustful of Bismarck owing to his antiliberalism, declared its faith more in the Prussian constitutional proposals than in the Austrian.<sup>41</sup> This and the Austrian defeat over the *Zollverein* were preliminary skirmishes before the inevitable battle. The Schleswig-Holstein problem was deliberately reopened, and inflamed: victorious concessions were made by Austria. The middle states were disillusioned by Austria's capitulation; the small states were full of fear at Bismarck's friendship with Napoleon—for when had a Napoleon been respectful of the territory and sovereignty of the small German princes? Austria took fright that France would liberate her Italian possessions. Then Bismarck demanded a German parliament elected by universal franchise! This was genius in every sense of the word, even as far as the ultimate blindness of genius to the final, sometimes the suicidal, result of its own creative activities.<sup>42</sup> The immediate motives were: to generate a force in politics strong enough to overcome princely separatism; to make that force one which should, perhaps, counteract liberal majorities by working-class votes, which could be managed so as to benefit "national" candidates of any class; to inflame Austrian opposition; and, finally, to throw a sop to the great mass of opponents of autocracy in the states, in Prussia and in future Germany.<sup>43</sup> The

concession made easier Bismarck's way over Austria's body into the German *Reichstag*.

Finally, Bismarck proposed a widening of federal authority to include all economic and foreign relations, and the command of the German armed forces. The unanimity rule in the Diet was to be set aside. To this Austria could not possibly assent, because an increase of power and the possibility of majority decisions would mean—often, if not always—a Prussian success.

Then a new plan excluded Austria and the Lower Rhine states altogether. Austria was bound to refuse to be pushed out of Germany. The Prussian plan was rejected. Thereupon Prussia declared that she considered the Confederation disrupted and annulled. The war of 1866 followed.

*The North German Confederation of 1867.* The most difficult part of the German federal problem was solved: Austria was excluded. There were still difficulties to overcome, but only one magnetic pole of proven force now remained.

The North German states had found little security in time of war. Their Particularism had, in any case, been less stubborn than that of the Southern states. Out of their wartime association and treaties with Prussia emerged the North German Confederation of 1867,<sup>44</sup> the immediate precursor and model of the Empire of 1871.

The very core of Bismarck's constitution was this: the barest needs of unity, and no more, were satisfied, and a very large amount of independence was allowed, for Prussia's sake, as well as to coax the Southern states.<sup>45</sup> "One must keep more to the Confederal system in form, but in practice give it the nature of a Federation with elastic, innocent, but far-reaching phrases." To make a complete,

<sup>40</sup> Cf. Herman Oncken, *Rudolf von Bennigsen* (Berlin, 1910), 2 vols., Books II and III.

<sup>41</sup> Brandenburg, *op. cit.*, Vol. II, p. 79.

<sup>42</sup> Bismarck's grant of universal suffrage was ultimately to result in the creation of such strong opposition parties in the Social Democrats and the Progressive Liberals and so to awaken political consciousness in Germany that his whole system fell into danger immediately he ceased to be Chancellor, and within a score of years completely broke down.

<sup>43</sup> Brandenburg, *op. cit.*, Vol. II; R. Augst, *Bismarck's Stellung zur deutschen Wahlrecht* (Leipzig, 1917); Bismarck, *Reflections and Reminiscences* (Tauchnitz, Berlin, 1899), Vol. II, pp. 245-49.

<sup>44</sup> Cf. Treaty, August 18, 1866: Heinrich Triepel, *Quellensammlung* (Tübingen, 1926), p. 200.

<sup>45</sup> Brandenburg, *op. cit.*, Vol. II, p. 218; E. Kaufman, *Bismarck's Erbe in der Reichsverfassung* (Berlin, 1917). On Bavaria and the renewal of the Union see H. von Sybel, *Die Begründung des deutschen Reiches durch Wilhelm I* (München, 1901-08), 7 vols., Vol. III.

exhaustive scheme would take too long, nor was it desirable; the old forms could be used, if with some difficulty. Since Bismarck now sought association and not annexation, he kept the old number of votes, adding thereto only the votes of the annexed countries. This gave Prussia seventeen votes out of forty-three, and it could only be in a majority if it could control five more votes. Since a constitutional amendment, however, could be defeated by fourteen votes, a veto was given to the small states if they voted together, and to Prussia always. Military resolutions required the assent of the federal commander-in-chief—the Prussian king. Other main points were the sovereignty of the federal Council, not of the popularly elected *Reichstag*, and the responsibility of the federal chancellor to the federal chief alone, not to the parliamentary bodies; and the execution of federal laws by the states.

No state opposed this constitution, and it came into force in July, 1867.

*Bismarck's Federal Reich.* Bismarck had virtually made the German Empire. A feasible association had been created, giving unity in more things than had been hitherto possible in the Germanic states, and more things than, in the heat of the moment, Bismarck had thought immediately desirable. Fear had overcome the objections of princely separatists, and victory that of Prussian dissentients. Now, the economic and spiritual advantages of federalism issue in laws and they tend to heal old wounds and regrets and to make retrogression impossible. Free migration, common regulation of the locus of responsibility for relief of the destitute, freedom of industry from guild restrictions, freedom of association, factory legislation, the abolition of usury laws—all these were great economic and social boons and swept away many antiquated institutions. The industrial and commercial energy of the day were further regulated by a single bill-of-exchange law and commercial code, by laws relating to patents and joint-stock companies, and by the reform of consular representation. The federation was also knit together by

the social influence of a uniform criminal code.<sup>46</sup> The federation was as yet, however, only a fragment: the Southern states had not yet been included.

*The South and the Customs Parliament.* The first impulse of the Southern states—Bavaria, Württemberg, and Baden—was to make federal terms with the North German Confederation, for Austria had failed them and France was exacting. But particularistic motives revived; the dynasties were still popular, and anti-Prussian feeling was strong. The old fear of Prussian harshness and discipline, as seen in the civil service and the army and in Bismarck's roughness with Parliament, combined with the steady pressure of the Catholic Church<sup>47</sup> to keep them away from Prussia. Nothing more than a defensive alliance with these states could at the moment be achieved.<sup>48</sup> For all Germany, then, there was a federation for defense purposes, but the Southern states insisted on their independent judgment of a *casus foederis* (when the situation required their assistance).

It is impossible, in the long run, to discuss economic affairs alone, nor can the representatives of the states, when democratically elected, be always a unanimous phalanx representative of particularist interests. The free-trade and tariff arrangements had visibly favorable effects upon commerce. The ceremonial and the amenities of a common life in the same assembly had the effect of smoothing down the sharpest antagonisms. National political parties arose to extend the power of the union, and election campaigns were fought on the issue. On the other hand, the whole armory of political tactics was

<sup>46</sup> For an account of the North German Parliament's activities see H. Robolsky, *Der deutsche Reichstag* (Berlin, 1893).

<sup>47</sup> Cf. Karl Bachem, *Vorgeschichte, Geschichte und Politik der Deutschen Zentrumspartei* (Köln, 1927), Vol. II, Chap. VII. The Bavarian Catholic Party was particularist; the feelings of the Catholic majority in Bavaria were wounded by the assumption of some Prussians that the war of 1866 had been a religious war by which "the work of the Reformation had been completed" (*Ibid.*, p. 231).

<sup>48</sup> This secret treaty was signed in August, 1866, and published in 1867.

used to obstruct the road to unity now being trod by the great party of the National Liberals.<sup>49</sup>

Bismarck was not impatient; the result was inevitable. All must be done to attract the South German states; their peculiarities must not be mocked but genially suffered and even given institutional room and effectiveness.<sup>50</sup> Yet the federal movement slowed down, for Bismarck too well incarnated the Prussian spirit. The Southern states attempted to establish a separate federation, but their plans failed, for among equals there is neither fear nor gratitude nor reward which can overcome jealousy and sovereignty.

*The War of 1871, and National Feeling.* Some excitation, an upheaval, a scene, was necessary to give back creative control to Bismarck. Would a common war help? Yes; against a foe who aroused defensive reactions and memories of historic battles and common aspirations. It was evident that if the opportunity for war with France should arrive, it would be taken to make sure that Germany's unity, however produced, should not be subject to France's veto. Any quarrel would have to be braved out; for diplomatic defeat was federal retrogression, while military victory was almost certain federal progress. In 1868 Bismarck says:

<sup>49</sup> For this phase cf. Robolsky, *op. cit.*

<sup>50</sup> "Besides, is unitarism the most useful and the form? Is it so for Germany particularly? Is it historically founded in Germany? That it is not, is shown by the Particularist institutions which develop in all aspects of life in Germany. It has led to the German feeling completely comfortable only in a small area, and to the conviction that one is not doing well to deprive him of his domestic comfort any more than is necessary to keep the whole together and give it effectiveness as against outside countries. This Particularism is the basis of the weakness, but, from another standpoint, that of the strength of Germany. Give it enough time! . . . centralization is more or less a matter of force and is not to be carried through without a violent operation . . . I believe that one should ask oneself, in the Germanic states, what can be regulated in common? and that which need not be regulated in common should be left to local development. Thereby one serves freedom, and one serves welfare . . ." (Quoted in Robolsky, *op. cit.*, p. 85)

"A more extensive union of the majority of Germans could only be obtained by force—or else if common danger should arouse them to fury."<sup>51</sup> The occasion came; indeed, Bismarck made it.

In a few months the Second Empire had fallen. The Southern states had hardly hesitated to fall in line with North Germany—though in Bavaria the Ultramontanes were able for some time to stop intervention.<sup>52</sup> All troops had come under the Prussian supreme command. The war was felt to be a German war, and victory supported Unity.<sup>53</sup>

*Union Completed.* Bismarck had no desire to overpower the South, but the opportunity would perhaps never recur, and pressure was needed. After Sedan, Bismarck let his press loose. Elsewhere particularism had weakened, but in Bavaria the Ultramontanes and the peasantry were at odds with the nationally-minded people of the large towns and the population of the Palatinate and the Protestant districts. King, court, and liberal opponents of Prussia were still separatist. Bismarck's attitude was that the burden of proof was on those hostile to federalism. Germany was one, had been one in a great war, was naturally one. Yet this must be demonstrated. All diplomatic channels were opened and used: Alsace should become an imperial territory! The *Zollparlament* was convened—a forum of discussion just when the whole country was excited and eager for sensational events and policies. When, after Sedan, both Baden and Württemberg positively begged inclusion in the Federation, Bavaria's hand was forced: it would be shameful to be the last state in!

Protracted, subterranean and often angry negotiations between Bavaria and Württemberg, between these, separately, and Bismarck, and between Bismarck and Baden ensued, each state watching that

<sup>51</sup> E. Ludwig, *Bismarck* (London, 1927), p. 319.

<sup>52</sup> Bachem, *op. cit.*, Vol. II, pp. 242-43.

<sup>53</sup> In his *Von Wesen der Menschlichen Verbände* (Leipzig, 1902), the "pluralistic" Otto von Gierke confesses what an overpowering sentiment of identity with the nation he felt as the victorious troops came marching along Unter den Linden.

the others should get no more favored position than it received. The North German Confederation was accepted as the kernel of a new federation, but special concessions were demanded. Bavaria's principal demands were: complete independence of its railroad system, posts and telegraphs; taxation of beer and brandy; legislation in matters of settlement and citizenship, conditions of carrying on a trade, the whole of the civil and criminal code (with the exception of the law relating to commerce and credit instruments), and consulates; an increase of its votes in the *Bundesrat* to eight (it had six in the customs *Bundesrat*), a Bavarian representative in the *Bundesrat* committees for army and fortifications, tariffs and taxes, commerce and transport; independence of the Bavarian army while carrying out a reorganization uniform with that of other states; and subordination to the federal commander-in-chief only in time of war. Further, to the navy, which Bavaria considered to be of importance only to North Germany, she would make no contribution. All these exceptions inevitably led to the further demand for a separate budget. In foreign affairs, independence was to be guaranteed by separate ambassadors: the *Bundesrat* must assent to a declaration of war, and in peace negotiations Bavarian representatives should be present. Finally—and this was the most energetic claim to independence—Bavaria must have an absolute veto on any extension of federal power and against all constitutional amendments affecting its number of votes or its privileges, and it must have the presidency of the *Bundesrat* in the absence of Prussia. The more Bavaria wished, the more the other states demanded.

Bismarck, the Prussian fanatic, could realize what it meant for a state with a long independent history and a deeply founded individuality to surrender its sovereignty. Prussia had done this only because it was in a position to obtain much and give so little. The principle of graduated privileges was just and must be accepted. However, this graduation must be accomplished discreetly; neither

must know what the other was asking or being offered. Negotiations, therefore, were conducted separately and privately. A tremendous amount of chicanery was practised; and even theft of territory was arranged by secret agreements with Bismarck!

Finally, Bavaria succumbed rather than risk the possibility of being the only state outside the Union; of individual war with France; and of exclusion from the *Zollverein*, which, in her peculiar geographical position, would have been a disaster felt every day and by every class. One by one her pretensions were surrendered: but she received considerable concessions, such as retention of her taxes on beer, her own postal administration, and separate military forces and command. Yet it was bitter to lose full military freedom and submit to federal inspection of the army, the federal oath, and federal determination of total military expenditure.

Had Bismarck used all his available force, the empire might have been more closely knit; but the powers of Europe were watchful and jealous. Nor did he desire anything much more unitary, for he was jealous of Prussian independence. Then the King of Prussia, swearing never to be "Emperor of Germany," became "German Emperor."<sup>54</sup>

The constitution was accepted with little opposition in Baden, Hesse, and Württemberg. In Bavaria the constitution was accepted in a few days by the lower chamber, by all except three votes. In the upper chamber the Ultramontane majority reported adversely.<sup>55</sup> Since there was no midway between acceptance or rejection and since the consequences of rejection were frightening, the constitution was ac-

<sup>54</sup> Bismarck had let go the title "Kaiser von Deutschland" on being convinced that the other princes might take his title to be a claim to sovereignty in their states, and Parliament had used the alternative title "Deutscher Kaiser." William I made this into an issue with Bismarck, out of temper at Bismarck's growing power rather than out of any rational discrimination between the one title and the other.

<sup>55</sup> Cf. Bachem, *op. cit.*, Vol. II, pp. 244-45.

## SAMENESS OF MOTIVES, DIFFERENCE OF FATE IN FEDERATIONS

cepted by 102 against 46, some Ultramontanes absenting themselves.

All things produce their proper symbols, but none was ever so appropriate as a coronation in a vanquished land to inaugurate this federation, reared to virility by the Prussian Mars, for only arms could expel Austria and exorcise that enemy of monarchical federation, democracy. Since the people could not win their way to political authority and to a federation based upon acknowledged utilities, fear and slaughter, ruthlessness, cruelty, and cunning were licensed. For the despotic prince of a sovereign state has all to lose, while the individual voter may believe that he personally loses hardly anything when he consents to give up a fraction of his morsel of sovereignty. The prince must be made to fear the consequences of his refusal. But every force in politics demands its price and is, in some way, paid for. The German Empire paid for its federal advantages by the burden of Prussian hegemony and the emasculation of liberalism. It was not until the originally needful operation had been performed—the transformation of the monarchy into a democracy, by a violent assertion of popular rights in November, 1918—that the empire at last arrived at a less strained, a more peaceful, and more unitary federation, distinctly more unitary in the scope of federal powers than Australia, Canada, and the United States, but less unified in common administration than the latter.

### SAMENESS OF MOTIVES, DIFFERENCE OF FATE IN FEDERATIONS

THUS, in the formation of federations the impulses have been given by spiritual ideals of national unity, by the prospect of the fullest extension of certain desired rights, by the economic motive, by a common language and literature, by considerations of defense and international prestige, by the peaceful settlement of fears produced by the contiguity of human groups which tend to form collective dislikes, by the amicable resolution of common problems, and by the energies and aspirations of specific leaders. On the other hand, racial, cultural, religious, and

economic differences obstruct the formation of the great state, while personal desires for prestige, which can be satisfied only in a small and separate polity, add to the separative force.

Before we turn to an analytical account of government institutions and ideas, let us compare and have before us the bare facts of their territorial extent.

<i>Unitary States</i>	<i>Area, in sq. miles</i>	<i>Pop., in millions</i>
Great Britain (excluding N. Ireland)	88,432	47.9
France	212,659	38.
<i>Federal States</i>		
United States	2,973,774	145.
Switzerland	15,940	4.3
Australia	2,974,581	9.9
Canada	3,684,723	11.5
Germany	182,741	69.6
USSR (this includes Carpatho-Ukraine, Baltic republics, oc- cupied Poland, lands returned by Roumania)	9,619,791	193.5

There is a tremendous disparity in the size, density of population, and climatic and economic range. The United States, for example, contains nearly 34 times as many people as Switzerland and has an area about 180 times as large. The climatic and economic range of America, Canada, and Australia is enormously greater than that of Germany. Hence a wider effective and compelling diversity. Broadly we can say that, other things being equal, sheer size makes any governmental system difficult: the larger the area, the more diverse the interests and the greater the extent of decentralization; the sparser the population, the greater the decentralization; the smaller the area, the greater the contiguity and centralization, and the less the diversity of interests; the denser the population, evenly distributed over large areas of federation, the greater the centralization.

But athwart these facts lie differences of religion, secular culture, and the accidents

of history, and these give extra and differentiating turns to the pattern. Of these differences, the most marked is displayed by the centralization of Russian government, whether under the Tsars or under the Soviet form. The centralizing forces of Kiev and Moscow, fighting against the Mongol invasion and two hundred years of occupation, left nothing but a centralized, absolute, and total régime, which swallowed the Church as well, and ideological fervor has in our own time made more drastic the authority of the capital.<sup>56</sup>

#### CONTRASTS BETWEEN AMERICAN AND GERMAN FEDERALISM

THE consequences of such marked difference between the territorial extent and the sociological history of Germany is a striking contrast in their federal institutions.

*Relative Power of the Component States.* Whereas, in the American union, all states were given an equal status, except for their numerical representation in the House of Representatives, in Germany some of the states received a particularly favored position. Most important was the fact that Prussia was hereditarily endowed with the office of chief executive—that is, the Emperor and Chancellor together, for the King of Prussia was always to be the German Emperor or Kaiser, and he appointed the Imperial Chancellor. Since these two were supreme in the conduct of foreign relations, and since also, the Emperor appointed as Chancellor the Prime Minister of Prussia, the predominance of Prussia was assured. Especially was this so since the sovereign power was not acknowledged to be in the people and therefore exercisable in the *Reichstag* for them. If it lay anywhere other than in the Emperor, then it must be in the *Bundesrat*—that is, the Federal Council, a second chamber like the United States Senate, but actually the sovereign repre-

sentatives of the states' governments and avowedly representing their sovereignty. The *Bundesrat* had the final sanctioning power in the making of law; constitutional amendments could be passed only by a special form of vote within it; and it settled disputes between the *Reich* and the states and between the states themselves. But in the United States, the amending power lay with both houses and with the people (see Chap. 9 above), while interstate and nation-state disputes were in various forms subject to the jurisdiction of the Supreme Court, a judicial body. Thus in Germany, the hegemony of one state was acknowledged; not so in the United States.

*Distribution of Powers.* In the United States legislative powers were distributed by means of assigning a short but pregnant list of powers to the national legislature, while the rest were reserved to the states or to the people; and some, again, were denied to both the nation and the states. The first category allowed of a vast development of federal power, by judicial interpretation (see Chap. 9 above). Yet the distribution caused frustration and confusions due to the pressure of economic and social conditions and ideals when confronted with the various and unequal initiative of nation and states, and with their very diverse capacity, in area and financial ability, to make law and enforce it.

In Germany, the difficulty of inducing the states (mainly governed by kings or princes) to yield up their sovereignty caused the legislative powers assigned to the *Reich* to be very meager, and the residue to the states to be very great, though some of these were ludicrously small in population. Furthermore, some of the states were put in more favorable positions than others. Bavaria was allowed full power over her railways and her posts and telegraphs, and Württemberg over the latter; and both these states and Saxony had considerable though not complete autonomy over their armed forces and contingents for the *Reich* army. In the German system all powers were either assigned to the *Reich* or reserved, *ipso facto*, to the

<sup>56</sup> Cf. B. H. Sumner, *Short History of Russia* (New York, 1913); Edward Crankshaw, *Russia and the Russians* (New York, 1918); and the various works already cited on economic planning.

states: there were no limitations on the power of *both* governments, as described in the discussion of the American system in Chapter 9 above.

*The Administration of the Laws* showed also a marked divergence. The United States changed over from the Confederation's method of leaving administration to the states, to direct administration by the nation of all matters coming under its own legislative power and under the power of its president. However, the German method was tantamount to that which the United States had abandoned: namely, the administration of almost all *Reich* affairs by the state governments through their own public services. Thus there was *Reich* administration in foreign affairs, in naval and military affairs, and (with the reservations already noticed) in posts and telegraphs—but not in taxes and customs! In the United States, the nation merely required that its agencies and officers should not be obstructed in their administration as they applied it to individuals everywhere in the Union, and this assurance they obtained in several classic cases decided by the Supreme Court. In Germany, the *Reich* was obliged to seek good administration where it legislated by supervision—that is, a kind of inspection which was mainly applicable at the top management level and which only with difficulty penetrated on specific occasions to the lower levels. A diplomatic process of negotiation between *Reich* and state government was necessary to obtain results. A dispute could be finally referred to the *Bundesrat*. This, being a body of sovereign representatives, or ambassadors, could hardly secure enforcement. The larger states were immune from enforcement, Prussia above all, for in her case the supreme *Reich* executive and the supreme executive of Prussia, and some of the *Reich* ministers and Prussian ministers, were the very same persons. Further, the Chancellor had the constitutional power to make orders for administrative fulfillment of the laws. In the end, the logic of such a federal arrangement led to enforcement by punitive action, *Reichs-exekution*, or "federal execution," direct

action upon a state. But such could not possibly be exercised, in fact, against a state so big as Prussia; and reciprocity therefore required that it be not threatened against any other. This weakened federal authority.

*Distribution of Power within the Legislature.* In the legislature, the United States House of Representatives and the Senate occupy an equal position of authority, except that financial legislation must be initiated by the lower chamber, conformably with traditional respect for the popular basis of a democratic system. But the Senate was endowed with extra powers in executive appointments, the conduct of foreign affairs, and the making of treaties. In the German system, though the *Reichstag* was founded on universal suffrage (ruined in effect by obsolete apportionment), final power of accepting legislation lay with the *Bundesrat*, an appointed body. Since the preponderance of representation herein was given to Prussia, and since in the government of Prussia the conservative Eastern parts dominated the rest because the system of representation designedly favored the country against the town and the East against the Center and West, Prussian conservatism limited the relatively liberal character of the *Reichstag*.

*Power of the Upper Chamber.* The special power and problems of the union of Prussia and the smaller states was revealed in the stark contrast of voting strength in the American Senate with that in the *Bundesrat*. In the Senate, by the Great Compromise of the Philadelphia convention, all states were represented equally. In the *Bundesrat*, the states were represented according to an impression of their size, population, and political weight, resulting in a very considerable diversity of representation. Prussia had a decided predominance. This had its effect in legislation: in the control of administration; in fear of or disdain for federal enforcement measures; and in constitutional amendment. The amendment clause provided that however the *Bundesrat* agreed upon an amendment (and the process would have to be one of negotiation among sov-

ereigns), if fourteen votes were cast against it, it was defeated. As Prussia possessed seventeen votes in 1871, and later acquired more, her interests were safeguarded; so also combinations of the other states—especially Bavaria, Württemberg, and Saxony, who had, six, four, and four respectively—could protect themselves. Prussia in 1871 had five sixths of the total population of the *Reich*, and could have demanded forty-five votes or more out of the fifty-eight votes in the *Bundesrat*.

*Powers of the Judiciary.* In the exercise of judicial power, the United States assigned to federal courts, in inferior and appellate instances, the judgment of cases arising out of the constitution and the laws it passed, and the validity of state legislation and executive action under the United States constitution. It left to the state courts the rendering of judgment in cases involving state affairs and inferior suits involving the United States constitution on the way up to appeal. But in Germany, all judicial actions came before state courts only, though procedure was given uniformity by a *Reich* series of statutes, and, of course, the state courts were interpreting several *Reich* laws and codes, the detailed regulations and commentaries on which produced an assimilation of judgments. Judgment rendered in any state court was valid all over the nation. It was not till 1879 that the *Reichsgericht* was established, a supreme appellate court which heard appeals from the state Supreme Courts in all civil and criminal matters, but which was effective only if the state decisions had infringed a *Reich* law.

*Financial Powers of Nation and States.* Finally, in the United States, with small and removable limitations, both nation and states were given the enjoyment of independent powers of taxation. Once the constitutional limitation on the power of the nation to raise an income tax had been removed by the 17th amendment, the chief difficulty in American federal-state finances was the effect of growing competition between nation and states for mounting sources of revenue to meet social expenditures and to provide for rewards

and sanctions for the regulating effort of both governments. But in Germany, quite other difficulties dogged the federal finances. In the main, customs duties were assigned for the *Reich's* needs, while whatever more was necessary to meet its budget was supplied by proportional contributions from the states. This system gave the last word to the states. However, customs duties mounted with the increase in tariffs, and with the rise in the volume of commerce. A statute of 1879, therefore, was enacted which enabled the *Reichstag* from time to time to assign to the *Reich* a fixed sum out of the customs revenues: the excess went to the states! But the amount so assigned was such as to leave the *Reich* still in deficit; and so the states received a contribution from the *Reich* and crossed this with a contribution from their treasuries back to the *Reich*!

#### THE NECESSITY AND THE DIFFICULTIES OF FEDERALISM

THE historical conditions under which certain states came into existence, or the continuing large extent of the area under a single government, have forced some politics to be federal. In addition, up to a point, the virtues of decentralization merit perpetuation. They are: (1) experimentation; (2) limitation of damage to the area which makes mistakes, and the value of example where the innovators are successful; (3) clear acquaintance by the government with the local situation to be solved; and (4) the possibility of personal interest in day-by-day government and personal pressure for remedy of grievous situations.<sup>57</sup>

It cannot be denied that federalism has its disadvantages. (1) It is financially expensive, since there is much duplication of administrative machinery and procedure. It is wasteful of time and energy, in that it depends on much negotiation, political and administrative, to secure uniformity of law and proper administrative fulfilment thereof. It is also especially

<sup>57</sup> See H. Finer, *English Local Government* (London, 1919), Chapter 1.

## MAIN TRENDS OF FEDERALISM IN THE UNITED STATES

difficult in the requirements for amendment.<sup>58</sup> It is, again, expensive, because it does not allow of the full technical integration required in such services as transport, utilities, health, and employment placement. From this point of view, federalism is a premium on the irrational, in finance, area, and personnel. Government already has enough problems of decentralization and diversity, without this additional obstruction.

(2) Federalism is confusing to the public and has awkward results on personal rights and obligations. For example, in the United States the greatest fiscal confusion reigns: Who properly owes what to which authority?<sup>59</sup> So involved is this question that simplification and reason are baffled, even where vast tax-research bodies have been established to clarify the situation. One's rights in such matters as insurance, marriage, and divorce, the status of married women, bankruptcy, and social assistance, are most difficult to discover. So, also, regarding the acceptance of responsibility for social and economic regulation or assistance by the various authorities: "each waits on the other, often less to secure an opportunity for action than to deny it to the agency which has assumed it. It might be ventured that the quality of government at the center is a function of an integral nation-wide focus of attention upon it. This attention, federalism disintegrates."

(3) There are governmental tasks which federalism does not succeed in doing, because, being a product of bygone decades and even centuries, the distribution of powers resists the centralization essential to various modern large-scale economic and social needs. Crime, for instance, is

especially difficult to control. A unified industry and society have overtaken a disintegrated power to regulate, control, and utilize them.<sup>61</sup>

The nation and the states are crisscrossed with lines of agreement and collaborative authority, designed to lace together what the constitution has put asunder. This we shall appreciate in particular by a mere glance at recent developments in the United States, it being necessarily assumed that the student is familiar with the general features of the system. And, in the next chapter, special attention is paid to federalism in Germany because it is a continuing problem in modern government.

### MAIN TRENDS OF FEDERALISM IN THE UNITED STATES

THE United States, it is manifest, is moving swiftly towards a unified economic and social system, coextensive with its whole territory.<sup>62</sup> Economical administration requires large-scale operation (up to a point, if it is to be efficient). The advancement of health, labor, manufactures, commerce, and morals in one state can be frustrated by the backwardness of its neighbors—an unchallengeable example is unemployment-insurance systems. Higher taxes and better labor standards over the level of other states have been followed by the migration of employers and their industries to lesser-taxed places<sup>63</sup> (see the Supreme Court's acknowledgment of this in the social security cases). Free mobility of labor and capital to their best prospects can be and has been obstructed by state and local differences of taxation, by licensing, and, among other things, by an Employment

<sup>63</sup> Harold Groves, "Tax Differential and Relocation of Industries," 31st Annual Conference on Taxation of National Tax Association, 1935, pp. 557-61. Temporary National Economic Committee (U.S. Government Printing Office), monograph, *Interstate Economic Barriers*.

Placement Service broken into forty-eight parts, each without any concept of the opportunities or deterrents to be encountered in sister states, which are yet part of a single country. Some states have even established barriers to migrants and commerce from other states, such as the application of sanitary regulations for persons or commodities, or the imposition of special charges or of licenses for transport vehicles.<sup>64</sup>

Of course, whenever people and commodities are in "interstate" commerce, the federal government may legislate and has legislated uniform conditions: or, where it has the power, it can formulate and has formulated different principles to suit different geographical and social conditions. But what is to be done where the popular desire for a higher standard of living, keen as it is, beats vainly against the poverty, the ungenerosity, the ignorance, or the corruption of some state governments, yet where a uniform reasonable standard for all is a condition of the successful fulfillment of such desire? Must children born in poorer states be doomed to inferior education? <sup>65</sup> Must some states permanently suffer from inferior housing, corrupt insurance inspection, and business corporations whose charter has been obtained in complaisant states administered by officials of easy virtue? Must natural reserves, like water power, remain in the hands of do-nothing states legislatures? Shall the utilities which are not interstate but which are still part and parcel of the national economy be immune from regulation by the Federal Power Commission? How is a nationwide market to be assured its uniformities of freedom or concerted regulation? How can meats and other

foods and drinks which are produced and distributed under interstate commerce, and so are subject to high standards of federal inspection, compete with commodities displayed side by side but produced within the state, possibly under the feeblest standards of cleanliness and purity? How can the moral interests of the states which prohibit or heavily regulate the alcoholic liquor traffic be defended? How can a national force assist the local agencies of crime control?

Is the agriculture of the United States to be treated as one unit, and, accordingly, is its policy of production and marketing to be uniformly regulated, especially in view of international agreements entered into by the federal government concerning the sale of certain primary farm commodities on the international market? Is the federal authority to say that the marginal lands within a single state are to be abandoned in keeping with a national plan of soil conservation?

New Deal legislation and the Supreme Court's attitude thereto have clearly drawn attention to the rapid development of centralization, but they have also strongly emphasized the recognition of the need for the reallocation of powers in a new balance, not excluding strong local organs of government.<sup>66</sup>

The United States constitution is, from this point of view, under tremendous strain, a strain even heavier than the similar pressures revealed by the Royal Commission on the Australian Constitution,<sup>67</sup> and by the Rowell-Sirois Report on Canadian Dominion-Provincial Relationships.<sup>68</sup> Devices have therefore been sought, and some applied, whereby the

<sup>68</sup> Reports of Royal Commission on Dominion-Provincial Relations (the Sirois Report), 3 vols. (Ottawa, 1940); and the series of studies in appendices, 8 vols., 938-39.

federal government may assume the necessary additional authority. This has come about either by initiative where the states have not as yet used their own powers at all, or by extension of the federal sphere of "general welfare," or "taxing," or "interstate" commerce powers. There has been a kind of transference of power from the states where these have used their authority, but inadequately, wherever the services which require large-scale treatment for full efficiency for the state no less than for all its neighbors in the Republic; the most recent instance is insurance.<sup>69</sup> Remedies for excessive state disintegration of the national economy and society are necessarily incomplete and indirect, for they have to pass the censorship of a Congress composed of representatives who hardly dare (at any rate openly and avowedly) to prefer the larger loyalty to the smaller, and of the Supreme Court.

It is impossible here to do more than merely indicate the chief methods used to bring about a higher degree of governmental integration.<sup>70</sup> (1) There is a growing tendency to uniform state action, fostered by the voluntary Council of State Governments and the National Council of Commissioners on Uniform State Laws.<sup>71</sup> Yet action by the former is very slow and incomplete, admits of continued diversities, and is always uncertain since it depends on subsequent action by the state legislatures. Indeed, on the average, each of the uniform laws agreed upon (and it takes years to reach agreements) is adopted by only one fourth of the states,

while in important matters the Council's work is altogether jilted. (2) There is some slight influence exerted by the Conference of (State) Governors, sometimes meeting with federal officials.

(3) A much more important mechanism of the readjustment of federal-state powers is the federal grant-in-aid.<sup>72</sup> The federal government pays funds to the states, and sometimes directly to the cities and counties, to implement a federal statute.<sup>73</sup> The grants are given provided that federal standards are fulfilled by the state governments, in respect of the purposes and principles of the service in question, the structure and procedure of administration, the recruitment and management of personnel, the furnishing of reports, and submission to federal inspection. Either or all of these conditions are applied in varying measure according to the nature of the service to be administered by this developing and peculiar partnership between national and state governments, and according to the quality of feeling in each case about the independence of states as against the advantages to be derived from federal assistance.

(4) Sometimes free skilled assistance in terms of advice or collaboration is rendered by the federal government to the states. Here the action of the states is supplemented without obligation on their part, as for instance, by expert advice from the (now defunct) National Resources Planning Board or the Federal Bureau of Investigation, or by the training of local officers at the FBI's police school.

(5) There is the growing practice by the federal government of conducting its own administrative agencies (e.g., the Farm Security Administration) and those in which it collaborates with the states through grants-in-aid (e.g., the Social Security Administration) in large regions, which include several states, with more or less of a common economic or social character imprinted by their geographical re-

<sup>73</sup> Report, National Resources Planning Board, *Federal Relations to Urban Government* (U.S. Government Printing Office, 1936), Vol. I, part II.

relationships, by the character of their production, or by their contiguity.<sup>74</sup> But so far there is only one truly regional governmental agency of the federal government (perhaps two, if we add Boulder Dam, the product of a compact made by seven states regarding the uses of the Colorado River). It is the Tennessee Valley Authority.<sup>75</sup> Yet these regional arrangements are by themselves no substantial modifiers of state powers or of the divergencies in their use. The states are the weak links in the American system of government, so much so that the federal government has been tempted to by-pass them and cooperate directly with the great cities, or has sought, but hitherto not substantially found, a regional solution. It is improbable that the TVA can be a model for the rest of the country, for it came into existence to solve a precise local problem based upon more than usually specific features. Other valley regions, for example, the Missouri<sup>76</sup> and Arkansas, have been proposed, and they will certainly be of benefit in the solution of the two or three peculiar local problems of their area. But it is surely impossible to envisage American government conducted through a congeries of very diverse valley regions or of regions on any other geographical basis pure and simple. The way of the grant-in-aid to the states and the cities is at present discernible as the line of maximum progress in the readjustment of federal-state powers in an age which cries out for government yet understands the need not only for administrative decentralization but for considerable local autonomy.<sup>77</sup>

# INTERNATIONAL FEDERATION

THE terrible results of World War I, and in part the weaknesses and yet in part also the promise of the League of Nations, produced impulses toward a "United States of Europe." The principal bid was made by the nation with the most to fear from isolation—France.<sup>78</sup> The effort was abortive. The idea lived on in the minds of some individuals and societies outside the groups of practical politicians in the League,<sup>79</sup> and was powerfully influenced by the miseries and devastation of World War II.<sup>80</sup> It was not difficult to formulate a plan of federal union. It is never difficult in matters of government to invent machinery; the question is, does the will to action exist?—without it machinery is doomed.<sup>81</sup>

What stood in the way of such proposals was nationalism, the spirit we have hitherto proclaimed to be unifying within the state. Such a "particularist" spirit we have seen to be at work within Germany, and such a spirit we saw had to be overcome in the American, Australian, Canadian, and other forms of federalism. But in these instances, deeply as state or sectional patriotism was felt, it was as nothing compared with the spirit of separation and contrast, rising to the plane of sustained hostility, prevalent in the relationship between nations. For those elements which produce a sentiment of commonalty within the nations are precisely those which sever

<sup>78</sup> Cf. Briand's *Memorandum on the Organization . . . of European Federal Union* (New York: Carnegie Endowment for International Peace, 1930); and *Replies of 26 Governments of Europe to M. Briand's Memorandum* (same publisher, 1930).

<sup>79</sup> Cf. Edouard Herriot, *The United States of Europe* (New York, 1930).

<sup>80</sup> Clarence Streit, *Union Now with Great Britain* (New York, 1941); and Percy Corbett, *Post War Worlds* (New York, 1942).

<sup>81</sup> Cf. Ivor Jennings, *A Federation for Western Europe* (New York, 1940); and R. Mackay, *Federal Europe* (London, 1940); cf. also a truly great work, Lionel Curtis, *Civitas Dei* (London, 1934).

them. Every nation is a tough, persistent, corporate body, with a collective personality stoutly different from all others. As Hobbes said, each is "an artificial Man."

This confident nationalism is no capricious triviality, no fantasy, but something which has grown out of the location, climate, resources, economic occupations, and the vicissitudes of history peculiar to the locality. It has been influenced by the nature of the immediate neighboring national groups, as well as by isolation or semi-isolation, which was the lot of all of them, let it be well remembered, for long centuries before the very recent development of rapid and vivid communications. Each has formed a separate culture, compact of a different language, alphabet (in some cases), literature, songs, stories, manners, religion, proverbial wisdom, philosophy, everyday courtesies, standard of living and production and consumption habits, and—issuing from all and standing above all—laws and government and the spirit in which they are used. What was built in six hundred years cannot be abolished in six or in sixty; and some national differences are as desirable as the diversity we delight to see among individuals.<sup>82</sup>

It is of special interest to notice that the attempt at economic federalism—which was broached at the time the European Recovery Program was being considered by sixteen European nations, with the aid and comfort of the United States—could not go very far, not beyond the standing organs barely sufficient for implementing that plan. It is also noteworthy that fear of the U.S.S.R. succeeded in bringing about a union of Britain, France, Holland, Belgium, Luxembourg,—the so-called "Western Union"—in a fairly far-reaching pact of friendship and mutual assistance in the case of attack on any one of them. But the tenuousness of the authority of the United Nations Organization is proof positive, alas, of the present impossibility of more substantial advance towards a federation, even as unified and

internally peaceful and just as the German Federation of 1871, which was far from the more considerable union exemplified in the United States of America.

#### FEDERALISM AS THE GUARANTEE OF LIBERALISM

THE opinions of Lord Acton, a great liberal—so great a liberal, indeed, that he could scarcely applaud any action whatever taken either by governments or individual men—have given rise to the erroneous view that federalism is in itself a deliberately contrived guarantee of civil liberties. Thus, Acton said: <sup>83</sup>

Of all checks on democracy, federation has been the most efficacious and the most congenial . . . The federal system limits and restrains the sovereign power by dividing it and by assigning to Government only certain defined rights. It is the only method of curbing not only the majority but the power of the whole people.

Dicta of this kind are sweet as honey to dogmatic champions of *laissez faire* like Hayek.<sup>84</sup> And the *reductio ad absurdum* is to advocate the further disintegration of the nation, the state, and the great society. But the doctrine is wrong. *First*, federalism is not, historically, a deliberate decentralization starting from a centralized state: it is, on the contrary, a process of concentrating power by uniting previously independent and sovereign or almost sovereign states or provinces. *Second*, sovereign power is not limited and restrained by dividing it among states and national government: in some federations all the powers of government are, in fact, assigned to one or the other authority. What struck Acton was the experience of the United States: and he observed it at a time when she had not yet reached the point of heavy social and economic activity by states and federal government (he goes back to before *Munn v. Illinois*, 1877!). And, even more important, he seems not to have noticed that what re-

<sup>82</sup> E.g., Acton, *Essays on Freedom and Power* (Boston, 1948), p. 163.

<sup>84</sup> Cf. *Road to Serfdom* (Chicago, 1945), p. 219 ff.

<sup>82</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), Chap. V.

strained American government most was the interpretation of the Bill of Rights and the due-process clauses in both state and federal governments. It is the constitutional limitations, the prohibitions on certain activities by any government, that offers the minority and the individual the guarantees Acton considers to be essential to liberalism. Indeed, some federations have been absolutist: like the German *Reich*, from 1871 to 1918. We hardly care to adduce the Soviet *Union*!

The most that can be said is that if we omit the truly tempering effect of the Bill of Rights (which prohibits governmental power, reserving action, and therefore, if necessary, coercion, to the people) then

the distribution of powers, federally, is an obstruction to government, but it is not a really serious obstruction.<sup>85</sup> It is a guarantee of inefficient and expensive government rather than a guarantee of liberal government. Liberalism and responsibility are to be sought in other devices. It should not be forgotten that Acton was so intemperate about liberalism that, as a young man, he was prepared to condone the continuation of slavery in the Southern states rather than have the United States united by the compulsion of the North.<sup>86</sup> Nor was he anxious to see the disintegration of the Austro-Hungarian Empire to make way for the national self-determination of its subject peoples.

---

<sup>85</sup> On this general theme see Roscoe Pound, C. H. McIlwain, and R. F. Nichols, *Federalism as a Democratic Process* (Rutgers, 1942).

<sup>86</sup> Acton, *op. cit.*

## Federalism—Germany, 1918-39

THE development of German federalism from the *Reich* of 1871 to that of Weimar in 1919, and beyond, to the Nazi unification, exhibits features so different from other federal systems that the problems and answers must be reviewed. Nor can it be ignored that the problems have yet to be answered, since a post-World War II Germany will be reborn, on foundations still quite stubborn.

### THE FOUNDING OF THE WEIMAR REPUBLIC

COMPARISON between the German empire of 1871 and that of 1919 reveals tremendous differences in spirit and organization.

*Political Background.* Revolution caused the old powers to break down in November, 1918. The vital force of the union, Prussia's military prestige, had been destroyed by defeat. Democracy and socialism destroyed the dynasties. There was a momentary cry of "Free from Berlin," and murmurs for a South German republic. But the very forces which overthrew the old system established a new one—the unity of political parties across state boundaries. The Majority Socialists, Independent Socialists, Spartacists, Democrats, and Center were centralizers, in virtue of their social and economic aspirations. A torrent of projects for a new constitution poured forth, all centralizing.

The Council of People's Commissaries in Berlin had, from the first, extended its hand over the whole of Germany, in the

name of the "German Socialistic Republic."<sup>1</sup> The states complained, and were invited to send delegates to Berlin, where the most generous devotion to German unity was expressed.<sup>2</sup> The central authority, however, had been warned that it could not go too far. The calling of a National Assembly required that the People's Commissaries should at once proceed to draft a constitution. For this purpose they made Hugo Preuss Minister of the Interior.

As a liberal and a professor of both constitutional and administrative law in centralist Berlin, Preuss had special qualifications. A democrat by temperament and by conviction, he was devoid of sympathy either for the princes or for the hegemony of Prussia. A zealous advocate of a more integrated Germany, his principles really became the new constitution.

*Toward a Unitary State.* The constitution of August 11, 1919, was strongly unitary. What were its dynamic forces? One was the abdication of the dynasties. Suddenly, forces which had for generations

<sup>1</sup> Proclamation of November 12, 1918 and announcement of November 23, 1918. Cf. F. Purlitz, *Deutscher Geschichtskalender (Die Deutsche Revolution)*, I, Berlin, November 1918—February 1919, pp. 48-49 for the proclamation.

<sup>2</sup> "The maintenance of the Unity of Germany is an urgent necessity. All German races stand united in the German Republic. They promise to work resolutely for the unity of the Reich and against separatist attempts."—November 25, 1918. Cf. Purlitz, *op. cit.*, Vol. I, p. 58 ff.

successfully acted as a drag upon unity disappeared, especially in Prussia. Further, Germany had attained a high degree of legislative and administrative unity during World War I. The process of integration had shown those who operated it that a great deal of former particularism was wanton waste. Moreover, the war period had not ended for Germany in 1918 or 1919: and the pressure for economy was immense. Therefore, that which appeared desirable in easier days to a rich people ceased to be worth its cost. Again, the National Assembly which made the constitution was elected by the whole people as an aggregate. There was no participation of the states as formal entities, but the *Reich* was divided into a number of constituencies with mere geographical significance. Quite expressly, it was as a collection of individuals uniting for the performance of a solemn political act, and not as states, that the people were asked to vote—at least by the vast majority of candidates. Social policy and democratic institutions were put into the foreground; greater unity seemed to be taken for granted. The National Assembly was the final authority: neither a body representing the states, nor ratification by the states, was to give validity to its work. (We show later how far the states *qua* states were consulted in the preparation of the constitution.) All these factors contributed to centralize the constitution. Yet one other element was quite as important as all of these put together: the position of Prussia.

*Prussia's Position.* Prussia had made herself master of Germany, but her mastership was not unchallenged. In particular, Bavaria's jealousy had never been stilled; nor were the states which had been absorbed by her—Silesia, Hanover, the Rhineland districts—quite happy within her conservative grip. Since 1917 the problem of Germany's future had become very largely the problem of Prussia's future, for a *Reichstag* with large, liberal and socialist elements in it accorded badly with a Prussian *Landtag* heavily conservative, and the whole *Reich* was vitally interested in the outcome of the problem

of Prussian electoral reform. For Prussia in 1914 constituted over three fifths of the total German territory and contained more than two fifths of its population. What was to be done with this great state? If the old system had continued, either Prussia or the *Reich* must have become increasingly dissatisfied. It was already within Prussia's administrative power to modify almost as she wished the effect of federal laws. Her position as the central war-making state had caused the exacerbation of separatist feeling, since all ills seemed to come from Berlin. Bavaria complained of "*Berlinerei*," that is Berlin's clumsiness, inefficiency, and favoritism. The parts of Prussia began to shake the framework which contained them—not unaided by Allied propaganda. In the Rhineland and Westphalia, it was pretended that the disturbances at Berlin entitled them to form a separate state, and the bourgeoisie, the industrialists, and the Catholic Church saw great benefits in "freedom from Berlin." Both the Prussian and the *Reich* governments took a strong stand against such disruptive movements.

There was no doubt that something must be done in a new constitution to reduce the actual predominance of Prussia, even beyond the creation of a democratic basis which was to be common to the whole *Reich*. These separatist movements and the antagonism to Prussia gave Preusz his opportunity. Should the domestic institutions of Prussia be assimilated to those of the rest of Germany, her internal organization decentralized, then her own separatism was reducible and the unification of the *Reich* promoted. All the signs favored such a development.

The result of all the constitutional discussions and projects between November 9, 1918, and August 11, 1919, was the creation of a federal state of such a high degree of unity that constitutional lawyers and political scientists have found difficulty in giving it a satisfactory name. It was variously called.<sup>3</sup>

<sup>3</sup> Cf. the various commentaries to be referred to in future footnotes: Hans Nawiasky, *Der Bundesstaat als Rechtsbegriff* (Tübingen,

*Original Published Draft.* The original published draft of January 20, 1919, was completely saturated with unitarism. Preusz wanted the new German republic to be an entirely unitary popular state, founded on "the national self-consciousness of a self-organized people." Replacing the undemocratic dynastic divisions, local government would still be permitted to the states, allowing for some separatist spirit as part of the German political character.

Yet one state had far too much independence and weight: Prussia, with forty million out of a total of some seventy million people in all Germany. Her new destiny was to be fulfilled as somehow merged in the greater German nation which would stand above all the states. Preusz's original project provided for the division of Prussia into eight separate states, the others in the federation being consolidated to form eight additional states, regardless of traditional boundaries, to suit modern economic and administrative needs.

*Separatism Cries, "Halt!"* The draft evoked an indignant outcry. The temporary socialist rulers of Bavaria were anxious to make use of the widest possible powers for the realization of their social policies, while the bourgeoisie desired separate and more favored treatment of Bavaria at the peace conference. What became of increasing importance in the later tensions in the *Reich* was that the nonsocialistic Bavarians created the Bavarian People's Party to secure the economic and financial independence of their state. Baden and Saxony resented central direction, especially since this was carried out by radical elements in Berlin. A violent storm was unleashed against territorial reorganization. The states all highly approved of centralization—but none wished its own borders to be altered. Prussia, of course, having most to lose,

was most reluctant. Therefore article 18, allowing area reorganization, was very considerably weakened, though not entirely emasculated.

The anti-unitarists also defeated Preusz's scheme for representing the states in a second chamber by representatives selected by the state legislatures, and secured, instead, selection by the state governments. The solution rejected would have tended to emphasize the peoples rather than the states as single-minded entities. In the *Reichsrat* the larger states attempted to maintain the proportionate strength they had enjoyed in the *Bundesrat*, but their defeat enhanced the feeling that the united Germans now counted for more than the states in forming the will of the *Reich*. Anschütz and Poetzsch, two of the foremost constitutional jurists, believed that "The victory of the idea of Unity over the territorial supremacy of the member states is patent."<sup>4</sup> We shall later see that the nazi régime found this altogether inadequate for its purposes.

It is now appropriate to analyze the federal institutions, and we shall do this in two phases, giving most attention to the Weimar Republic, then passing to the changes introduced by the nazi government. The subject is then concluded by a short consideration of the future.

#### THE WEIMAR REPUBLIC'S FEDERALISM

*The Presidency.* Instead of the Presidency being hereditarily vested in the Prussian dynasty, as between 1871 and 1918, it became, like the American, elective. This was a heavy blow at the moral and political authority of Prussia in the federation. Nor was the *Reich* Chancellor any longer the appointee of the President, but the creature of the popularly elected *Reichstag*, a body which took over the sovereign position hitherto occupied by the *Bundesrat*, the assembly of the states.<sup>5</sup> Prussia, then, though still a mighty state in the federation, found the former unity between her government and that of the *Reich*, in policy and administration,

<sup>4</sup> G. Anschütz, *Die Verfassung* (Berlin, 1931), p. 205.

<sup>5</sup> Cf. Chapters 23-26 on the executive.

1920); G. Anschütz and C. Biffinger, *et al.*, in *Bericht, Vereinigung der deutschen Staatsrechtslehrer* (Berlin, April, 1924); F. Fleiner, J. Lukas, *et al.*, *ibid.* (April, 1929); and literature in *Handbuch des deutschen Staatsrechts*, Vol. I, ed. by G. Anschütz and R. Thoma (Tübingen, 1930).

sharply disrupted. This was a grave matter, for one political majority governed the *Reich* and a different one Prussia, in accordance with the changing fortunes at frequent elections, and in between them, the changing composition of the short-lived cabinets.

Since the Chancellorship and the Presidency were elective, it later became possible for Hitler, an Austrian, to attain those positions, for it was not stipulated that the candidate must be German born.

*Legislative Powers.* The special rights of some states (for example, postal affairs in Bavaria) were abolished. Such special rights had been necessary to secure their adhesion to the *Reich*, a situation unknown to federalism in the United States and elsewhere. All states were now equal in legislative power: Lippe with fifty thousand population or Prussia with forty million. The jurisprudence of the old constitution held that the *Reich* possessed only the powers expressly and indubitably transferred to it, while all else belonged to the states. The same rule was continued. Where the verbal grant of power reasonably entailed other consequential powers, the authority of the *Reich* was by so much increased, rather like the broad construction of the powers of the United States Congress and President, although the *Reich* constitution contained no "necessary and proper" clause.

The direct competence of the *Reich* was immensely extended, until the independent legislative activity of the states was almost entirely at its mercy—legally. *First*, both the *Reich* and the states were subject to the fundamental rights of the second part of the constitution, and many of these were fulfilled by federal law: for example, administrative jurisdiction, the law of property, and so on. *Secondly*, the *Reich* received powers of two kinds, exclusive and concurrent (so different from the distribution of powers in other federations, where a clean cut between exclusive federal or state is established)—and both make lists of formidable scope.<sup>6</sup> The lists

were so intricate that, especially through the concurrent powers, there was less clarity of distinction between federal and state functions than in any other constitution. The concurrent powers were exercisable by the *Reich* at its discretion: until then, state law was valid; but when the *Reich* legislated, state law on the subject was subordinate and had to be consonant. The exclusive and the concurrent together gave the *Reich* full authority over the whole economic life of the nation, to an extent far beyond the permissions and stultifications of the United States and other federal constitutions.<sup>7</sup>

The concurrent power to legislate fell into two classes: free and conditional. In

domicile, immigration, emigration, and extradition; military organization; the monetary system; the customs department, as well as uniformity in the sphere of customs and trade, and freedom of commercial intercourse; the postal and telegraph services, including the telephone service."

By article 7: "The federal government has legislative power as regards: civic rights; penal power, judicial procedure, including the carrying out of sentences, as well as official co-operation between authorities; the passport office and the police supervision of foreigners; the poor-law system and the provision for travelers; the press, trades-unions and the right of assembly; the population question, and the care of motherhood, infants, children, and young persons; the health and veterinary departments, and the protection of plants against disease and damage from pests; labor laws, the insurance and protection of the workers and employees, together with labor bureaus; the organization of competent representation for the federal territory; the care of all who took part in the war, and of their dependents; the law of expropriation; the formation of associations for dealing with natural resources and economic undertakings, as well as the production, preparation, distribution and determination of prices of economic commodities for common use: commerce, the system of weights and measures, the issue of paper money, banking affairs and the system of exchange; traffic in foodstuffs and luxuries, as well as articles of daily necessity; industry and mining; insurance matters; navigation, deep sea and coastal fishery; railroads, inland waterways, motor traffic by land, water and air, as well as the construction of highways, so far as this is concerned with general traffic and home defense; theaters and cinemas."

<sup>6</sup> By article 6: "The federal government has sole legislative power as regards: foreign relations; colonial affairs, nationality, right of

<sup>7</sup> Cf. A. W. MacMahon, "Taking Stock of Federalism in the U.S.A.," *Canadian Journal of Economics and Political Science*, May, 1941.

## THE WEIMAR REPUBLIC'S FEDERALISM

the first class were the powers enumerated in article 7, in which the *Reich* was free to legislate as it wished, and as it could, given the political conditions. In the conditional set of powers, in articles 9 and 10, the *Reich* was limited: in article 9 by the terms, "where there is need for the issue of uniform regulations the *Reich* has legislative power as regards the promotion of social welfare and the maintenance of public order and safety," and more particularly in article 10, where the *Reich* was given the power (unknown in other federations) to establish by law "general rules" (*Grundsätze*) on a certain number of subjects.<sup>8</sup>

Now, whether the *Reich* used its powers properly or not, as permitted by article 9, was not reviewable in any court of law.<sup>9</sup> These powers were very far-reaching indeed, and they were put into the constitution as the nearest possible compensation for not allowing the expansion of federal competence except by constitutional amendment. Soon, German financial difficulties—arising out of the need to pay World War I reparations out of the economic depression commencing in 1929—compelled the heavy use of all central legislative power to impose economy, to raise revenue, to regulate the conduct of state and municipal governments, and to unify the close control of industry, commerce, and agriculture.

The constitution further provided the *Reich* with a special veto over state "laws regarding the socialization (*Vergesellschaftung*) of natural resources and economic undertakings and the production, preparation, distribution, and price fixing of economic commodities for the commu-

nity's use" so long as the welfare of the community was affected.<sup>10</sup>

The hand of the *Reich* was everywhere, and this in the more fundamental of state activities. Economically, culturally, in her representative and administrative institutions, in the foundations of the educational system, in the matter of general civic rights, Germany was one, or far on the way to becoming one; and the battle provoked by the division of powers was, in theory, between the conception of the *Reich* as a federation and the *Reich* as a unitary state with decentralization to regions.

Doubts or disputes whether a regulation under state law was compatible with *Reich* law were decided by the Supreme Court of State at the suit of the competent *Reich* or state central department. This was very different from the situation under the imperial constitution, since no court was then entrusted with a direct decision on the compatibility of state with federal legislation; the ordinary courts determined this indirectly as an incident of a challenge to the validity of a rule. Under the Weimar Republic there was a direct challenge and a special court.

Nevertheless, the high degree of centralization of legislative power was, even by pro-monarchical, anti-socialistic, Catholic, and anti-Prussian Bavaria, generally acknowledged as nationally valuable. But what was desired was less administrative confusion, and the dissolution of Prussia. The existence of a different political party alignment in the whole *Reich* from that in Prussia caused frequent inconsistencies between the laws made for the seventy million of Germany and those made for the forty million of Prussia.

Whereas, before 1919, Prussia was more conservative than the *Reich* and Bavaria (because the three-class system of voting and the out-of-date apportionment of seats threw political power to East Prussia), afterwards, with modernized repre-

<sup>8</sup> Article 10 includes: the rights and duties of religious societies; public instruction, including universities, and the department of scientific literature; the rights of the officials of all public corporations; the land laws, the distribution of land, questions regarding colonization settlements, the tenure of landed property, the housing question and the distribution of the population; questions regarding burial.

<sup>9</sup> Cf. Anschütz, *op. cit.*, on article 9; H. Triepel, *Streitigkeiten zwischen Reich und Ländern* (Berlin, 1923), p. 100; G. Lassar, *Handbuch des deutschen Staatsrechts* (1930), Vol. I, p. 307.

<sup>10</sup> K. C. Wheare, in *Federal Government* (New York, 1946) disqualifies the Weimar Republic as a federation because of the immense power wielded by the *Reich* over the states. He adduces as excessively strong the highly centralized financial powers.

sentation, she was distinctly more "liberal" and a striking contrast to Bavaria. The operation of parliamentary government in the medium and smallest states was very costly and brought popular government into ridicule through party tactics and instability of the executives. This was not only a legislative fault, but a serious administrative demerit for the state itself, and, as shown later, for the whole *Reich*.

*Administrative Competence.* Nothing like the clarity of the American and the British Dominion systems prevailed in the division of administrative authority. Whereas these use the "vertical" method—that is, they authorize the federal government itself to administer what it legislates—Germany used the "horizontal" method—that is, in general it permitted the states to administer *Reich* laws as well as their own. This method was a relic of state sovereignty, and had been a necessary condition of the *Reich* of 1871.

The articles which governed the power of the *Reich* to carry out its own laws were principally articles 14, 15, 16, and 77; and they attempted to combine federal strength with considerable flexibility, necessitated by the force of separatist sentiment and consecrated by the law and habits of the constitution of the German Empire. Let us consider the first three articles: They say that federal statutes shall be carried into execution by the state authorities, unless these same statutes decree otherwise, but that the federal government superintends the affairs which derive from its legislative power. It should be noted that under the imperial constitution, the power of superintendence where no law had been passed was disputed; but jurists held that the history of the Weimar article proved clearly that the *Reich* might superintend anything within its competence whether it had legislated or not.<sup>11</sup> Everything, of course, turned upon the machinery of superintendence ascribed to the *Reich*. This is roughly indicated in article 15.<sup>12</sup>

<sup>11</sup> Cf. H. Triepel, *op cit.*, p. 58; Anschütz, *op. cit.*, p. 74.

<sup>12</sup> Article 15 of the constitution.

Quite a different system had replaced the previous methods of Kaiser and *Bundesrat*. Instead of disputes, as then, being arbitrated before the state-ridden *Bundesrat*, where the *Reich* accused a state of administrative default, administrative control was now to be exercised by the *Reich* cabinet operating through the departments and then inspectors, and disputes were settled not by a body like the *Bundesrat*, founded to maintain state independence, but by a law court appointable mainly by the central authority. How far this method of superintendence would be more effective than the old depended upon two things: the personal nature of the court to settle disputes and the extent to which the *Reich* had the power of direct contact with the inferior departments. The court granted the *Reich* the power to issue general instructions to state officials administering federal laws; sanctioned the dispatch of commissioners to state central departments and with the consent of state officials, to subdivisions of the state; and laid it down that whenever the central government desired changes in state administrative procedure concerning *Reich* legislation, the states must accede to its wishes. In the case of conflicting judgments, either *Reich* or state could refer to the Supreme Court for a decision.

Practice developed in three directions: the inclusion of detailed rules in various *Reich* statutes, the appointment of commissioners, and the establishment of authorities regularly to cooperate with and superintend the state departments. The financial laws, the civil service laws, the laws on unemployment exchanges, and others, laid down general rules within which the state governments must act, or fixed upon some special authority (like the *Reichsrat* or a special arbitration court) for the settlement of certain quasi-legislative matters like municipal loans or civil servants' salaries, or they associated the *Reich* departments directly with the state departments in the administration of certain subjects (e.g., in the case of social welfare) or required regular information from the states. The appointment of commissioners to inspect state admin-

istration was rare and occurred only on exceptional occasions when civil disturbances occurred in a state, or when, as in Saxony in 1924, complaints were made about the administration of unemployment relief—but even this was due rather to a dispute on the interpretation of the statute than to incompetent execution. The *Reich* directly superintended many things (e.g., electricity, railways, canals), and, in the case of the regulation of the labor market and unemployment insurance and factory legislation, the entire administration went over to the *Reich*.

The administrative power of the *Reich*, in short, seems to have been exercised, either in the way, well known under the imperial constitution, of applications to the state government, or of the judicial settlement of disputes by certain courts, or the entire assumption of administrative power by the *Reich*. The judicial settlement of disputes (article 13, par. 2) operated through a special branch of the *Reichsgericht*,<sup>12</sup> and through the *Reichsfinanzhof* in twenty-three cases by 1931.

The power to assume detailed administrative responsibility was given to the *Reichstag* by article 77:

The general administrative rules needed to execute the *Reich* statutes were made by the *Reich* Government, unless the law otherwise determined. The *Reich* Government needed the assent of the *Reichsrat*, if the execution of *Reich* statutes belonged to the State authorities.

This power of the *Reich* was used for the creation or extension of *Reich* departments with their own local organization, as in social welfare, the coal commission, disarmament, the potato, wheat, and sugar departments, the labor exchange department, the juvenile welfare bureau, and the emigration department. Various of the activities of the Ministry for Economic Affairs and Ministry of Labor ramified through the federation in the same way. The administrative rules poured fast and furious from these departments.

All this was, of course, encouraged by the obvious necessities of each particular subject of administration for which large-scale organization and uniformity were essential. It was required by national financial stringency, and was enforced by the financial supremacy of the central government and its control over certain funds like those for the promotion of education.<sup>14</sup> The depression and its attendant problem of unemployment resulted in much closer ties between the state and the municipal governments and the *Reich*, particularly with regard to municipal finance. Partially because of the lack of constitutional ground on which to base this local control (which fell within state jurisdiction), Chancellor Brüning was forced to utilize article 48 (cf. Chap. 25 below), whereby under emergency conditions, civil rights could be suspended and government decrees enforced. The decrees, in this case, provided for control over local real estate taxes and municipal and state expenditures.

This, however, does not completely describe the extent to which the administrative power of the center increased. A number of subjects came directly and completely under the *Reich*. These were foreign affairs, railroads and posts, telegraphs, customs, cartel control, supervision of private insurance, and control of the potash and coal industries. Thus the distribution of administrative powers was very complicated, the location of administrative responsibility being in most cases (excepting for foreign affairs) not determinable without close inspection of the various *Reich* laws relating to the subject and the combination of powers given to the *Reich* by the constitution. This complexity was increased by two further principles: (1) that which permitted the states, by statute, to transfer to the *Reich* administrative competence over powers within their own field, and (2) article 16, which required that "officials entrusted with the direct

<sup>12</sup> Cf. *Reichsgesetzblatt*, 1920, p. 510, *Gesetz zur Ausführung des art. 13, abs. der Verfassung* (April 8, 1920).

<sup>14</sup> Cf. Hans Nawiasky, *Grundprobleme der Reichsverfassung* (Berlin, 1925); G. Lassar, *Reichseigene Verwaltung unter der Weimarer Verfassung*, *Jahrbuch des Öffentlichen Rechts*, Vol. XIV (1926).

*Reich* administration in the states shall be as a rule citizens of these states." <sup>18</sup> The matter was even further complicated by the statutory devolution of administrative powers to the *Reichsrat*, which is discussed presently.

German judgment of this administrative system was almost universally adverse. *First*, for the public generally, its complexity baffled the understanding and thwarted the allocation of responsibility. *Second*—more technically—though the vast centralization of legislative power (especially over the economy) saved the nation from the wastes and frustrations of the division of power prevailing between Washington and the forty-eight states in the United States, Germany still suffered from the administrative incompetence of the smaller states, while the many boundaries caused much geographic and bureaucratic stultification of rational administration of economic affairs. The states could have cooperated by agreements, but with small exceptions they did not. The enormous differences in area, the tortuous lines, the enclaves, resulted in the reverse of equal, manageable, economic regions.

*Third*, the *Reich* supplied the states with the cost of administration, in part directly, in part through a share in the income taxes levied by the *Reich*. This arrangement divorced responsibility for economical and efficient management from the disciplinary burden of raising funds. *Fourth*, the assumption of large administrative powers by the *Reich*, according to its constitutional rights—including even some concern for police, education, and the details of social assistance—alienated all the state administrative personnel as well as political personnel, above all in Prussia and Bavaria. But ill-feeling was not the only administrative sickness. Two authorities operated in each state. Especially obnoxious was this in Prussia: it involved an almost complete duplication of investigation and research, as well as actual operation in each. A *Reich* civil service paralleled a Prussian

civil service. Private interests, the public services, and local government units, interested in obstruction, found their abundant opportunity in the proliferation of authorities, which made easy the hiding of information and responsibility. There was no single career throughout the *Reich* for officials—transfer from state to state and to *Reich* was practically impossible owing to specialization in the particular laws and customs and administrative labyrinths.

*Finally*, the strength of particularist traditional feeling was revived and even more intensified by more modern political conflicts. Bavaria, which had gone anti-socialist and antiliberal, was not prepared to submit to police action by the *Reich* when she was the incubator of antidemocratic forces, like Hitler's, preparing to overturn the Weimar constitution. She succeeded in securing an agreement that she would not be policed by the *Reich*. But Saxony, democratic, was disciplined by a momentarily hostile *Reich* Government; and Prussia, too, was in the end overborne by a dictatorial *Reich*.

It was clear that some day a cleaner, neater, simpler, better-ventilated administrative adjustment between *Reich* and states must be sought. This theme is resumed at the end of the chapter.

*The Administration of Justice.* In the distribution of judicial powers, the Weimar constitution (section VII, and articles 102 to 108) made little advance upon the imperial constitution. A weak attempt to take over completely the judicial powers of the ordinary courts was heavily defeated by the representatives of all states; and article 103, that "the ordinary administration of justice is exercised by the *Reich* Supreme Court and the courts of the states," was intended to continue the old system—i.e., the law courts were state courts, although their procedure was settled by *Reich* statutes and *Reich* law was so large a part of their subject-matter.

Two novelties appeared. *First*, the establishment by the constitution (article 107) of the administrative courts:

In the *Reich* the states administrative courts must be established, as regulated by law, for

<sup>18</sup> Cf. Lassar, *op. cit.*

the protection of the citizen against regulations and decrees of the administrative authorities.

The significance of this article is explained in Chapter 36.

The second was article 108: "A Court of State (*Staatsgerichtshof*) shall be established by a *Reich* statute." This was a tribunal for the trial of constitutional issues of the first rank, these being:

(1) Impeachment by the *Reichstag* of the *Reich* President, the Imperial Chancellor, and *Reich* ministers for criminal violation of the constitution or statutes of the *Reich*. This follows from article 50 of the constitution, according to which the resolution for impeachment must be moved by at least a hundred members, and needs the assent of a majority as for a constitutional amendment, that is, a two-thirds majority in a quorum of two thirds of the members of the *Reichstag*; also similar impeachments in the states if they declare the court competent by statute.

(2) Differences of opinion regarding maladministration of *Reich* statutes by the states, suit being made by either *Reich* or state government, provided no other court is designated for the purpose by the statute. (This from article 15 of the constitution.)

(3) Disputes regarding property in cases arising out of territorial reorganization of the states (article 18, clause 7).

(4) Constitutional conflicts within a state in which no court exists for their settlement;<sup>16</sup> also conflicts of a nonprivate nature between states or between the *Reich* and a state (article 19).

(5) The rights of the *Reich* in disputes about its powers of expropriation and its authority regarding the railroad system; the conditions of transfer of the post and telegraph system, the state railways, canals and *seerzichen*, from the states which possessed them hitherto (articles 90, 170, and 171); and differences of opinion arising

out of the treaties relating to the transfer of these and similar institutions.

The constitutional article, 108, was followed by the law relating to the Court of State of July, 1921, which embodied the list of powers we have already indicated, and dealt with the composition of the Court for various classes of cases.

According as the Court applied itself to one or the other of its subjects, it included matters which were predominantly of parliamentary importance, and others the nature of which suggests their classification within a court of administrative law. Hence it was planned that this constitutional tribunal be part of the regular Supreme Court for such a purpose as impeachment; however, the connection remained theoretical, since impeachment proceedings were never initiated. In composition the constitutional tribunal could not but reflect the attitude of the Supreme Court, since the president of the latter served ex-officio as its chairman and since three of its associate justices were appointed from the Supreme Court. (The remaining three came from the supreme administrative courts of Prussia, Bavaria, and Saxony.)

The power of the Court to settle disputes between federation and states was an interesting and important innovation. Under the imperial constitution, the states were sometimes informally judged by the *Reich* without appeal to a properly constituted court of justice, or the *Reich* was successfully defied since appeal to the *Bundesrat* was an appeal to a political body the members of which had a personal interest in the result. The character of the new federation made such a method impossible. A central authority to guard the spirit of the constitution was imposed by the facts of the situation.

In this court, the constitution added to its statesmen in parliament and the cabinet one more group entrusted with high decisions which, though couched in judicial form, were indubitably superlegislative. This function was not exercisable by the roundabout method of judicial review as in the Supreme Court of the

<sup>16</sup> These were not disputes arising merely out of any violation of the constitution but only conflicts between Parliament and government. Cf. Lammers, *Gesetz über den Staatsgerichtshof*, p. 73, note 7.

United States, but by the direct claim of state upon *Reich* or *Reich* upon state.

One case of outstanding importance was settled by the Court. In October, 1932, it declared unconstitutional the action of Federal Chancellor Franz von Papen, in dismissing the Prussian government, and replacing its cabinet by himself and other federal commissioners. The *coup* had been undertaken in virtue of article 48 (see Chap. 25 below), ostensibly to restore order and safety in Prussia, which had for some time been in a state of uproar through Nazi and anti-Nazi rioting. Substantially the same issue arose when Hitler, on February 6, 1933, repeated von Papen's tactics. But this time the Court could not hear the Prussian challenge before Hitler's revolution swept away all constitutionality and scattered or killed the challengers.<sup>17</sup>

(In the Soviet constitution of 1936, which purports to be federal, no court guards the distribution of powers. Instead, the Praesidium, a body of thirty-seven members elected by the Supreme Council of the U.S.S.R., watches over the consonance of "state" administration with the superior authority of the Union. But if the constitution is federal, the Communist party is unitary, and that is quite enough to prevent disputes from occurring.)

*Representation of the States.* Here, more sharply than ever, the Weimar constitution diverged from the American and other federal systems, in its differential representation of the states. The tendencies towards unitarism were strong, but not strong enough entirely to overcome the demands for a body especially to represent the states and to obtain for them a power to influence the creation of federal policy. The reporter of the draft sent by the constitutional committee (in which mighty battles had been fought) to the full assembly said: <sup>18</sup>

The Committee has accepted the constitution of the *Reichsrat* to maintain the organic connection of the *Reich* with the individual states, and thus it has expressed the sense of

historical evolution and the living necessities of the Federation. This *Reichsrat* is, however, not intended to be either a first or a second chamber, or a parliament or a house of states,<sup>19</sup> but a body to represent the German states in the legislation and administration of the *Reich*. The *Reichsrat*—recognized by all parties of the National Assembly as a necessary and useful organ—is at once an institution of the *Reich* as well as an organ of the totality of states with a constitutionally complete double status.

Before we turn to consider the composition and power of this body, a few words may be said in general about its political position in comparison with the *Bundesrat* under the imperial constitution.

(1) Though strong, it was distinctly inferior to the *Reichstag*—which emanated from popular election over the whole territory of the *Reich*—in political authority and constitutional power. The centers of importance lay in the government and the *Reichstag*, whose confidence was necessary to the former's existence. Under the imperial system the *Bundesrat* was predominant, even sovereign. Its legal and political status was far weaker than that of the powerful United States Senate, but politically it was much stronger than the weak Canadian and Australian Senates.

(2) The *Reichsrat* was no longer the center of the activity of an imperial chancellor working without substantial responsibility to anyone but the emperor, but it was dominated by the government, which, again, was a creature of the *Reichstag*.

(3) It had not the wide power to issue administrative rules and to arbitrate in disputes between the *Reich* and the states.

(4) It was not the representative of monarchs and princes but of governments (in the states) popularly supported and controlled.

Very clearly it mirrored the pronounced rise of unitarism; and its character was perhaps best expressed by the dictum that it was a body representing the states attached to the Federation for federal purposes and not at all an organization of the states for state purposes.<sup>20</sup>

## THE WEIMAR REPUBLIC'S FEDERALISM

*Composition.* Article 61 of the Weimar constitution said:

In the *Reichsrat* every state has at least one vote. The larger states have one vote for each 700,000 inhabitants. A surplus of at least 350,000 inhabitants is taken as equivalent to 700,000. No country may be represented by more than two fifths of all the votes. . . . The distribution of votes is regulated by the *Reichsrat* after every general census.

Until March, 1921, this article read:

The larger states . . . have one vote per million inhabitants. A surplus which at least equals the population of the smallest state is taken as equivalent to a full million.

against the federation and the varied dignity of each state, the new order made population a developing factor, the basis of present and future representation. The full significance of this is comprehensible only in the light of the fact that large territorial reforms were envisaged, and that a movement for such reforms was expected to take progressive effect. The representation and the population in 1933, given in Table I, also serve to show how petty were some of the states—which had all of the form and panoply of full-blown republican states. Prussia, which before 1919 had had three fifths, afterwards had only two fifths, of the total representation.

TABLE I—WEIMAR GERMANY: REPRESENTATION OF THE STATES IN THE REICHSRAT, AND POPULATION

<i>State</i>	<i>Total Population</i>	<i>Number of Votes</i>
Prussia	39,746,901	26
Bavaria	7,774,777	11
Saxony	5,196,652	7
Württemberg	2,696,324	4
Baden	2,412,951	3
Thuringen	1,659,510	2
Hessen	1,429,048	2
Hamburg	1,218,447	2
Mecklenburg-Schwerin	691,000	1
Oldenburg	573,853	1
Brunswick	512,989	1
Bremen	371,558	1
Anhalt	364,415	1
Lippe	175,538	1
Lübeck	136,392	1
Mecklenburg-Strelitz	114,000	1
Schaumburg-Lippe	49,355	1
<i>Total</i>	65,124,310	66

The amendment <sup>21</sup> was made in order to increase Prussia's votes so that the division of one half of them among her provinces would give them exactly one vote each. This we shall explain presently.

Preusz's attempt to group the smallest states and give them combined representation was foiled. The disputants slowly worked back to the graduation of the old system, except that instead of being a permanent arrangement, which stereotyped the results of the movement for and

The states were represented in the *Reichsrat* through members of their governments (whereas in the United States, Senators are elected at large) and could send as many representatives as they had votes.<sup>22</sup> Now, this closely followed the practice of the old *Bundesrat*, the delegates to which were chosen by the government of the states, though at that time the government consisted of forces not popularly controlled. Instead of popular election, which would have tended to weaken

<sup>21</sup> *Reichsgesetzblatt*, 440, March 24, 1921.

<sup>22</sup> Article 63.

the unity of state representation, the essential element in the previous situation was reproduced: the members of the *Reichsrat* were neither elected at large, like United States or Australian Senators, nor chosen by the members of the state legislatures, as in the United States before 1913, but, as before, they were directly appointed by the state governments. Although the article said that the states were represented by members of their governments, this meant only that ministers could be chosen, but it did not exclude representation by officials of the states, and, in fact, in most states the pressure of governmental affairs normally compelled the governments to designate high officials as state representatives.<sup>23</sup> But members of the governments spoke in the *Reichsrat* in support of their state's attitude on the more important occasions. There was still the flavor of ambassadorship about *Reichsrat* representation—the term *Hauptbevollmächtigter*, used to distinguish the “full plenipotentiary” from his deputies, and the title conferred upon these by many states, of “ambassador extraordinary” (*ausserordentlichen Gesandter*), supported the illusion.

Prussia. As a rule, then, all states cast their votes uniformly, although the constitution was silent on the subject. This arrangement, which conformed to the old practice, was, however, legally impossible for Prussia, for the constitution had attempted to serve the true cause of federation by disrupting the unity of this state. “However,” said the constitution (article 63), “one half of the Prussian votes are accorded to the Prussian provincial administrations according to Prussian statute.” The statute in question was passed in 1921.<sup>24</sup> Its main provisions were (1) that the thirteen representatives would each

be elected by a provincial committee (the ordinary executive committee of the largest Prussian local government division), and (2) that all German citizens over twenty-five were eligible. Thus there was no obvious control of the Prussian government over the choice of these representatives. Yet the law was not unmindful of the need to reknit what the constitution had severed. For the law said (article 8) that in the committees of the *Reichsrat* (and the committee work was exceedingly important), the vote of Prussia would be cast by a representative appointed by the ministry, although any of the elected members could require a preliminary discussion of the matter with the ministry. Further, in the plenary sessions the elected members had a free vote: “Yet the items on the agenda shall be discussed in common by the appointed and the elected members for the purpose of producing a uniform vote.” This was a clever device, and was certainly not in the spirit of the constitution; Prussia sought for every vestige of its lost inheritance. Yet Prussia was never certain that the thirteen provincial representatives would follow the wishes of the central authority; and, in fact, between March, 1922 and December, 1923, there were twenty-three important occasions when dissensions occurred,<sup>25</sup> and later similar events occurred in crucial matters, as for example, on the *Reich School Law* in 1927. At the end of the Weimar Republic, such divisions were particularly frequent, because of the vehemence of opposing parties in the western and the conservative eastern provinces of Prussia, and a German political cleavage at least as important as that between Northern and Southern Germany. This caused serious disquietude, for if thirteen votes were cast against fourteen, Prussia's influence upon the law in the *Reichsrat* was neutralized. This rarely happened, since some provincial representatives of the same party as the government voted with it; yet influence was

<sup>23</sup> Cf. Anschütz, *op. cit.*, p. 203; Hugo Preuss, *Bericht und Protokoll* (Constitutional Assembly, 1919), p. 152; R. R. Held, *Der Reichsrat*, p. 23.

<sup>24</sup> June 3, 1921. *Gesetzssammlung*, p. 379. Cf. Preussen und seine Provinzen in Reichsrat, by Fritz Hummel (Berlin, 1928), which is a very capable and painstaking study of the law and partly of the practice.

<sup>25</sup> Cf. H. Triefel, *Der Föderalismus und die Revision der Weimarer Reichsverfassung*, *Zeitschrift für Politik* (1924-25), XIV, 193 ff.

lost.<sup>28</sup> Prussia was, indeed, strait-jacketed, and only a constitutional amendment could release her. However, what Prussia could not achieve within the constitution she was in a fair way to obtain by direct influence upon the *Reich* government—for, after all, she was two thirds of the federation!—and by informal conferences with the states outside the *Reichsrat*, where the art of political reciprocity was carried to high, because necessary, levels. Prussia was still far more important than any other state.

*The Government Presides.* Prussia not only lost power by the arrangements we have sketched but she fell from authority because she no longer presided as of right over the *Reichsrat*. The power which she lost, however, redounded to no other of the states: the *Reichsrat*, was legally subordinated to the *Reichstag* and the *Reich* government, by the vesting of the presidency in the federal government, thus:

The *Reichsrat* and its committees are presided over by a member of the federal government. The members of the latter are entitled, and, if requested, are obliged, to take part in the proceedings of the *Reichsrat* and its committees. They must be heard upon their demand any time during debate.

Thus a regular and continuous reciprocal influence was made possible; the significance of this becomes the more apparent when we consider the power of the *Reichsrat*. The government had no voting power, but its representatives had con-

siderable authority in the conduct of proceedings. The government, as well as any member of the *Reichsrat*, could introduce proposals.

*The Rights of the Reichsrat.* (1) The *Reichsrat* had the power (article 66) to establish its own rules of procedure, and this it did in November, 1919.

(2) The *Reichsrat* had to be kept informed, by the *Reich* departments, of the conduct of *Reich* affairs. The competent committees of the *Reichsrat* had to be called into counsel regarding important matters by the departments.

(3) In marked contrast to the United States Senate, the *Reichsrat's* consent was required to administrative rules made by the government when the execution of *Reich* statutes was carried out by the state authorities. The *Reichsrat* was given certain administrative powers by various laws passed since 1919.

(4) The *Reichsrat* had the right to initiate legislation and to challenge the bills passed by the *Reichstag*, and was required to be consulted before government bills were introduced in the *Reichstag*.

A few words must be said on points 3 and 4. The *Reichsrat's* consent to administrative rules was restricted to the cases where the states carried out federal statutes, and since this, according to article 14, was the rule, a wide scope of actual power was vested in the *Reichsrat*. It compared, in fact, not unfavorably with the *Bundesrat's*, because the field of federal power was so increased. In this matter the power of the *Reichsrat* was absolute, because it was not a mere power to challenge as in the case of legislation. The only remedy the government possessed was to convert the rejected order into a law; but that had its own political difficulties. The power was extensively used. The constitution amplified the general rule by the enumeration of certain special spheres of administration in which the *Reichsrat's* cooperation was required in details: so (according to article 88) regarding postal, telegraphic, and telephonic communication and the charges therefore; so too in railroad and canal transport (articles 93 and 98).

<sup>28</sup> Hans Nawiasky, *op. cit.*, p. 40 ff. Cf. also Hummel (*op. cit.*, pp. 84-85) who shows that the same provinces voted in contradiction to the government votes to safeguard their own local economic interests (tariff law, distribution of product of beer duty, wheat-production regulation, and rent law) as well as on spiritual issues.

K. H. Schoppmeier, in *Der Einfluss Preussens auf die Gesetzgebung des Reiches* (Berlin, 1929), reports the following: Between June, 1921, and September, 1924, there were 2994 cases of division in the *Reichsrat*. Of these, there were 49 occasions when some Prussian provinces voted against their government. In 11 cases of the 2994, the Prussian government was in a minority. Of the 11 occasions, 4 would have occurred even with a united Prussian vote. In 7 cases, then, the division of the Prussian vote caused a defeat of that state.

The *Reichsrat* was found a convenient body in which to vest certain other administrative duties; it was made a decision-giving body in a large number of disputes regarding land registration between a state and the *Reich* Minister of Finance, regarding resolutions of the Brandy Monopoly Council and its advisory committee, regarding the likelihood of municipal taxation prejudicing the income and prospects of the *Reich*, and so on. The *Reichsrat* sent representatives to the advisory committee of the brandy monopoly, to the advisory council for the *Reich* Electricity Administration, to the Committee for the *Reich* Debt and to the *Reich* Insurance Office. It elected and nominated members of the *Reich* Health Council, the Court of State, and many other advisory and quasi-administrative, quasi-judicial councils.<sup>27</sup>

All these powers tended to increase the authority of the *Reichsrat* much above the level to which it fell by the discredit of the *Bundesrat* and all that it stood for. Yet these powers would not be enough to satisfy the demands of the states for special representation unless they were merely the frills of something far more important—which served to give them a strength they did not inherently possess—namely, legislative power, which was given by articles 68 and 72. The most important clause—that which settled the respective authority of *Reichstag* and *Reichsrat* and served the certain and permanent supremacy of the former—was: "Federal statutes are passed by the *Reichstag*." This is in strongest contrast to the former constitution in which the *Bundesrat* had the decisive authority; it is in strong contrast to almost every other bicameral system, whether in a federal or unitary state. By law the *Reichsrat* was definitely excluded from coequality with the *Reichstag*, and the unitary, not the federal organ, exercised legislative sovereignty. The only position left to the *Reichsrat* was then, a subsidiary one: to challenge, to provoke an appeal to the people, to warn and advise. Did the facts change the law?

"The Introduction of Government bills requires the assent of the *Reichsrat*. If an agreement between *Reich* Government and *Reichsrat* cannot be reached, then the government can, nevertheless, introduce its bill, but must represent the objections of the *Reichsrat*." This provision included financial legislation, although this interpretation was challenged by the government in February, 1927. Now this clause (article 69, par. 1) left loopholes through which a government could reduce the power of the *Reichsrat* to a minimum: (1) no time was prescribed in the constitution during which the bill was to lie before the *Reichsrat*, and it could therefore be reduced to an impossible minimum; further, (2) the government could avoid the attentions of the *Reichsrat* altogether by getting a bill initiated by a private member of one of the coalition parties; and (3) its representation of the *Reichsrat*'s views could be perfunctory. In fact, the government gave the *Reichsrat* ample time and negotiated until it obtained the assent of the *Reichsrat*—for it was persuaded, almost forced, to this course by the fact that the states would be the executors of many of its policies, by the desire to secure an amicable evolution of the Federation, and by the coincidence of the party membership of some members of the *Reichsrat* with its own *Reichstag* supporters.

A survey of all the bills before the *Reichsrat* from 1920 to 1933 shows a very great activity as a result of which the government gave way in a good many cases, while in other cases it and the *Reichstag* overruled all objections. Space allows us no more than to say briefly that the disputes occurred regarding the substance of the laws, but even more upon the *Reich*-state division of powers. There is no doubt that this power of the *Reichsrat* was compelling and was in regular use, and also that it gave the states *as* states the opportunity to resist encroachments upon their freedom, and the establishment of new *Reich* services which they believed they could furnish at a cheaper cost themselves.

The *Reichsrat* had a right of initiative: "If the *Reichsrat* resolves a bill to which

<sup>27</sup> Fr. Poetzsch-Heffter, *Jahrbuch des Öffentlichen Rechts* (1925), p. 202.

the government does not consent, then the government must introduce the bill into the *Reichstag* and represent the opinion of the *Reichsrat*." This power did not extend to financial legislation; and though it provided the *Reichsrat* with the opportunity of airing its opinions and securing their representation in the *Reichstag*, that representation was not given to its own delegate, as in the case of the Federal Economic Council, but was left to the tender mercies of the government. It made very small use of the initiative, and of five cases (until the end of 1928) where the government disagreed, only two became law, one of which was amended by the government. This was not one of the strengths of the *Reichsrat*.

"The publication of a statute may be suspended for two months, if one third of the *Reichstag* demands it."<sup>28</sup> This was one of the preliminaries to a referendum for the protection of the minority. But "when statutes are declared urgent by the *Reichstag* and the *Reichsrat*," the *Reich* president might override the resolution for suspension and publish the statute. The reason for the inclusion of the *Reichsrat* here is obvious: so solemn an action as the suppression of a minority right must be undertaken with due deliberation, and a multitude of counsel. Article 72 was used in 1925, when the Devaluation Act was passed, a statute which engendered the bitterest controversy as it settled the value of contracts and property calculated in depreciated currency. Both houses agreed upon the urgency of the act.

We come to the final and strongest power of the *Reichsrat* (article 74):

The *Reichsrat* has the right to challenge a bill passed by the *Reichstag*. The challenge must be made within two weeks of the final division in the *Reichstag* to the Government, and must be supported by reasons within, at the latest, two further weeks. The law must be put before the *Reichstag* to be revoked. If, then, *Reichstag* and *Reichsrat* still cannot agree, the President of the *Reich* may within three months order a Referendum on the subjects of disagreement. If the President does not use this power, then the law counts as of no

effect. If the *Reichstag* by a two-thirds majority, votes against the challenge of the *Reichsrat*, then the President is obliged to order a referendum within three months on the bill as voted by the *Reichstag*.

Let us examine this piece by piece. (1) The *Reichsrat* amply used its power of challenge,<sup>29</sup> and in most cases the *Reichstag* conceded its claims. (2) If the *Reichstag* had not surrendered, its chances of victory against the *Reichsrat* would, politically, have depended upon a two-thirds resolution—to bring in the people to overcome the *Reichsrat*. But in a chamber composed of many groups, this was difficult to obtain: several governments, indeed, were in a minority; and moreover, the *Reichsrat* was not a nonpopular assembly against which the corporate fury of the *Reichstag* could be summoned. Nor is that all. No government is, except in the most abnormal case, anxious to invoke a poll of the people. This is bound to be managed by the parties, which would fall into government and opposition; and an unfavorable result would wreck the government. Nor may we forget that governments do not lightly undertake an electoral campaign, or, indeed, anything laborious, when in the midst of a legislative and administrative program with all its attendant parliamentary difficulties. All this redounded to the advantage of the *Reichsrat*. It could suspend the bill or force a referendum. (3) The President had power to decide whether a bill should be destroyed, that is, whether he should at once support the *Reichsrat* (which was an unlikely contingency) or refer to the people to settle the issue. Long before this decision had to be taken, we can be sure that the government would have arranged things, on the warning of the President, with the *Reichsrat*.

As regards the budget—ways and means and appropriations—the *Reichsrat* had

<sup>29</sup> Cf. Fr. Poetzsch-Heffter, articles in *Jahrbuch*, 1925 and 1929: twelve times between April, 1920, and May, 1927. Schoppmeier (*op. cit.*, p. 29) reports that in eight cases the *Reichsrat* won, and in only four cases was the necessary two-thirds majority obtained in the *Reichstag* to overcome the *Reichsrat*.

<sup>28</sup> Article 72.

the same powers as in ordinary bills, since the budget is an ordinary bill in the formal sense. Here, however, the *Reichsrat* could exercise a partial, but ultimate, veto, for article 85 of the constitution said that the *Reichstag* could not increase or create expenditure without the assent of the *Reichsrat*. Or it could act simply, as in nonfinancial legislation, according to article 74, and challenge the whole of the budget. If assent was refused to an appropriation, then the Finance Law was published by the President of the *Reich* without that appropriation. The refusal of the *Reichsrat* could be carried out as a challenge under article 74. Both these powers of the *Reichsrat* were used, but not in vital matters.

Thus, originating in unwilling concessions to state sentiment and in an atmosphere of suspicion, the *Reichsrat* was first endowed with paper powers, which looked small compared with those of the *Reichstag* and the government, but the evolution of actual forces made it a fairly strong body. Its personal composition of distinguished officials (often connected with the *Reich's* own body of servants), its permanent sessions in relation to swiftly changing governments, the practical impossibility of a two-thirds majority of the *Reichstag* against it, and the administrative powers of the states—all furnished it with unexpected power. It also gained credit as an organ for the conclusion of agreements between states. In no case did the *Reichstag* ever pass a constitutional amendment over the objections of the *Reichsrat*. But a number of ordinary statutes were passed over its objection—and no referendum was ever called to challenge the *Reichstag*. Yet there were voices which called for large changes. We shall indicate their argument presently.

*Finance.* The financial strengths and weaknesses of nations and states in a federal system are simultaneously the products and the instruments of the real division of authority. If the other institutions expressed the tendency to centralization in the German *Reich*, none was so potent as the financial relationship between the central authority and the states.

Here the impulse toward a completely unitary political system almost achieved its goal, and it borrowed extra importance from its fundamentality to all else. Under the imperial system, the *Reich* neither had nor needed large revenues, since its sphere of legislative and administrative power was severely limited, and, moreover, the states had contrived at once to make a large part of the *Reich's* revenues depend upon a system of state contributions, while they received contributions from the *Reich*. All that was altered: the Federation had a large and easily expandable competence, and the reparations problem and general impoverishment inescapably imposed financial unity. This was embodied in the constitution, which was made at a time when these considerations were most keenly felt, and in a number of laws established as necessity revealed itself fully.

The ruling articles of the constitution were 8 and 11. Following directly upon the grant of legislative powers, article 8 said:

Further, the *Reich* has legislative power over taxation and other revenues, in so far as they are claimed wholly or in part for its own purposes. If the *Reich* claims taxes or other revenues which hitherto belonged to the states, then it must take into consideration the maintenance of the significance of the states.

Article 11 said:

The *Reich* can by statute establish principles regarding the permissibility and mode of raising state taxes, in so far as this is necessary in order to prevent (a) damage to the income or the commercial relations of the *Reich*, (b) double taxation, (c) charges for the use of public communications and institutions which are excessive or impede traffic, (d) tax discrimination against imported goods compared with home produce, in commerce between the individual states and parts of states, or (e) export bounties, or (f) for the protection of important social interests.

On the basis of these very wide powers—for the *Reich* obtained both freedom in its own sphere by article 8, and a regulatory power over the sphere of the states by article 11—a large number of laws

and orders comprised a financial system<sup>30</sup> in which the *Reich* had a first call upon all revenues, and the states and the local authorities had a strictly limited freedom within permitted loopholes, and even here they were bound to follow procedure laid down by the *Reich*. The *Reich* could and did settle out of hand any problems of double taxation, and so avoided the confusions of the American system. For it was financial master.

The main features of the system were to be found in the financial settlement laws (*Finanzausgleichsgesetze*).<sup>31</sup> They were: (a) The states and the local authorities could raise taxes only in so far as they did not infringe upon the *Reich* constitution and laws. (b) Where the *Reich* claimed a source of revenue, the states and local authorities were thereby excluded unless a *Reich* statute gave permission. (c) Additions to *Reich* taxes were leviable by the states and the local authorities in the measure permitted by *Reich* statute. (d) State and local taxation schemes had to be submitted to the *Reich* Minister of Finance in order that their compatibility with *Reich* necessities and the constitution could be examined. (e) The *Reich* Financial Court (*Reichsfinanzhof*) decided differences of opinion: whether state tax provisions were in consonance with *Reich* statutes. (f) The question of fact, whether state and local taxation was appropriate, or damaged the *Reich's* revenues, or was incompatible with the national interests, was decided by the *Reichsrat*. (g) Certain revenues were assigned to the states and municipalities. (h) Certain taxes raised by the *Reich* were transferred altogether to the states

on principles of distribution settled by the law, and the law also stated the principles upon which the states should transfer a portion to the local authorities. The income tax and the turnover tax were legislated exclusively by the *Reich*, which then turned over a proportion to the states along with legal rules regulating the further sharing of the total between state and local authorities. It is obvious that this controlling power of the *Reich* seriously affected state and local activities—hence the *Reich* was inevitably drawn in as a judge and provider where it required certain functions to be executed by these authorities.

Nor was this all. The change in the purpose of power resulted in a change in the administrative arrangements to achieve it: the *Reich* had, instead of a small group of officials, a large body, ramifying throughout the country, having absorbed most of the state financial officials.<sup>32</sup> Financial stringency even caused the *Reich* officials to take over the collection of state income and other taxes. This was not accomplished without difficulties, since the state officials were by no means happy to transfer to a new master in Berlin, and even then the new taxes were so many and the tasks of building a fresh administrative system so heavy that the *Reich* was very much understaffed. So, throughout the country, were thousands of federal tax officials and customs officers, controlled by *Reich* departments in the states, controlled in turn by the *Reich* Ministry of Finance. The *Reichsfinanzhof* acted as the final arbiter of the law in financial matters and as a unified interpreter of the law for the whole *Reich*.

This financial centralization was, of course, much criticized, but unavoidable. Further, the fact that each state's share of the income tax was measured by the income tax due in each state, hurt the poorer states.

*Form of the State Constitutions.* In other democratic federations, a certain minimum of uniformity in the govern-

<sup>30</sup> Cf. Hensel, *Finanzausgleich im Bundesstaat* (Berlin, 1922); Koch, *Finanzausgleichsgesetz* (Berlin, 1926), and 1928 Supplement. <sup>32</sup> Cf. G. Lassar, *Jahrbuch des Öffentlichen Rechts*, Vol. 16, "Finanzverwaltung."

ment of the several states is prescribed by the federal constitution. In Germany, the abortive Frankfurt constitution of 1848, democratic and influenced by American and Swiss experience, followed this principle, but the constitution of 1871, building from above, with the desire to tap the sources of cohesion existent in the monarchical states, did not concern itself with their constitutions at all. This was far from the propensities of Preusz and the surge of revolutionary feeling.

Even the opposition of the state representatives to Preusz's severe rules could not overcome the very strong feeling that unless there were some unity in political fundamentals throughout the *Reich*, the structure would be unsound and weak. Preusz said: <sup>83</sup>

If the *Reich* builds itself, appropriately to the structure of a popular state, from below upwards, and if, therefore, it rests, with the whole of its inward vital processes, upon the organic foundations of its municipal and state members, then a certain normative influence of the general will of the *Reich* upon the organization of the individual states and their local authorities is indispensable. But it must be limited to the indispensable, only assuring homogeneity between the structure of the *Reich* and its state and municipal constituents.

(The student of international relations, and especially world government, should take special notice of this idea.)

Preusz's wishes were challenged not only by the politicians who were hostile to any interference with their own constitution, but also on the juristic ground that to prescribe the principles of a state's constitution was to destroy its statehood, its "sovereignty." "A state which cannot even determine its own form ceases utterly to be a state. For its sovereignty is denied." <sup>84</sup>

Article 17, as finally passed, ran:

Every state must have a free-state constitution. The representatives of the people must

be elected by universal, equal, direct, and secret suffrage of all men and women of *Reich* nationality according to principles of proportional representation. The state government requires the confidence of the body of people's representatives. The electoral principles apply to elections of local authorities also. A state law, however, may declare the qualification for a vote to be conditional upon a year's residence in the district.

What does this mean? "Free state" is the equivalent of "republican," and implies that monarchy is excluded. The terms "representative" and "representative body" (*Volksvertretung*) imply the notion and institution of the Parliamentary system and exclude any sort of a dictatorial system, whether of one or a minority.

Then a government with the essential feature of the cabinet system—responsibility to the Parliament—was provided, but a variety of forms, including the government's power to meet a vote of no confidence with a referendum, was permissible. Was a bicameral system permitted? Preusz's original draft actually prescribed a unicameral parliament, but it was thereafter deleted, and in the constitutional committee it was admitted that a second chamber was possible; and commentators argued that if this were so, it was possible only in the form that the representative body, spoken of in article 17, was one, while at its side another organ existed which was not Parliament but only a check upon Parliament. Thus in Prussia there was a state council "representing the provinces in state legislation and administration," but its members did not enjoy the immunities given by the constitution to members of Parliament.

World War II, issuing from Hitler's abrogation of democratic principles and his destruction of democratic institutions in the *Reich* and the states (in some of the former, nazi governments arose earlier than 1933 and there enabled the movement to develop), taught the need of more specific guarantees of democracy in the states. This has already been discussed (p. 90 above).

*Territorial Reorganization. The struggle*

<sup>83</sup> *Denkschrift* (January 20, 1919), *Entwurf*. Constitutional Assembly, 1919.

<sup>84</sup> Kahl, in *Heilfron*, p. 1255. Cf. United States constitution, article IV, section 4. See *Luther v. Border*, 7. How. 1. (1849) and *Pacific States Tel. & Tel. Co. v. Oregon*, 223, U.S. 118 (1912), on the guarantee of a "republican form of government."

between the unitarists' desire for power freely to redistribute the areas of the states for federal utility, and to secure, at least, that no state should have a population smaller than two million, and the separatists' ardent desire to be left alone to make friendly arrangements should it suit them, resulted in a limited victory for the unitarists. Article 18 received this final shape:<sup>35</sup>

The composition of the *Reich* by states shall serve the maximum economic and cultural utility of the nation, with the fullest consideration for the will of the population concerned. Alteration of the territory of the states and the formation of states within the *Reich* shall be effected by a law for the amendment of the Constitution. If the directly concerned states assent, then an ordinary *Reich* statute suffices.

An ordinary *Reich* statute also suffices if one of the states concerned does not assent, but where the alteration of territory or reorganization is demanded by the will of the population and required by paramount *Reich* interests, the will of the population shall be ascertained by a poll. The *Reich* government orders the poll, if required by a third of the enfranchised inhabitants of the territory to be separated.

The clause, "When the states directly concerned give their consent, an ordinary federal law suffices," was used only in the union of Prussia and Pymont.<sup>36</sup> Only two changes of territory, the formation of Thuringia out of seven small states,<sup>37</sup> and the union of Coburg with Bavaria, took place by constitutional amendment, since the assent of the states could not be formally ascertained. In 1928, Saxony and Thuringia exchanged enclaves, and Waldeck merged with Prussia. From twenty-five in 1919 the number of the states dropped to seventeen by 1933.

Other attempts at reorganization failed: one attempt to constitute a separate state of Upper Silesia, was defeated in Novem-

ber, 1922, when a ten-to-one majority of the population voted in favor of remaining with Prussia, and in Hanover a good deal less than one third of the voters voted in favor of a plebiscite to separate from Prussia.

However, article 18 was as important for its continuous challenge to inquiry and rearrangement as for its immediate effects. While it existed, there could be no rest. It produced a law relating to its execution in cases where the *Reich* took the initiative, and it produced a *Reich* Bureau, which was dissolved in 1929. The law was never used, since the states exacted a promise that the *Reich* would not act without their assent.

The work of territorial reorganization fell into the sphere of the general constitutional reorganization desired on many sides, and began with the calling of the State Conference in 1928, culminating in the Democratic Reform Plan which we shall discuss at length presently (p. 214 ff.).

*Reichs-exekution.* Under the Weimar constitution the *Reich* President, that is, the government, had the power to compel a state to fulfill its constitutional obligations, thus (article 48): "If a state does not carry out its obligations under the *Reich* Constitution or Statutes, the President can compel it to do so with the aid of armed force." Such a power was unnecessary in the United States because the constitution was less a union of states. "We, the people . . ." meant a more merged union, and the United States government was granted authority over all individuals directly wherever they dwelt, so long as the power had been granted to the Union. The power of federal compulsion was taken from an organ, the *Bundesrat*, which was not likely by its composition to force a state, and given to one which was less unlikely to do so, unless the President happened to be a native of the state which was to be forced. The decision of the President could be challenged by an appeal to the Court of State or other courts, where the constitution permitted an appeal in cases of disputes about interpretation, but this was hardly an obstruction to immediate intervention by the

<sup>35</sup> "In the case of union or separation, should any dispute arise on the question of arrangements as to property, the decision on such points shall be given, upon an application from one party, by the Court of State of the German Foundation."

<sup>36</sup> Law, March 24, 1922.

<sup>37</sup> Law, April 29, 1920.

President. We have already noted the two important cases in which the power was used.

*Survey.* The German *Reich* under the Weimar constitution was a federation in which the unitary element was very strongly marked. The constitution of 1919 conquered a good deal of the still-existing particularism of the states, but its attempts were met by a well-organized resistance. The result was that the anti-unitary elements were strongly stressed, much more so than in the United States, for the *Reich* was not able to obtain the plenitude of administrative powers. It is true, again, that it had a wider sphere of legislative power than the United States, but in such things as territorial reorganization, in which its unitary bias received pronounced expression, it was not able to make headway. The *Reichsrat*, which was not meant to be an independent body, gradually became more powerful than was originally desired.

The unitarists wished to see the many concessions to the states modified or entirely abolished, especially in regard to territorial reorganization, the administration of *Reich* affairs, the power of the *Reichsrat*, the power of the states to make treaties with foreign countries, and their claims regarding army organization. It was argued that the partial duplication of parliamentary and administrative machinery in so many states (seventeen), some with ridiculously small populations, was financially wasteful,<sup>88</sup> and, even worse, that the whole arrangement in states of this size made systematical administrative reform, with its consequent efficiency and financial economy, impossible. Especially wasteful was the coexistence of two great organizations—Prussia and *Reich*—in Berlin and over the whole of Prussia. Varying regulations broke up and made impossible the easy transfer of citizens from state to state in the great professions of

civil service and law, while ludicrous situations were caused by the intersection of great urban complexes (like Hamburg-Altona, Bremen-Wesermünde, Frankfurtam-Main-Offenbach) by state boundaries. The regional aspect of rearrangements of area was very strongly stressed.

On the other hand, anti-unitarist criticism was as comprehensive and perhaps as strong in political power. It came mainly, though not entirely, from Bavaria, which was too small to subject others, too large to accept subjection. It was argued that the constitution permanently endowed the central authority with a power won at an exceptional time, and appropriate for emergencies only, and that this has converted the "joy in the *Reich*" (*Reichsfreudigkeit*) into "grievance in the *Reich*" (*Reichsverdrossenheit*). The financial powers of the *Reich* took away all resiliency and strength from the states; the *Reich* officials only duplicated their already existing organizations, the various powers over the states wounded their patriotism, while centralization went far to reduce their power to pursue their own peculiar cultural development—especially so, felt Bavaria and Prussia.

At the end of this chapter the deficiencies of German federalism are resummarized indirectly in an outline of reform proposals.<sup>89</sup>

#### NAZI FEDERALISM

SINCE the nazi régime placed obedience above free comment, there is not yet and may never be available a realistic account of the highly unitary system by which it replaced Weimar federalism. Yet an outline of nazi practice is necessary. The transition is dealt with elsewhere (Chap. 25). The chief causes of the downfall of Weimar are not to be found in the federal arrangements, wasteful and confused as they were, but in other matters altogether. However, the rise of the nazi movement to power radically affected the relationship between the *Reich* and the states.

<sup>88</sup> Cf. Otto Braun, *Die Deutsche Einheitsstaat* (Berlin, 1927); W. Apelt, *Vom Bundesstaat zum Regionalstaat* (Berlin, 1927); Arnold Brecht, *Reich und Länder* (Berlin, 1928-30), Vol. 2 (1928), p. 349; Vol. 3 (1929), pp. 70 and 265; Vol. 4 (1930); Bund zur Erneuerung des Reichs, *Die Reichsreform* (Berlin, 1933).

<sup>89</sup> Cf. Arnold Brecht, *Federalism and Regionalism in Germany* (New York, 1945), for a most illuminating review of Weimar federalism.

The Nazi party program of 1921, and Hitler's *Mein Kampf* (chapter 10) favored the separate existence of the states. Even after January, 1933, confused talk about their preservation was continued. The "Roman pattern" of centralization was identified with "racial cross-breeding" and the "Jewish-democratic-socialist state"! However, the leadership principle could hardly be reconciled with federalism. And for Hitler the abolition of regional and local self-government was necessary as a means of scattering the landowning, military, and bureaucratic groups in state and local politics who might thwart his will. It was also a condition of full central mobilization of the resources of the *Reich* for military strength.

After the election of March 5, 1933, the Nazis controlled eight states, mostly in Northern Germany and including Prussia. They forced the resignation of the governments of the other six states, mostly in Central and Southern Germany, and of the three free cities of Hamburg, Bremen, and Lübeck. On March 31, 1933, they passed the First Coordination Act (*Gleichschaltungsgesetz*), "The Provisional Law for the Unification of the States with the Reich." By this law, *Reich* commissioners were appointed whose task it was to enforce the policies of the *Führer* in the states. The state cabinets were empowered to assume legislative authority and to ignore the state constitutions. The state legislatures—with the exception of the Prussian Diet elected on March 5, and all local legislative bodies except in Prussia—were dissolved and were reconstituted for four-year terms without new elections. The seats were allotted on the basis of the number of votes obtained within the states by each party in the Nazi-dominated *Reichstag* election of March 5. The Communist and later the Social-Democratic representation was canceled, and the other parties went out of existence "voluntarily." Then all but the Nazi party were prohibited by law.

*The Unification of the States.* On April 7, 1933, notwithstanding the provisions of the Enabling Act safeguarding the position of the *Reichsrat*, the *Reich* government passed the Second Coordination Act

(*Reichsstatthaltergesetz*), "The Law on the Unification of the German States." This law vested the *Reich* commissioners, now called *Reich* governors (*Reichsstatthalter*), with permanent authority. It empowered the *Reich* President, on the nomination of the *Reich* Chancellor, to appoint governors of the states (except in Prussia, where the Chancellor would exercise the powers of the governor), who in their turn would appoint and remove the governments of the states, dissolve the legislatures, order new elections, make and publish state laws, "upon the proposal of the state cabinet" appoint and dismiss the higher officials and judges, and exercise the pardoning power. From time to time, the *Führer* convoked the national governors to acquaint them with national policies. It was their primary task to represent these policies and the authority of the *Reich* within the states. For this purpose, each was given the powers of a dictator, including the right to call out the army to preserve public order. Laws and decrees supplementary to the Law of April 7, 1933 (of April 25, May 26, June 1, June 18, and October 14, 1933) provided, among other things, that the Chancellor might transfer his powers in Prussia to the Minister-President, and that the governors might transfer their powers to the state governments. In three instances, two smaller states were placed under one national governor. In most cases the national governor was the party district leader (*Gauleiter*) of the district most closely corresponding to his state. As everywhere in the Third *Reich*, governmental and party offices were thus combined, preventing difficulties which could otherwise have arisen between governor and *Gauleiter* in the same area.

The Law of January 30, 1934, "for the Reconstruction of the *Reich*" (*Gesetz über den Neuaufbau des Reiches*), passed unanimously by both chambers without debate, was decisive for unification. Authority for this was taken from the plebiscite of November 12, 1933, on Germany's withdrawal from Geneva, which was alleged to prove that "the German nation has attained an indestructible unity superior to all internal subdivisions of a

political character." This law decreed: (1) "Popular representation in the States will be abolished;" thus the state legislatures, which had in fact ceased to exist in October, 1933, were outlawed. (2) "The sovereign rights of the States are transferred to the *Reich*." (3) "The State cabinets are subordinate to the *Reich* cabinet." The *Reich* cabinet as a whole, and individual ministers within the jurisdiction of their ministries, could act through the state cabinets. State cabinets could still legislate, but only "by direction and in the name of the *Reich*." (4) "The national governors of the states, who had until now been under the direct control of the *Führer*, were placed under the supervision of the *Reich* Ministry of the Interior. (5) The cabinet "may establish new constitutional rights [for states]."

By designating the governments of the states, the *Führer* had made a mockery of their representation in the *Reichsrat*. Hence, on February 14, 1934, this second chamber was finally abolished (*Gesetz über die Aufhebung des Reichsrats*). Though the existence of the *Reichsrat* had been safeguarded by the Enabling Act, this action could be considered valid, since the Law of January 30, 1934, had authorized the cabinet to pass new constitutional laws. After a series of laws and decrees, all state law courts were transformed into *Reich* law courts on April 1, 1935, so that decisions were rendered uniformly "in the name of the German people." Many other functions, such as the administration of forests, zoning, and public health supervision, were transferred to authorities under the direct control of *Reich* ministries during 1934 and 1935.

On January 30, 1935, any remaining individuality of the states was removed by an Act Relating to the *Reich* Governors, which largely replaced the *Reichsstatthaltergesetz* of April 7, 1933. This new law subjected the governors to supervision no longer by the Ministry of the Interior but by the various ministers of the *Reich* government in their respective fields of competence. The gradual reduction of the governors from immediate subordination to Hitler to direct responsibility merely to the specific ministries reflected the de-

cline of local authority and prestige. Although, according to the law, the national governor was not a civil servant, but occupied an office similar to that of a *Reich* minister, his actual role degenerated steadily to that of a *Reich* official. Their power was reduced: they no longer appointed the state cabinets, but merely made nominations to the *Führer* who nominated. Also, while by the decree of February 2, 1934, state laws needed approval of the governors, now their validity depended solely on approval by the *Reich* cabinet.

Furthermore, the nazi government vastly extended the range of nation-wide legislation: all civil service personnel, in nation, states, and municipalities were centrally regulated by the *Reich* Civil Service Act of January 26, 1937. So also were the basic norms of police, educational administration, and mining operation, nationally regulated. In most fields the states were only allowed a secondary or subordinate law-making power for adapting the centrally established laws to local circumstances in minor matters.

*The Durability of Particularism.* These nazi reforms were intended to remove all "dualism" between *Reich* and states. But the diverse state administrations were never eliminated, nor was a unified administrative machine ever developed, although the idea was current that the governors were merely "the agents-general" of the national government. For the total territory of Germany is too extensive, and the regional diversities too ingrained, for a swift and thoroughgoing change in a time of military and economic anxieties. In many instances, direct national authorities and state officials worked side by side, thus preserving a double administration but not wiping out the state administration. The subordinate lawmaking power was still of some substantial effect. Indeed, as it was impossible administratively to effectuate such drastic changes in a short time, Berlin even called on the states to act for a Berlin which had presumably abolished the states! In World War II, the nazi authorities in Berlin showed spiteful restiveness at the survival of the particularist spirit of some German states. This per-

sisted in spite of the *Reich's* establishment at the center of the Superior Council of Defense and at the state and inferior territorial levels of civil commissioners of national defense to animate and control the normal peacetime governmental agencies now called upon to put forth all strength in a total war.

The particularist spirit even defeated the avowed intention of Hitler's government to resubdivide the *Reich* into entirely new administrative areas. The nazis talked much, in their early years, of plans for the establishment of economic-physiographic regions in place of the historic dynastic state boundaries, together with some return to ancient tribal regions (*Gaue*) as parts of the *Reich*.<sup>40</sup> On November 15, 1934, Dr. Frick, *Reich* Minister of the Interior, stated that in the near future the *Reich* would be reorganized into twenty regions (*Reichsgaue*) with three to four million inhabitants each. "These new regions," he declared, "and their governors will be instruments through which the *Reich* government will impose its authority on the humblest hamlet." These regions "will rest on considerations of an economic and geographic nature dictated by national interests." Earlier, Goebbels had enunciated a plan to set up thirteen tribal provinces, and other nazi leaders had propagated similar ideas. The matter was lost to view; it was probably never anything but romantic talk; military-economic tasks were far more important.

Little territorial reform was actually accomplished. On January 1, 1934, the two states of Mecklenburg-Schwerin and Mecklenburg-Strelitz were united into one state of Mecklenburg, and in 1937 the free city of Lübeck was incorporated in Prussia. Otherwise only minor boundary corrections were made between Bavaria and Württemberg and between Prussia and her neighbors, Oldenburg, Hamburg, Mecklenburg, Anhalt, Hesse, and Schaum-

burg-Lippe; these were made in 1934 and 1935, following a trend already apparent during the last years of the Weimar Republic. Exchanges of territory of somewhat greater importance occurred between Prussia on the one hand and Hamburg (1937), Oldenburg (1937), Bremen (1939), Brunswick (1941), and Anhalt (1942) on the other. The opposition to territorial reform came largely from two sources: (1) the Prussian aristocracy objected to any division of Prussia, which any through reform would involve; and (2) many nazi jobholders, headed by Goering as Prussian Premier, feared that their positions would be abolished by territorial change.

Prussia was incorporated in the *Reich*, but not fully. The *Führer* became the governor of Prussia; but on April 11, 1933, he appointed Goering Minister-President of Prussia and entrusted him with his powers. Goering was responsible, therefore, only to Hitler. By a law of July 20, 1933, the twelve provincial councils were changed from elective legislatures to honorary advisory bodies appointed by the Minister-President. The provincial chief presidents (*Oberpräsidenten*) were thus given all executive, legislative, and administrative power. By the decree of November 27, 1934, they were made nationally appointive and were given increased powers, so that they then occupied a status similar to that of national governors, that is, agents-general of the *Reich*, while as an inheritance of the older regimes they had detailed local administrative powers beyond those of the governors. Yet they were responsible to both the *Reich* and Prussia. All Prussian ministries, except the prime ministership and the Ministry of Finances, were amalgamated with the corresponding *Reich* ministries, so that for many years, Prussian government, laws, and budget, still prevailed. In September, 1944, Prussian finances were also taken over by the *Reich* "in order to set free additional manpower for the conduct of the war." The status of Prussia in the Third *Reich* was the reverse of that in the Bismarck constitution. Prussia was intermerged with the *Reich*: the *Reich* dominated, but did not abolish, Prussia. Yet the personal relationship between Her-

<sup>40</sup> Cf. Albert Lepawsky, "Nazis Reform the Reich," *American Political Science Review*, 1936, p. 324 ff.; R. H. Wells, "Liquidation of German Länder," *ibid.*, p. 350 ff. See *Nazi Conspiracy and Aggression* (U.S. Government Printing Office, 1946 and 1947).

mann Goering, the Prime Minister of Prussia, and Hitler, meant that Prussia was still a weighty, leading element in the *Reich*, with a power of independent leadership.

The thoroughgoing control of the *Reich* over all revenue-raising authorities that had developed in the Weimar period was carried by the nazi régime to a most pervasive mastery of taxation and expenditure in *Reich*, state, and local government units.<sup>41</sup>

*Nazi Local Governments.* Embodied in this highly unified "federal" system was the specialized instrument of heavily centralized local government, subjected to the Nazi party itself. This was introduced by the German Municipal Code of January 30, 1935.<sup>42</sup> All municipalities were subject to the supervision of the *Reich* Ministry of the Interior; their budget required advance approval by the *Reich*; the Ministry of the Interior appointed the mayors and councilors of cities with a population of over 100,000, while in smaller cities appointments were made by the *Reich* governors or other *Reich* officials. The burgomaster was chosen by the Ministry of the Interior or the *Reich* governor from among three candidates proposed by the local Nazi party delegate. Thus appointed, the burgomaster had full and exclusive responsibility for the government of the municipality. The councilors were a mere body of advisors, chosen by the Nazi party delegate (himself appointed by the *Führer's* deputy, usually the local Nazi leader) for their "political reliability, capability, and character." The burgomaster had to consult the council but did not have to be guided by the result. The councilors were supposed to maintain contact with the people and secure from them "a sympathetic understanding for the measures taken by the mayor." This function might have been a useful check on the mayor for the higher

authority, but it was difficult to fulfill in a despotic system; so the law went so far as to command the councilors to give expression to disagreeable criticism. The "leader" of the German League of Municipalities admitted the failure of the councilors; they had neither time nor will for their job.<sup>43</sup>

#### PAST AND FUTURE OF GERMAN FEDERALISM

THE future of German federalism is obscure because the future of the German state and democracy are as yet far from predictable in any clarity. But some factors are discernible, if dimly.

(1) It would seem that the Allied Occupation in four separate zones must encourage particularism, especially as elections were held in various states in 1946—states reconstituted and managed by reorganized political parties.<sup>44</sup>

(2) The difficulties in the way of inter-regional or interstate meeting of party leaders and followers assist the perpetuation of particularism, as parties based on common principles break down state and local particularism, but here their work is obstructed.

(3) Perhaps the Prussian problem will emerge easier of solution, for when the final distribution of population is settled (refugees from the eastern zone and from the areas taken by Poland, and some sort of permanence of adjustment achieved throughout the rump *Reich*), the proportion of Prussian population to that of the *Reich* will be considerably less than forty to seventy million. Moreover, the four zones have cut across Prussia, and for Allied administration her provinces are no longer as integrated under a common government as in the past, including the Weimar and nazi periods.

(4) The artificially induced division of

Meisel, *Germany under Occupation* (Ann Arbor, 1947); and Office of Military Government for Germany, *United States Constitution of Bavaria, Hesse and Württemberg-Baden* (February, 1947). See also R. G. Neumann, "New Constitutions in Germany," *American Political Science Review*, June, 1948, p. 448 ff.

Germany, if long enough protracted, may produce a strong yearning for union as in the past, yet not be drastic enough to destroy "Germany," and may thus have powerful unifying tendencies.

(5) The United States Government and Great Britain have publicly declared their wish for the restoration of something like the Weimar federalism. The U.S.S.R. has declared for a unitary state,<sup>45</sup> but the Soviet idea of "unitary" is not defined in detail. A return to Weimar would satisfy the need to provide for reparations, for Allied control of German industry and general policy, and for effective demilitarization. It would be even more satisfactory if the areas of the states were evened out, and if financial unification were continued and reformed.

(6) The establishment of the constitutions of Bavaria, Hesse, and Württemberg-Baden by the people under the aegis of the Office of Military Government (American) for Germany accomplishes two things of definite portent for the future. These are: (a) the restoration of the several states, prior to the restoration of the *Reich* as whole, but of more rational area, as in Greater Hesse, and Württemberg-Baden, and (b) the deliberate establishment within them of the constitutional principles of democratic government much more specific, purposeful, and far-reaching than in the Weimar period, and emanating from the clarification of ideas during the world-wide ideological debates and the bitter European experience of the years from 1933 to the end of World War II.

(7) As to other future possibilities, in order to look forward we must look back to the proposals of the States Conference of 1928-32.<sup>46</sup> These also indirectly summarize the defects of Weimar federalism. In briefest paraphrase, they were:

(a) The Prussian provinces were to become states, with territorial changes, exercising a lawmaking power like the other states, and subject to the direct governmental powers of the *Reich* also, like

other states—no Prussian administration would come in between.

(b) No separate Prussian central government would exist: legislation for all Prussia—that is, all the new states in common—would be undertaken by the *Reichstag*, perhaps by the members alone who were elected in Prussian states. A transition proposal allowed the existence of a common assembly for the Prussian states, whose laws would need the consent of the federal cabinet.

(c) The *Reichsrat* would be maintained, each state being represented by votes proportionate to its population, as in the Weimar constitution. The votes of each state would be cast uniformly. The Prussian states would cast their votes severally, as directed by their chief executive and a committee of the state assembly.

(d) The *Reich* would receive powers at least as wide as those developed in the latest practice of the Weimar system; the financial power of the *Reich* would be as unified and centralized. Moreover, in the field of federal lawmaking power, the direct pervading administrative power followed, with the exception of police, supervision of communities and professional organizations, industry and commerce, religious affairs, educational matters, and waterways, in the case of Bavaria, Saxon Württemberg, and Baden.

(e) But in the field of *Reich* legislative and administrative powers, it would be the duty of the *Reich* to delegate administration to the states, yet in the discretion of the *Reich* executive.

(f) A number of functions were assigned to the states, in addition to any that they might exercise because not assigned by law to the federal authority: they were social welfare, public health, juvenile welfare, public housing, state finance, agricultural affairs within and not interfering with the *Reich* power over the general economy, intermunicipal zoning, traffic, and roads within federal powers, and care of monuments. These rights were, for the

<sup>45</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), p. 203.

<sup>46</sup> See p. 214 above; and Brecht, *op. cit.*; also Gerhard Krebs, *The Problem of Federal Reform in Germany* (University of California, 1937).

Southern states already mentioned, to be guaranteed in the constitution.

(g) As for administrative harmony, it was proposed that within each state, the *Reich* agencies should be fused at the top, with power for the highest *Reich* official to supervise and direct in respect of administrative simplification. Several small states might be combined within single *Reich* administrative regions, and the *Reich* official at the top would supervise the whole regional establishment. He would keep close contact with state authorities, and it might be feasible even to appoint a state minister as the high federal official.

(h) The *Reich* could delegate its administrative powers to the states. When it did this, it could safeguard efficiency by a combination of general directions (and where necessary, directions in specific cases), these to be addressed only to the state governments and not to subordinates; disciplining of the states in their administration by appeal by the *Reich* to the Supreme Court for Constitutional Conflicts; the right to obtain full information, to make on-the-spot inspections, and to examine public records. In certain fields (especially labor, social insurance, and care of veterans), state and *Reich* administration at the regional level would require more cooperation than heretofore. Moreover, the power of the *Reich* over administrative courts, general administrative law, administrative structure, local government units, and public examinations, in the states, was greatly strengthened.

(i) The *Reich* should have the right to reorganize the territories so as to secure that the states should be of at least two million in population. This was not an official proposal of the conference, but the weighty opinion of experts of good will.

(j) In order to stabilize the states as administrative units, the reformers proposed that state cabinets should be appointed by the legislatures for a fixed term—say, four years—providing that only a two-thirds majority could overturn them within that time.

On all these matters, the delegates of the states at the conference were in agreement. But Bavaria's delegate objected in two vital matters: he wished to see the

*Reichsrat* endowed with a legislative power equal to that of the *Reichstag*, and he rejected the Weimar powers of the *Reich* to make law on "principles" and "in case of urgency," and rejected also the increase of *Reich* powers newly proposed. What was of even more revealing effect was the Bavarian objection to the break-up of Prussia. The argument was that if Prussia were broken up, the resultant states would sooner or later be assimilated to the new states that were to be formed on more convenient territories, and that there would be a powerful impetus to reduce the special status of the Southern "old" states of which Bavaria was the chief! In other words, no Prussia, no Bavaria! Hence, Prussia ought to be maintained; and if she were not, then the new states formed out of her ought each to receive constitutionally guaranteed powers equal to those of the "old" states. The conference offered the four "old" states the guarantee that their rights would be unamendable if their combined votes were thrown against any encroaching proposal.

How complicated are the problems of German compared with American and British federalism! The latter have their complications also, deriving from the attempt to secure the supremacy of large-scale economic regulation over extensive territories which embrace strong diversities of climate, resources, occupations, and therefore of interests, and in the case of Canada, the additional obstinacy of a religion and culture and language in Quebec markedly different from that prevailing elsewhere. In Germany, additional confusion has been caused, and still exists, because in the little monarchies and free cities, the idea of sovereignty cast its sharp shadow forward; it claimed at the establishment of the *Reich*, as it still claims, a marked differentiation between states of legislative and administrative power, and a differential representation in the federal council. These differences, so engendered, have been continuously supported by real diversities of culture and religion. It does not look as though these have been seriously reduced by the bitter experiences of the last quarter of a century.

#### *The Character and Policies of Modern Parties*

Decision by majorities is as much an expedient as lighting by gas. In adopting it as a rule, we are not realizing perfection, but bowing to an imperfection. It has the great merit of avoiding, and that by a test perfectly definite, the last resort to violence; and of making force itself the servant instead of the master of authority. But our country rejoices in the belief that she does not decide all things by majorities.—G L A D S T O N E

Governments therefore should not be the only active powers: associations ought, in democratic nations, to stand in lieu of those powerful private individuals whom the equality of conditions has swept away. . . . In democratic countries the science of association is the mother of science: the progress of all the rest depends upon the progress it has made. Amongst the laws which rule human societies there is one which seems to be more precise and clear than all the others. If men are to remain civilized, or to become so, the art of associating together must grow and improve, in the same ratio in which the equality of conditions is increased.—D E T O C Q U E V I L L E

## *The Electorate and Political Parties*

### RESPONSIBILITY AND REPRESENTATION

ANALYSIS of the idea of democracy has indicated that it may mean either of two things, which, however, are closely related in practice: a certain social purpose, or a specific machinery of government. Here we are concerned with the latter, and in this respect, generally speaking, democratic theorists have sought something labeled alternatively "responsible government" or "representative government." These are not coincident, but are very nearly so. It is not merely pedantry which requires it to be emphasized that responsibility is the chief and wider aim, and representativeness merely a convenient means to attain this. There are governments in which representative assemblies participate, but are so hampered in various ways that governments cannot be called responsible. The chief example before 1919 was the government of Germany. After that time the fascist government of Italy (commencing in 1922) had elections but not responsible government; rather the same thing was true of Hitler's Germany, and the distinction is still true of the government of Soviet Russia.

On the other hand, government may be responsible and yet not representative, because the people to whom it is responsible may act *directly* by popular vote. Of this there are no more examples in modern times, if we except the extraordinary procedure for ratifying constitutions (and this is to strain the example too much). The

desire for responsible government is paramount; people wish not merely to represent their views, but actually to make and unmake governments.<sup>1</sup>

The real question—and it is asked most anxiously of the Soviet system—is not whether the government deigns to take notice of popular criticisms and votes, but whether it can be voted out of office or forced by some machinery or procedures to change its policy, above all against its own will.

To whom, then, ought government to be responsible? Who ought to control the making of laws and their administration? Openly or silently men decide this by their general social philosophy. They ask, "What should I like to see government accomplish?" The answer generally dictates the desirable form of government, and this again settles for them the extent to which others should be represented. James Mill, for instance, desired the utmost perfection of society, and this was expressed for him in the principle of the greatest happiness of the greatest number. Thence it was simple to proceed to democratic government, and further, to representative government with universal suffrage.<sup>2</sup> But Macaulay was anxious for property, and to safeguard it he held that any franchise—that is, any system of representative government—which included the

<sup>1</sup> This was what so roused Burke's anger (in his *Reflections*) against Dr. Price and his friends.

<sup>2</sup> *Essay on Government*.

unpropertied working classes was ruinous.<sup>3</sup>

That question answered, there still remains another. How may the power to govern be best applied? Once it has been decided to have responsible government, the problem becomes whether the people shall act directly or through representatives. Now no modern state has faced this *ab initio*; every state, except the smallest, Switzerland, has found itself compelled to govern through the medium of a representative body. The reasons might be deduced from the nature of the work to be done by government. But we are fortunate in having the reasons put by a body of people—the French Constituent Assembly of 1789—who actually faced a situation spiritually favorable to direct government, and it is instructive to ask why representative was preferred to direct government. The reasons adduced were: that proper deliberation was impossible over a large area and with a large number of people to consult; that it was unnecessary to take the opinion of all citizens, sufficient direction being obtainable from a selection of them; that not all people had either the leisure or the instruction to judge capably of legislation; that tumultuous proceedings and demagoguery must prevail where no systematic procedure existed; and that, to secure the benefit of division of labor, it was good that citizens should allow representatives to exercise the function of government.<sup>4</sup> We may hazard a further reason: the deputies, as the debates plainly showed, enjoyed being deputies and were anxious to remain deputies; they relished their powers, and acquired a professional interest in maintaining that representative government was more feasible than direct.

The student may be referred to the results of the so-called unofficial "Peace Ballot" taken on the question of England's participation in the League of Nations and the problems of peace and disarmament.<sup>5</sup> It will there be seen (a) how easily it was possible for the questions to be misinterpreted unless they were debated for their meaning, and (b) how difficult it is to give meaning to the answers unless a series of alternative solutions are put for choice to the voter. The same conclusion may well be drawn from many of the Gallup Polls, where *Yes* or *No* is said to a proposition, but where, fallaciously, the consequent duties, responsibilities, and financial sacrifices are not brought in to the picture.<sup>6</sup>

The arguments presented by the French Constituent Assembly—valid, we think—have prevailed, with the result that everywhere democratic government means, practically, a representative assembly in the center of the machinery of government. Nevertheless, representative government has not absolutely triumphed, for some countries seek to remedy its shortcomings by the addition of the initiative and the referendum.

In the main, however, modern government functions through popularly elected legislatures and ministers responsible to them and to the people. A qualification must, however, always be remembered: that owing to the existence and activity of special organizations—political parties—to influence the electors in their choice of representatives, even representative government without any formal admixture of direct government has been made substantially direct. Representatives are selected, catechized, pledged, supported,

<sup>3</sup> E.g., Speech on the Chartists' petition. Bagehot was ready to have the working classes represented, in the sense of permitting their spokesmen to appear, but he would not allow them the full voting force of their total numbers. Cf. his *Essays on Parliamentary Reform* (written in 1859).

<sup>4</sup> All this is shown with a great abundance of learning in K. Loewenstein, *Volk und Parlament, nach der Staatstheorie der Französischen Nationalversammlung von 1789* (München, 1922).

<sup>5</sup> *The Peace Ballot: the Official History* (London, 1935).

<sup>6</sup> Cf. H. Cantril, *Gauging Public Opinion* (New York, 1944); and Lindsay Rogers, *The Pollsters* (New York, 1949).

## WHAT ENTITIES SHALL THE GOVERNMENT REPRESENT?

and afterward controlled in their parliamentary activities by parties in close and continuous touch with the electorate, so that absolute differences between direct and indirect democracy do not exist. The question of which is the better instrument of government turns upon the comparative merits of the party organization of a state and any alternative organization which might be improvised for direct popular government. To this question we return, therefore, only when we have completely reviewed the subject of parties and legislatures.

The chief democratic theorists do not apparently diverge a great deal in their definitions of representative government. The most concise form in which Locke expressed himself on this subject is in this passage in *On Civil Government*:

It is in their legislative that the members of a commonwealth are united and combined together into one coherent living body. This is the soul that gives form, life, and unity to the commonwealth; from hence the several members have their mutual influence, sympathy, and connection; and therefore when the legislative is broken, or dissolved, dissolution and death follow. For the essence and union of the society consisting in having one will, the legislative, when once established by the majority, has the declaring and, as it were, keeping of that will. The constitution of the legislative is the first and fundamental act of society, whereby provision is made for the continuation of their union under the direction of persons and bonds of laws, made by persons authorized thereunto, by the consent and appointment of the people, without which no one man, or number of men, amongst them can have authority of making law that shall be binding to the rest.

Such descriptions of representative government are very general, and reveal few or none of the difficulties inherent in its nature, or, consequently, the wide gulf which actually separates people when the term "representative" is to be put into practice. Experience, however, shows that these vital problems are involved: (1) What entities shall the government represent? (2) How can the sovereign people be represented? (3) Who may choose rep-

resentatives? These problems will concern us in the present chapter, and in the following two chapters we shall consider (4) how shall candidates for the assembly be chosen? (this is the problem of party government); and (5) how far is it permissible to influence others in the election of candidates? (this is the problem of public opinion and the parties). If we answer these questions by reference to the theories held at different times, and the practices based thereon, we shall discover more exactly what representative government means. Let it be remembered that it is not merely representation which is sought and accorded by democratic theory, but the actual selection and dismissal of the legislature and the executive.

### WHAT ENTITIES SHALL THE GOVERNMENT REPRESENT?

AT THE PRESENT time, and in all the countries of which we speak, legislative assemblies are said to represent the "nation," the "country," "the people," or the "electorate," and these terms generally mean the whole body of citizens, considered as equally entitled to representation, and free of connection with each other except through their common residence in an area ordained by the law to be an electoral district. Representation is territorial, a vague image of the whole of the state's territory being conceived, this falling into districts convenient for registration and polling purposes.

It is largely convenience<sup>1</sup> which determines the size and nature of the electoral district, and not the local existence of a definite interest whose representation is considered to be desirable. It sometimes happens, in England especially, that an electoral district coincides with some ancient borough or rural area because for centuries it was a parliamentary unit, and it has come to be thought of, sentimentally

<sup>1</sup> It depends, in fact, partly upon the reasonable size of the legislature, partly upon the struggle of parties for special advantage in their own strong districts, and partly upon the desire to represent already existing entities like counties, cities, townships.

tally, as having a corporate existence. It happens also in all democratic countries that some districts are more or less completely in the area of some special industry or occupation—for example, coal mines, textile works, potteries, or corn belts—and to this extent there is a coincidence between territory and representation. The Soviet constitution of 1924-36 is said to have been based on occupational representation. Elections were held in the cities at each plant or institution, with such unattached groups as writers, artists, and scientists constituting individual units, so that the city soviets were composed of at least one delegate from each establishment.<sup>8</sup>

Within this territorial scheme the electors are supposed to be free and equal atoms. Continental writers have for over a century applied to this system the term "atomized" and "pulverized," meaning that the whole nation is split into sovereign fragments, all entitled to equal power in fashioning policy. This doctrine is not much older, politically, than the French Revolution, stemming chiefly from Rousseau's *Social Contract*, though it goes back, philosophically, to the rise of modern religious nonconformity and the Reformation. It replaced the old system of "community" representation, and "virtual representation," on the Continent and in England.

*Past Theories: Community and Virtual Representation.* According to the first theory, representatives were summoned not because government was based upon the sovereign authority of the people, but because the tenure of land was the foundation of order and political obligation, its products were the chief sources of taxation, and in troubled times it was easier for kings to collect taxes if they at least appeared to consult the taxpayers. Hence the growth of the idea that communities—bodies of people, constituent and substantial parts of society—were the proper

units upon which to plan a parliamentary assembly.

The second theory (composed by the landed aristocracy who enjoyed political power) is most concisely expressed in Paley's words:

Before we seek to obtain anything more, consider duly what we already have. We have a House of Commons composed of 548 members, in which number are found the most considerable landholders and merchants of the Kingdom; the heads of the army, the navy, and the law; the occupiers of great offices in the state; together with many private individuals eminent by their knowledge, eloquence, and activity. If the country be not safe in such hands, in whom may it confide its interest? If such a number of such men be liable to the influence of corrupt motives, what assembly of men will be secure from the same danger? Does any new scheme of representation promise to collect together more wisdom, or to produce firmer integrity?<sup>9</sup>

The doctrine embodies two ideas—that of social bodies to be represented, but also the independence of the representative from the people to be represented. There were reformers, but as Macaulay said, speaking of the early part of this era, the object of the reformers was merely to make the representative body a more faithful interpreter of the sense of the constituent—it occurred to none that the constituent body might be an unfaithful interpreter of the sense of the nation.

Even Burke was only temporarily excited by the Wilkes' case, and he accepted virtual representation:

The virtue, spirit, and essence of a House of Commons consists in its being the express image of the feelings of the nation. It was not instituted to be a control upon the people, as of late it has been taught, by a doctrine of the most pernicious tendency. It was designed as a control for the people. . . . This change from an immediate state of procuration and delegation to a course of acting as from original power is the way in which all popular magistracies in the world have been perverted from their purposes.

<sup>8</sup> S. and B. Webb, *Soviet Communism*, Vol. I (London, 1936). In the 1936 constitution, however, selection of candidates is territorial, according to electoral districts.

<sup>9</sup> W. Paley, *Works* (London, 1825), Vol. IV, "The Principles of Moral and Political Philosophy," Book VI, pp. 392-93.

The "stake in the country" or "interest" theory of representation—that is, that wise laws could be made only by those sobered by ownership of property or pursuing a lucrative occupation—could not be surrendered by those who held it, for it was a product of their practical monopoly and part of the defense of that monopoly. Its natural fruits were the hideous maldistribution of seats, the queer franchises, and the electoral corruption which persisted until 1832 despite all debate about reform. Nor could theory and practice be changed until a hostile doctrine, claiming universal validity, violently challenged it. The attack was made in the name of the Natural Rights of Man, and in the vanguard were the middle classes, with the working classes acting as important allies in the two decades after the end of the Napoleonic Wars. The old tenets died a hard death, and to the last, in 1832 and even beyond, they were defended as wholesome for the commonwealth. Nor did France know the representation of individual persons until the Revolution. The system of three estates was possible only as long as graded social classes were not actively challenged; and that was possible only while the monarchy was absolute. When the monarchy fell, the question of who was to inherit the authority to govern naturally arose. The answer that nobility and clergy should be two to one against the Third Estate was ridiculous; for in that position, the Third Estate was indeed nothing. This was soon observed in 1788 and 1789, when the Revolution was brewing, and the holders of power held to their privileges until violence took them away.<sup>10</sup>

<sup>10</sup> Necker saw no way toward peace unless it were in convoking the *États*, to give the *Tiers État* a representation equal to that of both the others together. "The old-fashioned deliberation by Orders not being changeable, excepting by the agreement of the three Orders and the approbation of the King, the number of deputies of the Third Estate is not, until then, anything but a means of gathering all the useful informed minds for the good of the State, and it cannot be denied that this variety of information belongs above all to the Order of the Third Estate, since there are a multitude of public affairs upon which it alone is

*Sovereignty of the People—All the People—Triumphant.* The substitute for divine-right government, based on a social contract of free and equal individuals, issued from the essays of Jean Jacques, to control administration and fill the pages of the new statute books. France under the *ancien régime* had known the free and equal voter less than England had; her policy was founded upon an almost untempered monarchy and graduated subjection. But it was in just such an environment that the new doctrine could spring up. In the Germanic states the practice of distinct Orders was usual where monarchy was at all tempered. In fact, Hegel's answer to the French doctrines was that representation of Estates was essential, for these, while supplying the informational advantage of representation, maintained the cohesion of the units in each Estate, whereas the free and equal vote inevitably disintegrated society. It is interesting to note that this part of Hegel's doctrine fitted in nicely with his idea that representatives should exist only to suggest ideas, but not to exert authority. Authority was the possession of the king and the aristocracy. It did not occur to him, as it did to contemporary Englishmen and

instructed, such as domestic and foreign commerce, the condition of manufacturing industry, the best means to encourage these, the public credit, the rate of interest, and the circulation of currency, abuses of taxation, privileges and many other subjects within the experience of it alone. . . . The desire of the Third Estate, when it is unanimous, when it is in conformity with the principles of equity, must always be called the desire of the nation. . . ." (*Résultat du Conseil*, December 27, 1788. Cited in Ernest Lavisse, *Histoire* (Paris, 1912), Vol. IX, p. 371.)

Later the Third Estate claimed to be the National Assembly. Siéyès declared: "This title is the only one which is appropriate in the present condition of things, as much because the members which compose it are the only representatives legitimately and publicly known and verified, as that, finally, the national representation, being one and indivisible [*sic*], none of the deputies, in whatever order he is chosen, has the right to exercise his functions separately from the present assembly."

The Germanic states, which during the nineteenth century had diets, based representation on the various estates.

Americans, that political parties would supply the cohesion.

The victorious principle was that every sane male citizen has a natural right to participate in government, that this right is normally represented by the right to vote for the representative assemblies, and that all are entitled to equal votes, none more, none less.<sup>11</sup> That right was independent of capacity and class, and was the direct issue of the humanity of man. This was a mystical dogma issuing from the affective qualities of those who held it, although they pretended that reason was on their side. This expression of the dogma contains practically all its essential features:

All the individuals who compose the association have the inalienable and sacred right to participate in the formation of the law, and if each could make his particular will known, the gathering of all these wills would veritably form the general will, and this would be the final degree of political perfection. No one can be deprived of this right upon any pretext or in any government . . . in every society the associated are essentially equal in rights, and the first of these is participation in the establishment of laws under the empire of which they consent to live.<sup>12</sup>

Common to all in the French constituent, it was gradually hammered out into the form contained in the Declaration of the Rights of Man:

Men are born, and always continue, free and equal in respect of their rights. . . . The nation is essentially the source of all sovereignty; nor can any individual, or any body of men, be entitled to any authority which is not expressly derived from it. . . . The law is an expression of the will of the community, all citizens have the right to concur, either personally, or by their representatives in its formation.<sup>13</sup>

<sup>11</sup> Cf. French Declaration of Rights, 1789, 1791, article 6.

<sup>12</sup> Pétion, *Archives Parlementaires*, 1788-1789, Vol. III, p. 582.

<sup>13</sup> An earlier form which shows the reasoning clearly was:

Article 17: "Since every man in the state of nature enjoys an absolute and universal right over himself, then society must possess over itself the same right, that is to say sovereignty resides in all the members of a society considered collectively."

The principle developed in England during the political conflicts of the seventeenth century; a mighty tributary joined it in the American colonies,<sup>14</sup> and later in the American states;<sup>15</sup> another flowed from the fount of the *Contrat Social*;<sup>16</sup> and all met, with the newer contribution of a few English radicals,<sup>17</sup> in the tempest of the Revolution and thence spread to become everywhere the ideal of the weaker and poorer members of society. In all countries—even in Soviet Russia—one can find a constitutional declaration of the

Article 18: "Thus any society incontestably possesses every kind of power. It has always that of revising and reforming its constitution, that of making laws, of executing them, and pronouncing upon their violation; that is to say, in virtue of its sovereignty, it possesses eminently the legislative, executive and judicial rights."

Article 22: "The general will is never so well expressed as when it is that of all the citizens; in default of this it must be expressed by the majority of votes."

Article 23: "Since all citizens ought to have an equal share in the advantages of society, they ought to exercise an equal share in public deliberations."

Article 25: "Thus one of the principal points in a constitution should be the manner in which a people should assemble in order that it may, wherever necessary, express its wishes freely, clearly, easily and promptly."—Gouges-Cartou, *Projet*, August 12, 1789, *Archives Parlementaires*, Vol. VIII, p. 429.

One practical reason did weigh strongly with the deputies: that is, the desire to get a just distribution of the burden of taxation. Just taxation is a driving incentive in the creation of the dogma of equal suffrage, e.g., *Archives Parlementaires*, Vol. VIII, p. 432: "Taxation, being a portion taken from the property of each citizen, he has the right of deciding upon its necessity, of freely consenting thereto, of following its employment, and of determining its destruction, levy, collection and period."

<sup>14</sup> Charles Merriam, *American Political Ideas* (New York, 1920).

<sup>15</sup> W. S. Carpenter, *The Development of American Political Thought* (Princeton, 1930), Chaps. III and V; Kirk Porter, *History of Suffrage in the United States* (Chicago, 1918); Harold Gosnell, *Democracy: The Threshold of Freedom* (New York, 1918), Chapters 1, 2, and 8; also Albert De Grazia, *Theories of Representation* (mss. of doctorate, University of Chicago, 1948).

<sup>16</sup> Book IV, 2 and 3.

<sup>17</sup> Cf. G. S. Veitch, *Genesis of Parliamentary Reform* (London, 1913).

principle—in all except England—and the declaration has its effects.

This conception of representation was necessarily entangled with the fundamental question of where sovereignty should reside. Since the governing classes were unwilling that sovereignty should go over to the people, every practicable obstacle was put in the way of full realization of the idea, so that only in our own day have universal suffrage and the free and equal voter become coincident.

It is essential to emphasize that it is only during the course of the last two or three decades that the whole body of the adult population has achieved sovereign authority in the nation. The importance of the observation lies in the fact that mass democracy is still in its infancy. If every infant has mighty potentialities, an infant is still deficient until these are realized, especially in relation to the extraordinarily intricate societies in which self-government is today to be practiced.

#### REPRESENTING THE SOVEREIGN PEOPLE

Now, here were a multitude of equal citizens. How were they to be represented? In some way a vast gulf had to be bridged—the palpable gulf between each individual and the nation.

According to the earlier German theorists, this gulf should never have been made; it did not really exist; and, even if it were tolerated, it should be overcome by representation in Estates which organically incorporated individual and group.<sup>18</sup>

<sup>18</sup> It is extraordinary how the nazis recovered this point of view, putting the *Volk* above and around each individual, or at any rate not admitting the right to existence of the individual. For example, Aurel Kolnai states in *The War against the West* (New York, 1938):

"Individual rights are not encroached upon, they are deprived of meaning; the access to humanity is not obstructed, it is entirely cut off; humanitarian standards are not violated or disregarded, they are denied outright. Once the particular group has superseded humanity, then the individual, far from having merely to submit to stern governmental discipline, is philosophically considered and politically bound to live under the absolute domination of his own particular group over his wishes, mentality, and habits. It is no longer a ques-

But the disruptive, pulverizing philosophy of Locke and Rousseau had produced this gulf and had suggested that it was surmountable only by the social contract. The question still remained, how was the contract to be established in the everyday, continuous business of government? By what means could the reconciliation of all the particular wills be produced? As soon as this question was asked, and it was raised often and debated earnestly in the French National Assembly of 1789, statesmen were embarked upon a sea of troubles. There was the conflict we have already discussed, that of direct and representative government. There were the twin problems of the relationship between the constituencies and nation, and the electors and representatives.

If the nation were too large to be called together to deliberate, then the meeting must be reduced to manageable numbers, but nevertheless, there must be a proportionate expression of the will of the nation.<sup>19</sup> Mirabeau's metaphor, "a map to scale" (*carte réduite*), indicates the psychology of this form of representation. From each geographical point, a person or persons to speak for its people must be called. This was a simple and convenient solution, and seemed natural, for it was based upon the postulate that all wills are of equal value and therefore one, or ten, or ten thousand, or any group of citizens, or any fraction of the nation, was equal to any other, if it were numerically the same. Men do not seek out difficulties when their objects are obtainable without the burden of conquest.

Yet it could not be ignored that deputies coming from different places would have

tion of state reason, but of reason engulfed in the state; violence is no longer a means, it is the natural expression of the spirit underlying the new structure of the state; the voice of the ruler does not merely drown the voice of the individual soul, it entirely assimilates it." (P. 30.)

<sup>19</sup> Mirabeau, *Oeuvres* (Paris, 1819-22), Vol. I, p. 8: "When a nation is too numerous to meet in a single assembly, it forms a number of them. The individuals of each particular assembly give the right to vote for them to one person . . . the collection of representatives is the nation . . ."

different views. Were they, then, to hold out for those views? If the convention that a locality had sovereign rights were adopted, serious difficulties would follow: the locality and the deputy would be encouraged in their intransigence.<sup>20</sup> Yet to deny sovereign rights was to fly in the face of revolutionary philosophy by minimizing the political importance of all the sovereign individuals locally resident.<sup>21</sup> A way out of the dilemma was found in a convention as subtle as Rousseau's discussion of the General Will, Hegel's metaphysics of the State, and Gierke's analysis of associations (and all these subjects are cognate to ours)—the convention that the representative of a locality must consider himself not as representing his district but as representing the nation.<sup>22</sup> But if he is

to do this, he ceases to be the representative of the district, unless, at the same time, the local inhabitants vote for him not because they are thinking of their district and willing the things which concern it, but because they have transcended the individuality which the philosophy of natural rights accorded them, and willingly vote as individuals who are part of a whole of which they are conscious. This, in fact, is the only practical way out of the philosophical difficulty raised by a political system which begins with individuals in a state of nature.<sup>23</sup> Individuals, in the terms of Kant, must be in a state of "unsociability," but of "social unsociability."

Now if it were admitted that representation of the locality was not really representation of this but of something else, called the nation—an image here invented to cause men to acknowledge an external authority—how was this something else to be known? Who should conceive the national interest or will the deputy or his constituents? In other words, how far was the deputy to be free, and how far bound by "instructions"? The constituents had a very important place in the scheme of things, for what was the national interest but some kind of combination of the interests of all the localities?

It is one thing to attempt to answer these questions as an "ought" in an ethical vacuum, another to read the answer

whom the *baillage* charges to will in its name, but to will not as it would itself will if it could be transported to the general rendez-vous, that is *after having maturely deliberated and compared among themselves* all the motives of the *different baillages*. What is the mandate of a deputy? It is the act which transmits to him the powers of the *baillage*, which constitutes him representative of a *baillage*, and thereby representative of all the nation" (Talleyrand-Périgord).

E.g. *Constitution of 1793*, Vol. II, Chap. I, section 3, article 17: "The representatives elected in the departments are not representatives of a particular department, but of the entire nation and they must not be given any mandate."

<sup>23</sup> *Archives Parlementaires*, Vol. VIII, p. 593: "The deputy of a *baillage* is immediately chosen by his *baillage*; but indirectly, he is elected by the totality of *baillages*. That is why every deputy is a representative of the whole nation."

<sup>20</sup> *Archives Parlementaires*, Vol. VIII, p. 205: "If the system of imperative and limited powers were admitted, the resolutions of the assembly would be stultified by the recognition of a formidable veto in each one of the 177 *baillages* of the kingdom, or rather in the 431 divisions which have returned deputies to the assembly." Again: "If any *baillage*, or simply a division thereof, could govern in advance the opinion of the National Assembly, it could, on the same grounds, afterward repudiate its decrees, on the pretext that they were contrary to its own opinion." (Barrère)

<sup>21</sup> *Ibid.*, p. 204: "Each portion of society is subject; sovereignty resides only in the whole assembled: I say the whole, because the right to legislate does not belong to a part of the whole; I say assembled, because the nation cannot exercise the legislative power when it is divided, and then it cannot deliberate in common. This common deliberation can only come about through representatives; whenever I see the representatives of twenty-five million men, there I see the whole in which the plenitude of sovereignty resides; and if there exists a portion of this whole which wished to rise against the nation, I would see only one subject who pretended to be stronger than the whole. Protests and reservations are impermissible; they are attempts against the power of the majority" (Lally-Tollendal).

<sup>22</sup> *Ibid.*, p. 201: "Firstly, what is a *baillage* or a part of a *baillage*? [The reader should note our Anglo-Norman term "bailiwick."] It is not an independent state, a state united to others simply by a few connections, like any federal body; but a part of a whole, a portion of one only state, essentially submitted, whether it assents or not, to the general will, but having essentially the right to participate therein.—What is the deputy of a *baillage*? He is a man

from history. When a desirable solution was being discussed, each party to the arrangement regarded the matter in the light of what was desirable to *him*. Representatives were not anxious to be bound by mandates; they desired independence and security of tenure.<sup>24</sup> They could not forget that, on the whole, they had a better education and more leisure than most of their constituents, whence some of them argued that they were better able to decide what was their will.<sup>25</sup> Further, it was asked, how could a constituency know what was the national will, and state its attitude thereto, until the deputies met and deliberated?<sup>26</sup> On the other hand, politically conscious electors desired to give instructions,<sup>27</sup> shorten the duration of the representative period,<sup>28</sup> and recall the members who dissatisfied them.

Such devices of the electors were the only means of controlling the representative assembly in an age which lacked two things which today exist in a highly efficient form: rapid transport and communications, and a party system—an organization specifically to connect the electorate with its representatives and the electors with each other. Hence, therefore, the importance of such communications as the letters which passed between Burke and the sheriffs of Bristol, and the strict views

held in America and France on the subject of the responsiveness of the representatives: in default of any intermediate body to whom to be responsive and responsible, either the locality was the controlling factor or the representative was virtually free. The development of communications and the party system has caused the representative system to change its meaning and forms. Of critical importance, further, to the meaning of representation has been the growth of great organized bodies of citizens in their economic callings and social pursuits. This subject is pursued further at a later stage.

Perhaps no short formula has ever better described the relationship between the representative and his district than Burke's address to the electors of Bristol in 1774.<sup>29</sup> So crucial is it for the present theme, and for that of leadership in a democracy that it must be quoted:

Their [his constituents'] wishes ought to have great weight with him; their opinion high respect; their business unremitted attention. It is his duty to sacrifice his repose, his pleasures, his satisfaction, to theirs; and above all, ever, and in all cases, to prefer their interest to his own. But, his unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to you, to any man, or to any set of men living. These he does not derive from your pleasure; no, nor from the law and the Constitution. They are a trust from Providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion. . . . if government were a matter of will upon my side, yours, without question, ought to be superior. But government and legislation are matters of reason and judgment, and not of inclination; and what sort of reason is that, in which the determination precedes the discussion; in which one set of men deliberate, and another decide; and where those who form the conclusion are perhaps three hundred miles distant from those who hear the arguments? . . .

Parliament is not a congress of ambassadors from different and hostile interests; which interests each must maintain, as an agent, and

<sup>24</sup> *Ibid.*, p. 207.

<sup>25</sup> Siéyès, in *Ibid.*, Vol. VIII, p. 594.

<sup>26</sup> *Ibid.*, p. 594: "Here there is no question of drawing up a democratic survey, but to propose, listen, concert among ourselves, to modify one's opinion, finally to form in common a common will. . . . When we meet it is to deliberate, to know other people's opinions, to profit from reciprocal views, to confront particular wills, to modify, and conciliate them, to obtain a result common to the majority."

<sup>27</sup> Monnier, in *Ibid.*, Vol. VIII, p. 560: "The people confides its sovereign power—in so far as it confides it it cannot exert it; but it can take it back whenever the depositories abuse it in order to oppress them; and when it recalls the power, it should return it as soon as possible with new precautions to assure its liberty and happiness."

<sup>28</sup> Cf. Charles E. Merriam, *A History of American Political Theories* (New York, 1926); and cf. also the various declarations of rights in the American state constitutions of the Revolutionary period.

<sup>29</sup> Cf. the interesting essay in Ernest Barker, *Essays on Government* (Oxford, 1945), "Burke and his Bristol Constituency."

advocate, against other agents and advocates; but Parliament is a deliberative assembly of one nation, with one interest, that of the whole; where, not local purposes, not local prejudices, ought to guide, but the general good, resulting from the general reason of the whole. You choose a member indeed: but when you have chosen him, he is not a member of Bristol, but he is a member of Parliament. If the local constituent should have an interest, or should form a hasty opinion, evidently opposite to the real good of the rest of the community, the member for that place ought to be as far as any other from any endeavor to give it effect.

In the program of the Communist party of the Soviet Union, adopted March 18-23, 1919, the theory of delegation is stressed to a point where the power to recall their delegates "in the most easy and accessible manner" is accorded to the electors. The constitution of 1925 stated (article 75): "The constituents who elected a deputy to a soviet shall have the right to recall him or her at any time and to hold new elections." And again in the constitution of 1936: "Every deputy is obliged to render account to the electors of his work and the work of the soviet of toilers' deputies, and may at any time be recalled in the manner established by law on the decision of a majority of the electors."

Actually, it will be seen from Soviet experience that the recall was used mainly as an extraordinary means of purging deputies disliked by the communist leadership at critical stages in the continuous revolution. It has otherwise been employed mainly at the city and village level. For the Soviet system has other ways—very effective—of "animating" its political class.<sup>30</sup>

The effects of the recall<sup>31</sup> on the government of a state in which not one monopoly party dictated but several par-

ties were in operation would be most chaotic, and furthermore would add to an instability of the parliamentary executive. As we have observed (p. 106) the Soviet Union denies the validity of the theory of separation of powers. It affects to replace checks and balances by such devices as the recall. It is noteworthy that in the French Constituent Assembly of 1946, the French Communist party declared for the "recall," but interpreted this to mean not recall by the people but cashiering of deputies *by their party!* Andrei Vyshinsky's sneering comments conveniently omit reference to the contrast between his own monopoly-party state and states with free parties.

As for the privilege of voting, the right to choose representatives was extended from time to time in the nineteenth century and recently, until now practically all males and females over twenty-one years of age are enfranchised. Over one hundred years of struggle were needed to secure this, although there was a widespread consciousness of the justice of the universal vote at the beginning of that time. But those in possession of political power realized that concessions would mean loss: only violence or the fear of violence could overcome this monopolistic attitude. This fear itself was of small effect while the disenfranchised were unorganized—and even when they were organized, so long as they were unwilling to act violently and the minority controlled the armed and disciplined forces. Therefore concessions were piecemeal and slow. In England the Reform Bill of 1832 was passed only after violence, threatened and actual, after a concerted attack on the credit of the Bank of England, and after a threat to dilute the blue blood of the peerage by "swamping" the House of Lords.<sup>32</sup> This was the consummation of a long and bloody skirmish begun in 1815. The Chartist movement with its warlike

demonstrations followed. Once the Act of 1867 was passed, politics were radicalized and the poorer classes naturally admitted their unenfranchised brethren. French development<sup>33</sup> was marked by actual and recurrent revolution. In Germany, the movement was pent up until the Revolution of 1848, which, proving abortive, accomplished no more than a declaration of universal suffrage. This was granted by Bismarck only as a price for support of his policy of unity.<sup>34</sup> This gift, however, was made to Germany and not to Prussia, and, until 1919, Prussia possessed a type of franchise especially designed to hold the masses in subjection; circumstances did not favor violent revolution until 1919, and this alone, under Prussian conditions, could produce universal suffrage.<sup>35</sup>

The Prussian system<sup>36</sup> contradicted the contemporary practice of the western world in so many points that it emphasizes (by contrast) those features now almost universally accepted. It explains, also, the queer nature of German policy before World War I, for Prussia was the dominant partner. The system was indirect and unequal, in contrast to direct and equal, suffrage. It was indirect in that the electors did not possess the right to vote immediately for their representatives in the House of Deputies, but the "original" electors (*Urwähler*) were only entitled to choose final electors (*Wahlmänner*), who then elected the deputies. The effect of organization by political parties, however, was to cause the election of those "final" electors. But the "original" electors had no equal right to choose the "final electors": their elective power was

graded according to the amount of direct taxation paid. There were three classes of taxpayers. All in the constituency who paid the first one third of the direct taxes (in order of amount) comprised the first class; then came the second class, including the taxpayers in descending order until the line of two thirds in total was reached; and a third class contained the remainder. Hence the term "third-class system." This distribution of voting power caused, by the standard of equal suffrage, a serious distortion of representation;<sup>37</sup> for approximately, a voter in the first class possessed about four times the parliamentary power of a voter in the second and over sixteen times the power of a voter in the third class.

At one time, the Krupp family alone elected the whole representation of Essen. It is of special interest to notice the suggestion in a recent work, Hayek's *The Road to Serfdom*, that those persons who receive public assistance should have their civil rights limited. In nineteenth-century English poor-law policy, this meant deprivation of the right to vote. The resuscitation of the idea is interesting, as it seems once again to attempt to relate a defect in personal character which is supposed to produce unemployment, to the right to a share in government.

A noteworthy effect of this inequality—equality is an incentive to all citizens because it encourages self-respect and self-expression and competition—was to reduce the electoral interest of all the three classes of voters, for the top class thought it unnecessary to go to the poll, while the other two thought it useless.<sup>38</sup> Even the oft-demonstrated electoral

<sup>33</sup> Léon Duguit and Henri Monnier, *Les Constitutions, etc.* (Paris, 1932), Introduction. Down to 1848 a distinction was made between the nation, which consisted of all the people, and "the legal nation" (*pays légal*), the latter being the small number of enfranchised adults.

<sup>36</sup> Cf. H. von Gerlach, *Das Parlament* (Frankfurt, 1907).

<sup>37</sup> In 1908, for the whole of Prussia, the first class contained 293,000 electors; the second, 1,065,000; the third, 6,324,079. In 1913 (cf. *Statistisches Jahrbuch für den Preussischen Staat*, 1914, Vol. XII, p. 634 ff.) the percentage of the electorate in the three classes was I, 4.43; II, 15.76; and III, 79.81. Cf. Schippel, *Fort mit den Dreiklassen Wahlsystem* (Berlin, 1890); Jastrow, *Das Dreiklassensystem* (Berlin, 1894); and Bock, *Wahlstatistik* (Halle, 1919).

<sup>38</sup> In 1913, Class I, 51.4 per cent; Class II, 41.8 per cent; Class III, 29.9 per cent of the electorate voted. This was in every case higher than at previous elections.

strength of the working class, even its services during World War I, failed to move the rulers to more than vague promises of reform, and, in fact, the people obtained electoral power only when they violently took it in the revolution of 1918. The defenders of the system used the subtle argument that only property owners ought to be represented because they alone had property: or, in other words, they could not risk the transfer of their property to others by being outvoted.<sup>39</sup> But this, again, was also a defense of the Hohenzollern monarchy, which could not have survived in a state based on universal franchise; and the monarchy was a bulwark of the social and political privileges of the upper classes, and these—especially the Junkers, the larger farmers, who obtained about one third of the membership of the House<sup>40</sup>—were most attached to dynastic despotism. The callous injustice of this system accounts for the ardent, even doctrinaire spirit with which the constitution makers of 1919 embraced all the known, if untried, devices, for equitable Parliamentary representation. From one extreme to another is one of the most frequent rules of political development.

#### WHO MAY CHOOSE REPRESENTATIVES?

*Property and Educational Qualifications.* The main qualification for the franchise in the nineteenth century, that which limited the numbers enjoying it, was the possession of property. Two main reasons were advanced for this. One was that the possession of some property was a trustworthy indication that its possessor was educated and therefore competent to pronounce upon public affairs. The other was

that if those who had no property were enfranchised there would be an end of private property. The first was advanced by such otherwise different minds as Hegel and Bagehot and Disraeli and members of the French Revolutionary Convention. That so crude and erroneous a test was acceptable to such minds (when in good faith) shows how difficult it is to measure political competence; but this acceptance is at least partly due to the difficulty of defining and applying a more accurate one to multitudes of people. Further, and from this point of view and this only, there was something to be said for it. Until about the year 1900, very few citizens in any country had the means of any substantial education, and the lack of private means implied a lack of education. Now, it is necessary to representative and responsible government that the electors shall be able to understand their own interests, the interests of the nation, the policy of a candidate for their suffrages, and the nature of parliamentary activity. For without this there is no judgment; yet the essence of responsible government is popular judgment. The real question, however, is whether people can exercise such a judgment without formal education. It is a mistake to imagine that formal education is absolutely essential, for we are often taught more by the informal (sometimes the chance) experiences of life than by schooling. This is not all. It is a fundamental fallacy to argue that political behavior has depended, depends now, or must depend upon instruction. It depends upon will, upon the passions, which are at the most modified by instruction, and men and women vote primarily for what they want and not from purely intellectual guidance. Thus, it is a fallacy to be-

<sup>39</sup> Cf. *Der Preussische Landtag Kein Klassenparlament*, by Julius Vorster, a member of the House of Deputies (Cologne, 1907).

<sup>40</sup> Cf. W. Kamm, *Abgeordnetenberuf und Parlament* (Karlsruhe, 1927). Cf. A. Rosenberg, *The Birth of the German Republic* (London, 1931), Chaps. I and II. The great change in representation was due partly to the redistribution of seats—until 1919 distribution rested upon a decree of 1867, when rural parts were more thickly populated than towns: a situation which changed remarkably after

1870. Cf. also W. H. Dawson, *The German Empire* (London, 1919), Vol. I, pp. 387-88. The shift in party strength from 1913 to 1919, with direct, equal, and proportional representation, was as follows (expressed as percentages):

	1913	1919
Conservatives	45.6	12.5
National Liberals	16.5	5.2
Democrats	9.0	16.2
Center	23.2	29.9
Social Democrats	2.3	42.1

lieve that the poorest, the most ignorant, ought not to vote because they will not know what to vote for—they know very well, even too well for some people's comfort. The real question, of course, is not whether people know what they *want*, but whether they know what is *possible*. There, education is vital; and we analyze the question in Chapter 14.

In most countries, then, the property qualification has been reduced to very small proportions or has ceased altogether, no more than mere residence for a short period being required as a preliminary to registration as a voter.<sup>41</sup> When

<sup>41</sup> In England, owing to the nonstatement of the rational theory of representation in constitution or statute, voters had as many votes as positive qualifications. This resulted in much plural voting. The Reform Act of 1918 permitted, at most, two votes per voter to be chosen among the qualifications of residence, occupation, and university degree. In 1945 it was estimated that there were 200,000 qualified to cast a business vote and 175,000 a university vote. Such a device is a defense mechanism for the more wealthy and educated, to protect them from the workers' vote. The Speaker's Conference on Electoral Procedure of 1944 decided to leave the subject alone, but the Labour government abolished the "plural vote" by the Representation of the People Act of 1948.

Before this Act was passed, there were in Britain twelve members of Parliament elected by the graduates of the universities. (This practice had commenced in the reign of James I.) The Labour government proposed the abolition of the seats on the principle of "one man, one vote." To this the Conservative party and some independents strenuously objected. Their objection was not merely founded on the advantage they had possessed in almost always securing a victory in the universities, although no Labour candidate had ever been returned. They put forward the view that to-day, when the state is so extensively active, it was more important than ever to have members in the House who were independent of party, and the subsidiary argument followed that the university members were so unaffiliated. It is true that some notable members of independent views have come from the university constituencies: for instance, Eleanor Rathbone, the leader in the movement for family allowances, and A. P. Herbert—see his witty *The Ayes Have It* (London, 1937) and *University Member* (London, 1949)—who produced important changes in the law of divorce. In the Conservative argument there was still something of the ancient view that

property qualifications were attacked, the defenders (in all countries) of the theory of government by the competent suggested the establishment of educational qualifications,<sup>42</sup> but it was found practically impossible to devise a valid scheme, and statesmen ultimately surrendered to the principle of mere citizenship. But a number of the American states have literacy tests for voting.<sup>43</sup> They are simple tests: some require mere ability to read; others require the reading of the constitution and the writing of the applicant's name; six Southern states require either the reading or understanding or reasonable interpretation of the state constitution. These tests were hardly established for the sake of an ideally good democracy but, in some states at least, to procure specific exclusions from the electorate.<sup>44</sup> In the Southern states the intention was to exclude Negroes—and this has been done, since the standard of success at an examination is set not by the candidate but by the examining registration officers, who are white. In the New England states the alien population fell too easy a prey to corrupt bosses to be permitted by the "forward- and upward-looking citizens" a

representation was of communities and not of individual citizens grouped in areas—something of the corporate principle, as that principle had certainly prevailed when boroughs and counties were represented as communities. The Labour government's answer was that there was no more reason to represent the universities than the alumni clubs of the municipally provided schools anywhere in the land. Cf. *Debates* (February 16, 1948 onward).

place on the register without a test. At any rate, the tests are not any serious contribution toward the problem of electoral ability. They are pawns in the battle for social dominion, and exclude those who are considered heterogeneous on account of race or culture. Andrei Vyshinsky, in the treatise just referred to, alleges that the literacy tests are designed to reinforce the dictatorship of the bourgeoisie, everywhere!

The fact is that "political competence" is a very ambiguous term: it cannot be defined to the universal satisfaction, or even to the satisfaction of a majority of the people. Since it is not exactly definable, the prospects of difficulties in its administration stop those who are attracted by such a standard from its institution. Nor is the impersonal test which might be devised for intelligence and intellect any criterion by which to judge the moral excellence of an elector or candidate. This moral quality is entirely a subjective matter, itself in the very cockpit of politics; for what shall be considered "moral" in a nation's life is, in the modern state, to a large extent settled by law. It is difficult enough for the scientist to certify unsoundness of mind or prescribe the treatment for a juvenile delinquent, and when one arrives at the finer shades of moral rectitude one is baffled. I emphasize with all strength that it is exactly this uncertainty as to who is "right" and "good" in judging the direction society should take which has given birth to democracy and representative government: while the conviction of certainty has often given rise to minority and despotic government.

If we grant that those who are to elect and control government must justify their claim by their "understanding," then let us recognize two ingredients of political understanding. One is knowledge of fact, which includes history; and the other ingredient is values. When we use the word "moral" as we have used it above, we are referring to the fact that an act of political judgment is directed by a sense of values. The democratic theory is precisely that in the realm of values, each person must be presumed to have an equal

claim to speak, since there is no external objective test of value, that is, of the nature of the good life. This truth is denied by the dictators when they claim that government should be in the hands of those with special "competence." Its denial in a democracy implies the destruction of that democracy. The grave responsibility of placing even the queerest shade of idiosyncrasy beyond the bounds of potential validity has caused men both to offer and demand the inclusion of its opinion and weight in the lawmaking assembly.

Neither can there be an objective test of wisdom, which means judgment of the importance attachable to the various elements of a problem. This is certainly compounded of testable information, but its chief ingredients are intuitions, desires, and sanity of mind. But the democrat would say that such things are sacred. Knowledge, however, can be tested; and it is here that democracy is as yet most defective. A thorough knowledge of social affairs is fundamental to any real enfranchisement and sound decisions. Let us not pretend that uninstructed instinct can answer social and economic problems: it may be lucky or it may be disastrous, but it cannot be wise. Even then, we are unable either to teach or to test knowledge indefinitely. Science grows richer every day, but knowledge is still woefully lacking. When we reach that margin we inevitably shall, and do, set our course by large and imperfect socio-psychological generalizations—though science teaches caution. Equally, there is no doubt that tests based on knowledge now available, and indispensable to rational voting, would exclude some 95 per cent of all adults from the franchise.

These considerations throw into prominence two necessities: (1) the duty, for the future, of utilizing every social vehicle for promoting political knowledge: press, radio, periodicals, adult education, and so on; and (2) the dependence of the electorate upon a substantial number of rival leaders of wisdom and integrity, who may be sought through the selective filter of party organization. This still leaves much

to hazard—the impediments and difficulties of the political party.

*Other Qualifications.* Thus, excluding race and sex discrimination, only the clearly distinguishable defects, like culpable pauperism,<sup>45</sup> certified mental deficiency,<sup>46</sup> and criminality, now bring exclusion from the franchise. Until recently, the armed forces were not permitted to vote, but the reason was far different from the other disqualification.<sup>47</sup> However, the value placed on the democratic army in the United States in World War II caused agitation for a federal law for military suffrage. Although it was defeated, the soldier ballot was enacted by state legislation. The Soviet government from the beginning enthusiastically enfranchised the Red Army, recruitment for which is draconically controlled by the Communist party.

*Sex Qualifications.* Female sex was an almost universal exclusion from the vote until a generation ago; the prohibition lasted longest (until very recently) in France, Italy, and many other, especially Latin, countries.<sup>48</sup> Female disfranchisement arose out of no rational consideration of woman's need to participate in political activity, but out of the general social position of women, as determined by sexual role, family life, and religious tenets.<sup>49</sup> It was assumed that man was, or

should be, the head of the family and the lord of women, and that woman's place was the home; it followed that women were "represented" in politics by their husbands. They were put off with cant about their beauty and modesty. But with the insistence of natural rights theories upon the uniqueness of individual experience, women found a way into political life. Among the pioneers of reform were men like John Stuart Mill and Charles Bradlaugh, not Christians in the ordinary sense of the word. The mass of men, securely installed in authority, were proof against argument until women formed militant organizations and worried and shocked them out of their domineering complacency. Some statesmen have ascribed their conversion to the efficient services of women in World War I. We cannot entirely exclude one other consideration: party competition to bid for the votes of the newly enfranchised.<sup>50</sup>

Our experience of universal suffrage is too short to enable us to say in what fashion the intervention of women has affected politics, or to make an accurate forecast. No country has general arrangements for keeping a separate record of the votes of men and women. Germany, from 1919, legally provided for separate ballot boxes, but left the power to the constituencies, and only an inconsiderable number used it.<sup>51</sup> The results showed that women's votes were almost identical in quality with those of men, except that women voted less than men (nonvoting is greater among the younger women), and

<sup>45</sup> In Germany including drunkenness, which endangers economic independence. The destitute are not disfranchised in England, France, or the United States.

<sup>46</sup> This is not easy to define and establish. Only this extreme limit serves to disfranchise; mental and moral weakness otherwise does not. Cf. J. Barthélemy and P. Duez, *Droit Constitutionnel* (Paris, 1926), p. 274 ff.

<sup>47</sup> So for France, Germany, United States; not so in Great Britain.

<sup>48</sup> In France, politicians were particularly afraid of the power which the clergy might win by their influence over the women—and the subject cannot be isolated from the struggle for political power between church and anticlerical statesmen. Cf. Leclerc, *Le Vote des Femmes en France* (Paris, 1929).

<sup>49</sup> Cf. W. E. Lecky, *Democracy and Liberty* (London, 1898); M. Ostrogorski, *Rights of Women*; John Stuart Mill, *The Subjection of Women* (London, 1869); Mary Wollstonecraft, *A Vindication of the Rights of Women* (London 1792); E. R. Clough, *Mary Wollstone-*

*craft and The Rights of Women* (London, 1898); I. H. Irwin, *The Story of the Woman's Party* (New York, 1921).

<sup>50</sup> A critic of the German constitution of 1919, which enfranchised all women and men over twenty, raised the quaint protest that if it was difficult enough to accept the equality of voters (and hence the majority principle) when only men were voters, the convention entirely breaks down when one is counting women who have the vote, for they of a certainty are different from men. A. F. Freytag-Loringhoven, *Die Weimarer Verfassung in Lehre und Wirklichkeit* (München, 1924 and 1930).

<sup>51</sup> The power is derived from *Reichstimmordnung*, para. 5, established principally in order to make reference to voters' name easier.

that there was a slight bias to the parties of the Right, not least the Catholic Center party. This conservatism was also found to occur under the nazi régime, and in voting in Sweden, where a separate-ballot-box system was installed. Perhaps, too, the rise of the French Catholic party, the M.R.P., since World War II, is an evidence of this. One American study shows a definite inclination of women to the Republican party.<sup>52</sup> German politicians explain this conservatism by the aversion of women to the progressive and socialist parties, which on the Continent make of atheism and ungodliness a party religion.

In the course of legislative proceedings, women members have everywhere shown special interest in health, housing, temperance, social security, education, equality of economic conditions for the two sexes, international peace, and the abolition of the white-slave traffic. It is the intensity more than the direction of their interest which is important.

The wholesale entrance of women into politics must inevitably introduce complications, owing to the contact of different sexes. No one who has an experience of coeducation and cooperation in industry can avoid the conclusion that the minds of men and women are often diverted from objective considerations and are seriously affected by considerations of courtesy and the personal beauty and desirability of one of the opposite sex whose fate or interests are involved. Boys and girls tell lies for each other, and turn in work in some one else's name; pugnacity is aroused in the presence of girls, and discipline is audaciously rejected because it is humiliating. Time is wasted in philandering, and the mind loses itself in idle fancies. In business, women are often shielded from responsibility because of their sex; they are appointed because they are pleasing; they are dismissed or passed over in promotion because they are ugly. Women become extraordinarily devoted to their work because they are devoted to a particular manager, and

work badly for others in the firm. We all know such facts, and they should not escape us in public life. And although the vast majority of people in a representative assembly, its committees, and the ancillary organizations may be married, and therefore presumably (but only presumably) less susceptible to the charms and wiles of the opposite sex, everyday experience teaches us to expect certain results.

*Nationality Qualifications.* Two other things are worth insisting upon in regard to qualification for voting. One is that all countries, including the Soviet Union since 1936, accord the vote only to their nationals: i.e., those who have acquired citizenship of a particular state by birth or naturalization. This is one of the directions in which nationality—that is, the sense of a collective whole with special rights and duties among its members and less tolerance towards alien collectivities—is expressed. In the Soviet Union the apparent liberality is possible because immigration is hardly permitted, least of all to non-Communists.

*Race Qualifications.* We must also notice the extent to which race affects the right to vote. In the Southern states of the United States, almost the whole Negro population<sup>53</sup> is excluded from the vote either by convention and fear of violence, by complicated and impossible requirements, or by administrative discrimination based upon "educational" tests. Other, more blatant means of exclusion have existed, but have been declared unconstitutional.<sup>54</sup> Exclusion of the Negroes from primaries is a question that has reached the Supreme Court several times in recent years. In 1932, to circumvent a previous high-court decision, the Texas Demo-

<sup>52</sup> In 1940, with a total Negro adult population of 3,651,256 in the eight Deep South states (not including Oklahoma), only between 80,000 and 90,000 Negroes voted in the general election.

<sup>54</sup> Paul Lewinson, *Race, Class, Party* (New York, 1932) for a profound history and analysis; and G. Myrdal, *An American Dilemma* (New York, 1944), Chaps. 22 and 23. A certain number of poor, illiterate whites are accidentally excluded because they cannot come up to the residential, tax-paying, or educational standards.

<sup>53</sup> S. Anderson and P. E. Davidson, *Ballots and the Democratic Class Struggle* (Stanford, 1943), p. 143.

cratic party ruled that the direct primary could be participated in solely by whites. The Supreme Court held that since the party was a private association, the state was not violating the 14th amendment, guaranteeing equal protection of the law by states to all. This decision of 1935 was reversed in 1944 in the case of *Smith v. Allwright* (321 U.S. 649). In Europe, national "minorities" lodged against their will in alien states were frequently obstructed in their rights to vote in spite of the guarantees of the minorities treaties; and in Germany, the nazi government withdrew the franchise from all Jews by race. The continual efforts by the Republican and Democratic parties to abolish or abate the poll tax in the Southern states—the present means of disqualifying Negro citizens—have been frustrated by the opposition of the Southern Democrats, especially by Senate filibusters.

In the Southern states of the United States, it has been necessary for the law to pursue the would-be discriminants against the Negro voter back to the primary elections, which were instituted to give the electorate the power of choosing candidates in each party. In these states, to secure nomination is tantamount to election. The Supreme Court said in *Smith v. Allwright*:

When primaries become a part of the machinery for choosing officials, state and national, as they have here, the same tests to determine the character of discrimination or abridgement should be applied to the primary as are applied to the general election. And, further, the privilege of membership in a party may be, as this Court said in *Grovey Vs. Townsend*, no concern of a state. But when, as here, that privilege is also the essential quality for voting in a primary to select nominees for a general election, the state makes the action of a party the action of the state.

(The bearing of this on international organization for peace and security is important and it is dealt with at some length in Lauterpacht, *An International Bill of Human Rights*, 1945.)

Hitler considered the vote as a defensive weapon of the *Volk*. Thus the Jewish people were not considered eligible to par-

ticipate, since they were outside the classification of Germans or those "racially related," according to the nazis (not related by religion—for this the nazis held to be less detestable than "racial" features.) The Jews were subjects, not citizens, of the *Reich*. The victorious Allies under the impulse of their democratic theories, whether of the Western or the Soviet variety, accepting the doctrine of the equality of all men and women, abolished the nazi discrimination against Jewish citizens.

*Age Qualifications.* The age qualification for voting is almost everywhere coincident with that of the legal majority, though some countries set the age at lower than twenty-one (for example, the Soviet Union and Georgia in the United States, at eighteen, and Germany at twenty) and others higher.

I have nowhere met with a rational argument concerning the proper age to vote; it has been stumbled into without adequate consideration. Since natural-rights doctrines concerned the "citizen" and since the citizen was a man at his legal majority, the latter seems to have been accepted without examination. Argument has, in fact, been supplied only by those who take exception to the age of twenty-one. In the Soviet Union, where the age of eighteen was established, it was argued that economic productivity is a proper title to representation. Those who have set the age, or desire to set the age, above twenty-one, insist that the mind is not yet sufficiently mature to deliver a sound judgment upon political issues and that the youthful mind is too likely to vote for radical measures and enthusiastic but shallow-minded personalities. We can never know how far these theories are true, since the basis for statistical analysis is lacking. We can say that the official theory of the U.S.S.R. is that the democracies deliberately do not enfranchise at eighteen because they fear the political militancy of the young in favor of radical social change. Fascism in Italy was powerfully supported by young enthusiasts for Mussolini and that the Communist parties everywhere are a particularly power-

## THE ELECTORATE AND POLITICAL PARTIES

ful attraction to the young. The Nazi party in Germany found its most enthusiastic support in the youth of the country, but this may be partly put down to the unemployment that afflicted the country. Election figures for the United States in 1936 showed strong support of Roosevelt by the young voters—which was due partly to hero worship and partly to support of work-relief measures.

If experience may be held to teach, it

seems to be a better arrangement to initiate youth into politics as early as possible; and the initial radicalism must be suffered in the hope that the extra period of voting experience will give a compensatory poise in later life.

No country in the world has yet thought of denying the franchise on the grounds of old age. The world grows kinder and wiser: some cultures starve their senile to death or bury them alive.

## *Representative Government Is Party Government*

MODERN states, then, are ruled by the representatives of all their citizens, male and (often) female, of an age about twenty-one and over. These citizens are qualified by little more than their mere existence as indicated by residence, and practically no distinction is made on the grounds of property or ability. The voters are by law grouped territorially and in no other way, since representation of "interests" and Estates has been superseded by representation through equal electoral districts. The question now is what this system has achieved, and what its future is likely to be. This question cannot be answered without attention to others which arise out of it:

(1) Who nominates candidates for election as representatives?—the problem of this chapter.

(2) What influences are brought to bear upon voters and candidates in order to determine the result of election?—the problem of the next chapter.

There is no answer to these questions without an examination of the role played by political parties in representative government. It is difficult to analyze that role without the danger of losing a view of the integral function of party; but this difficulty attends all scientific analysis. We may say, then, that the function of political parties has two main aspects: (1) the organization of the electorate with the purpose of obtaining a majority, and (2) the maintenance of a continuous and responsible connection between representa-

tives and constituencies from one election to another. It should be noticed that the better these two functions are fulfilled, the closer is the attainment of integration between political leaders and the masses. If an ideal standard were reached, then representative government would not need to be supplemented, still less replaced, by direct government: that is, by measures like the initiative and the referendum. Nor would it be necessary to include anything like article 142 of the Soviet constitution of 1936, which institutes the recall of deputies thus:

It is the duty of every deputy to report to the electors on his work and on the work of the Soviet of Toilers' Deputies and he is liable to be recalled at any time in the manner established by law upon decision of a majority of the electors.

These processes are intertwined: they have a common end. However, though not separate, they can be distinguished. Here we discuss the first, nomination and, in later chapters, the second, the influencing of voters in nomination.

### REQUIREMENTS FOR NOMINATION

FIRST we should observe that various countries have required the age of candidacy as a representative to be higher than the age of voting. It is the distinction marked, on the Continent, between the active franchise (the right to choose) and passive franchise (the right to be chosen). The

grounds are plain: legislators believed that greater maturity was desirable in the persons who actively govern than in those who merely choose representatives. (It will be recalled that eligibility for the United States House of Representatives is at age twenty-five, for the United States Senate at age thirty, and for the United States Presidency at age thirty-five. There is no similar age differentiation in England. In Soviet Russia the age of eligibility is twenty-three.) It seems to me, however, that if there is any validity in universal suffrage and representative government, there is no practical ground for the distinction. For if the people are to be truly represented, they must be able to judge of alternative policies and the respective capacity of candidates, and the mind—from the standpoint of age—that can do this can be trusted to do as much to make laws as the average member of a legislature in fact does. The rule goes too far, or not far enough. There are disqualifications (beyond those which exclude from the franchise) for candidacy: in France, *inélégibilité* extends to naturalized foreigners for ten years after naturalization, persons who have not satisfied military obligations, army and navy personnel on active duty, undischarged bankrupts, candidates and electors found guilty of corrupt practices, and officials (local and central) under varying conditions. In Germany, there was only one condition: naturalization for one year. In England, there are "incompatibilities" as the French say, which exclude certain people from Parliament but not from election: civil servants, the clergy, military personnel, and peers.

The law requires that a certain number of electors shall subscribe the nomination of a candidate, and it steers between the ideals of ease of candidacy<sup>1</sup> and preliminary assurance that the candidacy is not entirely frivolous. Both these points are of importance. But the latter has acquired special significance in recent years, because the efficacy of representative government has come to depend so much

upon the stability of the executive and, therefore, of party organization, that undisciplined candidacies which disturb party affiliations and upset "straight fights" between majority and minority are widely deprecated. In England, until 1945, candidates were required to deposit £150 with the returning officer, and this was forfeited if the candidate failed to secure one eighth of the votes cast in his constituency. It is doubtful whether this made much difference, though it probably had the effect of diminishing the number of Communist candidates, and candidates of various propagandist societies, who would stand not to win but to advertise their doctrines. In July, 1944, an all-party Conference on Electoral Reform and Redistribution of Seats recommended a change in this rule to make it easier for candidates to compete. The amount of the deposit was to be retained at £150 and was to be forfeited only if a candidate polled less than one eighth of the total votes cast where there were two or three candidates; or if there were more than three candidates, the deposit would be returned if a candidate polled one tenth of the total vote cast. The Conference rejected a proposal that the deposit should be reduced to £100, by eighteen votes to four.<sup>2</sup>

In other countries the law requires candidates to be sponsored by a number of electors who sign the nomination form: thus in England eight electors, in France one hundred, in Weimar Germany only twenty (provided that the party organization gave sufficient proof that it had at least five hundred supporters, and one such proof was the winning of at least one seat at the previous election.<sup>3</sup>) In the

<sup>2</sup> *Cmd. 6543*: 1944.

<sup>3</sup> Cf. *Begründung*, Law of August 24, 1918, article 6 (No. 1288 of 1928): "All proportional representation systems agree in the requirement that nominations must be endorsed by several persons, so that only seriously meant nominations shall be made and so prevent any casual adventurer or imperceptibly small group with inessential separate wishes from producing a harmful scattering of votes and thereby confusing and enhancing the difficulty of the electoral process." Severer regulations than this have been declared unconstitutional by the Supreme Court of State of Germany.

<sup>1</sup> Bernard, *La Liberté de la Candidature* (Paris, 1925).

Soviet system under the constitution of 1936, no stated number of endorsements is required for candidates. The nomination is made by any of a number of social and economic organizations—above all the Communist party, which is assured predominance in the constitution itself. Soviet writers contrast the absence of need for endorsements in Russia with the need for them in other countries, declaring that the Soviet method is an evidence of a free democratic system of government!

NOMINATION IN ENGLAND, FRANCE  
AND GERMANY

*The Local and the Central Caucus: with Special Reference to England.* The main point, however, is: who actually nominates the candidates? The law, excepting in the United States, does not intervene, and nomination is left to the voluntary arrangements of the voters. Now it is clear that candidates are nominated because they and their supporters hope to win the seat, and, to do this, an organization to attract the attention of electors is necessary. As soon as the constituency becomes so large in area and number that a candidate cannot in person be known to all, a means of approaching the electors must be established. The necessity grows in proportion as the citizen's time available for political reflection is reduced by preoccupation with family duties and economic pursuits. For then the candidate must not only break through the barriers of territorial distance but also must overcome the resistance of the voter's fatigue, ignorance, and lack of interest. In the modern state, constituencies contain very large numbers of inhabitants<sup>4</sup> and are

extensive in area. In spite of the advanced condition of industrial technique and the means of travel between home and workplace, the voters' daily work exhausts them. They certainly show no signs of wishing to reduce their standard of living by absence from work for the sake of politics. This set of obstacles the candidate must overcome; but this he cannot overcome without an organization. Although such organizations first grew up to help the candidate,<sup>5</sup> they were later transformed to help the electorate also. But they were always established with a particular system of political principles in mind. Citizens founded local caucuses or local party organizations, and arrogated to themselves the power to select candidates. Their justification was their intention to serve their principles and their candidate. Selection by such bodies does not preclude other electors from acting similarly, but experience has shown that there are all too few citizens sufficiently conscious of their political powers to cause embarrassment by selecting excessive numbers of candidates. Still, with universal and equal suffrage, such embarrassment was and remains a possibility. A distinction between European and American parties must be remembered: the former fight chiefly for principles of public policy, the latter much more, though by no means entirely, for "spoils" (even though it is not desired to minimize the assertion of opposing principles by the American parties, especially since the New Deal). The distinction will become clear as the facts are unfolded throughout the rest of the book.

The local caucus desires to obtain the realization of its political principles—in

Country	Average Number of Inhabitants per Constituency
Great Britain (S.M.) 1946..	70,000
France (S.M.) 1946.....	62,000
Weimar Germany (P.R.)..	1,800,000
U.S.A. (S.M.) 1946.....	320,000
Belgium (P.R.) 1946.....	40,000

(S.M. means single-member constituency; P.R. means proportional representation.)

<sup>5</sup> Cf. M. Ostrogorski, *Democracy and the Organization of Political Parties* (New York, 1908), 2 vols., for the United States and England; further, E. E. Robinson, *The Evolution of American Political Parties* (New York, 1924); E. and A. G. Porritt, *The Unreformed House of Commons* (Cambridge, 1903); J. Grego, *Parliamentary Elections in the Old Days* (London, 1888) and L. Namier, *The Structure of Politics at the Accession of George III* (London, 1929), 2 vols. For Germany, see L. Bergsträsser, *Geschichte der politischen Parteien Deutschlands* (Berlin, 1926).

other words, to govern other people. There is no certainty, however, that it will succeed unless its representative forms part of a majority of like-minded people. The need for a majority, therefore, causes candidates for office, local bodies of citizens, philosophers, and would-be leaders to seek each other out, to form a homogeneous policy, and to act in concert. In other words, they seek to discover the conditions of power before they proceed to fight for it, lest by not knowing them, they waste their efforts upon a representative who insists more upon his idiosyncrasies than upon his solidarity with others. The result is the creation of political parties—that is, the association of men and women who broadly agree upon the principles of government and their application, in Burke's definition of a party: "a body of men, united for the purpose of promoting by their joint endeavors the public interest, upon some principle on which they are all agreed," or in a modern German definition, "a battle fellowship established in the form of a permanent association, to obtain power over the State to realize political aims."<sup>6</sup>

It is essential to a party's objects that it should extend beyond the boundaries of a single constituency, and most modern parties do, in fact, spread over whole nations. This at once raises various questions of centralization and localization, an important one being that of the selection of candidates.

In England, about 1800, the choice was mainly local with small central interference, loyalty to party principles being secured both by a statement made by the candidate in answer to interrogations from the few sponsors, and by the judicious use of office and bribes. Gradually, after the Reform Bill of 1832, the large and continuous increase of the electorate compelled more deliberate and concerted or-

ganization, and the politicians of the Clubs (the Carlton and the Reform), the private secretaries to cabinet ministers and opposition leaders, and later, the central party agents, became the advisers of the local associations. The arrangement was convenient and useful, because in England, differently from the United States, neither law nor custom required or requires today that the candidate should be a resident of the constituency; so that a central reservoir of candidates was possible. The source being centralized, it was possible to compare candidates with one another and with the different needs of the constituencies. The central agent was then able to advise the local associations who had no candidate of their own. But it was advice only, and even now continues, in the main, to be only that, though it is very influential and often enforceable by appeal to the needs of the party for special talent and by an implied threat that political and administrative facilitation will be withheld.

The conditions under which such advice is given have greatly altered since the middle of the nineteenth century. For the party has acquired the character of a distinct and conscious nation-wide community. A feeling of unity now pervades the aggregation of local bodies. They recognize that they are ultimately parts of a single thing, deriving significance from a place in a system, composed of creative purposes and defensive and offensive impulses against hostile groups. What caused the growth of this feeling? Many things: the experience of corporate struggle, victory, and defeat; the exercise of governmental power; the influence of a succession of leaders whose personality and fame had that aura which produces loyalty and worship; the moving quality of significant causes; the growth and operation of centrally directed propaganda based upon large funds of money; the newspaper reiteration of creeds; and finally, the growing consciousness of the individual voter that the whole—the party—is mightier than its parts—the local associations. It must never be forgotten that the whole of Great Britain is relatively small. The

<sup>6</sup> Cf. H. Triepel in *Staatsverfassung und politische Parteien* (Berlin, 1930). The reader is also advised to study Max Weber's essay, "Politics as a Vocation," p. 77 ff. in his *Essays in Sociology* (New York, 1946), ed. by H. H. Gerth and C. W. Mills.

figures of the size of its constituencies indicate that but partially. The smallness of the island, and the density of its population, contribute more strikingly than can be imagined by outside observers to the rapid circulation of impressions throughout the entire country. This all contributes to a clear consciousness of issues and an association for political purposes about which, relatively speaking, confusion is not too confounded. British conditions always recall the observations of Aristotle on the need for an area small enough for *all* citizens to "know one another's characters"<sup>7</sup> and Rousseau's similar views.<sup>8</sup> Of course, we speak with the relationship between size of the state and the availability of excellent communications in mind.

Victory is the first law of politics, and to this end all other laws are subordinated. If victory is more certainly attainable by centralization, then party organization is centralized. Centralization has triumphed, though this is far from meaning that local liberty has ceased to exist. The conditions of successful war are well known. Power must not be wasted, since how much will be called for cannot be exactly predicted. Therefore, there must be no quarrels within the camp, and pugnacity must never be turned inward, but always outward. Hence local supporters of the same party ought not to fight each other: one candidate for one seat is enough. To quarrel, especially on the eve of battle, is to discourage one's own supporters and to suffer defections, while encouraging the enemy. If, then, quarrels cannot be avoided, the intervention of a higher authority which can impartially represent the loss to the whole party community is desirable: it will ask for a sacrifice of the less to the more important, and a suppression of the relatively undesirable to avoid the absolutely undesirable, namely, the defeat of the party by a victorious opposition. Further, all strategy is one: forces must be concentrated where opposition is greatest and not wasted on gloriously

winning one's own strongholds. If this is to be accomplished, a skilled organization, a general staff, must concentrate information and material about the whole of the front and distribute it according to local need.

The party is a fighting organization, and it must obey the rules of successful warfare. One of those rules is that the central directing agency must watch over the quality of the local candidates, and with the growth of party unity and the knowledge of the rules of success, the central office has acquired a good deal of power in the matter of nominations.

Local associations may insist upon their own candidates. Unless there is a really serious reason why they should not be adopted, they are "endorsed" by the central office.<sup>9</sup> Endorsement means that the central office approves of the choice and will help that candidate during the campaign. The local association may have no persons considered clever enough to meet its standard for a member of Parliament, or it may lack the special qualities needed to win that particular constituency. If this is the case, the central office is approached. This already has a long list of people who urgently aspire to election,

<sup>9</sup> Cf. for the rule, the Labour party constitution, 1944, clause IX. This clause requires, among other things, that the candidate accept and act in accord with the parliamentary laws of the Labour party, which subjects him to the discipline determined by the whole of the group in Parliament and therefore gives the leaders considerable power over him. There is no such clause or rule in the Liberal or Conservative party constitutions, but their practice is sometimes severer than that of the Labour party. For the Conservative party, see, e.g., the correspondence between the South Paddington Conservative Association and the headquarters in 1930, when the Association was excommunicated by headquarters. The constitutions of the Continental and American parties occasionally contain clauses on this question. It must be remembered that the local organizations, although composed of individual members of the party or of trade unions, have affiliated with the party (this applies to the Labour party), have accepted its policies, principles, and politics, and have promised to conform with the constitution and standing orders of the party and to submit their political rules to the National Executive Committee.

<sup>7</sup> *Politics*, VII, iv; and *Ethics*, IX c.x, 3.

<sup>8</sup> *Social Contract*, Book 9.

## REPRESENTATIVE GOVERNMENT IS PARTY GOVERNMENT

and of these several are suggested to the local association. They are invited before the nomination committee or the executive committee of the local association. The secretary of the association, or its agent, interviews the candidates beforehand, and experience shows that his judgment has much to do with the final choice. The reason for this is clear: the secretary and the agent have a vital interest in victory; they are employed (the agent, in fact, is paid) to engineer victory. They have, as a rule, had actual experience of organizing campaigns, and they are able, better than the committee, to calculate the chances of success for a candidate. Thus there comes about a certain abdication of judgment on the part of the amateur; and the permanent employee benefits from this abdication. In Weimar Germany, one even heard of the "party bureaucracy."<sup>10</sup> However, the will of the committee, if it wishes to exert it against the secretary or agent, is final.

What, then, is the composition and state of mind of the committee? The committee is no more than about a score of members of the local party association. This again is nothing but a body of voters, rarely running into thousands, who have formally joined the party, having formally attested their belief in the principles of the party, and who regularly contribute to the party funds. This body formally elects its executive committee, and the executive committee is the continuously active administrative authority of the party. It is the "machine" for selecting candidates. Its members are the politically conscious, aspiring, and energetic members of the electorate; they have read a little, attended meetings, learned the party jargon and, thought a good deal. They are capable tacticians, knowing their locality well. Some, perhaps, serve or have served as municipal councilors—such office being not seldom the crumbs from the rich man's table to reward them

for their services. Upon them falls the decentralized management of a ward in a number of streets preparatory to a campaign.

What considerations determine their choice of candidate? The dominating consideration is victory. It is true to say that a local caucus would rather send an inferior man or woman to Parliament than lose the seat with a superior one. For in Parliament all members are equal; the greatest number controls the law and its administration. However excellent the candidate, if he cannot win he is electorally deficient. Better a seat without a brain than a brain without a seat! The candidate who impresses the committee as a winner receives the nomination. First, then, the candidate must be loyal to the party. This means not absolute acceptance of every jot and tittle of its creed, but a satisfactory reply to the committee's questions, which may be, and often are, based (a) on partial ignorance of the party's program, and (b) on some disagreement therewith. The candidate must in this interrogation "satisfy" the committee. He need not do this by a parade of legislative wisdom or by proof of his moral qualities; he must, however, "persuade" them that either keeping within the bounds of party loyalty, or any deviation therefrom is desirable; and he must persuade them above all that he can win. For the local caucus is fond of a candidate who can add to the party's stock of policy: it persuades them of their independence and their own creativeness: but he must be a winner first. A detailed description of the methods by which one commends himself to others as a successful person is here not necessary: charm, manner, wit, humor, moral incandescence, along with more substantial qualities like wisdom, knowledge, intelligence, and a sincere, if crudely articulate, passion for social justice or for any other ideal. Any of these things and many others may win the committee's support. Sometimes these things will so affect the committee that they will miscalculate the speaker's party loyalty and chance of success. Other things, too, may affect the judgment: gratitude or hope for gifts of

<sup>10</sup> The position of the "bureaucracy" in the party is stressed in Max Weber, *loc. cit.*, and Robert Michels, *Political Parties* (London, 1915), who first emphasized the oligarchical tendencies of modern parties.

money or other property, conviviality in the party's festive meetings, deference to a hereditary title or large estates, admiration of success in literature, the theater, or philosophy, or respect for long years of work as a trade-union official or social worker. This represents the main features of nomination; the essence of which is the collaboration of the local with the central wills.

This is far from ignoring the activity and effect of sectional economic and social interests which are an outstanding mark of modern social life. For though the modern state has built upon the notion of free and equal citizens, it has not produced them in all the stark nakedness of the abstraction. The consideration that the peculiar interests of a special group should be represented has some weight in directing the nominations. For example, in coal-mining areas a preference is shown for employers and trade-union officials connected with the industry. Here and there in the shipbuilding constituencies a similar thing occurs, so also in agricultural constituencies. This occurs rather more in England than in France and the United States, where there are more "professional" politicians: that is, lawyers, journalists, and others who are prepared to represent any constituency, whatever its chief economic interest.<sup>11</sup> However, as between candidates of the same interest, the main generalizations regarding other kinds of candidates hold good.

This, however, is certain: that few, if any, of the selection committees in England and France (the United States varies only slightly) rationally analyze their own part in political life. If they did they would ask themselves the fundamental questions: What are the functions of a parliamentary representative in the modern state? How far ought he to think for himself, and deviate from the party's formally declared

policy? What qualities are appropriate to a critic of one's own party; and what qualifications are required to participate productively in committee work, in the control of the civil service, in discussions on finance and foreign affairs? But to answer these questions, or even to know that they should be asked, requires a sense of public affairs and a knowledge of public administration such as exceedingly small numbers of citizens now possess. Because it lacks wisdom and knowledge, the local caucus becomes dependent upon the judgment of a few leading men and women at party headquarters. And even when their judgment is not accepted, they cannot prevent their nominee from coming under the influence and discipline of the central executive of the party once returned to Parliament, for he is not likely to be able to do or say much without the aid of the party's information service and handbooks on political questions. Now, since the party must, for its very life's sake, have a minimum number of experts of different kinds—good debaters, able committeemen, financial experts, some especially expert in each great branch of social and economic legislation and in international affairs—headquarters seizes every opportunity that offers to claim a comparatively safe seat for such candidates, and local caucuses rarely dispute such claims. Nowadays, the number of such experts is at least about one tenth of all the seats contested by a party. Again, England is more earnest and rational in this respect than either France or the United States, for the former has had an unstable executive and restiveness towards party leadership, while the latter is hampered by the "residence" rule.

One other thing: some of the candidates selected and returned are members of the central executive authority of the party and thus are tarred with its brush, although it is true that they have helped to make the composition with which they are colored.

It is enough, so far, if we have indicated how the idea of party unity and the effects of party organization overcome the atomization of the electorate. We shall later

<sup>11</sup> In 1935 at least 117 of the 166 British Labour M.P.'s were trade unionists. In 1945 it was estimated that 79 were trade-union officials—but the Labour members who were members of trade unions, manual and non-manual, is estimated to be about 231 out of a total Labour membership of 394.

observe the operation of other forces in the same direction. But we have described mainly English practice and the generalities regarding other countries. There are national deviations, due to different traditions, needs, and history.

*Nomination in France.* In France, local caucuses still play a far larger part in selecting candidates than in England, for neither the principle nor the organization of nation-wide political parties has been accepted as a controlling necessity. The principle of the second ballot forces the local organizations to pay special attention to the local situation, and their judgment has strong influence upon headquarters. A large number of parties exist, and so little possess the organizational qualities usually considered essential thereto, that even after the dreadful experience of 1940-45, they are frequently called *groups*. They have not the unbroken continuous history of the English and American political parties: the biggest and strongest are hardly more than four decades old. The *Parti Radical et Radical Socialiste*, the *Section Française de l'Internationale Ouvrière* (Socialist party), the *Parti Communiste*, and the *Mouvement Republicain Populaire* (M.R.P.) have a fairly well-organized system of headquarters endorsements, called *investiture*, where the "federations" in each *département* which group the party members make the nomination which for parliamentary elections must then be ratified by the central directing committee. But there is still more forcefulness in the local committees than in England. The various parties of the Right in the past, as now, were less determined on securing discipline by insisting on endorsement. In 1930 the *Alliance Démocratique*, an election organization of Right groups, declared its repugnance to central endorsements, though it gave them. Criticizing the Left-wing parties, it said: <sup>12</sup>

The Alliance will not fall into these excesses. It requires discipline, but it does not impose the *perinde ac cadaver*. It is the great party of free men, masters of their opinion and sov-

ereigns of their own thoughts. . . . From the parliamentary point of view do we offer that solidly organized group, that center of attraction capable of drawing into its orbit the errant planets? No. We have only a nebulous group policy.

These Left parties managed considerable integration of candidates in their ranks before World War II. But there have still been weaknesses, more especially on the Center and Right. Numbers of candidates fight as quasi-independent or completely independent. The latter are run by local election caucuses, *comités*, which are self-constituted electors, sometimes including government officials directed by the *maire* or *prefet* or their close friends. They are free in their choice of candidate—that is, neither law nor custom binds them to the wishes of a constituent body, nor do these oblige them to obey a higher authority speaking in the name of a party. But their number has been sharply reduced since 1945. The extent of real party discipline is only imperfectly revealed by tables showing the numbers of "integrated" and independent candidatures. Before World War II this intra-party incoherence was a fundamental defect of French government; since then it has been considerably remedied because of the increased strength and resolution of the Left-wing parties (though this has its own evils) and the organized reaction to them. Its consequences are grave; the full import cannot be stated cursorily. Every part of the political machine suffers: the Parliament, the cabinet, the civil service, local government. Unless there is a cohesive force in the electorate, there can be no concerted arrangements for the nomination of candidates; unless there are such concerted arrangements, there is no cohesive force after the election campaign to hold the representatives together in a permanent and settled frame of mind and behavior. The initial cohesive force was almost entirely lacking in France before World War II except in the Communist, Socialist, and Radical-Socialist parties, where the influence of trade-union discipline, passionately held

<sup>12</sup> *Congrès Nationale*, 1930, p. 28 ff. and p. 116.

convictions, and capable leaders produced a sense of party community and loyalty.

Since World War II, when the immense social stresses were emphasized under German occupation, and the experience of organization in the "underground" was gained, all the major parties have become more integrated, including the new M.R.P., while gaullists organized first the *Rassemblement du Peuple Français* (R.P.F.) from 1947 to 1953 and later, in 1958, the *Union pour la Nouvelle République* (U.N.R.) which were both disciplined and centrally-controlled parties.

Strong party organization used to be absent because, in the main, the French denied that the unit of government today is, or ought to be, the party. Almost incredibly, they still clung to the old dogma that the elector is sovereign and separate, and that the unit of political life is first the voter and then the representative. This was the result partly of character, partly of historical events; it is impossible to assess the proportions of each. But it is plain that there was little appreciation of the necessity of government, and indeed, government has not been kind to the French people. The majority (not all) of French people did not (perhaps still do not) wish to be governed, though they wish to govern; and the consequence is that they are badly governed. For some organization is indispensable and inevitably develops: but it develops in a hostile world, not in an environment of temperate control. Part of the energy which would otherwise be devoted to service the government uses to defend itself; and, since it has no friends, criticism makes it resentful and malicious. To a foreigner it was amazing, indeed, to observe the blankness of the French political mind in regard to party. In the literature of political and electoral reform there was much said about the electorate and its incompetence, but parties entered, if at all, as a minor afterthought or as a lamentable misfortune. Indeed, it is impossible to refer to any French book—as it is possible to refer to scores of works for England and the United States—which specially handles the problem of party organization as the vital part of democratic technique, which

it is. There are histories of political ideas and struggles, of crises which have thrown up organizations like the radical bloc of 1906-10 or the *bloc national* of 1919 to meet them—histories of outstanding men like Gambetta, Waldeck-Rousseau, Combes, Clemenceau, and Poincaré, who have embodied and proclaimed a sensational and transient cause. But that is all. This deficiency gnaws at the very vitals of French government, laming its every part. Its basic causes are indicated in Chapter 16—they are related partly to culture and partly to the predominance of the vast small-agricultural and petty-bourgeois element in the national economy.<sup>13</sup>

The French collapse of 1940 was due in part to this lack of electoral integration, since it weakened leadership. But it should be remembered that in the postwar elections the parties of negation, chiefly the Radical Socialist party, lost ground. With the strengthening of at least three parties of major dimensions that advocate substantial social and economic change, the situation altered for a while. During the second part of the Fourth Republic, and

<sup>13</sup> These views are confirmed in Léon Blum's *For All Mankind* (London, 1946), e.g., p. 49: "The same congenital inability to create genuine and regular parties explains the distasteful and often revolting character of our parliamentary struggles, the persistence of personal rivalries, the impatient and often dishonest bitterness of the struggle for power. Politics is not a sport, but, like every other kind of struggle, it becomes degraded and is repulsive to the spectator if it is not governed by rules imposing a certain minimum of honesty and propriety. It is clear, I think, that impropriety and dishonesty in politics can be prevented only by stable parties, whose stability itself leads them to respect in opposition the code of behavior from which they in turn will benefit when they become the Government. Further reflection will reveal no less clearly that it is the lack of organized parties in France that makes the elected representative the agent of his electors, and that it is to the same cause, much more than to the undoubted weaknesses of our electoral system, that we owe the reduction of elected members to the role of representatives or custodians of local interests."

in particular since 1952, the fall of disciplined parties, mainly that of the R.P.F., and the revival of loosely organized groups, such as the Radicals and Independent Conservatives, accounted for the return to the practices of the Third Republic. The Fifth Republic coincided with the creation of the gaullist U.N.R. which gained over one-third of the seats in the National Assembly and has remained disciplined: hence de Gaulle has been able to override the combined opposition of Right and Left which, in some matters, has been very vocal.<sup>14</sup>

*Nomination in Germany.* Between the Prussian constitutional conflict of 1862-66 and the advent of World War II, strong, but numerous, parties developed in Germany. The renaissance of political parties after the defeat of 1945 shows the same characteristics as those we now describe. The largest parties, the Social Democrats, the German Nationals, the German People's party, the Center, and the Democrats, had organizations—central and local “machines” as thoroughly organized as the English and American—and often the organizations went down to details which were left unregulated by the latter. The parties were strongly centralized,<sup>15</sup> and the nomination of candidates was influenced by the central office, even more than in England. Since Germany was a federal state there was, formally, a separate political life in each of the component states, and this is the expression of certain real differences which still prevail in spite of the unitary movement and in spite of the nazi attempt completely to unify the country.

State politics required of the political parties two concessions in regard to nomination. *First*, they had to have regard for the special situation of the party in the state legislature. *Second*, the distinct political features of the country had to be “represented” by the nomination of those who knew them at first hand. German political literature is full of the admoni-

tion that geography should be regarded in representation. Certain parties, therefore, mainly the parties of the Right, which, more than those of the Left, insisted upon state rights—were built up out of state party associations. The German National party was composed of 44 state associations. The Center (this Catholic party was, after World War II, replaced by Christian Democratic parties which include non-Catholics) was composed of 19 state associations and 16 provincial associations. The rest went mainly by electoral administrative districts: e.g., the People's party by 35 constituency associations, the Democratic party the same, the Social Democratic party by 33 secretaries, and so, too, the Communists. These culminated in *Reich* party conference, party committee, and executive committee.

Further, the peculiar electoral system which was instituted in 1919 provided for proportional representation, based on the “automatic” and “list” method,<sup>16</sup> and operating in 35 tremendous constituencies with an average of 1,500,000 inhabitants each. This system had the unforeseen effect of giving the parties more influence upon nominations than they possessed before.<sup>17</sup> Since the electors voted for party lists, the order of candidates on each list was vital to the chances of election: and after the fourth name on the list, further names need not have been given. The central machine felt bound to see that the “right” men were put in the “right” places. Further, a special list of candidates called the *Reichslist* (that is, the national list) had to be drawn up by each party in order (1) to obtain its proportion of the seats to which its surplus votes from the constituencies entitled it, and (2) as there were no by-elections, in order to form a reservoir from which representatives could be chosen when the party lost members of the *Reichstag* by death or resignation. The list was composed by the party leaders—the *Bonzes*, as they were called—and clearly the order of appearance on the list became essential. In the postwar period

<sup>14</sup> Above all is the Communist party centralized as to candidatures, general discipline, policy, and a doctrine of obedience to the central machine. Cf. *Statuts du Parti Communiste Français* (Paris, June, 1945).

<sup>15</sup> This in spite of the fact that the *Statuts* of the parties contain a federal organization, as they do also in France, Britain, and the United States.

<sup>16</sup> That is, one seat is given to each party for every 60,000 votes polled; and fractions are gathered together to form a special national list, which benefits the parties. Voters vote not for candidates but for lists.

<sup>17</sup> Cf. F. A. Hermens, *Democracy or Anarchy, A Study of Proportional Representation* (Notre Dame, 1941).

the German state constitutions have continued proportional representation.

NOMINATION REGULATED BY LAW: THE UNITED STATES

Now, in the countries of which we have spoken, legislative regulation of the selection of candidates is practically negligible. This is not so in the United States. The difference is so striking, and so important for the relationship between political cause and effect, that it must be discussed at some length. In the United States, owing to the excesses of political parties and groups of self-willed men, nomination has received close attention and has been submitted, one cannot yet use the word "subjected," to statutory regulation.

*Machines: Their Rise and Reform.* In the 1820's and 1830's the modern American party machine was created. As the decades passed, its chief elements became: (1) a democracy ignorant but strongly conscious of its sovereign power, (2) a monopoly of politics by men who made it a regular "trade," and (3) the availability of all the paid administrative offices, central and local, as "spoils" with which the victorious party could reward its supporters. Both the vast expanse of territory (soon to be over thirty-one times the size of England) which had to be covered by propaganda and drill if votes were to be turned to account, and the theory of the "rotation of office," which had as its object and consequence a multiplicity of elective offices and elections, made party organization at the same time essential and difficult; but, once party organization was established, it was even more difficult for dissentients to overthrow its rule. Oratory, graft, blackmail, deceptive demagoguery, and despoliation of public lands and resources welded the parts into an unbreakable machine obedient to the "boss." Stupidity, political conceit, and immigration prior to World War I caused the lower classes to fall into the boss's hands. The ruthlessness of his invincible tactics, combined with the people's haste after dollars, caused the wealthier and educated classes to abandon political compe-

tion. All nominations fell into the hands of professional politicians linked through ward, district, city, county, state, and country.<sup>18</sup>

This organization had (and still has, though in a much smaller quantity) remarkable commodities for sale. Through municipal government, it sold immunity from police interferences, contracts for all public works, leases for streetcar, gas, electric-light, and water service; through the state governments, contracts were obtainable, laws were passed for private benefit and others were weakly administered, joint-stock companies could obtain charters of incorporation permitting the spoliation of the consumer by monopoly rates, and ugly banking and insurance practices, and the evasion of civilized restraints in the pay, hours, hygiene, and safety of industry and commerce. "Booze, betting, and brothels"—the three B's, to which may be added a fourth, building regulations—were (and are) fertile fields of money and political pressure. The courts of justice could be "squared;" naturalization could be granted to or withheld from immigrants; from the Federal authority could be filched a share in the "pork barrel," that is, the mass of annual expenditure upon internal improvements; laxity of customs and tax administration prevailed; and the postponement of legislation needed in the public interest was obtainable. Moreover, hundreds of thousands of paid offices, legislative and admin-

<sup>18</sup> Cf. E. L. Schattschneider, *Party Government* (New York, 1942); and E. J. Flynn, *You're the Boss* (New York, 1947).

istrative, were obtainable by the electoral voters.<sup>19</sup>

A famous American cartoon depicts some birds of prey upon a mountain crag. Anxiously they scan the heavens, full of the thunder, lightning, and rain of Justice. By their talons are the picked bones of the Treasury, Justice, and the Suffrage. The legend runs, "Let us Preyl" This injunction was executed largely by the sale of nominations of candidates for the benefit of private interests. In a democratic system, however, some show of public consultation is indispensable to the permanent reign of the "boss"; and, indeed, nominating committees of party delegates called *primaries* had a history going back to the Heroic Period of American history.

The primary is simply another name for the local caucus or local association of party members, the basic or original cell of party members who meet to designate candidates for the smaller authorities, and delegates to the higher or secondary conventions which select the candidates for the higher political offices. They are, therefore, vital parts of the democratic system; and until recent years they were thoroughly corrupt, especially in the large cities. The local politicians arranged primary meetings in such a way that their will destroyed the public's. The arrangements produced an expressive terminology. The "slate" was made up privately by the "bosses," good citizens being sometimes included in it. The party membership roll, inclusion in which gave the right to vote at the primary, was either falsified to exclude opponents of the slate makers or "padded" with false names. "Repeaters" voted several times, while the primary scrutineers or inspectors appointed by the henchmen of the "bosses" could not, curiously, detect impersonation. Date, time, and place of the meetings were arranged as inconveniently as possible for dissident elements. The places chosen were sinister saloons in shady neighborhoods; and they were "packed" with rowdies.

sometimes lent by the organization of the rival party on the principle of "live and let live." The procedure was "cut and dried," the chairman with his henchmen tolerating no nonsense. Ballot boxes were "stuffed" with fraudulent votes, or more direct ways were taken with the count. "Snap" primaries were held, that is, meetings were fixed and held suddenly, without due notice; or sometimes, the chairman's watch being unaccountably fast, the meeting was held and over before the innocent voters arrived. This system exploited the power of the general will and destroyed its judgment.

About 1870 America began to awake to a consciousness of political degradation, and a stimulus was given to political reform.

Having defined the people so as to include women as well as men, the Progressive Movement aims to give to a majority of the people so defined an easy, direct, and certain control over their government. The first of the measures proposed by the Progressive Movement to give to the people greater control over the nomination and election of candidates is a direct primary law. It has long been the boast of politicians that they do not care who elect candidates to office so long as they have the power to nominate them.<sup>20</sup>

Direct primary laws were passed in most states during the ensuing years. While practice varies rather widely from state to state, the general intention is to take the powers of nomination away from the party managers and give them to the people, as directly as possible. This involves the establishment of a special meeting at which the nomination shall take place, and, further, the regulation of its procedure.<sup>21</sup>

<sup>20</sup> B. P. De Witt, *The Progressive Movement* (New York, 1915), pp. 196-97.

<sup>21</sup> "Essentially the direct primary system is a system for making nominations by popular elections—the Primary held under state management. When applied to all offices it abolishes not only the state convention, but lesser conventions in districts, counties and cities, and popular caucuses of primaries as well. The convention system was a representative and indirect method of making nominations; the direct primary election system is direct in that it places the nominating power in the hands of the voters themselves."—R. C.

<sup>19</sup> A rough estimate of the number of offices still so available is 770,000.

The problems inherent in this system are obvious upon reflection. They are these:

(1) Who has the right to attend and vote? This involves the definition of a political party and the test of membership of a party—assuming, as American theory and practice assume, that the primaries are to be based upon the recognized existence of political parties. Is the primary to be “open” to any voter, or “closed” to all but the communicants of the party officially in charge of the primary? (2) How is a candidate for nomination brought to the attention of the primary—how is he “designated,” as the jargon goes? (3) What majorities are required for an effective choice of candidate?

*Definition of Party.* Parties are legally defined by the strength shown at previous elections, a minimum being laid down in terms of votes or percentage of the poll.<sup>22</sup> The New York definition of a party is a political organization which polled at least 10,000 votes (at one time 25,000) for governor at the last preceding election; in Texas it is 100,000. This number is so small compared with that usually polled that it is not unfair to the aspirations of new and rising bodies of opinion. The percentage tests are sometimes severer; in Maine 13 per cent of the total vote is required, in Illinois and Pennsylvania 3 per cent. But the large percentages of 20 per cent and 25 per cent are required in Kentucky and Alabama, respectively (and 50 per cent in Florida), the explanation here being that a large reduction of this minimum would involve the danger of specifically Negro parties. Some states, in order not to block the path to political expression, provide that recognition as a party may be obtained upon a petition signed by a certain number of voters, usually ranging from 3 to 5 per cent.

Now parties, thus defined, are obliged to obey the law regulating the procedure of the primary. Minority parties are not thereby excluded from the general elections, but nominate by petition, their

nomination appearing on the ballot papers in those elections.

The definition of parties in these terms is not wanting in exactness. This cannot be said of the definitions of membership of a party. When a test of party affiliation is imposed by law, the primary is said to be “closed”; when no test is established, the primary is “open.” Only Wisconsin, Montana, California, Minnesota, and Washington now have the open primary. In these states the voter is given the ballot papers of all parties together, secretly marks and returns them so folded that his choice remains undetected. With this system the party affiliation of the voter is not revealed; undue influence is thus avoided, which might subject the voter to concentrated electioneering by canvassers or might even obstruct his change from one party to another as his opinion changes. The open primary, however, has the serious defect that it is dissolvent of party: for members of other parties may press into the primary of the dominant party and interfere with its domestic politics, sometimes with the intention even of causing the election of the weaker candidate, while the managers within their own primary use the votes of people not strictly their own, to determine the issues in their own camp. This has occurred in both Wisconsin and Michigan.<sup>23</sup> In most states the open primary has therefore given way to the closed.<sup>24</sup>

The tests imposed in the closed primary system consist of declarations: these may be made either before or at the primary. Those made before the primary are classified under the “enrollment system”; those made at the primary, under the “challenge system.” The voter makes a declaration of one of two kinds: (a) as to past allegiance and (b) as to present affiliation and intentions. The latter are much more frequent than the former.

In New York, the voter declares his

<sup>22</sup> E. M. Sait, *American Parties and Elections*, pp. 400-02.

<sup>24</sup> Cf. M. McClintock, “Party Affiliation Test in Direct Primary Election Laws,” *American Political Science Review*, August, 1922, pp. 265-67.

Brooks, *Political Parties and Electoral Problems* (New York, 1933), p. 260.

<sup>22</sup> Brooks, *op. cit.*, p. 264.

general sympathy with the principles of the party and his intention to give its candidates general support in the next election. In some states enrollment takes place at the primary.<sup>25</sup>

May a voter, having enrolled, change party? Provision is made for this in most states; and it consists essentially in personal or written application to the registrars within a minimum time before the primary elections. In other states a change of affiliation is allowed only during the normal registration period.

Voters so enrolled may, in several states, be challenged at the primary to give proof of having previously voted for the party. Such challenge, however, is politically dangerous since it may drive the voter to support the opposition party at the general election.<sup>26</sup>

In the "challenge" system, the voter swears at the primary that he did not vote in the primary of another party for a period of so many years or, positively, that he voted for the party in the last election or, prophetically, that he will vote for the party at the next election. We discuss the effectiveness of these arrangements later.

*Designation of Candidate.* In the South and West, a large number of states permit candidacy by a simple declaration and by the payment of a fee. In others a petition is required, supported by a stated number or percentage of the party votes.<sup>27</sup> These qualifications must sometimes be accompanied by the payment of a fee. Further, the supporting voters are often required to belong, so many or such and such a percentage, to well-dispersed local government areas in the constituency. Some states, finding the primary elections difficult to run without previous concert among the party leaders and officials, ar-

range for "preprimary designating conventions." Here in the assemblies elected under rules determined by the respective parties, the delegates vote for the candidates: a certain quota of votes, for example, 10 per cent, entitling each candidate thus endowed to appear as a candidate in the primary.

*Votes for Election.* The primary elections for candidates are likely to suffer the same conspicuous difficulty as ordinary elections: namely, that if the ordinary rule of relative majority prevails, where there are more than two candidates for one place, a minority of votes may triumph. Remedies have been devised. In some states the alternative-vote system is accepted in order that the candidate shall ultimately achieve an absolute majority. Iowa has a plan which requires that when no candidate obtained more than 35 per cent of the total vote, the primary is dispensed with, a state convention taking its place. Other states having a specific percentage system abandoned it for the relative majority, since experience showed that while crucial issues resulted in a two-sided contest, only personal issues caused a many-sided contest, and these issues did not concern the public so much that a minority victory needed to be prevented by special legislation. Other states have adopted the second-ballot system or, as it is technically called, the "double primary": a second ballot being cast between the two top candidates when no absolute majority is obtained at the first ballot.

*Value of the Direct Primary.* By these methods American legislators have sought to break the power of the "party managers" and to give back to the people the power of choosing their representatives. Have the methods succeeded, and if so, to what extent?

(1) What has been the effect upon the party machine? It has been weakened, but not very much, for its organizing and campaigning services are almost indispensable to success in primary candidature and in the subsequent elections.<sup>28</sup> The candidate

<sup>25</sup> Cf. also J. R. Starr, "The Legal State of American Political Parties," in *American Political Science Review*, June, 1940; C. Beidahl, "Party Membership in the United States," *ibid.*, February and April, 1942; and Louise Overacker, "Direct Primary Legislation, 1936-1939," *ibid.*, June, 1940.

<sup>26</sup> Brooks, *op. cit.*, p. 269.

<sup>27</sup> They vary with the importance of the office sought in each case.

<sup>28</sup> F. R. Kent, *The Great Game of Politics* (New York, 1926), Chap. XXXV, also his

for nomination is not now so completely dependent upon the party managers for selection as before. He needs the support of the voters at the primary, and if he can obtain support he can dispense with the benediction of the bosses. He is then involved in two duties: he must induce people to attend the primary, and to vote for him. That is, the procedure to win a seat at a general election must be followed in order to win a candidacy, not always in so intense a manner, for the battle is within the party fold and not against an external opposition. But human nature does not, because it cannot, so easily solve its problems. Even as at a general election candidates seek anxiously for wirepullers," for those with more than the ordinary influence, and even as they negotiate with interests and groups, so, at a primary campaign, they tend to gravitate to the party managers or to become the satellite of some more powerful man who himself seeks higher office.

Further, where there are acute personal differences within a party (which may happen anywhere in the United States), or where there are real political differences about state politics (as in parts of the South and the North and West), or where one party is so fast in the saddle (as in the South where the Democratic party has an almost exclusive hold upon office), then nomination is equivalent to election to office, and the primaries become the field of intense electioneering. Hence there arises a quantity of mendacious and spiteful publicity about the candidates (I, myself, have witnessed this in several elections) which is rare in European countries except when rival members of the same party fight each other. Thus the public is treated as the arbiter and is canvassed more sedulously, on the whole, than under the previous system.<sup>29</sup> The party managers are still important in this process, but, obviously, votes in a properly regulated primary campaign cannot be

"traded" quite as easily as before, though they are traded.

(2) Have normal party functions suffered under the direct primary? Part of the answer to this question is that the primary elections have affected the normal functions of party by shaking its foundations—hierarchy and discipline. This has come about in three ways: *First*, it has become less easy to distribute nominations among the orthodox and heterodox groups in the party. Just as political parties in France can be induced to "concentrate" in a ministry by the gift of a number of portfolios, so in the United States it was possible, before the primary laws, to keep the party together by dividing out the offices of the state among the various subgroups. The primary system enables the triumphant majority to behave despotically, but it still recognizes the value of some distribution of offices. *Second*, differences which were formerly settled in private can now be ventilated, but hardly settled, in public. Any dissentient element need not obey the majority or concede part of its claims for the sake of unity, since it is licensed to fight in public for its own candidate with its own policy. Nothing is so bitter as civil war, especially among professional warriors, and nothing is so difficult to quiet as its aftermath. That has been taught in England by the private and public conflicts of Lloyd George and his opponents in the Liberal party after 1924, the National Labour members (MacDonaidites) and the Labour party after 1931, and Churchill and the Conservative party in the period 1933 to 1940; and in Germany by the feuds between the Majority Socialists and Independent Socialists between 1918 and 1921. Imagine such conflicts made permanent and public! American observers emphasize the disintegrating effect upon party counsels, and the loss to parliamentary institutions, and to the public itself, which is asked to judge differences of opinion which it cannot really judge, since they are too many and often personal.

*Finally*, the "committeemen," that is, party officials and workers, are chosen at

*Political Behavior* (New York, 1928); and especially E. J. Flynn, *You're the Boss* (New York, 1947).

<sup>29</sup> Senator George W. Pepper, *In the Senate* (Philadelphia, 1930), Chaps. 1, IV, and X.

the primaries also. Formerly such members of the hierarchy, particularly those at the top, were self-chosen and got themselves elected or ratified by the conventions, which were manageable. At any rate they had about them an air of authority—that is, the presumption of rulership with a title from an elevated source. They had a prerogative derived not really, although ostensibly, from election. Their title may have been morally bad, and its destined uses corrupt. It had, however, the quality of reducing the lower members of the hierarchy to obedience and, therefore, of making and keeping the party one and indivisible. All the ranks of committeemen and candidates now come from the same source: election by the sovereign people. This would, in any case, cause a weakening of cohesion and responsiveness throughout the body of the party; but there is the defect also that committeemen are sometimes elected before the candidates for whom they are to manage the election campaign, and since the party may be fluid in policy and membership, dissensions may and do arise.

It is not easy to say how far party disintegration has been caused by the direct primary. In the first place, quantitative measurement being impossible, observers differ widely in their estimation. In the second place, opinions differ not according to what is actually observed, but according to the observers' ideals, some desiring to discredit the primary because they believe that it threatens a well-integrated biparty system without which representative government breaks down, and others desiring to applaud it because they believe that, even with it, party managers will pursue, as in the past they have pursued, infernal plots against the people.

The truth seems to be that party organization has been endangered, that it has even suffered, but that the party managers have been able to adapt themselves to the requirements of the primaries singularly well.<sup>30</sup> They prepare their "slates" as before. They pull the strings as before,

with a little more difficulty and, to compensate for this, with more ingenuity. Though their power is decreased by the threat of a potential revolt against them, it has been increased by the addition of one more set of elections to the already great number upon which the professional politician must instruct the public. The system forces political leadership to come out into the open of the primary, but the vital needs of instructing the masses and of thinking and concerting before instructing still throws leadership into the hands of the "invisible government." And the ignorance of the public is proved by the necessary existence of primary laws which, to avoid the advantage obtainable by candidates with names first in the alphabet, provide for an order determined by rotation, or by priority of petition, or by lot.

Preparatory to the Congressional elections of 1938, Franklin D. Roosevelt intervened in the primary campaigns in Alabama, Florida, Oklahoma, Georgia, South Carolina, Maryland, Tennessee, and Kentucky. The intervention was more than a failure; it was damaging to the President.<sup>31</sup> The fact that most of the successful candidates were incumbents and in control of their local organizations was the potent factor. Also, Wendell L. Willkie in the 1944 preconvention campaign judged his prospects (unfavorably) by his failure to win in certain primaries; Harold E. Stassen, in 1948, made a general onslaught in the primaries for the party nomination, with mixed success. The results of the primaries in these cases were taken as indications of the prospects of the leaders. The action signified an attempt to create a steady party following at the earliest stage in the election process.

(3) Are the party tests valid? The answer is that the tests of party affiliation have proved to be the least satisfactory part of the primary system. Where the test is strict and elaborate, as in the South, no more has been accomplished than to cause the voter to reiterate current party jargon which he is apt to learn direct from the

<sup>30</sup> Cf. V. O. Key, *Politics, Parties, and Pressure Groups* (New York, 1943), pp. 340-72.

<sup>31</sup> Cf. James Farley, *My Story* (New York, 1949), Chaps. 13 and 14.

lips of the inquisitor, whose interrogation is lax for fear of driving away votes. The real purposes of the voters who take the test are beyond the scrutiny of the inspectors. It is said that the voters are impelled to register and some to participate in the primaries because they like the thought of having one more vote. Voting figures show quite clearly that primaries are invaded, and that voters register for one party and then vote for another. It is clear that a party test is practicable only under the following conditions: (a) if the parties are sundered by clear and definite programs of which the voters are entirely ignorant but which, having blindly accepted, they will maintain at the ensuing election; or (b) if the parties have clear and definite policies separating them, if they are sincere in wanting only the convinced voters on their register, and if the voters are so convinced by the program, which they fully understand, that they could neither enter the primary of another party nor vote for any but their own candidates at an election. Neither of these prerequisites exists. The voters are neither blind nor fully enlightened; the parties are neither certain of their own policies nor scrupulous in gathering votes. All are somewhere between, and consequently the party label may mean something, but it does not mean much for long.

(4) What has been the effect on campaign conduct?—in light of the fact that it is impossible that the primary election should take place without a preliminary campaign, which may be conducted in the open or in the dark? Open campaigns are necessarily conducted when the petitions are being pushed, and this process has raised two problems—that of fraud and force in the collection of signatures, and the public regulation of "publicity" and its cost. Apart from the costs to the state, which are considerable, the candidates' burden is exceedingly heavy.<sup>82</sup> Although

some states forbid party expenditure upon primary campaigns and although others strictly limit the expenditure, in fact the rules are evaded. The very process of appealing to the people inevitably returns the power to the place whence it was to be revoked: to the party, which possesses the instruments of publicity, the workers, and the money. (In the pursuit of equality, Oregon has arranged for the state publication and distribution of a publicity pamphlet for primary purposes. There is a pamphlet for each party, and each candidate may therein publish his portrait and reasons why he should be nominated. Any person or persons may file an opposing statement. A flat rate is charged for one page each to candidate and opponents.)

(5) Are the primaries actually free from party control? Actually, the instinct for preprimary control of the primaries cannot be smothered. Some states have set up preprimary conventions in order to give parties the opportunity of consultation and concerted arrangements. This is an inevitable development, whether the law recognizes it or not. For in a democracy nothing is to be done without a majority, and majorities do not come ready-made. The existing parties, those with a history, do, in fact, privately conspire to help candidates and so let the public know whom they have chosen.

What is it that causes this flight from the party to the primary, from the primary to the preprimary, and from this, maybe, to the pre-preprimary—and thence back to the boss? It is the belief that somewhere there is the pristine voter, pure and undefiled, who, if properly informed, will vote as an ideal man for ideal parties and policies, without organization. It is the flight from men to man, from Americans today to Adam before the fall. Since man does not exist, the party still contrives to take his place.

(6) What are the effects on political participation? The numbers attending at the primaries are small, outside the South or elsewhere where one party dominates. Key has shown that in the South in 1942, from 10 times as many voters to an equal

<sup>82</sup> Cf. S. Ervin, *Henry Ford vs. Truman H. Newberry* (New York, 1935), which reveals that \$190,000 was spent by Newberry; C. H. Wooddy, *The Case of Frank L. Smith* (Chicago, 1931), which shows that over \$1,000,000 was spent by Smith and his opponent in 1926.

number of voters participated in the primaries as in the general elections; while in all other states the participation ranged from 77 per cent in North Dakota to 43.2 in Wisconsin and 24.9 in Utah.<sup>83</sup> Yet the number of people participating in a choice of candidate, with the effective opportunity of choice, is far greater than the number who concern themselves even to this extent (which, at the minimum, is to ratify the choice of the party) with the selection of candidates in England, France, Germany, and other countries where nomination is unrestricted by law. This cannot but have a rousing effect upon the voters, if we admit at all that experience is capable of teaching.

(7) Can candidates and policies be coordinated? Experience shows that difficulty arises with regard to the "platform" or compendium of policies which the party puts before the electors. If a convention of a party frames a platform, it is not sure whether any of the adherents to that platform will be elected. If several candidates for nomination are put up, are they to suggest their own policies? But for the voters this means woeful confusion if the policies are set out at length. Therefore short, compendious pronouncements have been proposed, and, in one case, actually adopted.

To an English or Continental observer, nothing in politics can appear so quaint and dangerous to truly effective, as distinct from apparent, representation, as the choice of candidates with little or no continuous guarantee of a policy. In a large number of states, party conventions, voluntarily or by law, establish a platform—some before, some after the primary. But there is not that contact between candidates and policy which comes by their previous identification and selection on its basis. In other states, councils of candidates and sitting members formulate the policy. This is better than the convention system as a means of bringing the policies, the candidates, and later judgment upon their work, into close correspondence. But the more an automatic legal separation is

effected between candidate and policy, the more must party be relied upon to make them combine.

(8) Finally, has the direct primary system caused the choice of "better" or "superior" candidates? American observers speak with an uncertain voice in answer to this question. One says that it is impossible to prove that it has produced a superior type "in the absence of accepted standards of measurement to determine political ability and virtue."<sup>84</sup> The utmost he concedes to the primary is that "given a popular revolt against the machine of sufficient magnitude, it is possible to break the slate of the latter." He gives one example of this, and concludes: "No doubt the possibility of such untoward events induces a certain moderation on the part of political bosses that is doubtless salutary. On the whole this seems to be the greatest single advantage that can be claimed for direct primary elections after twenty years' experience with them." Another says: "Yet no judicious and impartial observer will contend that the new nominating system has revolutionized the character of candidates with reference to their ability, their integrity or their representative character. This is a part of the great problem of democracy, which cannot be so simply solved, and which will not be determined either by directness or indirectness in methods of selection."<sup>85</sup> A third says: "But there has already been no advance in the quality of public offices since the abandonment of the nominating convention."<sup>86</sup> A fourth says that "Doubtless some men have been nominated who would not have been nominated under the former system, or at least would not have been nominated so easily, but it cannot yet be affirmed that the type of man who is successful in politics has been materially altered."<sup>87</sup> And a fifth concludes that a really effective

<sup>83</sup> Key, *op. cit.*, p. 362.

nominating system in the United States awaits a fundamental change, that is, the development of responsible government: that tinkering with the nominating mechanism is of small value.<sup>38</sup> Boss Flynn concurs.

NOMINATION AND ELECTION OF LEGISLATORS  
IN DICTATORSHIPS

THE characteristic mark of the selection of candidates in democracies is the openness and freedom of opportunity to all individuals to become candidates, and for any free grouping of citizens to propose them. The mark of candidacy in dictatorships is the reverse: the dictator or the ruling group and the dictator's party exercise the monopoly of nomination and conduct of the election campaign. To use the word "election" is, indeed, a misnomer, because the word implies a choice, whereas the dictatorial practice is the artful and forcible denial of choice—indeed, its deliberate seduction.

*Fascist Italy.* In the heyday of Italian fascism, the single-member election district was abolished: there were no local nominations. The system was that 400 candidates were placed on a single national electoral list, all together, and submitted for election *en bloc* throughout the nation. These 400 were selected from 1000 nominees presented to the Grand Council of Fascism by the legally constituted confederations of employers and employees and various social organizations. The council could and did include other "distinguished" candidates, thus displacing some of the others. Competing lists could, by law, be put up by any organization having more than 5,000 members, but no competing lists were ever drawn up,<sup>39</sup> and in fact, no organizations could exist without the permission of the fascist government and party. There was considerable competition within the party for nomination: only Fascists were nominated, and it was the object of all ambitious men to please the chiefs at the top of the hier-

archy. Loyalty and good works, within the interpretation of the régime, were the first qualifications.

*Nazi Germany.* The single-list system was also instituted by the nazi government, and though the details differed from Italian fascist practice, the end attained was the same: nomination by the party hierarchy, and the exclusion of freely-offered alternative candidatures.<sup>40</sup>

*The U.S.S.R.* In the Soviet Union, the nomination of candidates is vested in "public organizations and societies of the working people; Communist party organizations, trade unions, cooperatives, youth organizations and cultural societies." This is stipulated in article 141 of the constitution. Article 58 of the U.S.S.R. Election Regulations,<sup>41</sup> gives the right to nominate candidates to the central organizations and societies of the working people and their republic, territorial, regional, local and district bodies, as well as to general meetings of workers and other employees in enterprises, to general meetings of servicemen in army units, general meetings of peasants in the collective farms, villages, and so forth. The nominations are made to the "area" election commission. Such area commissions are formed of representatives of the various organizations already mentioned; they are appointed by the executive committees of the various Soviets, local, regional, republic, and upwards; and they manage the official side of the election. The nominations made by the various organizations are submitted to the area election commission along with the minutes of the meeting which designated him or her and comprehen-

## REPRESENTATIVE GOVERNMENT IS PARTY GOVERNMENT

sive information about life and career of the candidate. The election commission of each republic and the central commission for the whole U.S.S.R. supervise every process from nomination to final registration of the elected deputies. By their power to consider complaints regarding "incorrect" actions of the commissions, they are able to influence beforehand, or amend after nomination, any proposal they consider against the public interest. Candidates have been replaced by others, even after their names have appeared on the ballot, by the area election commission or by higher authorities.

What stands out in this procedure is the role assigned to "organizations" or "collectivities," or "meetings," and their official nature. They cannot be called without the permission of the governing authorities. But all such authorities are dominated by the only political party permitted to exist: the Communist party. At the pre-election meetings this same party, and the Communist Youth, and the leaders of the organizations who are Communist, set the pace and direct affairs. Only those who have demonstrated their loyalty to the regime are nominated; only those devoted to the cause of Lenin-Stalin are considered worthy to stand for election. But the Communist party seeks to draw the non-party people—and about ninety-five per cent of the people are not members of the party—into the election process. They form with them the "bloc of the Communist party and non-party people." It is strongly desired, and enjoined from the top levels of the party downwards, that the people be not alienated, but on the contrary persuaded into union with the party. Many non-party nominations are made: many more, of course, in the local soviets than at the top, and more in the legislative branches than in the executive directorates of the various levels of government. This cannot be called a free election system, for it is dominated by the Communist party, and if there are non-party nominees and later deputies, it is by grace of and to the satisfaction of the party. The enthusiastic accounts which

the Soviet Government itself gives of the nominating process show genuinely that what may be called the élite of Soviet society are nominated: those who have rendered distinguished service in every sphere of life are honored by being made deputies: teachers from kindergarten upwards, skilled workers of all kinds, leaders of the nomadic communities, scientific workers, the organizers of the social services, physicians, engineers.

The ballot papers do not contain two or more candidates for each place: only one nominee for each office is agreed upon at the pre-election nominating meetings and negotiations. Thus, there is a rich representativeness of Soviet economy and society. But it will be remembered that between representative government and responsible government yawns a wide gulf. The efficacy of the Soviet election procedures may be gauged from the results: <sup>42</sup> in the elections for the Supreme Soviet of the U.S.S.R. on February 10, 1947, 99.7 per cent of the registered electors voted: while 99.18 per cent of the electors who voted cast their ballots for the candidates of "the bloc of Communists and non-party people." What is surprising is that even 0.81 per cent opposed the nominees. This they did, not by offering alternative candidates but by merely scratching out the names of those on the ballot. A little over 10,000 ballots were found invalid, either by reason of more than one candidate being left on it, or for other reasons.

Thus, the vast body of electors are not in fact free and equal, though they are in law and in political opportunity. They do not spontaneously move in an undifferentiated and incoherent mass. They are marshaled, and their candidates chosen for them, by those who have worked to acquire the controlling positions in the parties. It is in a sophisticated sense only that the people choose their representatives.

<sup>42</sup> *Information Bulletin*, Embassy of U.S.S.R., Washington, March 12, 1946.

Nor are the voters left to their own devices once candidates have been nominated. For the aim of a group or a party is to send its nominees to the representative assembly or the executive offices which are open to election. Therefore a continuous process of "education" is undertaken by the parties. It increases in intensity in

the few months preceding an election, and becomes furious in the final fortnight.

Before the activity of the parties is analyzed, it is essential to consider the qualities without which sound representation—that is to say, public opinion—is impossible, and to ask how far the electorate possesses them.

## Public Opinion and the Parties

THREE qualities are indispensable in any system of representation (if that word is to have its plain meaning, that is, the presentation of the will of the constituents in a common assembly where representatives meet representatives): the first is that those who are to be represented know what they want; the second, that they are able to express what they want; the third, that they are sufficiently interested to utter their wants.

### THE NATURE OF PUBLIC OPINION

WE are in the realm of a subject which, though it has been made one of the cardinal studies in political science in the last twenty years, is still perhaps lacking proper analytical definition.

Most definitions of public opinion will, upon study, be found to reveal that one of three possible meanings is intended: (1) public opinion as a record of *fact*; (2) public opinion as *belief*; (3) public opinion as *will*, that which it is intended shall be done. It is important that the student should reflect upon the use of the term and distinguish which of the above three meanings is apposite in each of his particular contexts. It cannot be said that the professional writers have accomplished this clarification yet; and the failure vitiates their "public opinion" polls and problems of measurement.<sup>1</sup>

(1) By opinion as a record of *fact* is meant such a simple statement as "The price of bread has gone down" or "I know the United Nations exists."

(2) By opinion as *belief* is meant not only a record of fact but a valuation of the fact or facts involved, culminating in a prophecy of the probability of future events. For example, "The United States will not become socialist." It puts a weight on facts and constructs trends.

(3) Public opinion as *will* includes facts, includes the valuation of them to found a belief, and then goes beyond it to assert that it is worth while to pursue a course of action. Thus, "China should go to war with the Eskimos—Yes or No?" Or "Should the secret of the atom bomb be revealed to all—Yes or No?"

Politics is most concerned with public opinion as *will*—which typically eventuates in a statute and in administration. But in order that public opinion as *will* may be sound, it is essential for public opinion as a record of the facts to be sound, and for public opinion as *belief* to be founded on the facts and to be interpreted by the opinion developer according to a logical and reasonable social valuation of the facts. Now the last sentence raise serious difficulties which will be touched upon presently.

Belief will be created by two ingredients added to fact. One is the power of logical

<sup>1</sup> Lindsay Roger's *The Pollsters* (New York, 1949), published since this work was written,

has addressed some very proper admonitions to the sounders of public opinion.

thought and inference, and the other is spiritual values. Few secrets any longer exist about the aspect of public opinion involved in logical thought, for the fallacies to which the mind can be victim have been thoroughly discussed from Aristotle onward and are to be learned from his *Rhetoric*, Hobbes's *Leviathan*, Bacon's *Novum Organon* and *Advancement of Learning*, Bentham's *Book of Fallacies*, and Hegel's *Phenomenology of Mind*, not to speak of many recent academic treatises on logic, such as the works of Morris R. Cohen and (of exceptional importance) M. Oakeshott's *Experience and its Modes*.

When the Institute of Propaganda Analysis lists the devices of propaganda, it is merely listing the well-known fallacies under a new slang or jargon: thus, name-calling ("rabble-rouser," "reactionaries"); glittering generalities ("democracy" used as a cover for carrying on faulty arguments); transfer (the use of symbols such as the flag or the cross or the clenched fist or the upraised arm to provide acceptance of a policy which, it is implied, is authorized by the virtues of the symbol); testimonials (using somebody else's recommendation and authority); plain folks (the confidence trick on the people you are talking to, known as *argumentum ad hominem*); card stacking, which means merely suggesting all the false points and suppressing the true ones (well-known for thousands of years as *suggestio falsi* and *suppressio veri*); and finally the band wagon ("140 million Americans can't be wrong"—join in).<sup>2</sup> These well-known logical errors, recoined, and sometimes merely

expressed in psychopathological terms, are almost all that public opinion analysis consists of. They have been known for centuries even before Francis Bacon expatiated on the idols of the Tribe, the Cave, the Market, and the Theater.

One thing more needs to be added. The premise, to observe the facts and interpret them, is also a question of: (1) interest in acknowledging all the phenomena, and (2) our moral attitude to man and society. The first is heavily dependent upon our economic and social position, and this is not a matter simply of class differences but involves the vertical occupational differences in a society and also our personal situation within the community or school or economic enterprise in which we happen to work. Both (1) and (2) at once involve what have been called *stereotypes*, *blind spots*, *codes*, and *myths*<sup>3</sup>—that is, limited versions of the truth, limited to selections from the booming, buzzing world of a million facts which will be of interest, use, and moral support to ourselves. Our symbols are created for simple, abbreviated thinking and for our determination to protect our interest and moral position, or to win what we want. They roughly correspond to Bacon's idols of the Tribe and the Cave.

Public opinion is compounded of perception of the facts, logical inferences from them, and moral interpretation of them. It is clear that between ourselves and the facts occur a number of processes which may distort our reception of them. Therefore, the process of distortion will determine our opinion as will, which becoming so distorted, may not solve the problem that we wish to see solved.

In any case, the facts of relevance to opinion regarding modern society are not the simple facts of everyday apprehension, but come necessarily from afar and through mediums of mass communication. Those means of communication are owned by a few people, who themselves have an opinion and therefore an interest in presenting the facts so that they are not

<sup>2</sup> *Propaganda Analysis* (New York), October-November, 1937, Vol. 1, Nos. 1 and 2. Cf. further on public opinion, Leonard Doob, *Propaganda* (New York, 1935 and 1948: the later edition contains a comprehensive bibliography); William Albig, *Public Opinion* (New York, 1939); Ruth Benedict, *Patterns of Culture* (New York, 1933); Charles Merriam, *The Making of Citizens* (Chicago, 1931), which is one of a series on the same subject as it related to several other countries (which see); Charles W. Morris, *Signs, Language, Behavior* (New York, 1945); Robert and Helen Lynd, *Middletown* (New York, 1932) and *Middletown in Transition* (New York, 1937).

<sup>3</sup> Cf. Walter Lippmann, *Public Opinion* (New York, 1922).

mere facts but belief, and even the suggestion of will. Hence, the citizen is deprived of the direct possibility of making up his own mind. This would seem to put him at the mercy of those who own the presses, the radio, and the films; and to some extent it does. Yet it must be remembered that of all the mediums of mass communication, the most important by far are individual human beings themselves, so long as they have legs on which to walk to meetings or to visit their neighbors, hearts to feel, brains to think, and tongues to speak.<sup>4</sup> And this accounts for the triumph of so many progressive movements over those defended by the owners of the mediums of mass communications.

*Propaganda* may be defined as the closure or coercion of the individual or mass will by the argument that only one way is available to accomplish a policy and that that policy is the best. It deliberately shuts the mind to all but one course. *Education* may be defined as the process which sets free the will because it opens the mind to all alternatives and does not insist on action. The difference between the two (as we have already observed) may so be put: the educationist says, "In our father's house are many mansions and it is your privilege to choose which of these is best suited to your values." The propagandist says, on the other hand, "In my father's house there is only one mansion, and in that one alone you are obliged to dwell; and moreover, there is no father but only a master, and I pretend not to be him."

Propaganda is not unlimited in effect; and in the interwar years, especially from 1933 to the outbreak of World War II—that is, the peculiarly Hitlerian period—its limits were more clearly exposed than ever before to students of public opinion. These limits will be mentioned at the end of this chapter, but it may be said at once that force was the bully who walked arm-in-arm with propaganda.

#### THE SOURCES OF PUBLIC OPINION

IF we closely examine the knowledge of the electorate, we must admit that it is sadly deficient, especially since the knowledge with which politics is concerned is mainly the control of the behavior of individuals and groups separated from the voter by vast distances, wealth, culture, and occupation. It is obvious that the citizen's knowledge is quite strictly limited to his personal daily experience. He learns the nature of the things which he does to others—and this but very vaguely when the effects reach out far into society—and almost nothing of the cause of the things which are done to him, especially by the distant Fates of industry and politics. We may divide the scope of his knowledge into that which he has at first hand and that which he has only upon report.

*First-hand Information.* At first hand there are his family relationships and the tangled skein of experience spun therefrom. He learns something, sometimes very much, of human character and its varied manifestations. He gets to know something of the medical profession, and of religion and the churches. He has some experience of the army or the navy, in some countries by family hearsay, in others, where there is conscription, from actual service. Most people come into contact with the police at one time or another, if only by a trivial attempt to square a minor misdemeanor.

The local mayor or prefect or member of the legislature occasionally reveals to the citizen that he is governed or that he is possessed of sovereign power, causes him to swear at public extravagance or to be inspired or amused by official regalia. The post office is known from childhood. The tax and rating departments become stern realities. As juryman he may even have assisted in the administration of justice. Thousands find places on local government councils. At home there is the eternal talk of prices and wages; at work that of wages and prices. There is the school with its routine and compulsions, its ambitions and opportunities. Transport is a daily preoccupation; theater,

<sup>4</sup> Confirmed in Paul Lazarsfeld *et al.*, *The People's Choice* (New York, 1944), Chap. XVI.

motion pictures, radio and sports offer an occasional excursion into a realm of experience in which the citizen plays neither a wholly active nor a quite passive part.

Even the most thoughtful man or woman cannot extract from this experience the knowledge needed to rule hundreds of millions of people with international connections. The field of facts is too narrow. If it is effective in stimulating wants, desires, and dreams, it has but little relation to (but because of domestic anxieties, *some* relation to) social possibility. Even in the stimulation of interests and desires, the daily round is not profoundly effective, and it has required a great deal of agitation, or exceedingly bad times, to teach political lessons, and to overcome the soporific effects of habit. How Lassalle, when founding the socialist party in Germany, in his anguish denounced the "cursed needlessness of the poor!"

The creation of public opinion—that is to say, fact, belief, and will in the family circle—has two important characteristics: it is compulsive and it is kindly. It is compulsive in the sense that, being formed from the early years of a child's experience and being continuous, the stereotypes and symbols—and every word is regarded as a "symbol" by the psychologists—of public opinion becomes ingrained. The opinion thus formed is difficult to penetrate and enlighten at a later stage. Social reformers have recognized the hard shell of the family as a public-opinion-making unit, and have accordingly either attempted to crush it, as was tried by early Soviet attempts (until just before World War II) to weaken family discipline, or as in the Nazi and fascist movements, to destroy it by virtually kidnapping the children into youth movements.<sup>5</sup> The bitter complaints of the par-

ents in these countries are a testimony to this attempt at cracking the family unit. It is not here denied that unhappy tensions are set up in some family relationships with life-long results for the individuals and those he touches, near and far. But most benefit by kindness, assurance, and stability.

Family public opinion, however, has a vulnerable point: that it is kindly, because the family relationship, generally speaking, operates on a basis of special good faith as compared with the discipline and everyday competition of individuals in the outside world. This has made it easy for people like Hitler to take advantage of what they regard as the gullibility of the average man, woman, and child, that is to say, their amenability—their "full faith and credit"—to accept opinion stated by authority. This allowed the success of the

*all Flesh*) are purposely passed over, because the aim in my present context is one of relationships rather than the profundities of individual and family psychology, and still more, psychiatry. Many of the facts and hypotheses (more the latter than the former) are of the utmost importance to the psychiatrist and social welfare worker, but they have not the same kind of significance for the wholesale political process. The works of Schopenhauer, Nietzsche, William James, Freud, Adler, Jung, Flugel, Reik, Erich Fromm, Harold Lasswell, Geoffrey Gorer, Margaret Mead, Ruth Benedict, ought to be mastered by those who wish to make of this phase of political science a special feature. They might also see: R. G. Barker, J. S. Kounin, H. F. Wright, *Child Behavior and Development* (New York, 1943); K. Lewin, *Dynamic Theory of Personality* (New York, 1935); Jean Piaget, *The Child's Conception of the World* (New York, 1929); Ian Suttie, *The Origins of Love and Hate* (London, 1938); J. W. Haney's translation of Rudolf Otto, *The Idea of the Holy* (New York, 1939); J. S. Plant, *Personality and the Cultural Pattern* (New York, 1937); J. K. Folsom, *The Family* (New York, 1934); H. Ordan, *Social Concepts and the Child Mind* (New York, 1945); S. de Grazia, *The Political Community* (Chicago, 1948); a series of articles by P. Kecskemeti and N. Leites in *Journal of Social Psychology*, "Some Psychological Hypotheses on Nazi Germany," during 1947 and 1948, Vols. 26, 27, and 28; and "Round Table on the Treatment of Germany," *Journal of Orthopsychiatry*, June, 1945, p. 381 ff., on the relations between family life and national culture.

<sup>5</sup> Cf. George Zeimer, *Education for Death* (New York, 1941), and *Nuremberg Documents* (U. S. Government Printing Office, 1947), IV, *passim*.

This account of the relationship of the family to the formation of political opinion is deliberately simplified; for the depths and intricacies of which I am well aware (let the student read such novels as Edmund Gosse, *Father and Son* or Samuel Butler, *The Way of*

Hitler theory of the "big lie," which may now be stated: <sup>6</sup>

... [t]he size of the lie is a definite factor in causing it to be believed, for the vast masses of a nation are in the depths of their hearts more easily deceived than they are consciously and intentionally bad. The primitive simplicity of their minds renders them an easier prey to a big lie than a small one, for they themselves often tell little ones but would be ashamed to tell big ones. Such a form of lies would never enter their head. They would never credit to others so important a possibility as the complete reversal of facts. Even explanations would for a long time leave them in doubt and hesitation, and any trifling reason would dispose them to accept a thing as true. *Therefore something of the most impudent lies always remains and sticks*, a fact which all bodies and individuals occupied with the art of lying in this world know only too well, and hence they stop at nothing to achieve this end.

Nevertheless, the toughness of opinion formed over the years by the exchanges of views and experiences within the family produces an attitude which at least partially defeats propaganda as well as education. This attitude remains, therefore, an ingredient of the policy which cannot but be accepted. Much more must be done than the family does if the family is to appreciate the part that it should play in the government of a great community—that is, what conditions it may demand, and what obligations to the community it ought to honor. Modern American investigations attest the truth for at least the United States of Gilbert and Sullivan's wit concerning England:

I often think it's comical  
How Nature always does contrive  
That every boy and every gal,  
That's born into the world alive  
Is either a little Liberal  
Or else a little Conservative.

Voting as the family has done is just as high as 75 per cent.<sup>7</sup>

*Professional Knowledge.* For men and

women who earn their living in industry, commerce, and the professions, an additional source of understanding is open, and sometimes, in the most conscious and public spirited, it extends to deep knowledge of their work and its relationship to the situation of other groups. Of course, the development of employers' associations, cooperative societies,<sup>8</sup> and trade unions has done a tremendous amount in recent years to accumulate and spread knowledge which is of the very essence of public affairs. If their comprehension of fact is narrow, it is at the same time a critical microscope which defies deception in its own field. The great part played by such associations or interest groups led to a new theory of political representation: the guild socialist theory. This theory, which flourished shortly after World War I, avowed that men and women could not have a general political opinion and that this could not be represented. But these various opinions of producers and consumers could be woven together in a congress of guilds. The rank and file of employers and employees and of the liberal professions have, however, a rather limited personal experience. Think of the railroad conductor, the postman, the grocer, the bank clerks, of the bus driver, the miner, the textile worker, and multitudes of others who constitute the modern community, and ask, what would they know of any fruitful use to government, even of a rural district council, if no external agencies existed to discover and report to them the things they do not and cannot otherwise know? Save for the help of a few, we should be at a standstill. Wants which are largely the issue of instinctive dispositions could be expressed; the immediate self-regarding interests of each group would be well understood and claimed; but how to prevent these from causing collisions with undesirable consequences, how to attain them in an order of priority which would neither balk the desire nor kill the possibility of satisfac-

<sup>6</sup> *Mein Kampf* (New York, 1940), p. 313.

<sup>7</sup> Cf. Paul Lazarsfeld *et al.*, *The People's Choice* (New York, 1944), p. 142 ff. Cf. also D. Anderson and P. E. Davidson, *Ballots and the Democratic Class Struggle* (Stanford, 1943), pp. 8 ff. and 317 ff.

<sup>8</sup> There are about 15,000 on the elected management committees of the British cooperative movement.

tion, whether the satisfaction is in any degree possible—these things are not to be learned in the appropriate degree from the common experience of the average man. It requires years of close and constant application to master even a single branch of public affairs.

*Education and Publicity.* Infinitely the chief part of knowledge of public affairs is obtained by report. All the modern instruments of education and publicity give this instruction and, further, dogmatize about the best way to satisfy wants. Without this the voters would be ignorant indeed, and utterly puppets in the hands of willful men—not that the puppets would always act, for they might be too wooden to do so. The apogee of the "governing class" lay in that era when certain families had much to obtain from governing the country and before either education or parties had influenced the voters.

The principal agencies of instruction in public affairs—other than political parties—are books, the newspaper press, schools, clubs, churches, the motion pictures, radio, and hearsay.

*Books.* The value of books depends upon their accessibility and the possession of leisure. Books have become easily accessible to those who really want them by the extension, in our own time, of public libraries, in spite of the parsimony practiced by many local councils.<sup>9</sup> Further, political parties, cooperative societies, and trade unions lend books, and one will find, in England and Germany at least, a small number of volumes at local party headquarters. An obstacle which is not entirely insuperable is the unwillingness of many municipal councils to provide books which shock their morals and political principles. There is an *index expurgatorius* in everybody's mind, and extremists of all kinds on local library committees apply it, to a degree which is, however,

<sup>9</sup> The annual expenditure of local authorities in England and Wales alone is over one million pounds. Cf. *Annual Local Taxation Returns*, published by His Majesty's Stationery Office. Cf. also Report of Public Libraries Committee, Cmd. 2868; 1927. In the United States for 1943 the amount spent for libraries was \$50,000,000.

limited by majority opinion and the democratic bias to tolerance.

There is much more leisure today than at any time since the Industrial Revolution took most people away from agricultural pursuits; and it consists of all the hours of the day which can be seized from rest and sleep, save eight or ten for work, besides one and a half to two clear days in each week. This would be clear gain were not economic pursuits extremely monotonous and fatiguing, and distances between work and home long and jading. Is not leisure, the average person will ask, for *living*? For conversation, music, the theater, the motion pictures, for one's family, for dancing, for dress, love making, sport, hobbies, drinking and smoking, and for the lethargic delight of armchair fantasies? The books are accessible, there are some hours, though not as many as appear on a surface calculation, for study. But does the mass of mankind read the books which will give them a clue to controversy and control of the sources of power? Common experience shows that they do not. It is calculated that even fairly popular books on public affairs costing two to three dollars cannot be expected to sell more than an average of five thousand copies in the United States. The advent of the cheap reprint at one dollar to twenty-five cents a copy is a very important and welcome political fact, but few are on public affairs. Novels are read, and the newspaper whiles away the rest of the time.

It requires a large amount of passionate interest, and the concentrated attention which comes of that, or intellectual power, or habit, to attempt the mastery of a serious study of a public problem. Few people have such a passionate interest, few have been trained in the habit of purposeful reading;<sup>10</sup> and even when these are present, the mind itself can only in rare cases hold out for the necessary time to master an argument. Every university teacher knows that only five or six out of every hundred students can show first-

<sup>10</sup> Only a few people can be expected to follow the rather rigorous instructions by Prof. Mortimer Adler in *How to Read a Book* (New York, 1944), though they ought to.

class qualities, and fewer still originality, although students are helped in every way.

The conclusion is, then, that the masses of voters do not, and will not, until education has assumed new shapes, read for themselves—and that many will never be able to profit from it—although the opportunities exist and are improving. Any reader can think of twenty books in each country which all voters should have read as the absolute minimum necessary if they were to be able to select and check their representatives independently of the very parties themselves who recommend these representatives: are they likely to have read even one? Even then, in spite of conspicuous exceptions, how much real significance have the crude, unassimilated, distorted values of the self-taught man? It should be borne in mind, however, that so long as books and libraries which are comprehensive and not deliberately expurgated are available, there exists one potent source of opposition to dictatorship, and one more opportunity for democratic leadership.

*The Press.* The newspaper is not the most important feature of modern civilization, but it is among the most important, especially in regard to the electorate's opinion. Briefly, these are its qualities:

In every country, printed news and opinion, attractively written and produced, are purchasable at an exceedingly cheap rate, so that few people go a single day without reading a newspaper or conversing with somebody who has. It is the most widely disseminated single agent of instruction in the modern world. Newspapers can be sold at a ridiculously small price because they earn tremendous sums by carrying advertisements (from one half to three quarters of the revenue of a newspaper comes from this source). They are private property and are subject to no stricter measure of public control than the laws relating to libel, obscenity, blasphemy, and sedition.<sup>11</sup> Otherwise, no en-

actment, no public institution or official, regulates or challenges their veracity, for this kind of truth is private property. Upon public affairs the newspapers serve out news and opinion. A part of their material consists of plainly reported news or complete or reduced reproductions of important public documents. A part—the leading articles—consists of comments and short essays upon events and policies, and the reports of experts in some branch of public affairs. The "news" section, the representation of fact, varies among different countries and different newspapers in amount and quality. Several newspapers with a fairly wide circulation in each country give great attention to news, reproducing legislative debates in much detail; to government announcements; to judicial decisions; to the actions and declarations of representative bodies of industry, society, and the churches; to events abroad; to the findings of commissions of inquiry. There is more such attention in England and Germany than in the United States or France. In the Soviet Union there is practically nothing but this!

Another portion of the newspapers undoubtedly receives more attention: that is the plainly political, which here means the biased, part. Here fact and interpretation of fact—the past, the future, the hypothetical, and the prophetic—are mixed and served together. But each newspaper has a tendency and dogmas. Those who are conscious of them tend to become permanent readers of the paper whose bias is nearest their own; or some signed articles may hold them out of respect for the writer. The owners know the tendency they wish to spread and they can guess the circles where they will find support. There is such a close community of feeling between the directors of a newspaper

(Paris, 1911-38). Cf. also Léon Duguit, *Traité de Droit Constitutionnel* (Paris, 1925), Vol. IV, Sects. 35-37; Mannheim, *Preszrecht* (1927); and Haentzchel, *Reichspreszgesetz* (1927); Z. Chafee, *Government and Mass Communications* (Chicago, 1947), 2 vols., for the United States. See also for a comparative treatment, I. Rothenberg, *The Newspaper* (New York, 1948).

<sup>11</sup> The best descriptions of the law relating to the press are to be found in T. Dawson, *The Law of the Press* (London, 1927); G. Barbier, *Code Appliqué de la Presse*, 2nd edition

and their readers that it is difficult to say how far the newspaper actually pushes opinion beyond the point independently reached by the readers.<sup>12</sup> Certainly the paper confirms and strengthens the reader's opinion and gives him confidence in it. Reasons appear there in plain words, while in the reader's mind they only float about, vague and unformed; and he is often convinced that what he reads is what he meant to say—although common experience proves that we may easily deceive ourselves about this when we have the habit of relying upon authority. At the same time, the proprietors and the editors are not unconscious of their constituency—the paper must not shock too much or the sales will decrease and revenue from advertisements will fall. Consequently, if the newspaper makes its readers it is also made by them. The newspaper, however, has a considerable power, for it may produce an effect upon the mind, and then raise a fresh issue to ward off the punishment which might have followed its deviation from what the readers expected.

Now all this would not cause the distortion of beliefs formed by independent experience, technical reading, and impartial teaching, if readers knew quite clearly that the papers deliberately hold and inculcate a biased attitude of mind. Then readers could agree or disagree, consciously. But in fact, a large proportion of the public is quite unconscious, and an even larger proportion is only dimly conscious, that they are the subjects of an everlasting mental operation conducted by unlicensed and sometimes venal practitioners.

The mass of readers is attracted to a newspaper not by its political tendency but by other qualities entirely.<sup>13</sup> Every

conceivable domestic and social interest is catered to: we have an avid curiosity about our fellow creatures. All newspapers have succumbed to pictures, some carrying hardly any text matter. Their psychology is sound, though one may despise their ideals. For newspaper pictures appeal to the unimaginative, those unserved by their own wits and unable to read and think connectedly for a space of time. Tabloids have the greatest circulation. Important attractions are the news of crime and accidents, festival and ceremonial gatherings, preferably of those high in "society." Theatrical and Hollywood news (especially scandals), puzzles, and "comic strips" open the minds and mouths of millions. Most attractive of all, especially to men and boys, is sporting news, principally horse racing.<sup>14</sup> This social entertainment vastly preponderates over political news, and the headlines confess what is really attractive. Almost invariably they include the words "disclosure," "mystery," "sensation," "surprise," "startling." The gift of insurance benefits is another factor in the Delilah power of the press. All this blankets the eyes of the ordinary man and woman, and they swallow opinions at which they might pause if there were anything to give them pause. If they knew who and what interests were dictating the policy of the paper, or if policy were separated from news, they might be vigilant. But no law compels the regular declaration of the politics of the chief owners and editors of the paper.

Of graver importance is the practice of summarizing the contents and meaning of political events in headlines, that is, in a telling though ungrammatical sentence of anything up to ten words. Whether the distortion is intentional or not, distortion there is; and these reiterated distortions are too often the only

<sup>12</sup> On the closeness of the dependence on reader reaction see Robert M. Hutchins *et al.*, *A Free and Responsible Press* (Chicago, 1947); and Charles Merz of *The New York Times*, in *Annals of the American Academy of Political Science*, January, 1942, "The Press and Contemporary Society," p. 143.

<sup>13</sup> Cf. *Annals*, *loc. cit.*, p. 20, where it is shown that less than 27 per cent space is devoted to news.

<sup>14</sup> A good racing handicapper is an important asset of every newspaper which aspires to several editions a day and a wide circulation. During the general strike of 1926 in England my barber dolefully summed up the situation in regard to newspapers thus: "Terrible, ain't it, no newspapers! Why, it's like a day when there's no racing!"

political intelligence which the reader hurrying to work or homewards, or snatching his lunch, ever has the time to absorb.<sup>15</sup>

How then can the influence of the press of our own day be judged? (1) Few people use the newspapers consciously as a basis of independent opinion. (2) Many consciously subscribe to a paper because it preaches approximately the political creed they already hold. (3) The newspaper can develop these creeds and apply them to the events and policies of the day and take its readers along with it. It acts as a common worshipping ground, confirms opinions, and encourages resistance. Hence dictators suppress opposition papers, knowing that this will at least cause a dispersal of the mutually inspiring communicants.<sup>16</sup> The newspaper is able to tide over any unpopularity with its readers if it cleverly picks up and drops "stunts" and covers an advance or retreat with attractive "features." If, for example, after a newspaper has covered a political opponent with mud, the public decides that the real repository of the mud is the newspaper proprietor and not his opponent, the proprietor then assumes

the pose of one who "takes his licking like a sportsman." Where he once fulminated he now fawns. (4) In the minds of the unsophisticated and unwarned (and large numbers of the electorate are so), ideas are silently and skillfully implanted, since, while unguarded, they consume untruthful "headlines." (5) Newspapers are most often avowed or unavowed tools of a particular political party, though the editors and proprietors may occasionally revolt owing to differences with the party leaders;<sup>17</sup> but their affiliations are not always known to the public.

The amount of objectively true information and balanced opinion is, on the whole, small, and the press has acquired an extraordinary dominance over opinion, aggravating rather than correcting its defects. A great deal of organization and education are required to overcome the power of the press over untutored minds, and such education and activity in fact falls to the political parties. That the power of the press is not so dominating as is supposed, that its effects are, as it were, suspensive of truthful opinion rather than quite destructive of it, can be seen from the steady and rapid growth of the mass parties of dissent—in spite of the daily opposition of newspapers—whose interests and political creed were entirely hostile to the majority of their readers. These continue to read the paper but vote against the paper's persuasion. The most widely read newspapers in the countries with which we are concerned—until recently in England and the United States, almost the only newspapers—were owned and directed by what may be broadly called the "capitalist" class. Yet mass parties and groups of dissent against their creed arose. The reader will recall how in France, Germany, and Britain the Social Democratic parties and the Labour party arose through thirty or thirty-five years of deliberate effort to organize their interests and ideals in a party, against the

<sup>15</sup> Cf. *Annals*, loc. cit., p. 7, where an average reader is said to spend some 20 minutes per day on newspapers. Cf. also D. Waples, B. Berelson, and F. R. Bradshaw, *What Reading Does to People* (Chicago, 1940).

<sup>16</sup> Fascism claimed that Italy "is too poor to be able to afford the continual nervous strain and frittering away of energy. The formula was: Criticism is allowed, but not opposition." Moreover, the press "must be at the service of the nation, for the nation must be defended by all Italians without distinction." Cf. H. Schneider, *Making the Fascist State* (New York, 1928), pp. 96, 316; and cf. Herman Finer, *Mussolini's Italy* (London, 1935). As soon as the Nazi movement took power, it seized newspapers and either suppressed or renamed and used them. (See *Nazi Conspiracy and Aggression*, U.S. Government Printing Office, 1947.) The Soviet régime is equally inhospitable to free newspapers. The government's absolute control of paper, the printing presses, and factory space is alone decisive. But in addition is the law relating to the practice of journalism and sedition, and control by the Communist party. In all three dictatorial régimes the journalist became a salaried officer of the state or of the monopolistic party, admission to the profession being officially controlled.

<sup>17</sup> Cf. the detailed analysis of the relations between the English press and the political parties in Hartman, *The Press and the Modern State* (unpublished thesis, University of London, 1930).

## THE SOURCES OF PUBLIC OPINION

most persistent opposition of the "capitalist press." And it may be remembered that in spite of the almost universal hostility of the press, it was not possible to stop the electorate from choosing Mr. Roosevelt, not once, or twice, or thrice—but four times!

The limits on the power of the privately-owned press as an independent dominator of public opinion may be recapitulated. (1) Even where the press is "capitalist" there are rival capitalists, with marked differences of opinion and accounts of the facts in public affairs. (2) Even where only one newspaper circulates in a locality without a rival (and in the United States this occurs in nearly ninety per cent of the places), *given time*, it may be controverted by out-of-town papers, by the radio (even where this happens to be owned by the newspaper), by common report, or by reflection. (3) The special press—the periodicals of vocational and social groups, of the professions, the businesses, and the churches—carries alternative versions of the truth, confirming or denying the facts, beliefs, and policies of the general press. (4) The press is limited in influence by the receptivity of its readers. (5) There are institutes, like Brookings in the United States, or Political and Economic Planning in Britain, or university departments with publications, whose standards cut across the values peculiar to the general press.

Yet it must be admitted that the newspaper can and does enslave the uneducated; if not for always, yet for a time. And time is of the very essence of politics. Its battles are fought in terms of months, years, and generations. The general effect of the press is to uphold the *status quo*; it is on the whole conservative (less so in France, with its host of small newspapers of opinion). It does not assist dissident minority opinions. It defers their victories but cannot stop them. The strongest newspaper cannot, beyond a certain time, baffle the impetus of a group opinion founded upon the interests of that group. The group knows its own interests too well to be fooled by newspaper opinion. So that

we are back again in the making of public opinion to the conflict of groups.<sup>18</sup>

How complex a problem the better ordering of the press for modern society is, may be gathered from the recommendations contained in *A Free and Responsible Press*, already referred to.<sup>19</sup> A résumé of its principal points are as follows.

(1) What can be done by government:

- (a) Government must maintain freedom of the press, radio, and motion pictures, but as to the two latter, they must be subject to the kind of regulation conducted hitherto by boards of review and the Federal Communications Commission.
- (b) Government must foster new techniques and new ventures in communications and maintain competition through the anti-trust laws—used with care.
- (c) Libeled persons should have a right to a retraction or a restatement or to reply.
- (d) Legislation prohibiting advocacy of revolutionary changes should be repealed where there is no clear and present danger of violence.
- (e) The government should inform the public of the facts respecting its policies and purposes through the mass mediums, and where private agencies do not permit this, the government should employ its own mediums.

<sup>18</sup> For England, the reader is referred to Kingsley Martin, *Fascism, Democracy, and the Press* (London, 1938); "Report on the Press," by Political and Economic Planning (London, 1938); Francis Williams, *Press, Parliament and People* (London, 1945); and House of Commons Debates, October 29, 1946, on press control and ownership, a debate precipitated by the unfairness of the opposition press to the Labour government.

The most penetrating analysis of the position of the American press and radio and movies is to be found in the report of the Chicago Commission on Freedom of the Press prepared by a body of eminent experts in political science and public opinion, published in 1947. The reader is also directed to the 1945 case of the *U.S. v. Associated Press* (326 U.S.1), in which the news-gathering agency was compelled to admit *The Chicago Sun* whose exclusion had been possible under the articles of the association permitting *The Chicago Tribune*, a member, among others, to exercise a right of objection. The reader may also consult the *University of Chicago Law Review* for April, 1946 and June, 1946, for articles on this decision.

<sup>19</sup> *Op. cit.*, p. 79 ff.

(2) What can be done by the press: (a) The agencies of mass communication should be hospitable to ideas and attitudes different from their own—that is, accept the responsibilities of “common carriers” of information and discussion. (b) These agencies should finance new, experimental, activities of high literary, artistic, or intellectual quality which do not bring financial rewards, and they should do this out of their profits on the rest of their revenues. (c) The members of the press should engage in vigorous mutual criticism. (d) The press should use every means to increase the competence, independence, and effectiveness of its personnel.

(3) What can be done by the public: (a) Nonprofit institutions—like schools, libraries, colleges, universities, religious organizations, a chain of FM educational stations—should supply the variety, quantity, and quality of press service required by the nation, to give it diversity and elevation of ideas. (b) Academic-professional centers of advanced study, research, and publication in the field of mass communications must be established; and the schools of journalism must be converted into places of the broadest and most liberal education. (c) A new and independent agency to appraise and report annually upon the performance of the press should be established: to define standards, point out inadequacies, inquire into minority discrimination, etc., and foster publicity and public discussion on all phases of the service of the press to the nation and the world.

*The School* is of surprisingly small value in the creation of independent political opinion. Let us divide and discriminate. We may speak, broadly, of elementary, secondary, and university education—as it is.

In the elementary schools, attended by the mass of children until about the age of fourteen, what is taught? There are the introductory subjects like reading, writing, and arithmetic; elementary natural sciences and handicrafts; and—of sole importance as an approach to public affairs—history and geography. The chief features of this instruction are its scantiness

in terms of the time which can possibly be devoted to it, and the curious way in which the subjects have in the past been studied and taught. Even in the best schools in the most advanced educational systems, history has suffered from undue attention to battles, kings, and great men, with emphasis upon pretty-pretty stories about them, while the fundamental forces in the evolution of society—the economic, the social, the doctrinal, the technical—have been ignored. The “nation” is considered as a solid and homogeneous unit without internal troubles or conflict. Further, it is almost universally considered the sole standard by which the rest of the world should be judged. Geography has been too national, an enormous time being spent on learning trumpery natural features by rote, and long lists of products made or grown in different parts of the world. But the dynamic factors in race, the distribution of peoples, climate, migration, and commerce do not receive appropriate attention. At the very best the elementary school is a beginning; unfortunately, in the present context, it is for many the end of all disciplined schooling.

In the secondary schools, high schools, *gymnasias*, or *lycées*, history and geography are pursued further, and some attention is paid to the characteristics of other countries when the usual two modern foreign languages are taught. A little more than the few miserable stories of the elementary schools is recited. In some schools, where the headmaster and history and geography teachers are adventurous and wise spirits, the few good textbooks are introduced,<sup>20</sup> so that by the age of sixteen the pupil has learned enough at least to begin to inquire and read. How rare are such teachers and how rare such books; how inadequate, too, is the time

<sup>20</sup> For the situation in the United States, not likely to encourage complacency, see Educational Policies Commission, *Learning the Ways of Democracy: a Case Book of Civic Education* (Washington, 1941).

For an exceptionally fine high-school history see C. H. Firth, *History Secondary Series* (London, 1945-49), 5 volumes, each with a reference book. Cf. also B. Pierce, *Civic Attitudes in American School Textbooks* (Chicago, 1930).

for these studies! <sup>21</sup> The career approaches; and cramming for examinations is imperative. It is, however, interesting to note that during the last twenty years, almost all secondary schools have begun to teach a subject called "civics" <sup>22</sup> or "citizenship" or "American democracy," which is an introduction to public affairs. In the commercial secondary schools there is an introduction to economic theory, economic history, and "commercial" geography, and this, when taken seriously as a large part of the curriculum, is a useful step to a knowledge of the conditions of government.

However, generally speaking, any close and honest examination of the contribution of secondary schools in all countries clearly shows that three things stand in the way of an education which could fit pupils to grope their way to an independent judgment of public affairs: (1) the lack of teachers with the appropriate knowledge and skill; (2) the lack of proper textbooks and other equipment, such as motion-picture projectors, pictures, and books other than textbooks; and (3) the staring grim fact that children are not sent to school to become authorities upon public affairs but to learn to earn their living in some special vocation.

(1) We know that the national supply of good teachers is small; those who have the talent and the vocation are very few. Teachers are very badly paid, and so, often the timid and mild who are likely to fail at other things turn to teaching. The higher salaries now paid in some places induce the entrance of others who are not merely finding a refuge from a rough world. Yet it is impossible to find as many illustrious teachers in a nation as are required, given the large number of children at school. We are rather con-

demned to a large body of mediocre (many worse) teachers, with a few noted exceptions. It must be remembered also that teachers are not at liberty to devote themselves to one subject or a group of cognate subjects, but are expected to profess "subsidiary" subjects. This is all a question of cost. One improvement is noticeable: the more rapid acquaintance of teachers with recent research in the social sciences, yet even now far from adequate. Signs are not wanting that World War I and World War II and the interwar economic and ideological ferment have much vivified the curricula and the outlook of teachers.

(2) Secondly, owing to the short time available and the importance of obtaining examination results, textbooks form the principal reading. But even these summaries of summary summaries are not read all through, for heavy-led-type captions stand guard over the portals of the rest, crying out, "Read and remember me, if nothing else!"

(3) We come to the final count, and that is the prior necessity of earning a living. The standard of living lashes and goads the modern world. It causes parents to fling their children into school, whether they like it or not, and snatch them out again in time to get a job. They may stray a little to pick up some accomplishments, and, of course, if they insist upon straying altogether—there is nothing to be done.

It is relevant at this point to observe that in Britain, until 1946, the number of children going on to secondary education after the age of fourteen was only three out of ten. This is now changed by the recent Education Acts.<sup>23</sup> It would seem as though a body of citizens emergent from an educational system in which only so small a proportion had been educated beyond the age of fourteen would be an incompetent electorate. That this is not the case is observable from the political and social progress in Great Britain. The truth is that elementary education in Eng-

<sup>21</sup> H. G. Wells, in his *World Brain* (London, 1938), examines the number of years devoted at school to subjects which are a foundation of subsequent political understanding, and demonstrates how small is the proportion of time spent on the political-humanizing subjects. The reader is advised to study this book.

<sup>22</sup> In Germany, *Staatsbürgerkunde*; in France, *Instruction civique*.

<sup>23</sup> W. K. Richmond, *Education in England* (London, 1945, Penguin edition).

land has been of a rather higher quality than in the United States, in which attendance at high school is the reverse of the British proportion, that is, seven out of ten, and if the Southern states are excluded from the average, then the attendance is almost 100 per cent. The high schools in the United States have not been notable for adding preparation for political participation. However, whatever the quality of American high-school education, her system has the inestimable merit of opening the doors to all who want that education, and in the end her polity is certain to benefit immensely from this. In France and Germany the situation has been closer to that described for Britain than for the United States.

The mercenary is the chief motive to secondary education, and only those with expectations and the financial means of a political career, or the very few who are brave enough to dispense with expectations and financial rewards, can make the secondary stage the beginning of political understanding. Thus, of all the numbers of secondary students, only the moneyed "governing classes" and the mentally adventurous may pause to profit. Most of the rest rush helter-skelter out of the doors of school with some true and many false notions, and with the mind closed rather than made eager—to be governed, inevitably, not by their own qualities, but by other people's, or by their own, not too well.<sup>24</sup>

Owing to the expense and the necessity of finding work, only a tiny fraction of the population enters the college stage: in the United States about one in six of the population of university age; in England about one in forty; in France and Germany a little higher than the English figure. Those who do not enter do so mainly for a vocational purpose and specialize in a particular technique; only a very small proportion undertake studies which offer an approach to politics. Those

who learn history, law, political and economic theory, philosophy, and ethics are being fitted for comprehension of the political world, for they are learning something of human groups and their interpretations.<sup>25</sup> Even among these, there are stages of wisdom. The specialists in the social sciences are very few, though the present tendency is for a rapid increase in the numbers. That a college education may provide a man with a negligible endowment of political wisdom is to be observed from conversation with the average medical practitioner, engineer, clergyman, solicitor, bank manager, and, in a lesser degree, schoolteacher. People are often shocked when they observe for the first time that some of these very capable craftsmen are quite uneducated outside the narrow sphere of their own activities, necessary and humane as they are. Yet no one would expect, as of necessity, that a capable carpenter (or a nuclear physicist<sup>26</sup>) should *ipso facto* be a political oracle.

The net conclusion is that schooling, in its present state, may do much to prepare people to make a living, to exercise special skill, and even to enjoy leisure, but it does very little either to prepare the mind or train the mind to prepare itself competently to understand and judge social relationships in the nation and the world. No one, surely, would go to the other extreme and claim that schools turn out students highly efficient therein. There is ground for much constructive improvement in this respect.

So far, then, as schools are concerned, the irresistible conclusion is that the mass of mankind are destined to become what the Germans aptly call *Stimmvieh*: that is, voting cattle.

<sup>25</sup> On the relationship between education and civic intelligence, compare the fallacious remarks of Hayek in *Road to Serfdom* (Chicago, 1943), Chap. 14, and my refutation of this in my *Road to Reaction* (Boston, 1946), pp. 112-13.

<sup>26</sup> How far from political wisdom an eminent physicist can be may be learned from one among many similar cases from M. P. Blackett, *The Bomb, Fear and War* (New York, 1949).

<sup>24</sup> For a sensible, critical account of education for citizenship in American schools see D. Anderson and P. E. Davidson, *Ballots and the Democratic Class Struggle* (Stanford, 1943), Chap. V.

This judgment, like others relating to the schools and political participation, must be tempered by the recognition that, however little the schools do accomplish, so long as the public has a clear economic or social interest to develop and defend, the domination of the press or political parties is limited.

In addition to the intellectual contribution of the schools to the formation of public opinion, as estimated already, certain other considerations are important. (1) The school is the earliest stage in the formation of the mind where the influence of the family is confronted with an alternative; it begins to put the family in a wider social setting. (2) The school contributes to the mind something beyond the range of the family's occupation, its locality, and its class. Manifestly, if properly improved it could render far greater services in these directions. (3) Yet one more truth is of tremendous importance: in preparation for political life, the school suffers from the vital defect that students are not living the full life of citizens but are sheltered, protected, and provided for by others, usually their parents. They have not to face the stern realities of self-maintenance, personal and economic protection, and advancement and security, in open, unassisted competition with others at least equally determined. But the conditions of personal existence and success, and full responsibility for these, are the essence of the political process and the public opinion which is its material. Hence the school, in the main, can do little else but supply theories or ideas. The realities come later, and for these, men and women need specifically contrived social arrangements—I refer to political parties.

Some slight headway is being made by adult education in evening courses, such as those provided by the Workers' Educational Association and Adult Education Association in England, the *Ligue de l'Enseignement* in France, the *Gesellschaft für die Verbreitung der Volksbildung* in Germany, and the Association for Adult Edu-

cation in the United States.<sup>27</sup> An important opportunity is open for adult education to render a magnificent service for the welfare of democracy, that is, the kind which is not rendered by political parties. It is a remarkable fact that in Great Britain no less than one hundred members of Parliament on the Labour side returned in the election of 1945 were people who had attended the classes of the Workers' Educational Association. But this is a serious educational venture, requiring study, attendance, and paper work for a course lasting two or three years. Experience during World War II with the Army Bureau of Current Affairs in Britain, the Army Information and Education Division in the United States, and the "underground" in France has shown clearly what enormous avidity for political and economic education exists, and how quickly awakened are those who have made contact with it. In the United States, it is probable that a new lease of life in serious adult education is beginning with the efforts of Chancellor Hutchins of the University of Chicago in collaboration with the *Encyclopedia Britannica* to produce and circulate a series of humanity's mightiest classics and to have them discussed in regular classes by properly conducted and continuous groups.

Before passing on from this consideration of the schools and policy formation, one most important feature needs to be given high relief. If the teaching of policy in schools and colleges assumed important dimensions and a character of indoctrination, they could not possibly resist invasion in various ways by the managers, bosses, and officials of political parties. A narrow path must be trod—that of education, not party propaganda—and a high temperature will stimulate the attack of political disease germs from the outside upon the bodies academic.

#### *The Motion Picture and the Radio.*

<sup>27</sup> Cf. A. Mansbridge, *An Adventure in Working Class Education* (London, 1920); cf. also the important report taken from statements made by adult students on this subject, in W. E. Williams, *Learn and Live* (London, 1936).

These two instruments have enormous potentialities, for at low cost they can reach almost everyone for long periods of time, and they do not exact the more difficult kind of attention necessary to master a printed argument. The cinema, owned by a few, has become almost exclusively a means of entertainment. It is enormously popular because it preaches with fanatical vehemence the ultimate and holy triumph of the Ten Commandments by showing with tropical imagination naked detail, and beautiful men and women, the attractive consequences of their disobedience. Of recent years there has been a conscious mobilization of "educational" films, and much may be done therewith. But even in the schools they are not as yet highly popular, and a theater manager takes a grave risk with an "educational week." The sound films are, I am sure, destined to become a most potent means of education, and all political parties possess portable apparatus.

The radio is of very unequal value. Its best development is in Great Britain, Germany, and France; in the United States the radio awaits more cultured public control. The policy of the British Broadcasting Corporation is to give about five hours per week to the discussion of subjects which may be called "political," and the intellectual standard is about that of well-expressed university and adult classes, not too high for large masses of people to profit from influence.<sup>28</sup> But so far the development is in its youth, and the time actually devoted to it is small compared with the long succession of plodding hours needed to master the vast range of complicated facts, especially in the form of organized discussion groups. The potentialities are enormous, and we are reminded of Carlyle's dictum that the true

university today is a library of books! Yes, for him who is by nature a part of the *universitas*! Shall we avoid again what we have seen in respect of the newspapers? The majority of minds attracted either by the crude, the sensational, and the vulgar, or by all that is sublime in artistic feeling and expression, but revolting from disciplined study of the science of government?

What has been said about the British Broadcasting Corporation also holds good for France and Germany. But during the nazi period, the amount of political education was enormously increased, not for the world's benefit. In the United States, because of the existence of several nationwide networks and hundreds of small stations, the amount of time during which a discriminating citizen may be regaled with political discussion is much larger than in Britain and France. This is, in part, due to the competitive effect of private enterprise, as each network must have some program of intense educational interest on the air. This, however, is enforced only by the most vigorous efforts on the part of the Federal Communications Commission, which is in control of the use of the air by the station owners and managers. News and talks during the daytime take about 11 per cent of the time. This includes talks which do not reach a good sober standard of quality and much which is futile.

On the whole, no country—whether, as in England, broadcasting is under government control, or, as in the United States, maintained by private enterprise, is really exploiting the educative potentialities of radio on the grand scale which is possible. This is one of the greatest of missed social opportunities.<sup>29</sup>

C., 1946); "Radio: the Fifth Estate," *Annals of the American Academy of Political Science*, January, 1935; Llewellyn White, *The American Radio* (Chicago, 1947); and more sensationally, Frederic Wakeman, *The Hucksters* (New York, 1946).

It is not so much the moral pressure of the churches in politics that interests us, but their intellectual contribution to the understanding of political argument, not that the two can be entirely separated, for the fear of the particular Hell or the love of the particular Heaven of any church infallibly closes many minds to any argument at all which disputes the beliefs respecting the supernatural. Every church professes a body of ethics which consist of principles of human obligation and rights deemed to be universally valid. It is obvious that, in so far as the communicants have really mastered the verbal arguments addressed to them in schools and sermons and the history of their creed and group, and, in so far as they really believe what they have heard and read, there must be large bodies of opinion employable as a criterion of political problems. These bodies of opinion cut across each other, sometimes agreeing, more often violently disagreeing; and they are specific and often very rigid attitudes of mind.

Some even enter into questions of the day: for example, into education, temperance, marriage and divorce, the emancipation of women.<sup>30</sup> And in our own time the churches have begun sedulously to occupy themselves with labor conditions, with sporadic movements, called generally Christian Socialism,<sup>31</sup> commencing in the middle of the nineteenth century. The Papal Encyclical of 1891, for example, gave an impetus to Roman Catholics to occupy themselves with finding and embracing an industrial policy.<sup>32</sup> These tendencies are becoming strengthened, and

churches are now especially sensitive and proud of their answers to economic and social problems.<sup>33</sup> They are a little ashamed of one thing only: their inability always to preach the gospel of peace.<sup>34</sup> But this, of course, is the unfortunate fate of all who occupy themselves practically with man's actual lot in the world where time is of the essence. Christ himself brought a sword.

The teaching is, however, on the whole rather vague; the body of knowledge is small, and the people who may be supposed to be really influenced thereby are very few. Though for many the gospel of a church has still that commanding significance which only belief in an other-worldly scheme of values can give, their number is far outweighed by perfunctory attendants. The country is more "religious" than the town; the villages and townships of the United States, for example, still give a powerful impetus to its politics; and the Catholic strength in France and Germany is so formidable that pitched and long-drawn battles have occurred between secular politicians and churchmen. Their influence on education has been and is weighty. On the whole, however, the forces which would have drawn men to hear the social doctrines of the Church have become so weak that the churches have undertaken their study and instruction largely for their own preservation. Yet they are tortured and broken upon the rack of their followers' economic and local dissensions, as witness the difficulties of the Center (Catholic)—later the Democratic—Party in Germany and the *Mouvement Republicain Populaire* and parties of the extreme Right in France. For the exacting time-element spurs on to violence of feeling, word, and deed. Nevertheless, the churches speak when men are in a peculiarly receptive mood,

<sup>30</sup> Cf. the papal encyclicals on marriage and the family, and on socialism (1931), in J. Husslein (ed.), *Social Wellsprings* (Milwaukee, 1942), 2 vols.; and on atheistic communism (1938) and Hitler's and Mussolini's régimes (1931).

<sup>31</sup> Cf. C. E. Raven, *Christian Socialism: A History* (London, 1920); and the former Archbishop of Canterbury, William Temple, *Christianity and Social Order* (London, 1942); Philip Hughes, *The Pope's New Order* (London, 1943); H. Trommen, *The State in Catholic Thought* (St. Louis, Mo., 1945).

<sup>32</sup> Cf. reports issued by the I.L.O. (Geneva and Washington) on Roman Catholicism and economic welfare.

<sup>33</sup> Cf. reports by Federal Council of Churches of Christ of America, currently, but especially during 1946 to 1948, and the British Council of Churches, from time to time.

Above all, see *Man's Order and God's Design*, by the First Assembly of the World Council of Churches (New York, 1949).

<sup>34</sup> Cf. British Council of Churches, *The Era of Atomic Power* (London, 1946).

and there is no doubt that they are efficacious in creating a political mind independent of other and outside agencies.<sup>35</sup> They do not go far with the mass of people, but they can excite these when their privileges are attacked. In the Christian world, the paramount truth is, most probably, that in spite of the small hold of the churches on the externals of worship, men are much better citizens than they would have been had Christ never lived and died.

There remains the hearsay of clubs and social intercourse as sources of public opinion. More than at any time in the previous history of the world does man come into relation with man. Communication and transport are so rapid, and division of labor so takes people from their own homes and mixes them together at work and in their leisure, that, willy-nilly, they learn something of each other's experience, needs, aspirations, and values. It is true that these contacts are irregular, a little incoherent, often more trivial than the conversations reported in the novels of Sinclair Lewis, Thomas Wolfe, Aldous Huxley, and Jules Romains, but they take place over a long series of years and tend to cure purely personal preoccupations. There is force in the astonishing realization that there are other people in the world. It is idle to imagine that the knowledge and opinion thus diffused can possibly be gauged in any quantitative fashion, but it is obviously important. If we can judge by changes in fashion, in the vulgar tongue, in the spread of rumors, and changes of political allegiance which have been produced quite definitely *not* by the agency of printed opinion, it must be very important in quantity. Its quality, however, is crude: it is based upon all sorts of hearsay, evidence of the most doubtful value, complete nonsense, and logical op-

erations so crude and false that one would swear to their impossibility were it not for the direct evidence of one's senses. World War II, coming on top of ideological discussions, caused an enormous interpersonal stir—veteran interest was fostered, and the nations will surely benefit permanently.

#### PARTY IS KING!

WE have surveyed the extent to which the mass of voters are independently capable of judging public affairs, since only if they are capable can they know how they wish to be represented. We have seen that a number of agencies of instruction exist apart from the direct experience of the individual voter. We found that his direct experience in limited and special and produces desires but little knowledge of social possibilities. What can we say, in general, about the agencies through which experience of social events and problems are obtained at second hand?

The vast mass of voters are entirely innocent of objective knowledge of political possibilities. Their disciplined study is of the slightest. A few have a smattering, small in quantity, uneven in distribution, incoherent, without basic soundness. A very small number, indeed, go beyond this and obtain a sufficiently systematic and profound insight into the body politic. The general body of the electorate does not, and cannot under present conditions, contribute more to politics than some a smoldering, some a flaming, sensibility of their wants and passions. Even these are not clearly focused to themselves, and are hardly articulate without use of the jargon of propaganda. This holds good not only of the poor; it is just as true of the middle and upper classes who have not had a special training in the social sciences.

A consciousness of wants is the independent contribution of the electorate to representation: but not yet an adequate knowledge of what is possible. The electorate is not entirely devoid of an informed sense of the possible, for everyday contact inevitably teaches a good many things—all that is summed up in the terms mu-

<sup>35</sup> Cf. the papal protest against the fascist attempt to monopolize the education of youth in the interests of "the pagan state" (*Universe*, July, 1931). But consider also the failure of that church to combat Mussolini, and the obsequiousness of so many of its clergy to the fascist rulers, central and local. Nor did it speak clearly enough against Hitler's régime. See Herman Finer, *Mussolini's Italy* (London, 1935), Chap. XVI.

tuality, reciprocity, harmony, common sense, morality, and forbearance. But this can only be applied to the problems of government when these are known in all their intricacy, and when their remote, impersonal natures are "brought home" to the citizen. The power of generalization and abstraction, and of comprehending the significance of general laws, is of the rarest.

There is thus a field, which has always been vast, but which in the modern state is colossal, of which the average voter is ignorant and cannot help being ignorant. He is likely for several generations to remain so in spite of the specious and not disinterested observations of Lenin, hardly supported by the practice of the Soviet state.<sup>36</sup> It is the inescapable result of the peculiar civilization of our time, with its economic compulsions and ethical failures. It is not the result of capitalism but of something deeper, and that is economic acquisitiveness serving itself with modern sources of energy and the aid of a machine as vast and complicated as the great globe itself. The electorate needs help!

*The Help the Electorate Needs.* What is the help the electorate needs? (1) Since it consists of many small "publics", each with its own opinion, the voters need to be helped to see the consequences for themselves and for others of their self-regarding opinion. Some one, some agency,

must bring to them the vivid knowledge of the repercussions of the opinion of each upon others, and of others' opinion upon it. These repercussions, in the tangled, dense intricacy of modern societies, can be of the most desperate complexity in the number of interrelationships involved, and the extent to which they must be carried over successive stages of the future. Many of these interrelationships are world wide, concern the fate of foreign nations, and might involve war! Consider only the different interest of the various groups in a policy of full employment, and the variety, extent, depth, and future stages of the measures necessary to produce it! Or the pervasive, distant consequences of the control of traffic in alcoholic liquor! Hence, some agency standing *outside* the individual and the group is needed to render the all-round view possible, and simultaneously, it must stand at the pinnacle of knowledge in the state, so that to it may flow the total diversity of relevant facts.

Nor is this all. (2) Some one or some agency outside the groups must assume responsibility for presenting a public opinion which harmonizes all the little opinions as to (a) priority in time for satisfying their respective wants, (b) preference in *value*, how much satisfaction shall be accorded to each, and (c) a doctrine of *justice* by which to commend these to all who are virtually being asked to modify their little public opinions in the light of the wider one, a larger goal.

*The Rarity of Native Aptitude.* The attainment of political knowledge and wisdom is a faculty as special and rare as any other science and art. There are very few first-, second-, and third-rate political thinkers for the same reason that there are very few first-, second-, and third-rate poets, painters, sculptors, dramatists, composers, physicians, constructive engineers, actors, chemists, critics, and people of taste. For fruitful political initiative one needs, in addition to technical training, a native complex of qualities called "aptitude". Training and experience are alike wasted upon the inept: they can be given if society should set itself to the task, but

<sup>36</sup> Lenin, *State and Revolution* (New York, International Publishers, any edition since 1917): "Accounting and control—these are the chief things necessary for the organising and correct functioning of the first phase of Communist society. . . The accounting and control necessary for this have been simplified by capitalism to the utmost, till they have become the extraordinarily simple operations of watching, recording and issuing receipts, within the reach of anybody who can read and write and knows the first four rules of arithmetic. When the majority of the people begin everywhere to keep such accounts and maintain such control over the capitalists (now converted into employees) and over the intellectual gentry who still retain capitalist habits, this control will really become universal, general, national. . . The more complete the democracy, the nearer the moment when it begins to be unnecessary . . . the more rapidly does every state begin to wither away."

it is idle to imagine that the distribution of human talent can rise above itself. This is not to say that, given conditions we have earlier indicated, a great deal of ignorance and fallacious method could not be replaced by fact and sound knowledge. And that, obviously, on the democratic assumption, is most desirable and necessary. This would still leave the intelligence curve as it is, with only a few at its superior end, although it would cause the personal place on the curve of actual electors to be very different from what it now is owing to the operation of present-day factors. The student of government will make many mistakes in the analysis of political institutions and their operation unless he has in mind continually the broad results of certain well-known tests of intelligence.<sup>37</sup>

*The Low Potential of the Mass.* There is one thing more, of at least equal importance. The mass of men and women are not self-excitable except occasionally and for a few brief moments, and concerning one or two special interests. In regard to all other things they are permanently apathetic and bored. Even if they know, they do not feel. There are as few geniuses of emotion as of intellect or art. To use the language of motor transport, the mass of people are not "self-starters." Some agency is needed to excite them and, on special occasions such as elections, to concentrate a heavy and unrelenting bombardment upon them, enforcing their attention.

(To avoid any misunderstanding, I am anxious to affirm that the traits of the electorate do not commit one to the nazi and fascist, or even the Leninist-Stalinist claim, of the spiritual superiority of the leaders to the masses. For that claim is that their values are *naturally* better than those of the masses, whereas I have already shown that there is no test of the level of moral values that is objective and outside man: and that the surest long-run method

of discovering the most acceptable and livable level is to admit a right in all men to utter, and equally compel consideration for, what is revealed to them. This has little to do with knowledge of temporal facts, and does not lose in validity because the person is politically apathetic; see Chapters 5 and 38.)

Now what all the other agencies do not do—namely, teach—and what cannot be done without special organizations—namely, to gather the talented and stimulate interest—political parties set out to accomplish. They gather up the whole nation into fellowships, and they lead, in the sense of bringing to the individual citizen a vision of the whole nation, otherwise distant in history, territory, and futurity. They gather the knowledge and the capable practitioners, and we must now consider their methods and ask how far they are successful.

Let us make no mistake: political parties do not perform this function simply because they nobly want to; it is not entirely an elective virtue of theirs; they are in part compelled. For the first commandment of a political party is victory. Victory is found also written even unto the ninth of its commandments. The tenth, enforced by experience, the general sense of honesty, and one's personal integrity, may counsel other courses. By choice, the party would be victorious; virtuous it is only by compulsion. "Buncombe" is the homage which electoral virtue so often pays to electoral victory.

*A Continuous Organization.* The organization operates incessantly, partly because victory in parliamentary elections is otherwise impossible, but also because in the modern state there are many local elective offices to fill. In France, also, the Senate is partially renewed every three years, and in America and Germany there are state as well as federal elections. Although in the United States much has been done to bring about a coincidence of elections, the elective periods are too heterogeneous to perfect this. So the organization, the machine, the caucus, the workers, are always on the watch for movements of their opponents and for the opportunity to

<sup>37</sup> L. M. Terman, *The Measurement of Intelligence* (New York, 1916); L. L. Thurstone in *Psychometrika*, various surveys of "primary mental abilities," *The Nature of Intelligence* (New York, 1924), and *Multiple Factor Analysis* (Chicago, 1947).

## PARTY IS KING!

"swing" over blocks of votes. There are slack periods, but none entirely dead; and informal talks and formal councils are always in progress. Reputations fluctuate as their owners legislate, administer, or conduct campaigns, and men and women are marked out for various positions.

This, the permanence of organization and activity, marks off the parties of the present from the parties of three quarters of a century ago, and the parties of England, Germany, and the United States from party organization in France until after World War II. For before the middle of last century, political parties were loosely organized and quiescent between elections, sudden mobilization taking place just before the election and demobilization after polling day.

More recently the parties have added another source of power: they deliberately set out to capture the young people, long before they are of an age to vote, and this is done by the creation of Leagues of Young Socialists, or Friends of the Children, or the Junior Imperial League, or Pioneers, or Communist Youth, Young Liberals, *Fascisti*, or *Hitler-Jugend* who are not so much taught as drilled. The impulses of human rhythm and harmony are exploited by demonstrations, processions, singing, and self-decoration. In this sphere Germany was first and most developed; England holds the second place, France the next, and the United States the last. (The Soviet state is, for obvious reasons, most interested in political youth organizations.<sup>38</sup>) Thus the party moves towards all-inclusiveness from infancy to senility, as well as permanency of organization.

How do the parties operate? We will not make a rigid separation between the all-the-year-round activity of the party and its activity in the few weeks preceding the campaign, but will point out any differences of kind that occur when the period

of organization and skirmishing merges into that of intensest battle. The parties operate through meetings, personal canvassing, the circulation of "literature," the creation and distribution of posters and slogans, the use of radio broadcasting, the manipulation of the press, demonstrations, and "pressure." These methods are common to all parties in each country, but in each the emphasis is differently placed.

Meetings are broadly of three kinds: at the party headquarters, in halls, in the streets. At the party headquarters only avowed members of the party and novices are entitled to be present. The meetings are regular and frequent. Here the serious business is speechmaking by nationally prominent members of the party and by the leading members of the local caucus. Questions and discussions follow the speeches. The speeches are naturally directed to strengthen the party's enthusiasm and numbers, and the tendency therefore is for the speaker to say that all things which the party considers desirable are possible. Only the hopeful may be alleged of one's party: electorally, to doubt is to die. The local members are more inclined to listen to doubts expressed by a considerable personage who comes from afar than from one, even a leader, among themselves. The local leaders also learn by such contacts three important things: (1) what the party can do as distinct from the full measure of what it would like to do; (2) the possible maximum accomplishment even if opponents did not exist; and (3) on what terms the various occupational interests and territorial sections can be reconciled with each other and with a conception of the "national" interest. The local workers learn the intentions of the national leaders, may apprehend that they are part of a nation-wide community, suffer a change of mind, and cause a change of mind in the speaker. By slow degrees, harmony and oneness are approached: it is never a perfect unison, but it is far from violent chaos. These meetings are important, too, for their cohesive powers, for they are accompanied by pleasant conviviality. One is the recognized member of

<sup>38</sup> For the Soviet Union cf. Samuel Harper, *Making Bolsheviks* (Chicago, 1931); for Italian fascism, cf. Herman Finer, *Mussolini's Italy*, Chap. XV; for Nazi Germany, *Nazi Conspiracy and Aggression* (U.S. Government Printing Office, 1947), Vol. I, p. 312 ff. and relevant documents.

a community! What does this not mean to otherwise rather humdrum and lonely souls? Here is significance, grace, justification, honor, even immortality—as well as utility! All these things warm the heart and provide the party with willing workers and preachers not too careful of the rational value of their gospel. Such meetings are more prevalent in England and Germany than in the United States and France, and less in France than the United States, where the parties have large competition from the churches and the Y.M.-C.A. (especially in the rural parts, which constitute nearly one-half of the whole country) and from its multitude of civic but nonparty organizations. They are less frequent in the parties of the middle and upper than of the poorer classes.

In all countries there are occasional meetings in halls. They are held on the occasion of some special national or party crisis, when a new policy is being debated; or when one of the great men of the party pays a visit; when a special fillip is needed to party organization—when a “rally” is required, or during an election when advertisement and the spectacle of activity are likely to arouse confidence and enthusiasm. They are open meetings, though usually the faithful form the largest part of the attendance.<sup>39</sup>

The objective merits of a policy are not explored with pedantic care. A cut-and-dried policy is artfully expounded. The art consists in appealing to the interests of the listeners while suppressing considerations of difficulty or making light of them or ascribing them to a moral defect in opponents; in drawing special attention to the noble personal character of the speaker and his colleagues; and, especially, in causing laughter. Usually the meeting is kept well under control by a chairman, and questions are allowed after the main speech. But it has become a well-established custom in England (not so well-founded, though practiced, in Germany

and France, and hardly attempted in the United States) to interject short sharp questions. The speakers are expected to answer this “heckling” good-naturedly. Nor are they everywhere expected to answer seriously and rationally. And much of a speaker’s success depends upon his ability to glide over difficulties or to demonstrate, with wit, that the question is foolish and the questioner a congenital idiot. I have been astonished at the good humor and tolerance of audiences in England, at their ever-patient long-suffering in the United States, where they rarely “heckle,” at their stern passionateness in Germany, and at their turbulence and pithy comments in France. Everywhere better and more questions are asked in the towns than in the country.

In the streets the local workers or paid speakers, the “party hacks” of the richer parties, gather audiences round them, especially during elections. This is practiced far more in Great Britain than elsewhere; in Germany and France previous permission of the police is required and freely granted. There are no rules of order, save those contributed by the ideas of fair play normally held by the majority. The meetings have the merit that they attract voters who might not go to a hall or party headquarters, and they give the illusion, by determined activity, that the party is out to win. (The activity of the Communist party and the Young Communists in the Soviet Union takes this form, very busily in election years, and also in between). Since the voice, even at its highest natural strength, will not carry far, the audience may drop off. The natural means to prevent this is to drop all subtlety of argument and to lay emphasis upon the sensational and the amazing. Consequently, these meetings, though serviceable to the party, are not of the same value to truth. There is no possibility of close argument and consecutive discussion. Both in the hall and in the street a “demonstration” is more important than technical and logical proof. The audience has neither the time, opportunity, nor wisdom to detect and challenge fallacies! (Some improvement in the speaker’s rationality has re-

<sup>39</sup> In Nazi Germany and fascist Italy such open argument was not possible. In the Soviet Union it is restricted to polite and “loyal” expressions on minor matters of government, but certainly not on high policy.

cently been produced by the invention of the sound truck with its public-address system.)

*Personal Canvassing.* It is the practice in England and the United States,<sup>40</sup> and to a lesser degree in Germany and France, for the party machine to organize personal calls upon the voters to discover their affiliation and induce them to promise their vote. All canvassing has for its object the production of the largest number of votes for one's own party on polling day, and it is then that it assumes its most intensive and desperate form. Canvassing is an ancient practice in the Anglo-Saxon countries, and has consequently been skillfully elaborated.<sup>41</sup> If the voter does not entirely close the door to conviction, the canvasser attempts the task of conversion. To be useful, the canvasser must have qualities akin to those of an expert salesman: the psychology of salesmanship is the psychology of canvassing. He must have a commodity for every taste and an answer to every objection; and these must be varied with the client. The canvassers usually learn from the party's handbook, or notes for speakers, or speeches at meetings; they also improvise. On the whole, voters are flattered by the attentions of the canvasser: their existence, it seems, is recognized: they are somebody; and they have a favor to grant which somebody actually begs. Some busy housewives are a little annoyed, and some voters, who are disillusioned with the promises of canvassers,

maintain a neutral and forbidding blankness which is disconcerting. But on the whole, canvassing is liked. The essence of successful canvassing is to be all things to all men, and the canvasser is so much tempted by personal contact with the voter, and the knowledge that perhaps a vote depends upon his talk, that it is exceedingly difficult not to promise too much. Much that is impossible is promised, much that is untrue is told, and there is a large element of nonrational persuasion, especially when the candidate himself canvasses. Men of great private integrity think it proper on such occasions to go along with their wife and their children especially dressed for the occasion. No doubt they are convinced that the end justifies the means. To say this is to emphasize the extent to which politicians themselves believe that the ordinary agencies of education have failed.

*"Literature."* Party literature is broadly of two kinds—that destined mainly for candidates and workers, and that to be broadcast among the electorate. In the first class are pamphlets upon special topics, a periodical, usually a monthly magazine or newspaper, sets of speaker's notes, and during campaigns, booklets full of "points" or "shot and shell." In the second class are leaflets and pamphlets and the literature distributed at elections—the "address to the electors" or *professions de foi*. (Material to be printed locally is distributed among several printers to attract votes from each, and at least cause the candidate to be discussed.) The mass of literature is immense: the greatest amount per head being circulated in the United States, the second place is shared by England and Germany, while France is far in the rear.

What are the chief features of this literature? It is inveterately dogmatic, and every fact adduced only goes to show that the party is right. It uses the fallacy known as "stacking the cards." Argument is mixed with facts and figures, the weak points of the opposition are paraded and ridiculed or denounced, while one's own promises are proclaimed as both desirable and possible.

*Broadcasting and Politics.* Broadcasting

<sup>40</sup> Cf. F. R. Kent, *The Great Game of Politics* (New York, 1926); Charles E. Merriam, *The Making of Citizens* (Chicago, 1931), p. 316. Cf. also A. E. Smith, *The Citizen and His Government* (New York, 1935), p. 119 ff.

<sup>41</sup> This is a laborious task, especially among the working class, for they are not accessible until the evening, and after they have washed and eaten. If a voter says he is of their party, their task is to sum up whether he is speaking the truth or not and, in any case, to see that he gets party literature; it is also to judge whether he needs to be called on before polling day, whether he can be trusted to go to the polling station, or whether he needs to be escorted by a party worker. Cf. F. Gray, *Confessions of a Candidate* (London, 1925). Cf. also R. B. Macculum and A. Readman, *The British General Election, 1945* (Oxford, 1947), Chaps. V-X.

commenced as a casual auxiliary to the more personal process already described. Its importance swiftly increases. Millions of voters in their parlors can be directly reached by the party leaders! In the United States about one fourth of the campaign expenditures is for radio time. In Britain there is bitter interparty dispute for an "equal" time on the very few occasions allotted by the British Broadcasting Corporation, and the government is allowed little more than the opposition!

The effect is, on the whole, deleterious. Meetings and canvassing are partially supplanted. Immediate effectiveness of appeal tells far more than the truth, for time is short and the attention of listeners easily strained. Qualifying detail must be omitted in favor of exciting exaggerations. No personal meeting affects the speaker; there is no discussion; the effect of spontaneous interjections is lost. Attention is focused on immediate issues; the general program is blurred. The manner has some advantage over the matter. Worst of all, listeners cannot ask questions, make comments, or obtain elucidations. Thus we recede from rationality and approach the complete triumph of the good "debating point." The concentration of power in the party leaders is promoted, since they appeal over the heads of their immediate following, whose critical independence is thereby weakened. Let us remember that this is part of the process by which cabinets, the supreme governmental directorates, are selected.

*Function and Effect of Political Parties.* On reflection, then, it will be realized that political parties, whether they consciously intend it or not, and whether or not they are pleased with what they are obliged to do, perform a combination of six functions:

(1) They bridge distance, since the territorial area of nations and electoral districts is so wide that the electors must be brought into communion with each other. Party is the organizing intermediary. (2) Parties wrestle with the apathy of all citizens, and particularly of those who are least endowed with or convinced of an active interest in politics, the govern-

ment of public affairs. The public opinion polls always register the numbers of those who declare their answer to the question as "Don't know!", and this is often translatable as "Don't care!". The parties work to make citizens care, and actively intervene. (3) Political parties seek to overcome ignorance: they penetrate social and economic complexity and make it simple; they investigate and report the territorially distant effects of local policies and bring home the results to the local district electors; they attempt the tasks of foresight, sometimes over generations, and confront the voter with the fact that a choice must be made between the short and the long run. Only a small number of citizens in democracies are as yet able to do these tasks for themselves without assistance.

(4) Political parties set a priority scale of values for the fulfilment of the will of the many diverse small publics of which the great national public is composed—who shall be attended to in preference to some other groups' demands, and what degree of the demands of each group shall obtain satisfaction in the law and administration. Parties also set an order of priority in time: what comes first for legislative attention. (5) They select spokesmen and leaders—indeed, they *are* spokesmen and leaders. Men and women select themselves as leaders in democratic countries, but for the victory of their ideas they need more men and women to accompany them. Hence an original process of self-selection, and then the selection of yet others, followed by a more organized method of seeking adherents and leaders occurs. It is done best where the party has dignity and prestige, and above all where it is founded on principles. (6) Parties assume responsibility for these services; they accept—indeed, they eagerly seek—the obligations of leadership. The status leads to authority, jobs in the vulgar sense as well as vocation in the nobler sense, and the satisfaction of realizing social, economic, and political ideals.

Professor Lazarsfeld has shown that political party campaigns tend to have three effects: they activate some voters, they reinforce others in their opinion, and

## PARTY IS KING!

they convert others. His figures are interesting, but their exactness as a generalization for the whole nation is not material to the present discussion. He concludes: <sup>42</sup>

In sum, then, this is what the campaign does: reinforcement (potential) 53%; activation 14%; reconversion 3%; partial conversion 6%; conversion 8%; no effect 16%.

By *activation* he means that campaign propaganda "brings the voter's predispositions to the level of visibility and expression. It transforms the latent political tendency into a manifest vote." <sup>43</sup> By *reinforcement* he means that though some people knew before the campaign how they would vote after it, "political communications served the important purpose of preserving prior decisions instead of initiating new decisions. It kept the partisans in line by reassuring them in their vote decision; it reduced defections from the ranks. It had the effect of reinforcing the original vote decision." <sup>44</sup> Lazarsfeld urges the importance of this, considering that where there are two strong parties confronting each other, party loyalties are constantly open to the danger of corrosion. As for *conversion*, he asks, "Were people actually convinced by campaign propaganda to renounce their original choice in favor of the opposition, or to decide upon a vote contrary to that ordinarily associated with their social characteristics?" <sup>45</sup>

*If the Electorate Were Omniscient.* What might be expected if the electorate were all-knowing and all-interested? What are the limits to the success of propaganda?

The first hypothesis is entertained simply to indicate the room for improvements in the public-opinion-forming bodies (like the schools) and political parties.

An omniscient electorate would choose representatives capable of carrying into the legislature a full and shrewd knowledge of (1) the human and environmental conditions requiring the making of law. It would understand the interest and

spiritual objections of dissentients in friendly ranks as well as the regular opposition. It would understand the obstacles and the means of surmounting or surrendering to them. The relationship between the social value and the time-order of legislation would be palpable. Citizens would insist on men who could fulfil such needs. They would therefore concentrate rigorously on the selection of candidates, and realize that this decision is their supreme contribution to the quality of the legislature and all its works. The electorate would not be deflected by arguments of transient strength as compared with the long-term values. It would not be seduced by meretricious but fallacious appeals. It would be much more *direct* in its seeking to be represented. It would not, that is to say, permit its convictions to be distorted by party organization or frustrated by party officials who amass special power by continually tending the machine, and by their disturbing conflicts over their own personal ambitions.

*The Limits of Propaganda.* Where parties can challenge each other constantly and in all districts, no falsehood can live for long, or long enough to be even a short positive influence on the laws. (The condition is notoriously unfulfilled in the Southern states of the United States.) More equality of wealth will solve many problems of "propaganda" that constitute anxieties to-day. Harder work by party rank and file can defeat almost any propaganda, though it costs leisure time.

In dictatorships propaganda is defeated, or at any rate limited by (1) people's biological proneness to certain ways of feeling and thinking; (2) common-sense discussion among men and women, which cannot be totally controlled; (3) memories of a former time; (4) reflection on events in one's own lifetime, and comparison between promises made, discrepancies between these and events, and inconsistencies in the arguments used by the propagandists. Libraries are always dangerous to dictators. Further, utilitarian values assert themselves strongly. And, above all, every scheme of human values, from metaphysics down to the pattern of our daily

<sup>42</sup> *The People's Choice* (New York, 1944), p. 103.

<sup>43</sup> *Ibid.*, p. 75.

<sup>44</sup> *Ibid.*, p. 87.

<sup>45</sup> *Ibid.*, p. 94.

duties, has somewhere a flaw for large bodies of people.

The propagandist can enforce obedience if force is at his disposal as the *ultima ratio*, and uses it to root out nascent dissent. He cannot make all the people believe by the (on the whole) trivial tricks used. To secure belief, he must deliver the goods. Otherwise the consumption of his persuasions is only temporary and more apparent than real. Even the most sanguine of propagandists, Hitler, could not transfer his fanaticism: only a handful died in the bunker with him. Nor can the Soviet rulers remake the consciousness of the Russian people in their own image; they continue to rule by enormous, unprecedented force, and yet still considerably yield to mass inertia. Mussolini's closest associates abandoned him in spite of his propaganda.<sup>46</sup>

*The Burden of Electoral Responsibility.* The modern democratic electorate is charged with a terribly heavy responsibility for the integrity, survival, and welfare of the society we call "the nation"—and when one says the "nation" one says "the world." That electorate is largely dependent on its leaders, because they are (or should be) men and women who devote themselves to getting to know "the nation," who have special aptitudes for such an enterprise, and who are especially sensitive to their representative function. To the vast social network of minds, characters, and interests—an incomplete and ragged texture without them—their service is to add coherence and riftless interweaving. But if they thus lead, they can do so only because informed and considered support is lent them by the rank and file of citizens, or because the job is abandoned to them out of electoral apathy, carelessness, or negligence. If the latter is the case, then the laws may not solve political problems as well as they might: a serious risk is incurred. At critical phases of world affairs, in economic depressions, during postwar readjustments, in periods of con-

flict between employers and workers, and between the workers themselves in their various occupations seeking each a larger share of the national product, disaster may occur. It can happen. It has happened. The condition of Europe and the United States is witness thereto. Falling short of catastrophe, but still seriously damaging, society may be afflicted with economic waste, underproduction, and injustice to large sections of the people.

When the student of politics is confronted with the problem of the "responsibility" of the German people for Hitler and World War II, or of the French people for their prewar governments leading to their dismal war effort, the quality of the electorate is at the heart of the answer. At the minimum, the voters were guilty of civic ignorance. To what destination did the road paved by their votes lead? It is not unreasonable to hold that the régime of political parties, as hitherto known, cannot satisfy the needs of democratic government—that is, achieve welfare and social justice and progress under the impulse of freely and actively cooperative citizens—without a marked improvement in the formation of policies, the selection of representatives, nation-wide discussion of the issues to be determined, and unremitting vigilance over the legislature. Britain's survival is, in part, due to the high degree of civic understanding of its people. Britain's solution of the problems of an extensively planned and socialized economy, beginning with the General Election of 1945, problems of incentive, loyalty, dissent, cooperation, is another test at least as exacting. The responsibilities on the shoulders of the modern electorate are, indeed Atlantean.<sup>47</sup> The Soviet rulers have denied that their people, at any rate, are able to bear them,<sup>48</sup> and hold them in the tutelage not merely of children, but mainly delinquent children.

<sup>47</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), Chap. XII, "Destiny Follows Power."

<sup>48</sup> See especially, Finer, *Ibid.*, Chap. VIII, "The Soviet Despotism in Russia."

<sup>46</sup> Cf. Piero Saporiti, *Empty Balcony* (London, 1947).

## *A Closer View of Party and a Sketch of Dictatorial Parties*

### THE CENTRAL MACHINE

THE propaganda of political parties is not conducted by the unconcerted activity of the numerous local caucuses, for they have common interests, and not all have the information, money, speakers, and organizing ability adequate to their purpose. It is clear, too, that the central organization is in closer touch with the sources of information: the legislature, the political chiefs, the stock exchange, the government offices, the press agencies, spokesmen for the "lobby," and so on; and this proximity means exactness and promptness of reaction—which are essential to a campaign. Very broadly, the activities of the central machine, as regards the electorate, comprise the planning and execution of campaigns, policy making, and the accumulation and distribution of funds.

The planning and execution of an actual campaign is conducted with more deliberation in England, the United States, and Germany than in France; and it falls into a number of steps well known to close observers of the tactics of central headquarters. First comes the settlement of internecine disputes in the constituencies, the counseling of preparedness, and the determination of how many and which constituencies are worth fighting. Second comes the discovery of an "issue" or "key-note" which will inflame the public and put opponents on the defensive and at a

disadvantage.<sup>1</sup> Campaign managers are not entirely free in this matter, for they cannot choose except from the more immediate subjects which affect national welfare. Experience has shown the remarkable effect of ingenuity, the best recent examples of this, in England, being the cry of "Free Trade" in 1923, "Bolshevism" in 1924, "Unemployment" in 1929, "Your postal savings" in 1931,<sup>2</sup> "Peace and collective security" in 1935, and "Socialism," "Let Churchill finish the job," and "Beware the Socialist Gestapo" in 1945; in Germany in 1930 "Revision of the peace treaties," "Strong and stable government," and "Domestic peace" against "Disturbances" (i.e. the extreme elements on the Right and Left): in 1932 the Nazi cry of "the shame of the Weimar system"; and in the United States in 1928, "Prosperity" and in 1932 and 1936 "the New Deal versus free enterprise."

Search for an issue, and its formulation, fall to the leader of the party in Parliament, the chairman of the party executive committee (or its equivalent), the party manager or agent (as in England), or its secretary (on the Continent), or the

<sup>1</sup> Cf. F. R. Kent, *The Great Game of Politics* (New York, 1926), Chap. XLI; Raymond Moley, *After Ten Years* (New York, 1939); Charles Michelson, *The Ghost Talks* (New York, 1944).

<sup>2</sup> Cf. McNeill Weir, *The Tragedy of Ramsay MacDonald* (London, 1937).

especially appointed campaign manager in the United States. The connection between these and the Parliamentary leadership in England and on the Continent is very close, so that the Parliamentary leaders have every reason to be fully conscious of their undertakings and mandate. The connection is excessively loose in the United States, since the platform precedes the Presidential nomination and the manager is chosen even later than that. The discovery of the issue is, of course, preceded by careful soundings of the country taken through the medium of the local agents and secretaries, and sometimes circuits are made by the leaders for this purpose, as by Taft and Stassen during 1947. Such circuits are especially necessary in the United States, owing to the enormous size of the country.

*The Program.* The central machine is not only the energizing and strategic center of the campaign; it is also the creator of the program. The center is under the control of a committee, chosen by delegates to a conference who have been selected by the local caucuses. The various countries have slight variations of this machinery, as have the parties themselves. In England, Germany, and France (among the carefully organized parties), the creation of policy is strongly centralized, in spite of the fact that original as well as critical resolutions may be moved at conferences. The short time allowed for the conferences (five or six days at the outside), the necessity of preserving the semblance of a united front, the willingness to trust in the established leaders, the lesser information possessed by the critics compared with the party officials, and the superior knowledge and wisdom of those leading the opposition or the government in the legislature, and often their arbitrariness in using the procedure of the conference, most usually result in a decisive victory for headquarters.<sup>3</sup> The resolutions

become the party's policy. In the United States the resolutions committee of each party gets to work at the Presidential nominating conventions. Tremendous private battles occur for control of these committees. A distinctive feature is their "hearings" of the great organized economic and social groups—the "lobbies"—who want to insert a plank in the platform.

Now party conferences and conventions are demonstrations rather than organizations to think out policy, in spite of the fact that sometimes party conferences achieve success in this sphere, and that their temper may persuade the leaders of the urgency of change. Upsets are not infrequent in French party conferences, especially in the Socialist party and the Radical and Radical Socialist party. Hence the importance of unity in the conference. Where publicity imposes unity it is clear that some other way must be discovered of making terms with internal dissent before it becomes publicly disagreeable. This is done behind the scenes where the voters are never permitted to penetrate and the report of which they hear only, if at all, in a garbled form, and perhaps from a statesman's biography a generation or more after the event.<sup>4</sup> The political importance of this secrecy is twofold: it shrouds from the citizen the real source of policies, and it provides the possibility of a *rapprochement* between majority and minority groups and rival persons, and, by averting public strife, it works against the breakup of parties.<sup>5</sup> Policies are then set forth with the *imprimatur* of that joint anonymity, the party, or as though they were the personal contribution of its leader. Once again, then, the mass of voters is deprived of the knowledge without which control becomes an empty term. The prevention of the disintegration of

<sup>3</sup> Cf. also J. K. Pollock, "The British Party Conference," *American Political Science Review*, June, 1938, for an account of the British Labour party; and cf. above all, any report of the Annual Conference of Labour, Conservative, or Liberal parties.

<sup>4</sup> For example in Arthur Schlesinger Jr.'s *Age of Jackson* (New York, 1945); or J. Alsop and T. Catledge's *The 168 Days* (New York, 1938); or J. Morley's *Gladstone* (London, 1903); or J. A. Spender and C. Asquith's *Asquith* (London, 1932); and more recently, Keith Feiling's *Life of Neville Chamberlain* (London, 1947).  
<sup>5</sup> Cf. J. L. Garvin, *Joseph Chamberlain* (London, 1938) for the story of the tariff campaign and the Conservative party.

parties is, as we shall see in the chapters on legislatures and cabinets, good; but this good can be obtained only by a relegation of certain values and desires to a place far down upon the party program, and perhaps their utter surrender.

*The Research of Policy.* Now, for reasons explained in the preceding chapter when we discussed the limit of party rhetoric, parties tend to equip themselves systematically by research not only for propaganda but for legislation. This has developed best where a high level of popular common sense and political experience prevail and where the parties fight intensely about the application of serious differences of principle. The impulse comes originally from the need to answer sensible questions, and, in proportion as these are put either by the worker or by the rank and file of either one's own party or the opposing parties, a source of such answers has had to be created. Nor is this all. A party gets a decided advantage when it sets the pace with proposals, shows that it cares for the public welfare, and that it is busily occupied with this when it can put unanswerable posers to the other side. Further, some persons in a party are not satisfied unless all the possibilities of reform are explored by experts. Moreover, in countries where the parliamentary system functions well, with full publicity, a clear sense of responsibility, and a recognition of the importance of organized and continuous opposition, the need arises of putting questions and amendments to the government's proposals. It is clear that a good reputation can be obtained, and a sense of public duty satisfied, only if the proper means are established to make this possible in the best technical, not partisan, sense. One thing is sought above all by members of every party—to obtain for every move of their own, electoral or parliamentary, the repute that it is national in its intention and benefit, not partisan; and so fasten upon their opponents the vice of preferring party to nation.

The result has been the establishment, in varying degrees in different countries, of research institutions and schools for candidates and the rank and file. The prin-

cipal experiments so far were in Weimar Germany; England comes next;<sup>6</sup> while France and the United States lag very far behind. (In France various organizations, economical and social, which are outside the parties but ancillary to them, provide information.) The full importance to this development is appreciable only when two things, which have yet to be discussed, are remembered: the plebiscitary nature of modern democratic government, and the controlling part played by parties in parliamentary discussion.

The first significant characteristic of the party research bureaus is that they are centralized—established and managed by the central machine in the capital. The second is that they were commenced by the socialist parties, followed at length by the liberals, and taken up last by the conservatives, the latter tending to the view that since all that is good, and should be preserved, there is no need of research. Broadly, research is conducted continuously by an office organization of several permanent officials, of proven academic capacity, linking up with committees of members of the legislature and experts co-opted for special branches of inquiry; and it is stimulated, and its results spread (apart from the party's periodical press and handbooks) at occasional schools and institutes, usually held at Easter and in summer. The American practice is less party schools than university-sponsored institutes, or the adult schools of labor unions. European party schools are more intensive.

The results of this activity and organization, broadly viewed, are significant. All parties become more advised of the technical possibilities and impossibilities of their policies on subjects susceptible of quantitative statement and discussion (as, for example, socialization, the organization of certain staple industries, unemployment, and social insurance problems). Rhetoric and nonrational appeals are pushed far back, and a large measure of agreement can be and is reached before

<sup>6</sup> Cf. *The Labour Organizer*, a monthly journal of the British Labour party.

the inevitable clash of ultimate ideals occurs. The result has been to socialize the conservatives and to conservatize the socialists. That this is an advantage there can be no doubt: for parties are but means to ends, and where government can proceed without certain machinery and qualities, it is pure extravagance to have them. To disagree from ignorance is certainly waste, and to outvote a minority for the same reason is a deplorable addition to the necessary sum of human pain.

In the United States such developments have not occurred. The nearest approach thereto was the establishment of an advisory committee on policies and platform by the Republican party in 1919. But its report, of large bulk and wide scope, built up by about two hundred members, composed mainly of experts of the Republican party outside Congress, was swept away by that imperious and cynical campaign manager, Will Hays.<sup>7</sup> A subsequent attempt in 1937 had little more value.<sup>8</sup> So far, the central leadership of national and state parties in the United States has no place for scientific intelligence as distinct from campaign technicians. Both Republican and Democratic parties have, of course, a paid office staff, but they have nothing to compare with the research committee and schools of the British and German parties. The research is only the hand-to-mouth research of every political party; that is, the hasty discovery of fairly accurate facts to bolster up an argument during the campaign, not the steady application of scientific thought to problems with the view of providing a solution of permanent national benefit. The frame of mind does not exist in the public of the United States, with the exception of the unimportant Socialist party and the CIO's young Political Action Committee. Outside those groups it exists in a number of associations, which do the work which in

England has come to be included in the normal functions of a political party. I refer to such organizations (to name but a few) as the National League of Women Voters, the Anti-Saloon League, the United Nations Association, the Women's International League, the National Child Labor Committee, the United States Chamber of Commerce, and the Committee for Economic Development.

These organizations are propagandist, research, and "pressure" organizations. They concentrate upon Congress, upon the electoral support of one or more specified "planks" in a platform, and work through candidates and parties who are the more amenable to their purposes. I shall say more about these organizations later in this chapter and in the discussion of legislatures, but it will be seen that they are outside, yet impinge upon, parties, and exercise an independent influence upon the electorate. The results of their research are not immediately embodied in party policy, as the results of party research are in England, but the parties are hounded down and driven from pillar to post until at last they become the vehicles of reforms they themselves have not fully examined.

Parties, through the activity of the central headquarters in the campaign and in the creation of policy, have become strongly centralized. Or, to put it in another way, the mind of the localities and that of the center are almost one and the same thing, and the response of the localities to any problem is likely to be much the same as that of the center even without prompting, of which the means is continually available. This condition is most fully realized in England and Germany, is most mechanical and spasmodic in the United States, and was the least effective in France until 1945. The belief in freedom plays a large part in slackening (but to a small extent only) the reins held by the central machine, and therefore in giving opportunities to the local caucuses to act spontaneously. In Weimar Germany the method of election (proportional representation) and the prevailing belief in order and discipline contributed to cen-

<sup>7</sup> Cf. E. M. Sait, *American Parties and Elections* (New York, 1947), p. 479; McCune Lindsay, "Political Platforms of 1924," *Review of Reviews*, LXX (1924), p. 193 ff.

<sup>8</sup> Cf. Ronald Bridges, "The Republican Program Committee," *Public Opinion Quarterly*, 1939, p. 299 ff.

## FUNDS AND UNPAID WORKERS

tralization, but the social system, which was based upon some real local differences and more legendary ones, slackened central control, at least so far as the state-Berlin relationship was concerned. In the United States, state politics run on lines very different from federal politics, so that considerable decentralization (sometimes a complete annihilation) of national party organization occurs. But it is mechanically centralized because no profound differences of principle cause men to adhere to one machine or boss rather than another, and it is spasmodic because victory is more highly regarded than policy and because between elections policy making demands almost nothing of the organization. This is related to the Congressional system, which has been partly explained in Chapter 6 on the separation of powers and will be further considered in Parts IV and V on legislatures, cabinets, and chiefs of state. In France, for a number of reasons which have already been given (p. 244), the central authority of parties has been important only on a few outstanding occasions when the country has been deeply moved or involved in difficulties, and in normal times (today) four parties maintain an almost nation-wide organization supporting a common body of opinion.

### FUNDS AND UNPAID WORKERS

We have seen how the parties conduct campaigns. They can do little or nothing without a tremendous apparatus of printed material, canvassers, and speakers. There is a large party bureaucracy: permanent professional officials, secretaries, organizers, and agents, employed at central headquarters or in the locality.<sup>9</sup> This bureauc-

<sup>9</sup> In England the agents have their own professional associations, and the association of Liberal agents provides a diploma for those who pass examinations in electoral law and organization. In Weimar Germany, the party officials were similarly given a special education; cf. Röder, *op. cit.*, p. 46 ff. Cf. also the *Conservative Agent's Journal*, the *Liberal Agent*, and *Labour Organizer*.

A noteworthy fact is that many of the Labour local agents were partially maintained by the central machine. See also a perennial

racy has attained the highest quality and status in Germany and Great Britain. Necessarily, therefore, they need as much money as they can get. There may come a time when paper manufacturers will provide all the paper called for by political parties, when printers will work with the slightest intervals for meals and rest, when speakers will find their own train fares, their own information, and their own cough drops free of charge to their party, out of enthusiasm and hope. Some do so now. But while voluntary services are appreciable during the excitement of an election and the imminence of success or failure (particularly so in the parties of attack and progress), the work is too exacting to be done by unpaid workers, even at election times. Then, we have seen, operations are continuous at a level requiring the establishment of a permanent body of officials and the aid of all the instruments of publicity. It is possible to live upon enthusiasm only a short time: a party marches upon its belly.

The problem of party funds has, therefore, always been of importance. There is no way of exactly isolating the effect of money in elections. It cannot be said that so many hundreds of thousands of votes were turned this way or that by an extra expenditure of such and such a sum upon posters, pamphlets, ribbons, party buttons, or speakers. The services of the formal and informal voluntary party workers must be accounted for. We know, however, that party managers have a high opinion of the importance of money and its influential products, and we may assume that, other things being equal, the parties gain votes in proportion to the spaciousness and excellence of their publicity, which depends largely on expenditure. That is an article of faith with every election agent, and with the candidates. A high American party official once declared: "We have lost continuously because we did not have money enough to present the issues. There is no question about that."<sup>10</sup> In spite of the

concern about agents, in the *Annual Reports*, Labour party.

<sup>10</sup> W. R. Marsh, treasurer of the Democratic National Committee, *Hearings before the Sub-*

fact that much publicity is wasted—posters put in places where they can hardly be seen, pamphlets and declarations thrown away without perusal, canvassing, which falls on deaf ears, and speeches which are simply regarded as entertainment—yet there is a response to stimulation, the response being proportionate to the stimulus; for the voter has certain self-created defenses which need conquest.

Money is therefore of vital importance, and its possession has given the richer classes the power if not to nullify yet to defer hostile votes. The advantage has not been entirely overcome by the large amount of voluntary help enjoyed by the parties of the poorer classes, and they also have had to find sources of revenue. The amounts spent are very large but official figures are obtainable only for Great Britain and the United States; in the first, candidates spent £1,073,216 in 1945, and the second over 20 million dollars in 1944. Even these figures do not include all that is spent. In Great Britain the amount spent by the central headquarters is not included; and in America it is admitted that the official figures are far below the true amount.<sup>11</sup> Further, there is no reckoning of petty amounts spent by friends.

Money is spent by the local caucuses and the central machine. In the local caucuses it is obtained from the candidate himself and from contributions by the members of the caucus, the rank and file paying a regular but small subscription, while wealthy friends of the candidate give large sums. The central machines also obtain money from the affiliated caucuses and from various associations (industrial, commercial and social) as well as

from private individuals. The socialist parties in all countries have a more regular and wider circle of contributors owing to their adherence to democratic ideas. They receive publicly acknowledged contributions from their individual members, and affiliated societies, the trade unions and the cooperative movement.

The richer parties have never had to rely upon such means of raising money; they have been able to tap a few large sources. Nor have they, except until recently in the United States, been obliged to divulge the sources of their revenue. In the English Liberal and Conservative parties a small amount comes from the local caucuses paid by duly inscribed members, but by far the largest amount has come and still comes from private contributions. So also in France<sup>12</sup> and Weimar Germany.<sup>13</sup> It is very likely that Communist parties are financially assisted by the Cominform. In the United States, about which there is much more information than about England because publicity is required and politicians are frequently indiscreet, the Republican and Democratic parties draw their funds mainly from: (1) rich private subscribers, that is, individual persons or business firms; (2) assessments of office holders, though this is strictly forbidden by statutes, and (3) small subscriptions paid with some regu-

<sup>12</sup> Candidates in the richer parties find their own means and obtain subsidies from great industrialists. Cf. A. Pileco, *Les Mœurs du Suffrage Universel en France: 1848-1928* (Paris, 1930), p. 207. Cf. also M. Privat, *Les Heures d'André Tardieu, et la Crise des Partis* (Paris, 1935). Some French party leaders who favored the German Nazis were assisted by Hitler and Mussolini. Cf. C. A. Micaud, *The French Right and Nazi Germany* (New York, 1943); also observations in "Pétinax," *The Gravediggers of France* (New York, 1944), p. 417 ff.

<sup>13</sup> Consider the example of the German Nationalist party, almost entirely subsidized by Hugenberg, head of the great steel and other concerns, and also the example of the German Nationalist party. Not infrequently, a bargain is made between the money power and the party leaders for the inclusion of certain representatives on the party list of candidates. Herr Thyssen has told beyond any doubt the story of the forming of the Nazi movement by the industrialists. Cf. Fritz Thyssen, *I Paid Hitler* (New York, 1941), p. 32 ff.

*Committee of the Senate Committee on Privileges and Elections*, 66th Congress, 2nd Session, 1, 532. Yet how, then, can the victory of 1932 be explained? By 1936 and 1940, even less funds were really needed for victory by this same party.

<sup>11</sup> Cf. *Return of Election Expenses* (April, 1946). The American figures cited refer only to the campaign "to secure the Presidential nomination." The total includes the expenses of the various committees "operating in more than one state." Cf. especially Louise Overacker, *Presidential Campaign Funds* (Boston, 1946), p. 34.

larity to the local caucus or begged at meetings at election time. In 1944, 26.3 per cent of the individual contribution to the Democratic National Committee came from donors of less than \$100; to the Republican, only 9 per cent.<sup>14</sup>

We later (p. 297) discuss legislative regulation of party funds. The sources of revenue, except the small contributions voluntarily paid, have in both England and the United States given rise to serious criticism in recent years. There are common problems, but each country has its special difficulties.

#### SALE OF HONORS

THE special but not really important problem of Great Britain is the sale of honors to contributors to the party funds.<sup>15</sup> Had not World War I and a production of honors-seeking profiteers degraded moral standards, it is very probable that this traffic would have quietly continued until the advent of a Labour government with a decisive and resolute majority. That some titles of honor were sold was well known in the political world of Parliament and the parties. World War I caused a break-up of the old parties and a coalition of ancient enemies. Henchmen of the new leaders acted as whips and party managers. The touts could not help making mistakes, and prime ministers were always too busy to purge the lists of improper nominations. The House of Lords was vitally interested in the value of its hold upon the public imagination; and it has never been slow to further the public interests when its own privileges have been threatened. The royal commission which was established as the result of this tremendous shudder did not recommend the abolition of titles for political services. It accepted the necessity for such funds,<sup>16</sup> accepted the necessity of reward,

and this in the form under criticism, and suggested arrangements to keep the lists pure of any man "whose antecedents, if properly known, would have precluded the idea of his being singled out for promotion."<sup>17</sup> Substantially "political" honors are still given as before, although greater care is doubtless taken to avoid the ennoblement of the infamous.<sup>18</sup>

The evil is less the increase of a party's power in the House of Lords, for a few more or less conservative votes there do not matter, than the social one of imposing upon the public, which cannot readily distinguish between virtue and title, and the political one of providing services and money for those who benefit politically through the magnitude of bought propaganda. Without any doubt there would be some diminution of political service if titles were not given—to deny that is to deny that honor and prestige, not to mention snobbery, are quite potent factors in English life. Now, there is nothing immoral in subscriptions for the support of a policy considered of benefit to the nation at large. It has been said that "money does not smell," but that, surely, depends upon the nostrils.

conduct of elections is equally so"; and p. 6: "The practice of giving honours for purely political service has been continuously followed ever since the growth and development of the Party System of Government."

<sup>17</sup> A Committee of three Privy Counsellors (not members of the Government) "men of well-known character and position," appointed by the prime minister for the period of his government to scrutinize the lists as passed up by the patronage secretary or party manager and to report to the prime minister. An adverse report overruled by the prime minister is to be communicated to His Majesty.

<sup>18</sup> Arthur Henderson, the Labour member of the Commission, declared: "In a democratic country it is a distinguishing mark of the good citizen that he interests himself according to his opportunity in the well-being of the community. It is indisputable that public service of great value has been rendered by men and women whose thoughts have never dwelt upon titled reward, and in view of the difficulty of keeping the honours list pure, I do not believe that the abolition of political honours would in any way diminish either the volume or the quality of the services given to the community by its citizens."

<sup>14</sup> A closer analysis is made in Chapter 15, below.

<sup>15</sup> Cf. Hilaire Belloc and G. K. Chesterton, *The Party System* (London, 1911).

<sup>16</sup> Cf. Royal Commission on Honours, *Report*, Cmd. 1789 (1922), p. 8: "The existence of party funds is notorious and the necessity for such existence under modern conditions as to the

## SPOILS

THE common difficulty of both England and the United States, and of Germany and France equally, is that of large contributions made by "interests." The trouble arises from the fact that such contributions arouse popular suspicion and cynicism about the democratic process. For they are used to buy radio, press, and pamphlet propaganda which is directed to nonrational judgment, especially when used and paid for by people whose economic interests are bound up with the subordination of the masses and the probability that contributions may be made in the hope of influencing a party to give special benefits to big interests at the expense of all, or virtually to buy ambassadorships and cabinet offices.

The atmosphere of suspicion and distrust is murkiest in the United States, owing to the immense gulf which separates the theoretical idealism of all from the politicians' cynical use of government for the benefit of "spoilsmen" and financial interests. The periodical tariff battles, and the continuous attempt to stave off government regulation of, and inquiries into, "big business," have attracted large fortunes into party funds, and more into the Republican party's coffers than the Democratic, since that party has been "regular" on these questions. Charles A. Beard<sup>19</sup> quotes John Wanamaker, the treasurer of the Republican National Committee of 1888, who said to businessmen: "How much would you pay for insurance upon your business? If you were confronted with from one year to three years of general depression by a change in our revenue and protective measures affecting our manufactures, wages, and good times, what would you pay to be insured for a better year?" The businessmen paid.

In a Senate investigation committee of 1892 it was admitted that the sugar trust contributed to the funds of both parties, regulating its contributions by the size of

party votes.<sup>20</sup> Croly, in his life of Marcus Alonzo Hanna, who was chairman of the Republican National Committee for over sixteen years, gives many examples of this kind. The tariff and "sound money" were the sanctions for universal appeals to bank and industry, and the former were even taxed at 0.25 per cent of their capital. The Standard Oil Company gave a quarter of a million dollars. Enormous sums were raised in 1896, 1900, and 1904: it is rumored that in 1896 Hanna raised between ten and fifteen million dollars.<sup>21</sup> There is ample evidence that the contributors believed that they were to get a specific return for their money.<sup>22</sup>

Toward the end of Hanna's reign and with the advent of Theodore Roosevelt, a change came over the public conscience: it was part of the general progressive movement and in part due to Roosevelt's own initiative, for he was prepared to accept money from anybody, but not on terms.<sup>23</sup> He gave the impetus to the passage of the law of 1907 forbidding national corporations to contribute to any election and any corporation from contributing to federal election campaigns. But, of course, what a corporation is forbidden to do its officers as private individuals may do. Although public opinion now condemns large contributions and their danger is widely recognized, large total sums of money are still raised in this way, as the figures suggest, but the parties now make a conspicuous exhibition of getting a large number of small sums. Both parties have at various times fixed maxima: the Democrats in 1908, \$10,000,<sup>24</sup> the Republicans in 1916, \$1,000; but in order to bring the total sum up to a useful level, both parties carefully organized "drives" with paid collectors. Apparently all this apparatus was bothersome compared with

its fruits,<sup>25</sup> and the system was abandoned as the chief source of supply. In 1944, the big contributions came to the Republicans from bankers, brokers and financiers, from big manufacturers of the heavy industries, from oil, insurance, the press, radio, the utilities, mining. The Democrats were most helped by a greater but more even spread of contributors including office-holders, brewers, merchants, and labor.

In England we can only suspect that the great industrial and commercial associations and the captains of industry subscribe in much the same spirit as in America. But the motive of special advantage would operate as only a faint hope, owing to the comparatively high standard of English politics, the publicity of English parliamentary procedure, and the absence of that spur to intrigue, a general tariff. For years the Labour party has demanded the publicity of party accounts, knowing that this could disadvantage only its opponents, and this cry was raised most poignantly during the debates on the "political levy" clause<sup>26</sup> of the Trade Disputes Act of 1927. (This clause deliberately sought to hamstring the party funds which came as affiliation fees from the trade unions, by making it unlawful for a trade union to require any member to make a political contribution unless he first delivered a notice of his willingness to contribute. They constituted over 70 per cent of the party funds. The act caused a 35 per cent reduction in party funds from this source. The act was repealed in 1946 shortly after the Labour government took office.)

It cannot be expected that a reform such as publicity of party accounts will eventuate until the Conservative and Liberal parties are powerless, for secrecy of funds is part of their electoral strength. Their publication would without any doubt cause the loss of large blocks of votes as soon as the voters realized who were paying for the posters, pamphlets, and speakers.

<sup>25</sup> Although these were quite large by English standards: between 1916 and 1920, 30,904 contributions were made, averaging a little over \$90 each. (*Hearings*, 1, 1103.)

<sup>26</sup> *Trade Disputes and Trade Unions Act*, 1927 (Section 4).

Workers are obtained for political parties by the prospects of a share in the "spoils" and by appeals to their sense of self-importance and snobbery as well as by their zeal for the party cause. The term "spoils" (an American addition to political terminology) in its narrow and most usual sense connotes the distribution of governmental paid posts by favoritism and patronage, and not by technical tests of efficiency regardless of political affiliation. But in American minds its sense is widened to cover the "use of public office" in an illegal manner for personal profit or advantage.<sup>27</sup> It is now mainly an American phenomenon, thus summed up by a foremost American political scientist:<sup>28</sup>

Here we find the exploitation of the public by the official, sometimes assuming the most subtle and sinister form of class and personal discrimination, or of open challenge to the fundamentals of law and justice commonly recognized in civilized society, and of these elements arises the force which President Cleveland once characterized in his trenchant phrase as "the cohesive power of public plunder."

Outside the most benighted of South American countries, America has had the longest and most vicious experience of this political malpractice, and is still its chief playground.<sup>29</sup> First, then, we should know the extent of offices available for political distribution, and, second, the scope of political perversion of public functions.

From the beginning of the Republic both state and federal politics were nourished by the use of office as a political re-

<sup>27</sup> Charles E. Merriam and Harold Gosnell, *The American Party System* (New York, 1940), p. 103: "But the term 'spoils' may be applied not merely to a patronage or favour system, but to use of public office in an illegal manner for personal profit or advantage."

<sup>28</sup> *Loc. cit.*

<sup>29</sup> Both Canada and Australia have similarly suffered, but have both gone far to purifying themselves (cf. *Report on the Public Services*, 1919; and *Annual Reports of Public Service Commission*). Cf. R. McGregor Dawson, *The Civil Service of Canada* (Toronto, 1929) and *Government of Canada* (Toronto, 1947), Part IV. Cf. also F. A. Bland, *The Government of Australia* (Sydney, 1944), Introduction and Chap. IV.

ward.<sup>30</sup> But the "spoils system" on a really grand scale began when Andrew Jackson became President in 1828, his victory having been made by the new states of the West. Then, for various reasons, chief of which were the wide diffusion of agricultural land and wealth, the self-reliance and equalitarian ideals of a pioneering society, and the lack of geographical or spiritual contact with the culture of the East and spite against the financiers of that section, a fierce belief in the democratic rights of the common man prevailed. De Tocqueville has said of this area and time: "In this part of the American Continent, population has escaped the influence not only of great names and great wealth, but even of the natural aristocracy of knowledge and virtue." The leveling spirit, and the cynical observation that here was a perfect means to obtain electoral victories and private wealth, conducted to the establishment of the system that all offices should fall to the victorious party. The classic statement of the doctrine and cult which gave the world a new political term was made by William L. Marcy, a United States Senator from New York, where the system had reached its most polished perfection:<sup>31</sup>

The politicians preach what they practise. When they are contending for victory they avow their intention of enjoying the fruits of it. If they are defeated, they expect to retire from office. If they are successful they claim as matter of right the advantages of success. They see nothing wrong in the rule that to the victor belong the spoils of the enemy.

It was not quite in this spirit that Jackson inaugurated the system for the nation. He defended his practice first on the

grounds that the service would be more efficient if there were frequent changes in personnel, since long and fixed tenure caused the growth of indifference—a loss not offset by the fruits of experience; and second on the grounds that the rotation of office "constituted a first principle in the republican creed."<sup>32</sup> From that time, with the development of universal suffrage, the growth of nation-wide parties, and the expansion of population, the "spoils system" more and more demoralized the whole of American government and administration: the politician promised office instead of policy, and the administration served the politicians instead of the public.

It is, indeed, a remarkable phenomenon that England and France (but more recently) have escaped the evils of "graft" that America has suffered. For why should the democratic principle stop short of administration? Why should it not, as it did in Greece and for centuries in Rome, go beyond the legislators and affect judges and civil servants? There has been, in fact, in both England and France, a deliberate self-denial of the absolute realization of the democratic theory, and not only a denial, but the assumption of a habit of mind and rule of political behavior culminating in great self-control on the part of politicians. That self-control is not so strong in France as it is in England, and it is only in its infancy in the United States. Germany as a republic saw the

Ostrogorski, *Democracy and the Organization of Political Parties*, Vol. II, p. 48 ff., and see MacDonald, *Jacksonian Democracy in the American Nation Series* (1906), Vol. XV, and C. J. Bowers, *Party Battles of the Jackson Period* (Boston, 1922); also L. D. White, *The Federalists* (New York, 1948).

<sup>31</sup> Cited in M. Ostrogorski, *Democracy and the Organization of Political Parties*, 2 vols. (London, 1902), Vol. II, p. 50; also cf. Fish, *op. cit.*, pp. 156-57.

<sup>32</sup> "The duties of all public offices are, or at least admit of being made, so plain and simple that men of intelligence may readily qualify themselves for their performance; and I cannot but believe that more is lost by the long continuance of men in office than is generally to be gained by their experience. . . . In a country where offices are created solely for the benefit of the people no one man has any more intrinsic right to official station than another. Offices were not established to give support to particular men at the public expense. No individual wrong is, therefore, done by removal, since neither appointment to or continuance in office is matter of right. . . . He who is removed has the same means of obtaining a living that are enjoyed by the millions who never held office."—Jackson's *First Annual Message to Congress*, December 8, 1829, *House and Senate Journals*, 21st Congress, 1st session.

necessity of learning it and of proclaiming it in her constitution, because she suddenly turned from the calm three centuries of bureaucratic government to the turmoil of a party system: "Officials are servants of the whole community, not of any parties."<sup>33</sup> It would be missing the essence of modern government, its necessities, and its nature, to pass by the deliberate abnegation implied in the setting of administrative and judicial services beyond the bounds of party politics. Its full meaning is discussed, however, in the Chapters 27-37 on the civil service.

For a mass of offices this abnegation does not apply in the United States, and the great George Washington Plunkitt of Tammany Hall has supplied the reason with irresistible logic:<sup>34</sup>

First, this great and glorious country was built up by political parties; second, parties can't work together if their workers don't get the office when they win; third, if the parties go to pieces, the government they built up must go to pieces, too; fourth, then, there'd be the ——— to pay. Could anything be clearer than that? Say, honest now; can you answer *that* argument?"

The full number is not known, but there are some thousands of federal jobs available, and this is as nothing compared with the thousands of state and city "spoils," for which figures are given below.<sup>35</sup> Combined with the gift of offices is the assessment of their salaries—now prohibited by law. Less conspicuous, but more pervasive and mortal in effect, is the partisan perversion of law and administration. We need not pursue this in detail, for American students have themselves sufficiently analyzed the system.<sup>36</sup>

Against this portentous feature of American party life what has poor Europe to show? Administrative partisanship is, on

the whole, negligible. In England the only paid offices are a very few in the administrative service, post office, and some minor municipal offices. All these are insufficient to reward the small circle even of the most zealous party workers. Moreover, the standards are all against the use of office as party currency, so that patronage is dispensed shamclacredly. "Graft" is infinitesimal.<sup>37</sup> In France there is rather more party patronage than in England, the prefects and many local officials still being subject to "spoils," in spite of attempts in the 1930's at making the prefect a regular career, while recruitment and promotion in some of the central offices are rather badly tinged with party color. Further, the granting of tobacco licenses and such local governmental favors is influenced by political affiliations. Imperial Germany almost entirely rooted out "spoils" unless we are to say that her system was *entirely* "spoils" because some social classes and creeds were altogether excluded from the *Reich* and Prussian civil service. Even between 1919 and 1933 patronage was at a minimum. Under Hitler the nazi movement took all the "spoils" it wanted. In the U.S.S.R., the Communist party has the pick of all governing positions in the whole economy and all social organizations and the determination of all the rest. The Party Control Commission of the Communist party watches over this.

Why is there this sharp difference between the United States and the other democratic countries? The heavy demands made upon a party system which has to produce some coordination among so many agencies in a federal system occupying a continent is only one. Certain psychogenic factors stand out.

(1) The first is the idea, widely rife, that it is proper to acquire everything that one can afford to buy or which is obtainable by exploiting somebody or something. There are many people of that kind in

<sup>33</sup> Article 120, Constitution, 1919.

## A CLOSER VIEW OF PARTY

other countries, but not quite so many as in America. If a cause of this difference must be given, the best is that in the United States, millions of poor, oppressed, and ignorant people suddenly fell upon a tremendously rich land. We expect the starved to become gluttons, especially when they live in a land free as well as rich. A thoroughly predacious culture was created. It is considered highly laudable in America to "get by"—that is, to beat the competitor or acquire a commodity, by personal effort, no matter how questionable the moral quality of the process.<sup>38</sup> Then too, the never-ceasing waves of immigration brought a succession of people from lands where political authority was oppressive and where the only known ways of circumvention and propitiation are purchase, guile, and violence. Such people will never boldly and plainly assert a right granted them by the law, but always seek extralegal intermediaries who are believed to have influence.

(2) Next, the United States has, through a hypertrophy of the democratic theory, a tremendous number of elective offices—a matter we have already indicated—and this inevitably leads to two things: the parties have more grist and as mere managers are more indispensable than elsewhere.

(3) Lastly, there is not yet a wide enough intellectual participation in government insistent upon excellent administration—people are too occupied with other things.<sup>39</sup> However, it is making a gradual appearance. I have the distinct impression that the dictum reported in *Better Government Personnel*<sup>40</sup> that "spoils" is the

currency of politics, that "patronage is the price of democracy," is on the decline.

### STATUTORY LIMITS ON PARTY ACTIVITIES

CANDIDATES and the organizing parties are so anxious to win that, especially in the heat of an election, they tend to forget sedulously established standards. They confuse the public good with their own policy, and feel that with their own victory is bound up every just solution of the problems of government. Moreover, many do not possess nice scruples about the roads to office. Consequently, the law has stepped in to purify the electoral process. It is significant that intervention began in a serious measure only after parties had developed a nation-wide organization and had begun to face each other as substantial and responsible rivals. Not until 1883 was a comprehensive and stringent law passed on this subject in Great Britain; not until after 1890 in the United States; while in France and Germany legislation is very recent.

*Great Britain.* In Great Britain,<sup>41</sup> the Corrupt and Illegal Practices Act of 1883, codified and added to the piecemeal legislation of previous centuries, making a code of admirable strictness. Corrupt practices include: (1) Bribery by gift, loan, or promise of money or money's worth to vote or abstain from voting; by offer or promise of a situation or employment to a voter or any one connected with him; by giving or paying money for the purpose of bribery, by gift or promise to a third person to procure a vote; or by payment for loss of time, wages or traveling expenses to secure a vote. The consequences are the same whether bribery is committed before, during, or after an election. (2) Treating, which means the provision or payment for any person, of meat, drink, entertainment, or provision, at any time, in order to induce him or any other person to vote or

<sup>38</sup> As a single example of dubious governmental practices, the reader is recommended to study the whole episode (1947) of the unsuccessful nomination of Edwin Pauley to office in the Navy Department, and his subsequent alleged speculating in grain, during his appointment in the Department of Agriculture.

<sup>39</sup> Cf. Edward J. (Boss) Flynn's almost contemptuous challenge in the title of his book *You're the Boss* (New York, 1947): "There are really 80 million political bosses in America."

<sup>40</sup> Luther Gulick *et al.*, *Better Government Personnel* (New York, 1935), p. 18.

<sup>41</sup> Cf. Rogers on *Elections* (London, 1928) 3 vols., Vol. II (20th ed.), *Parliamentary Elections and Petitions*, *passim*; Vol. III (19th ed.), *Municipal and Other Elections and Petitions*, *passim*. Also cf. J. K. Pollock, *Money and Politics Abroad* (New York, 1932).

abstain from voting—and such extends to the wives or relatives of voters. (3) Undue influence, i.e., the making use, or the threatening to make use, of any force, violence, or restraint, or inflicting or threatening to inflict any temporal or spiritual injury on any person in order to influence his vote, or by duress or fraud impeding the free exercise of the franchise by any man. (4) Personation: applying for a ballot paper in the name of another person, whether alive or dead, voting twice at the same election, aiding or abetting personation, forging or counterfeiting a ballot paper. (5) Unauthorized expenditure: that expenditure which is not authorized in writing by the election agent.

Illegal practices include paid conveying, advertising, and hiring, without authority, committee rooms; voting without qualifications; making false statements about candidates; disturbing public meetings between the issue of an election writ and the return of the election; printing, publishing, or posing any bill, placard, or poster not bearing on its face the name and address of the printer and publisher; illegal proxy voting. Heavy fines and withdrawal of the right to vote or be a candidate are attached to those offences.

The expenses of the candidates were limited by the Act of 1883 and, after the passage of the Reform Acts of 1918 and 1928, stand at 5*d.* per elector in a borough constituency and 6*d.* per elector in a county constituency. In some cases, therefore, it was possible to spend nearly £2000 in a single constituency. The average amount possible was £1200, but the average actually spent was only one half that. It was the general sentiment that the maxima should be reduced to give poor candidates a clear chance of election, and, following the recommendation of the Speaker's Conference of July 20, 1944, the Representation of the People Act, 1948 (Part III) reduced the legal maximum expenses per candidate to £450 plus 1*d.* for each borough elector and 1½*d.* for each county elector. This roughly halves the legal maxima hitherto prevailing.

In practice there is little corruption of a serious nature at election times. But

neither law nor custom has stopped the practice of "nursing" a constituency; that is, of treating to entertainments, excursions, municipal gifts, and so on, from the time of "prospective" candidacy until the election period, as legally defined, has commenced. This practice still causes some nonrational bias in the election results and in party membership. Further, there is no easy means of inspecting whether the agents' returns are a true account of all that has been spent. A constituency, as we have seen, is a large place, and it is difficult for either the state or opposing parties to appoint officers who can light upon anything short of flagrant cheating. Nor are the parties as severe with each other as theoretical reasoning would teach, for though upon proof of illegality, the reward is the gift of the seat to the opponent, a denouncer risks unpopularity. Mutual tolerance on legal laxities is not seldom preferred by party agents. At any moment some worker may do an unwise and unauthorized thing and bring the law upon his organization.

The main evil from which British elections now suffer is the unfair contribution of motorcars and the occasional payment of party workers. Motorcars are lent by friends to candidates and the rich candidates<sup>42</sup> get more than the poor. Then there is also the pressure which is not sufficiently perceptible or fixable for prosecution. Tradesmen are intimidated into putting posters in windows—but who can litigate upon a smile, a wink, or a gesture? Agricultural workers, in particular, have not yet lost all fear of being dismissed from their jobs if they do not vote right. Canvassers of rural constituencies are full of anecdotes of those effective relics of feudalism, and everywhere the system of large estates and agricultural hired labor is accompanied by moral conservatism. But all this kind of influence is now very weak; the schools, the press and the parties, have practically killed it.

A final point. There is no penalty for the use at elections of the Union Jack—as

<sup>42</sup> Cf. the discussions of this subject in Parliamentary debates on the Electoral Reform Bill, 1931.

a "symbol"—on posters or unfurled over vans and speaking platforms. In France, neither white nor tricolored paper may be used for placards—because the former is reserved for official communications and the latter is the official color of the republic.<sup>43</sup>

*France.* The provisions of French law relating to electoral procedure are not vitally different from the English. The first serious attempt at statutory regulation of electoral behavior came with the Organic Decree of February 2, 1852, on the Election of Deputies to the Legislative Body, a decree following close upon the establishment of universal suffrage and Louis Napoleon's *coup d'état*. Until that time a few dispositions of the penal law served to throw into relief the normal custom of electoral corruption; it could do little more, for the governments which managed France for the constitutional monarchy were themselves the supreme corruptors, their success being quite assured by the paucity of the electorate, and the firm centralized grip over local administration.<sup>44</sup> Nor were the governments of the Third Republic at pains to divest themselves of the electoral succor obtainable from the local officials: the prefects and the mayors in particular. In the early years of the Republic, the pressure of the government on the prefects and of the prefects on their subordinates was enormous. "Neutrality," said one prefect in a declaration to his staff, "is hostility which attempts to hide. As for me, I cannot be duped that way. I shall unmask it when I come across it, and mete out justice every time I can."<sup>45</sup>

Governmental pressure still persists, especially in the constituency of a min-

ister, and through the practice of the distribution of administrative favors, like grants-in-aid, via favored candidates and members. But on the whole, the amount and intensity of governmental pressure is now quite small. It is clear from contested elections that much petty corruption still occurs, the main forms being an increase (promised or actual) or withdrawal of poor relief; considerable intimidation of leaseholders and laborers in agricultural areas; banquets held between the two ballots; food and drink given to electors who come from far away; small gifts of money; drinks on a large scale (the French form of canvassing); promises to bestow upon the constituency the whole or part of the Parliamentary salary; threats to stop a pension; and, in some constituencies, systematic distributions of goods and money. The laws of March 30, 1902, of July 29, 1913, and March 31, 1914 extend the scope and detail of the previous rules and make the penalties much more severe. But organized ecclesiastical pressure, very powerful in the rural districts, has not been overcome. The electors themselves are in many places always on sale. They enjoy the turbulence of the campaign and are imposed upon by pageants.<sup>46</sup>

Laws designed to produce equality of opportunity among candidates and to reduce election expenses were passed: the law of March 20, 1914, regulates placarding, and that of 1919 the free postage of circulars; while Title V of the Electoral Law of October 5, 1946, reaffirms these with some small modifications due to shortage of paper.

The reasons leading to the laws on placarding were: to stop candidates from swamping each other's posters by overposting and destruction, a practice which the law had attempted to regulate without success; to reduce electoral corruption by means of excessive payments to bill-posters; to reduce expenditure generally; and to reduce the bought competition which poorer candidates must face—this, the egalitarian motive, being the strong-

<sup>43</sup> See Étienne Pierre, *Traité de Droit Politique et Parlementaire*, Vol. I and Suppléments 1919 and 1924, Chap. IX, "Des Crimes et Délits Electorales," and the full text in Léon Duguit and Henri Monnier, *Les Constitutions et les Principales Lois Politiques de la France* (Paris, 1932), p. 280 ff.

<sup>44</sup> Georges Weil, *Les Elections Législatives depuis 1789* (Paris, 1895), gives a good though brief account of the development of French electoral law and manners.

<sup>45</sup> *Ibid.*, p. 291.

<sup>46</sup> Cf. A. Pilenco, *Les Mœurs du Suffrage Universel* (Paris, 1930), Book II, Chap. I.

est. On the whole, candidates for the French chambers are poor men. They do not and cannot usually spend much on an election campaign. A large number are outside the parties which can afford to give help; hence the importance attached to equality. The administrative circular accompanying the text of the law runs: <sup>47</sup>

It [the law] proposes, by reducing electoral expenditure, to equalize as much as possible the means of propaganda which the different candidates may have at their disposition, in the course of the same electoral campaign and in the same constituency, and to prevent the wealthier from benefiting over their rivals by material advantages which hitherto have placed the poorer candidates in an unfavorable position. The legislator desires that, in placarding, the contest shall take place with equal weapons.

The law applies to all elections—for the chamber of deputies, the senate, local government bodies. No posters may, during the electoral period, be placarded anywhere excepting on special places reserved therefor by the municipal authorities. On each of these boards each list of candidates receives an equal surface. In order that there may be a proper distribution of boards through the constituency, their placing is regulated according to the size of the district. There is a categorical prohibition on placarding otherwise, even when it pretends to be an industrial or commercial advertisement, or a letter addressed by a candidate to one of his supporters. How careful legislators must be is shown by an amendment which the Senate made to the bill presented by the chamber. The chamber provided for "special sites and an equal surface . . . to each candidate." But this could mean each candidate or list being given a site, so long as the area was equal, but in different places in the constituency—some prominent, others unfrequented.<sup>48</sup> Hence the

Senate's amendment, whereby posters appear equally on each and the same site. Comparative study is thus possible for the electorate, and however little this is, the statesman cannot despise small mercies.

The law of October 25, 1919 was the result of a confused struggle to secure a diminution of candidates' expenses, and, if possible, to cause the state to take over some part thereof. A bill of July, 1912, voted by the Chamber, had even transferred to the state the printing and distribution of ballot papers and one election address for each elector. But the Senate killed the proposal. The project was taken up again in 1919 but was reduced to that of a sharing of expense between candidates (each to pay a flat rate) and the state. The law finally arranged for a kind of cooperative printing of ballot papers and one circular per candidate.

The law of October, 1946, carried this a stage farther. Each list of candidates is represented by a mandatory. He pays on behalf of each candidate of the list a bond of 100,000 francs (worth roughly \$200 when the law was passed in 1958) for each constituency. The lists each receive the amount of paper from the local official electoral authorities allowing for three big placards, three notices for meetings, envelopes, ballots, and two circulars. The lists designate their own printers to the electoral authorities and make up their circulars and placards as they themselves think fit. The circulars go out at separate short intervals before election day. Postage for these is government-franked. The state pays for the paper apportioned to the candidates, for envelopes, printing of the placards, ballots, and circulars. It also pays the cost of fixing the placards.

Then, let it be noted, the expenses of placarding and gasoline are not repaid to candidates, and the bond is forfeited to the state, whenever a list of candidates

<sup>47</sup> March 21, 1914; Pierre, *op. cit.*, Vol. III, p. 288, footnote.

<sup>48</sup> See Rapport, Groussier, March 9, 1914, Chambre des Députés, and Bérard, *rapporteur* in the Senate (March 5, 1914): "All boards reserved for candidates must be side by side,

in order that the electors may compare their 'professions of faith.' It would be arbitrary, unjust and disloyal to be able to sacrifice one candidate to any other by the location of the hoarding sites."

## A CLOSER VIEW OF PARTY

does not obtain at least three per cent of the votes cast in the district. In other cases, the bond is returned to the candidates. Here is a faint imitation, with additional features, of the British rule that the candidates put in a deposit of £150 which is forfeited if they do not get one eighth of the votes cast, the purpose being to deter frivolous candidatures.

The foregoing arrangements are administered by a local commission of the president of the civil court, the prefect, other local government officers, and representatives of the political parties putting up lists of candidates.

Outside of this, the candidates may spend as much as they like on their candidacies. In fact, the restrictions on placarding, and the saving of money on postage, have simply given rise to more expenditure upon meetings and the party newspapers. It is of the highest theoretical as well as practical interest that the Communist party, in the Consultative Assembly of 1945, resisted the equalization of electoral expenditure, thus reversing the historic trend—for it used to be the parties of the poor who were clamant for equality!

*The United States.* The law relating to electoral purity in the United States falls into the two divisions of federal and state regulation.<sup>49</sup> The federal authority has no jurisdiction excepting over electoral organizations which cover more than one state. Thus state and municipal elections are outside federal and only within state jurisdiction. Where possible, it has been attempted to prevent any mutually destructive legislation, though careful scientific coordination has been no more than occasionally mooted.

Federal law is now summed up in the Federal Corrupt Practices Act of 1925,<sup>50</sup> (which codified and expanded acts passed in 1907, 1909, 1910, 1911, and 1918) and the Hatch Acts of 1939 and 1940. Before

1907 the only law treating of corrupt practices was the Civil Service Act of 1883, which forbade political assessments and regulated several other incidents of the spoils system.

The broad features of federal regulation are:

(1) National banks and corporations organized by federal law may not contribute money in connection with elections to any political office; nor may any corporation contribute money for elections of the federal legislature and executive. Penalties of fines and imprisonment are established.<sup>51</sup>

In 1943, by a rider to the Smith-Connally Act to prevent strikes in war-time, it was made illegal for "any labor organization to make a contribution at which presidential or vice presidential electors or senators or representatives . . . to Congress are to be voted for, or for any candidate, political committee, or person to accept or receive any contribution prohibited by this section." (U. S. Statutes at Large; Public Law 89, 1943).

(2) All contributions and disbursements made to influence elections of representatives to Congress must be publicly declared. The treasurer of a political committee receiving and spending money and the candidates must file accounts before and after the election: quarterly, and in election years two reports between the fifteenth and fifth day before the election. The upward limit of a candidate's expenditure was put as \$5000 for "nomination and election" for Representatives, and \$15,000 for Senators. But personal expenses and expenses on objects previously exempted were not to be reckoned.

(3) In 1911 and 1918 the law was directed against the promise of office, money, or "anything of value" in consideration of votes or abstentions in elections. The filed declaration was to specify

<sup>49</sup> Cf. J. K. Pollock, *Party Campaign Funds* (New York, 1926); E. R. Sikes, *State and Federal Corrupt Practices Legislation* (Durham, N. C., 1928).

<sup>50</sup> Postal Salary Increase Act, Title III, *Federal Statutes Annotated, Supplementary Pamphlet*, April, 1925.

<sup>51</sup> By the Law of 1907 (U. S. Statutes at Large: 34,814) corporations became liable to a fine not exceeding \$5,000; any officer or director consenting to the contribution could be fined not in excess of \$1000, or imprisoned for one year (maximum), or sustain both penalties. Cf. Sikes, *op. cit.*, pp. 191-92.

## STATUTORY LIMITS ON PARTY ACTIVITIES

whether or not promises of appointment had been made.

(4) The Act of 1925 limited the law only to general elections.<sup>52</sup> Expense statements have to be made three times at intervals of five days before the day of election, and also after the day of election, within a period of thirty days.

(5) The Hatch Act of 1940 provided three major regulations. (a) No political committee may receive or disburse in any calendar year more than \$3,000,000. The purpose was to limit the total expenditure of the political parties, with special reference to the two great parties. (b) No single person, committee, or corporation may contribute more than \$5000 toward the election of any person in any calendar year. (This provision was not properly considered before it was introduced at a late stage of the legislative process, and its intention was actually to make the whole bill unworkable.) Nor may goods, commodities, or advertising be bought for the advantage of candidates. (c) To meet an unmistakable danger of a kind of intimidation arising out of the broad extensions of social security, work relief, and so on, severe limitations were placed upon the political activity of federal officials or state officials employed in the spending of federal funds (through the administrative device of federal financial grants-in-aid to the states). The purpose was to prevent political influence through the official denial of benefits or jobs to the seekers of relief.

Oaths or affirmations attest the honesty of the statements, an attempt thus being made, as in so many proceedings of state, to secure the truth by a special, if not a supernatural, solemnity.<sup>53</sup>

<sup>52</sup> The constitutionality of the earlier law as applicable to primaries and conventions arose in 1921 in the famous case of *Newberry v. United States* (216 U.S. 232), in which five judges against four maintained that primaries and conventions were not elections in the sense of the constitution.

<sup>53</sup> Indeed, if their electoral and parliamentary eloquence is any index to the state of mind of American politicians, their oaths must have been as awful in effect as deep in substance. No politicians in the world have God upon their lips as often as the American.

How have these laws worked? Let us consider, first, the group of rules designed to obtain publicity, for these seem to be the principal contributions of American law and experience to democratic government. Statements are filed and sworn to, as required. Not to do this is too obvious a breach of the law. Other committees, not political yet affected by the law, are sometimes recalcitrant, owing partly to ignorance and partly to their alleged honest belief that they are not affected. Thus, for example, the great champion of obedience to law, the Anti-Saloon League, did not in 1920 file its statement.<sup>54</sup> In 1944, the CIO Political Action Committee filed a statement, though contending it need not do so because it was not helping specific candidates.

The \$5000 limitation is violated by the contribution of gifts from members of the same family, and to several individual candidates of one and the same party. The \$3,000,000 limitation is violated by the establishment of numerous political committees operating for the benefit of a single party, the Democratic or the Republican, such as state committees, or "Willkie Clubs," or "the National Committee of Independent Voters." A carefully thought-out gentleman's agreement on who shall give how much to whom to spend upon what can and did make the aggregate go far above \$3,000,000: to \$6,000,000 for the Democrats, and \$15,000,000 for the Republicans in 1944.<sup>55</sup>

All in all, the statutes have failed to have an appreciable affect upon American

<sup>54</sup> The decision of the Supreme Court in re the Anti-Saloon League of New York (188 N.Y. Supp. 605) in 1923 was as follows: "Many activities in connexion with elections are educational, but their motive is to affect the result, and to aid or defeat candidates or propositions submitted for a decision by the ballot-box. When money is received for such purposes, the law requires publicity to disclose its source and amount, and to test the sincerity for the public good of the means and propaganda employed. The law is predicated upon the truth that publicity will never hurt a good cause, and has destroyed many bad ones."

<sup>55</sup> Cf. Louise Overacker's analysis in *Presidential Campaign Funds* (Boston, 1945), pp. 32-35.

practice. There is neither restraint in expenditure nor full truth in the statement of its sources and destination. Such laws may make politicians either reform or hide; and American politicians have preferred to hide. Yet there is some restraint, and the spirit of the law establishes a standard, or at least the notion that there ought to be a standard, and this is not without value. The spirit of partisanship is stronger than the sense of state; and the vast apparatus of party requires an extent and quality of supervision to which American citizens have not yet awakened in sufficient numbers.

The limitations are designed to reduce the irrational befuddlement of voters, and to give an equal chance to all candidates, irrespective of wealth. But the former purpose may really require greater expenditure: the political results depend less on the amount spent than on its objects. Campaign propaganda matters less and less in a society dominated by occupational groups and better educated than generations ago. What is crucial is publicity of the source of funds. Here United States practice leads the world but could still be improved.

The individual states in the United States have a longer history of continuous occupation with electoral corruption, and many have gone along paths quite unfrequented by European nations in their attempts to purify electoral operations, not that they are anywhere more effective than in the federation.

(1) Publicity of accounts before and after election is adopted in many states. But in some there are no official forms. Where they exist they are sometimes not drawn with adequate detail; in other places, they begin to become revelatory by their classification or the attempt to differentiate clearly between pre-election and postelection declarations.

(2) States have, therefore, been compelled to go further. Some have public officials to review the accounts and report delinquents. Some require publication by the candidate in two newspapers of general circulation in the state as well as the usual filing. In others the accounts are

marshaled in the annual report of the secretary of state; or parties and candidates must hold their accounts open for public inspection, and must notify rival candidates and parties of their revenue and expenditure. It is easier to hide from a public officer than from a rival in one's own trade. The only obstacle is that a "truce of God" between rivals of equal villainy may defeat the law. Yet there is the certain gain that the law gives the more honest candidates a weapon which costs them nothing and which may win them a good deal if they are vigilant.

(3) Limitation on expenditure is very common, but is evaded (a usual limitation is by percentage of the amount of yearly salary to be obtained from the office, a sum often quite inadequate for a statewide election).<sup>56</sup> Friends of a candidate spend what he is not permitted to. The exempted objects of expenditure are precisely those upon which much can be spent. If no single contribution of more than \$1000 is permitted, then it is easy to ascribe part of the bigger subscription to any name taken at random. The politicians are merely embarrassed for a time. Nor is this all. American experience has shown that limitation of the total spent is not so effective as limitations of expenditure on special items. The success of this, however, depends on the practical ease of detection, and upon the difficulty of proper audit where money spent upon one object is wrongly classified.

(4) Several states forbid expenditure on election day. North Dakota even forbids electioneering on that day.<sup>57</sup>

(5) In most states corporations are forbidden to contribute, and assessments of public officials are prohibited. Further, careful distinctions are drawn between political and other committees and their respective rights clearly stated. The intention is to reduce the agencies of expenditure and propaganda and thus concentrate responsibility.<sup>58</sup>

(6) A general requirement is that all political advertisements must be plainly

<sup>56</sup> Cf. Sait, *op. cit.* p. 558 ff.

<sup>57</sup> Brooks, *op. cit.*, pp. 340-36.

<sup>58</sup> E.g., Utah (Pollock, *op. cit.*, pp. 251-52).

distinguished by some such legend as "Paid advertisement," with a statement of the cost, the name of the candidate, and those authorizing the advertisement, and the name of its author.<sup>59</sup> Newspaper support may, in some places, not be purchased. This seems to be generally obeyed.

"But what is the constitution between friends?" Pollock's conclusions are not fully optimistic. He speaks of general agreement that the laws on campaign funds are of little use. He says that bribery laws are fully effective; limitations of expenditure innocuous; corporate contributions largely prevented.

Speaking generally, the whole tendency of state laws on the subject is toward raising the moral law of elections, and it can hardly be denied that they have not been of considerable value in this respect. They have been largely instrumental in producing better political conditions today and no amount of criticism should permit this fact to be covered up.<sup>60</sup>

Their efficacy, such as it is—and that an improvement has been caused is attested by a number of independent observers<sup>61</sup>—rests upon two grounds which issue directly from the democratic theory: first, that the citizen has the right to know what is being done in government, and second, that he has the right to revolt on the basis of this knowledge.

*Weimar Germany.* In Germany the law relating to the sincerity of elections was mainly embodied in the criminal code, but further rules were included in the general electoral law, the laws relating to meetings, press, and the secrecy of the ballot. We are mainly concerned with the contents of the criminal code once again effective for post-World War II Germany.<sup>62</sup> These are general and short, and their efficiency has necessitated parliamentary construction and application, especially since the clauses of the criminal law were before the Revolution of 1918 not seldom violated by the administrative

authorities acting under the orders of the government. Whoever prevents a person from voting, either altogether or for a specific person, by a criminal act, is punishable with from six months' to five years' imprisonment. Officials employed in the collection of ballots or registration who intentionally produce a false or corrupt result are punishable by a week's to three years' imprisonment; others committing the same crime are punishable by imprisonment up to two years. The purchase or sale of votes is punishable by imprisonment of one month to two years and it may entail the loss of civil rights: "purchase or sale" here includes material reward of any kind. (Occasional gifts of beer are apparently not penal, but to swamp the constituency in beer is to invalidate the votes. However, where it is usual to provide free beer at election meetings, and this is fairly common, regard must be had for the custom.) The spreading of false defamatory facts about candidates is not a punishable electoral misdemeanor, whether actionable in the courts or not. Votes which are attended by improper practices are in some cases withdrawn from the total polled by the benefiter, and in other cases ascribed to the victim.

Systematic falsification entails the nullification of the election. Neither law nor practice limits the amount of money which may be spent in elections by either candidate or party (provided the articles of the criminal law are not violated); nor does the law require the publication of campaign funds; nor are there rules regarding the equality of placarding as in France, or the issue of publicity pamphlets as in various American states. Article 125<sup>63</sup> of the constitution of 1919 stipulated that "electoral freedom and electoral secrecy are guaranteed. Details are to be settled by the electoral laws." This article has so far not been interpreted to include anything more than the law established in the criminal code (with which we have already dealt). And secrecy<sup>64</sup> is dealt

with by the *Reich* Electoral Law of April 1920, Section 27, and the Electoral Order of March 14, 1924. It is not an inconceivable interpretation of the article that freedom is not guaranteed where electoral funds are large and secret—yet this conclusion has not been drawn by the electoral court.

#### A SENSE OF PROPORTION

ON reflection, it is clear that much of the pother about election expenses arises out of the class inequalities in the state. But as previously explained, wealth can defer but not frustrate the advent of social control and equity. The abolition of expenditure on elections is impossible. A mere glance at the objects of expenditure is demonstration sufficient: radio, literature, overhead expenses like rent, postage, telephone and telegraph, travel, speakers. Another solution offered in the past was the payment of all election expenses by the state, proposed by Theodore Roosevelt in 1907. This would have involved very difficult administrative and political problems, and perhaps the eventual reduction of expenditures for reasons of economy. In democracies, it would threaten the freedom of political parties and electoral campaigns. In Britain, where the wealthier candidates obtained some advantage by the possession of cars in which to take voters to the polling booths, several legislative projects included the pooling of all cars, or the provision of these by the election officials. They failed.

The complete state assumption of electoral expenses obtains only in the U.S.S.R., where article 11 of the Election Regulations (Presidium, October 11, 1945) prescribes that the expenses of elections are covered by the state. This provision is feasible only in a dictatorship and it has its ulterior purpose as well as its declared one of making the campaigns "free," although the official apologists sneer at democratic elections as "commercialized."

The next possible solution is the reduction of expenditures to what is "reasonable," and that evidently is the intention of the various statutes we have reviewed.

In England, conservative candidates have been thought to gain an advantage by subscriptions to charitable, social, and sporting organizations in the intervals between the actual election campaigns—a practice known as "nursing" a constituency. This practice was deprecated in the *Speaker's Conference* (July, 1944), previously referred to, but was not abolished. It tends to favor the richer among the candidates of the wealthier parties, rather than hurt the rising progressive, mass, political cause. The same holds good for direct or indirect payments or promises of subscriptions to party organizations to influence the selection of prospective candidates.

Publicity, in which the United States at present leads the world, is the soundest antiseptic against democratic corruption,<sup>65</sup> although it must be confessed that some of the germs are decidedly virulent and hard to kill.

#### POLITICAL PARTIES IN THREE DICTATORSHIPS

DICTATORIAL countries have no political parties in the original sense of the word, namely, that they are parts of the state, for to be a part of the state would be to imply that there are other parts. The dictatorial party has attained its monopoly by the exclusion of other parties, either by positive law as under the nazi and fascist systems, together with a simultaneous liquidation and prohibition of others, or as in Soviet Russia, without the accord of a monopoly to a party but its *de facto* assumption by the Communist party preceded and accompanied by the forceful liquidation of all opponents of its leadership. Both in Germany and Italy, the parties by statutes or decrees were given a special status regarding their property and the dignity and physical safety of their membership. By being made public corporations they were assured that the use of their property, if challenged, would

<sup>65</sup> The student is advised to read the Green Committee Report and Hearings, 1944, *United States Senate, Special Committee to Investigate Presidential, etc. Campaign Expenditures*, 1944, Report No. 101 (79 Cong., 1st Sess., 1945).

receive from the courts and administrative agencies special consideration in relation to the ends the party performs; and party members, and especially functionaries of the parties, were granted various immunities from arrest, the right to use force, and protection by the law against insults.

In Soviet Russia, "antinational" (which can have a wide meaning) associations are not permitted, and since political parties are associations, the domination of the Communist party is assured. Further, article 126 of the Soviet constitution, which enumerates the organizations that may be established by citizens, sets up the Communist party as that in which "the most active and politically conscious citizens associate."

In contradistinction to democratic political parties, dictatorial parties are characterized by a sanguine doctrine. (From the sanguine to the sanguinary, the step is short and natural.) This faith springs either from a philosophy of history, expressing itself through a collective party leadership, or, as in fascist Italy and nazi Germany, from the dicta of a leader. There is a significant difference, as will be appreciated later, between the two. Since the leaders in either case are the repository of this faith, they claim and normally obtain unquestioning obedience. (Perhaps the best psychological analysis of such bonds is found in Arthur Koestler's novel, *Darkness at Noon*, and in his *The Yogi and the Commissar*, both treating the theme of loyalty to communism. For naziism, one among many illustrations is Dr. Ley's avowal, "The National Socialist Party is Hitler and Hitler is the Party." The Party Organization Book<sup>66</sup> contains the oath of loyalty to the *Fuehrer*, which runs: "I pledge allegiance to my *Fuehrer*, Adolph Hitler; I promise at all times to respect and obey him and the leaders whom he appoints over me." It was a regular pleasure for nazi leaders to declare, even when under extreme sentence at the war crime trials,

that they had no conscience but Hitler. Italian fascism showed a like absoluteness of declared submission.

In a democracy each party has every interest in securing for itself the largest possible membership and makes desperate efforts for success, for the size of its membership will directly or indirectly determine the extent of its control of the legislative and executive machines. Dictatorships deliberately practice the limitation of the membership of the dictatorial party, especially after they have achieved power. Thus, the Communist party of Russia probably has no more than five million members. The Fascist party in Italy had something like three million members. The Nazi party had nearly three million members. The restriction of membership is intentional, with various objects. (1) It is sought to maintain the militancy of the organization. With excessive numbers, a dilution of doctrine would arise, as the chance of internal dissent increase with every additional person recruited—he brings his individuality with him. Also, closeness of organization, discipline, a feeling of community are attained with smaller numbers. Nor can it be forgotten that a dictatorial régime founded on the will of a minority must rely—especially in times of domestic or foreign critical challenge—upon especially intense feeling, "fanaticism," as the dictators consciously say. But this needs activation by the leaders, and this cannot be successful except among a small number, and except that these do not move outside their artificial seclusion. (2) It is desired to maintain a sense, both in the public at large and among the members of the organization, that the members of the party are an *élite*, selected for their superior quality in comparison with the rest of the population. This serves to give them self-respect, to feed their confidence and pride, not to say their arrogance, and ultimately to supply that feeling of alienation from other men and women necessary to ensure the consistent and successful practice of hot persecution and cold brutality. (3) The restriction of numbers

<sup>66</sup> This is reproduced in the U.S. State Department publication called *National Socialism* (Washington, 1943).

makes it possible to claim that admission into the party is a privilege and a reward, and so secure a flow of gratitude and humility toward the leaders who have been so gracious. (1) None of the dictatorial parties offers membership primarily as a pleasure, except that of a duty properly performed; candidates join as members of a vocation, and indeed, especially in the Soviet system, there is heavy emphasis on the sacrifices they must make by voluntary unpaid work in the task of government and leadership.

It is important to re-emphasize the austerity of the vocation of party membership. On this the party documents are clear.

Any one who becomes a Party member does not merely join an organization but he becomes a soldier in the German freedom movement, and that means much more than just paying his dues and attending the members' meetings. He puts himself under the obligation of subordinating his own ego and to put everything he has at the service of the people's cause . . . readiness to fight, readiness to sacrifice, and strength of character are required for a good National Socialist.<sup>67</sup>

The introduction to the Nazi Party Organization Book goes on to stress the conception of servanthood of the movement and people: prohibits arrogance between party comrades; demands that each member should be a leader and promoter while on duty, and while off, a good comrade; prescribes simplicity and modesty of bearing; inveighs against vanity; applauds honesty and candor and constant solicitude for the humble members of the people. Festivities, honors, gifts, and drinking are deprecated for participators in the "unspeakably hard work" of constructing a better Germany.

The Communist party of the Soviet Republics expresses the austerity of the life of a party comrade all through its rules. Its preamble says: "The Party is a unified militant organization held together by conscious, iron, proletarian discipline. . . . The Party demands from all its members

active and self-sacrificing work. . . ." <sup>68</sup>  
A heavy list of duties follows.

It is well to reflect on the austerity (at any rate, as commanded) of party membership in the dictatorial as contrasted with the democratic countries. The difference is remarkable. In democratic systems, first, of course, almost anyone can join any party subject to practically no test whatever by the party. The joining of political parties may, by some people, be regarded as dedication to a serious public purpose, but it is also regarded by very many simply as a diversion or hobby, with dues unpaid and meetings unattended, an association which can be casually relinquished at any moment. Furthermore, in contrast to unquestioning obedience in dictatorships to the dictatorial leader, the follower in a democratic party is free, within very broad limits, to criticize the personal character, ability, motives, and policy of the leader. Indeed, in democracies the leadership is always on trial, and the displacement of the leader by some one more capable is the proper and the applauded object of political activity. In a dictatorship, the gain from discipline is militant strength and energy—for a time. But it is accompanied by the constant possibility of deadening the thoughtful and creative vital processes of both leader and follower, because there is no guarantee of mutual stimulation. Originality in the ranks is flattened by command from above. The creed that the leader is always right inhibits the movement of ideas upwards to him. Since his power to make or break political careers is absolute, and since any appeal from him is revolution and treason, he tends to become insulated from the views of the members of his own party who, paradoxically enough, have been commanded to keep in touch with the masses. In the democratic system, the open possibility of continued competition of ideas is kept alive. There is no stereotyped unbreakable hierarchy of value or

<sup>68</sup> See Rules of the party published in *Land of Socialism Today and Tomorrow* (issued by the party and published by the Foreign Languages Publishing House, Moscow, 1939), p. 465 ff.

<sup>67</sup> *Op. cit.*, section, "Organisationsbuch," Para. 1.

opinion. And though the democratic leader is not endowed with an extraordinary status to summon up the political energy of the party members, the mere existence of free contestants for the prize of a sovereign power that is accessible to all ensures the continuous renewal of the membership and, necessarily, as the continuing cost of success, of reasoning, reflection and the development of policies and programs of action.

Since the doctrine of dictatorial parties is one of already conceived perfection, and since this is fanatically embraced, and, since also the locus of party life and doctrine lies in a single person, the conditions are present for highly selective recruitment and for "expulsions" or "purges" or "liquidation" of those held to fall below the useful standard of mind, character, and physique. In the early days of the Fascist and Nazi dictatorial parties, a process of personal selection was conducted by members already in the party, careful account being taken of their general personal characteristics, readiness to assume responsibility, political dependability and firmness of character, their grasp of the party doctrine, their willingness to fight and sacrifice, their absence of self-seeking and ability to fulfil the various technical tasks. The party recruiting officials are enjoined to realize that this selection of members is a most serious responsibility. Soviet Communist rules for "cleansings" of the party indicate the positive qualities for retention of membership. Thus it provides against:

Double dealers who deceive the Party . . . overt and covert violators of the iron discipline of the Party and of the State; . . . careerists, self-seekers and bureaucratic elements; morally degraded persons who by their improper conduct lower the dignity of the Party and besmirch its banner; passive elements who do not fulfil the duties of Party members and who have not mastered the programme, the rules and the most important decisions of the Party.<sup>69</sup>

<sup>69</sup> The exact source of this has been lost: but students will find it amply verified in the *Short History of the Communist Party of the Soviet Union*, 1939, available in translation from In-

In their earlier days, the parties had recruited from among both old and young. After a time, graduation from the Youth Organizations became almost exclusively the source of recruitment. Choosing from organizations of school children and youth, the party had some guarantee founded upon several years of deliberate observation of the effect of its training upon the candidates.

The experience of these countries is far too short for conclusions regarding the efficiency of breeding a new political generation, except that they have been able to secure unconditional obedience and fanaticism within the fixed order from some, especially in Germany and Soviet Russia. Yet it left or produced apathy in others, especially in Italy. Not a few remain untouched and rebellious, while such obedience as was achieved can be to an important extent ascribed to fear of force, and to enjoyment or promise of the spoils of office.

The only formal discussion—not merely exhortations by party leaders—of the requisites of mind and character of party members known to the present author is one which occurred at the Eighteenth Congress of the Communist Party of the Soviet Union.<sup>70</sup> The inductions into the Communist party in Russia are governed by a well-conceived set of rules, the principal of which are as follows: From one to two years of candidature admission to which requires recommendations from several party members of some years' good standing; followed by mastery of the program and rules of the party; or proven worth in the groups of sympathizers and youth organizations, and the Soviets, trade unions, and cooperatives.

At the Congress the question was the introduction of more vigor and life into the Communist party, and one of the principal issues was the intellectual preparation of candidates. Must the candidate be an adept at Marxian doctrine? If so,

ternational Publishers, New York City, and in the speech of A. Zhdanov in *Land of Socialism Today and Tomorrow*, p. 173 ff.

<sup>70</sup> Cf. A. Zhdanov, *loc. cit.*, p. 199 ff.

## A CLOSER VIEW OF PARTY

the party would become a party of intellectuals and doctrinaires and filled with too large a proportion of university recruits. It was true that a mastery of doctrine was desirable on the part of some and perhaps of many; but what was also necessary was a membership which would show proven good will and reliability. Stout and decent believers, not philosophers, made a second party. The Congress abolished the rule that candidates must have thoroughly mastered the party program, must be a real Marxist, a tried and theoretically trained Marxist:

I do not know whether we have many members of the Party who have thoroughly mastered our programme, who have become real Marxists, theoretically trained and tried. If we continue farther along this path we should have to include only intellectuals and learned people generally in our Party. Who wants such a Party? We have Lenin's thoroughly tried and tested formula defining a member of the Party. According to this formula, a member of the Party is one who *accepts* the programme of the Party, pays membership dues and works in one of its organizations. Please note: Lenin's formula does not speak about *thoroughly mastering the programme* but about accepting the programme. These are two very different things.

To assist those who accept the program but cannot rise to a mastery of the theoretical basis, the "short histories" of the Communist party of the Soviet Union are employed, and every organ of the Soviet press is unflaggingly used to apply high party doctrine to every phase of social and individual life from art to zoology.<sup>71</sup> The problem, however, still remains: without a *full mastery of the grounds* of the doctrine and their acceptance, how can the rulers believe in the reliability of their followers in the long-run evolution of their state; how can they be sure that they are *followers*? While if, indeed, many do master the elements as propounded by the prophet, they may be-

come very inconvenient purists and proclaim the falseness of the leaders. Men have murdered kings out of patriotism. In a sense, the simplest way to provoke a schism is to discuss fundamental principles. Burke warned against too searching an inquiry into society's foundations. For a democracy this is no problem, for, in a way, dissent is what it exists to produce. Yet *mastery of the grounds* is the only reliable and durable foundation of life in the state, the national or world order; the democratic even more than the dictatorial. For if there is a gulf separating men's values, it ought to be seen, and then it ought to be bridged by voluntary conscious purpose; if not, coercion will assume the task of unity.

There is one very important difference between recruitment in the Soviet Communist party and in the Nazi and Fascist parties. In the former a process of free local election prevails, in which, though direction is by no means lacking, more free discussion and choice at the local party headquarters is permitted than in the Fascist parties which practise co-optation by superior officials tempered by the collusion of favourites.

As for purges, these sometimes take the form of the expulsion, imprisonment, and execution of large groups of party members who, to use a Russian phrase, may have "deviated" to the right or left of the party line as laid down by the central organ of the party.<sup>72</sup> In Germany there was the Röhm massacre of 1934, when the *Fuehrer* claimed that he was the supreme judge for the well-being of the nation. But other than at revolutionary crises in the parties, the elimination of the infidels is not by such wholesale and therefore sometimes admittedly faulty treatment. In the Soviet Republics a return was made to the Leninist principle of "individual approach to people," especially because hostile elements could *en masse* cover their subversive activities by an outer show of agreement with the party line and deceitful practises designed to persuade people that they were militantly loyal, "creating

<sup>71</sup> This may now be clearly seen in the *Current Digest of the Soviet Press*, a weekly set of translations, made in Washington under the aegis of the American Council of Learned Societies and the Social Science Research Council.

<sup>72</sup> Cf. *Short History*, etc., pp. 264-346.

an atmosphere of flattery, uttering solemn speeches, greetings, and et cetera., in order to deceive and lull the vigilance of certain of our leading workers." <sup>78</sup> The "individual approach" was recommended also to stimulate Communist party members to throw off an alleged unwillingness to investigate charges, to avoid hedging and considerations of personal safety, and especially to depart from the assumption that a Communist is a good or bad Communist, not according to his own personal deeds, but to the actions of his relatives, even back to the "ideological stamina or social preference of a great grandmother."

Naturally, all those in dictatorial parties who deviate are covered with infamy and stigmatized by a spate of the choicest invective. Calumny, indeed, is one of the well-tempered instruments of punishment, of undermining independence of mind, and of political destruction. If the party doctrine were not clear-cut and presented with intense emotional force (honestly or otherwise), there would be no grounds for the tactics of calumny, since there could be no deviation to which one could point as the mark of infamy.

It is a simple consequence of what has been said that dictatorial parties are highly centralized, and at the same time that their central organs are deeply penetrative of society through their local offices down to the last cell in a block of a city or the floor of a workshop, the "capillaries," as the fascists say. There is no space for portraying the numbers of the hierarchy, beginning with the *Fuehrer*, the *Duce* or the Party Secretary at the very top of the pyramid, and then proceeding layer by layer, district by district, through the various governing bodies of the party. The important thing is that even the most disciplined party in the most democratic state does not begin to approach the intense centralization of dictatorial parties. Since there is such centralization, and since all movement must come from above, and since fidelity has to be maintained in all the ultimate organs of the party, there is

machinery at the top for inspections of the subordinate layers of the hierarchy, and at the same time for the appointment of the subordinate officials and trustees of the party going downwards.

In Russia, in characteristic contradiction to the Nazi and Fascist parties, democratic elections in the lower councils of the party are permitted, but ratification by the party organization immediately superior is necessary. Neither in Germany nor in Italy was a democratic choice of executives the principle or the practice; the appointments are made from above by a process of delegation. In Soviet Russia—and this, let us re-emphasize, is a distinguishing mark of the régime—the principle and practice of so-called "democratic centralism" prevail. It arises mainly from the fact that a scientific (more or less) interpretation of history (more or less) dominates (more or less) the leaders, but also because those leaders govern an enormous area and have the good sense to know that achievement must depend upon local vitality. "Democratic centralism" means, according to the rules of the Communist party, the application of the elective principle to all leading organs of the party from the highest to the lowest, and the periodic accountability of the party organs to their respective organizations. That is the democratic side. But it also means the absolutely binding character—"iron discipline"—of the decisions of the higher organs upon the lower and upon all party members. That is the centralized aspect. The party requires a free and businesslike discussion of party policy in individual organizations or in the party; such discussion is declared to be the inalienable right of every party member derived from "internal party democracy." The declared purpose of this internal party democracy is to develop self-criticism, that is, criticism within the party itself, and to vitalize party discipline, which must be conscious and not mechanical. On this, the words of Lenin are always quoted: "All revolutionary parties which have hitherto perished, did so because they *grew conceited*, failed to see where their strength

<sup>78</sup> Zhdanov, *idem.*, p. 188 ff.

## A CLOSER VIEW OF PARTY

lay, and feared to speak of their weaknesses." <sup>74</sup>

There is, then, a significant difference between the Communist and the Fascist parties: in the former's tolerated self-criticism—indeed, the stimulated self-criticism and even more, in the fact that it is regarded as a disloyalty to the party to undertake any action which diminishes—or be remiss in any action which maintains—the freedom and liveliness of local party life. We may refer again to the discussions at the Eighteenth Congress, where it was re-emphasized that the work of the party, which was the "remoulding of the people's consciousness," was frustrated by those who believed that all Communists were born free from prejudices and stood in no need of re-education. It was consequently necessary to restore the elective principle, to abolish the practice of co-option, to forbid voting by a list of candidates, to vote for individual candidatures, to guarantee all party members the right of criticizing and rejecting candidatures, to vote by secret ballot, and to guarantee periodical meetings of leading party workers. The revival of the elective principle of criticism and self-criticism was sought, in order to heighten the responsibility of party organizations to the party membership, and to intensify the activity of the members of the party. It was desired to develop and strengthen the feeling of contact between each party member and the party, and to enhance each member's sense of being a fully responsible unit. This was the meaning of "inner party democracy," and this would strengthen the unity of the party and its "conscious proletarian discipline."

The democratic element in the Soviet Communist party (but it is necessary that this be not *overemphasized*)—a quality distinguishing it from the Italian and German dictatorships—has two sources: the liberating purpose of the Bolshevik Revolution and the tradition of the party in its formative stage. In the first place, the bolshevist movement was founded to overthrow the Tsarist régime, one of the

most horrible tyrannies in the history of humanity, and to bring freedom to the Russian people. It had a dual purpose: not only to inaugurate a free system of government, but to establish an equalizing and socialized economy—each purpose being enough to overtax the mind and energies of the mightiest statesmen. It proposed to progress from an inferior and practically primitive society of almost altogether illiterate members to a very highly civilized, most complicated and organized political and economic system. And it intended to progress with the greatest achievable rapidity in order to be able to withstand domestic and foreign hostility. Its animating force was liberty, equality, and fraternity. But the fascist and the nazi systems were founded on the denial of freedom and equality, and were erected on the corrupt destruction of existent democratic government. They were movements of decline from a superior to an inferior kind of society, even if there were marked blemishes in democratic practice. In the second place, under Lenin, freedom of discussion in the Bolshevik party was encouraged in order to stimulate vitality and to attract the sincere and the strong.

In the *Short History of the Communist Party*, the lessons of a generation of party experience are summarized. Among these are two which should be especially noticed. The first is the need for continual self-criticism; the second to keep in touch with the masses. On the first, the work says: <sup>75</sup>

A party perishes if it conceals its mistakes, if it glosses over sore problems, if it covers up its shortcomings by pretending that all is well, if it is intolerant of criticism and self-criticism, if it gives way to self-complacency and vainglory and rests on its laurels.

On the need of keeping in touch with the masses, it quotes Stalin: <sup>76</sup>

We may take it as a rule, that as long as the Bolsheviks maintain connection with the broad

<sup>74</sup> *Short History*, etc., p. 361.

<sup>75</sup> *Idem*.

<sup>76</sup> *Ibid.*, p. 362-63.

masses of the people, they will be invincible. And, on the contrary, as soon as the Bolsheviks sever themselves from the masses and lose their connection with them, as soon as they become covered with bureaucratic rust, they will lose all their strength and become a mere cipher. . . . I think that the Bolsheviks remind us of the hero of Greek mythology Antaeus. They, like Antaeus, are strong because they maintain connection with their mother, the masses, who gave birth to them, suckled them, and reared them. And as long as they maintain connection with their mother, with the people, they have every chance of remaining invincible. That is the clue to the invincibility of Bolshevik leadership.

Side by side, however, with the democratic virility of the Russian Communist party, there is the other aspect, namely, its centralism. The party will punish such discussion on "an all-Union scale" as would lead to the imposition of the will of an insignificant minority on the vast majority of the party, or cause the disintegration of its unity by factional groupings and attempts to split it. It is only if the necessity of an all-Union scale discussion is recognized by several regional party organizations, or if there is an insufficiently solid majority in the Central Committee on very important questions, or if a solid majority of the Central Committee wishes to test the quality of its policy by means of discussion, that such discussion would be permitted. These are the limits of internal party democracy, beyond which internal party democracy would be disintegrated. "The maintenance of party unity, the relentless struggle against the slightest attempt at a factional fight or a split and the strictest Party and Soviet discipline are the foremost duties of all Party members and of all Party organization." Since 1945 there is little doubt that hierarchical discipline overwhelms the democratic element in the Soviet Russian Communist party.

It ought to be added, in order that the power of the central leader or leaders of the dictatorial party may be fully comprehended, that since the dictatorial party controls a totalitarian state, expulsion from the party, as the leading officials

openly declare, is a question of life and death for those expelled. For the key positions in society, economic and otherwise, are held by loyal party members; and the conduct of the professions, and even ordinary occupations, can be made impossible on the mere fiat of the authorized party official. Thus, the disciplinary force is tremendous.

Another mark of the dictatorial party is its possession of a military organization. Within the Nazi party, there are the Storm Troopers (*S-A*) and the Elite Guards (*S-S*), and the Gestapo or secret police;<sup>77</sup> within the Italian Fascist party, the Militia and the O.V.R.A.;<sup>78</sup> within the Communist party, the Red Guard and, acting with it, the O.G.P.U.<sup>79</sup> These organizations serve two purposes; first, of rooting out, as early as possible, the first faint stirrings of disagreement and opposition, and then, in the final resort, of defending the régime by force of arms. This organization of coercion is taken to the most minute point of detail, is well-equipped with all the best that technology and organization can offer, for investigation, record, and torture, and makes revolt practically impossible. These organizations are safeguarded against legal action by citizens or members of the party who have suffered maltreatment. They enjoy complete immunity from responsibility if their actions are in the interests of the party, and beyond where party comradeship and the maintenance of the power of the party requires it.

Now, it may be that many thousands, even hundreds of thousands, of members of dictatorial parties accept the party programme, even understand it, and even consciously and fanatically will it. It is difficult to read the mind and spirit of so many. Clearly, dictatorial party leaders are far from complacent. Experience shows

<sup>77</sup> O. Giles, *The Gestapo* (Oxford, 1936); and *Nazi Conspiracy and Aggression* (U.S. Government Printing Office, Washington, 1946), Vol. I and Vol. V.

<sup>78</sup> Herman Finer, *Mussolini's Italy* (London, 1945).

<sup>79</sup> Boris Souvarine, *Stalin* (New York, 1939).

that it is very difficult to maintain the flame of conviction, the permanence of devotion, and the fierceness of the party warrior simply by persuasion alone. The maintenance of cohesion and force in the party membership is promoted by two devices. One is the continuous emotional, ceremonial, and ritual procedures and evolutions designed to enhance the self-importance of party membership, arouse the feelings and appeal to the aesthetic element, agitate the sentiment of belonging to a great collective body, and this is accompanied by argumentative appeal. The second element promoting cohesion, though not exactly belief, is the vast "patronage" and "spoils" in the hands of the dictatorial parties, immeasurably greater than any democratic party has ever had. All the jobs, all the professions, all the occupations, all the symbols of social prestige are in the gift of the dictatorial party,

and party members come first and necessarily hold the key positions in that society —so in the civil administration, so in the conduct of the national economy, so in the control and conduct of education, so also in the armed forces, though as to the latter there has been considerable resistance by the professional officers of the German army. With less spoils there would be less loyalty; take away the jobs and there would be smaller party membership and a less intense prosecution of its duties. It need not be laboured that Party and State are intimately linked. The leaders at the various levels of the Party machinery either had, as in Germany and Italy, by law an *ex officio* right to certain positions in the state, *de facto*, or, as in Russia, Germany, and Italy, held the key offices in the state, regional, and municipal government, and so, all through the apparatus of society and economy.

## *The Character and Policies of Modern Parties*

THE nature of political parties is far from simple. Some are close to being little more than associations for economic purposes in a comparatively strict sense; others are almost like churches militant, embracing a complete religion or philosophy, high in temper and determination; others, again, are mixtures of a profound and all-embracing social philosophy with a special economic interest—with either an equal or unequal emphasis on the philosophy or the interest but not excluding the one or the other. Hardly a party anywhere exists only for a single narrow purpose, like some of the nonstate groups we have spoken about: parties are varieties of multipurpose associations, rising to some that have as their concern the totality of human existence.<sup>1</sup> But whether wider or narrower their outlook and objects, they have, almost all, a general view of right and wrong, a particular character of public conscience, a universal social creed, and this is exemplified in and implemented through specific policies and programs. At times, the policies and programs are more alike than the basic creeds are in themselves, or in logical inferences drawn from them; or they are jettisoned or bargained with in such wise as to make the observer affirm that there are, indeed, no creeds, and to cause the zealots of the party to cry out aloud against foul play while the party's opponents (who have done and

who will again do the same thing) twit their opposite numbers with patent insincerity at last publicly revealed! Some observers may even charge that political parties have no principles, but are merely logrollers for material gains, not least for office and power, power simply for the enjoyment of its use.

To all these, in part, we can return the answer already made to Acton,<sup>2</sup> who placed such emphasis on the "isms" alone as the determinators of political conflict and endeavor. In politics it is men who fight, not disembodied ideas. The transient, the utilitarian, the mundane goods must needs be tended within the brief lifetime of man, also. One cannot wait for perfection before living off an installment: for in the long run, it may be said, we are all dead. The surrender of what seem to be principles by compromise is essential to the attainment of something, or the best would get in the way of the good.<sup>3</sup>

What is attempted here, then, is just to sketch the more fundamental portion of the parties' creeds and suggest some of the temporal items of the contemporary program, not to be exhaustive regarding the former nor by any means complete in the later—for neither, in the compass of this work, is possible, and sometimes the two aspects are inextricably mixed up.

<sup>2</sup> Cf. H. Finer, "Acton," *Journal of Politics*, September, 1948.

<sup>1</sup> Cf. M. Oakeshott, *Political and Social Doctrines of Contemporary Europe* (New York, 1947).

<sup>3</sup> Cf. Morley, *On Compromise* (London, 1917, originally published 1877), and *Notes on Politics and History* (London, 1914).

England has three important parties, Labour, Liberal, and Conservative, and a small struggling Communist party. The United States has two major parties, Republican and Democratic, and some minor parties, notably the Socialist party. Weimar Germany had seven principal parties, German National, German People's, Center Party, Democratic, Social Democratic, National Socialist, Communist, and many minor parties. France of the Third Republic had a confused mass of parties from which emerge, with a history, *Action Française*, *Fédération Républicaine*, *Alliance Démocratique*, *Radical-Socialistes*, *Républicain-Socialistes*, *Socialistes*, and *Communistes*. Their fate since World War II, as that of the German parties, will be discussed later (p. 328 and p. 347).

The countries differ, then, in the number of their parties, and we shall study the effect of this upon the effectiveness of government and civic behavior. As remarkable is the variation undergone by the fundamental themes issuing from man's political nature. We shall see how at the contact of minds of different types with different problems, diverse solutions have come into being, causing men to group themselves in ways peculiar to them to find new methods of contest and co-operation, to acquire unique oddities of demeanor and a language all their own, gibberish to their opponents and to foreign countries, but shining like a vision for themselves.

#### ENGLAND: CONSERVATIVE AND LIBERAL PARTIES

MODERN parties appeared first in England, for here the revolution which was almost everywhere the prelude to democratic government came earliest. Differences were brought out from the private council of the king to become public confrontations. In the constitutional conflicts of the seventeenth century arose the two camps, Tory and Whig; but we have learned enough to know that men do not fight merely for a constitution, but for a good which it is to authorize and defend. The forces behind those conflicts pervaded the

parties and caused their hostility, and down to our own day have continuously maintained a significant distinction between the parties which in time came to be called Conservative and Liberal.<sup>4</sup> Even as political feeling and thought produce variety of doctrine and behavior according to place, so do they according to time, and the history of Conservative and Liberal doctrines is necessarily one of digressions and deviations from their central character. But the central character is there, it does determine the solution in time and place, and, moreover, it is peculiar and clearly distinguishable. But we cannot follow out historic reactions: we can only attempt to penetrate to the sources. Early rivalry was not expressed as in the mass organizations of today, but in the leaders to whom different knots of men looked and in the rather vague general doctrines they held. The differences were recognizable if not constitutionalized, and the opposing faiths not seldom won away members from their previous allegiance.

*Conservatism.* The essence of conservatism is to be discovered in the social institutions of which it approves and its attitude to the idea of Progress. The social institutions favored by Conservatives are crown and national unity, church, a powerful governing class, and the freedom of private property from state interference. Each of these is desired both for itself, as an end, and also as a means to something else. The Crown is at once a glorious monument, a center of social life conferring distinction and prestige as one approaches it, a sign of the nation's age, a symbol and an instrument of political authority and unity, an evidence of the virtue of heredity, a link of empire. The depth of reverence for the Crown and the royal family is extraordinarily profound, and the fervor of the toast "The King, God bless him!" is so emphatic that, if the circumstances and the evidence did not demonstrate that the speaker was sincere, one would suspect caricature. This

<sup>4</sup> Cf. C. Hill, *Three Essays on the Revolution of 1640* (London, 1940), for an "economic" interpretation.

is an ultimate in human nature, issuing from reverence for the distinguished, especially when such distinction results from birth. Not that this is unprompted or comes from a vision of the ruler of the day. A long line of monarchs is dimly seen traversing centuries; each is clothed with qualities colossally virtuous; they are above the average, more even than humans. The response is awe and obeisance. Moreover, the Conservative has always applied and now applies, as we have reason to discuss in Part V on chiefs of state, all the contemporary means of publicity to creating the legend that the king, his wife, and children possess ideal virtues.

The fixation of the royal symbol has its uses: it enhances the sentiment of unity and order, and so tends to moderate economic and social grievance and to unite the nation in the world political struggle. Only a few romantic Conservatives like Churchill befriended Edward VIII; for the rest he was the principal civil servant of the nation, to preserve unifying social respectability or to go. Badly shaken in the crisis of 1936, the party nevertheless continued to hail the new king, of their making.

When such loyalty is attracted on a large scale, it is clear that proximity to the object thereof lends social prestige, and this again is valued tremendously by Tories, even attracting the more snobbish Americans, though their constitution was founded on a virile renunciation of kings and courts. Presentation at court and garden parties at the palace are satisfactions that reward many industrious, self-sacrificing home, foreign, and imperial officials. So, too, does a royal visit to slum neighborhoods have a conservative influence. The Crown, as the chief symbol of unity in nation and empire, is of immense importance in the Tory mind, sometimes on a par with Parliament. For, instinctively, the Conservative, though not wholly blind to utility for power, social status, and wealth, is enamored of national and imperial unity. There is a strong element of cooperativeness which, though its object may be restricted, is nevertheless stern

within its scope. This itself is founded upon an ultimately irrational, quite mystic, devotion to the national community, the community of race and history. Of this, obviously, a dynasty is an admirable symbol; it is, indeed, a part. It is understandable that though the origins of that dynasty may have been alien (William of Orange) and its accession bitterly contested by the forebears of the Conservatives of today, these facts should be ignored. At a certain point every practical thinker and leader becomes blind; and did he not do so, he would be irrevocably lost upon the sea of doubt. Rationally considered also, kingship is an efficient attraction for loyalty, for its hereditary origin impresses many and lends itself to the deliberate ascription of all those virtues to which most of us render homage. If not the king, it might be Hitler or Huey Long.

The Conservative sense of nationality is intense, and its most frequent judgment is that such and such a foreign country or sect is untrustworthy. It has faith in the superiority of the race to all other races, even its allies in war. It believes in the superiority of its own political institutions and traditions, and in the mission of the race to civilize other peoples, even against their will, and even with violence to the point of brutality. This feeling of nationality reveals itself in a glorification of all that makes for the defense or aggrandizement of the country; a grandeur considered rather in a material and warlike light than as artistic achievement. It shows itself unwilling to enter into foreign alliances and engagements except those absolutely necessary for the defense of what lies within the national boundaries. Its interpretation of obligations to the League of Nations and its looking to collective security was "strict," not "liberal." Empire is its very breath: for it betokens the potency of the race to extend its force and rule, and success gives the presumption of high spiritual value. Churchill's famous remark, that he had not become His Majesty's first minister to preside over the dissolution of the British Empire, was

no accident.<sup>5</sup> Yet even the dominions and colonies are not quite the homeland: not quite the county or the town, the parish or the church which mothered their body and soul and actually planned part of itself abroad and still rules them from the "homeland." Nothing quite reaches the proud level of the indigenous: these are God's own, destined to be right whether they act or forbear, are consistent or inconsistent, slay or give life, break the Commandments or keep them. They echo—perhaps they inspired—the famous toast of Commander Stephen Decatur, United States Navy: "Our country! In her intercourse with foreign nations may she be always right; but our country right or wrong!"

Nevertheless, *noblesse oblige*: the station requires sacrifices. National unity, which is the first foundation of national strength, must be preferred to other goods; one must submit to heavy taxation and not actually revolt; one must see the House of Lords brought low in esteem by a crowd of newfangled peers and simply bite the lip; one must see the imperial services surrendered to natives and others no better, and must bide one's time; from 1945 one must even submit, accepting the principle of Parliamentary sovereignty, to a detested Labour government's policy of nationalizing the basic industries—but the nation must not be rent asunder. Yes! The Crown itself must be constrained to the service of national unity, even when that means the forcible retention of an alien population within the state, as when the Crown was dangerously counseled to use its veto power to overcome the Home Rule Bill. For behind all is the desire for dominion; and to lose Ireland was a prelude to weakening the bonds of the Empire. Moreover, how dangerous to national existence to have a weak, perhaps a hostile, power so near the English coasts! It is right to divest others of self-government if it will cause you any danger. Now aliens are always a danger: they

have strange philosophies, necessarily issuing from their queer racial composition. It is not wrong to regard them with a tolerant and patronizing amiability when they are useful and amusing. After all, foreigners cannot be expected to know the English language or to understand English customs and "good form," but they can be useful and amusing. And if they are adequately kept in chains, or not taken really seriously, and if one is vigilant to detect and destroy the signs of corruption and treachery, then use may be made of them.

The recurrent motif of Conservative policy has been the need of a privileged governing class. They believe that there are people who have the skill and the right to govern independently of the popular will. They are suspicious of arithmetical majorities of the citizens *en masse*, and were in bygone times the advocates of "virtual" representation and the representation of "communities" rather than individual persons (See p. 222 ff.). To the last they defended the right of representation of the universities, as an offset against the dead level of mediocrity which the principle of "one man, one vote" would produce.<sup>6</sup> On their lips more than on any others is the assertion that there is something called the "real will" of the nation distinct from the transient will of the majority.<sup>7</sup> From the end of Elizabeth's reign they insisted that government is, of right, the possession of the king and, naturally, of the advisers he calls to his counsel. It is true that following Bolingbroke, many argued that the king was to be a patriot, a philanthropist, but this argument is remote from the doctrine of government by consent. It has, indeed, been used to bolster up the most nefarious tyrannies, as, of course, it is the standing argument to establish them.

When the Tories cried out for Parliamentary reform—as they often did in the seventeenth and eighteenth centuries—it was to spite their Whig rivals by excluding Dutchmen and Whigs from office by

<sup>5</sup> This attitude is well expressed in his subsequent speeches on Burmese independence. Cf. *Parliamentary Debates*, November 5, 1947, col. 1247 ff.

<sup>6</sup> Cf. p. 231 above.

<sup>7</sup> Cf. p. 418 below.

Place Bills, and, by shortening Parliaments, to appeal to the people more often, thus threatening the hold of the Whigs over Parliament and the Crown.<sup>8</sup> But when it came to any serious partition of political power with any body in the nation not sanctioned by long usage or controllable by wealth and influence, the matter was differently viewed. So fierce an opposition was engendered in 1832 that the country was all but wrecked, and, equally calamitous, the House of Lords all but swamped! Reason and utility challenged traditions long accepted and pleasant for those with hands upon the levers! A matchless and envied constitution was to be unbalanced! The mob was to be let in, under the name of Democracy, and it was quite clear from the experience of France that this meant disorder and a universal leveling! Property itself, no longer a stabilizing force, would be swept away! "I hold it as a maxim that every government which tends to separate property from constitutional power, must be liable to perpetual revolutions; for power will always seek property and find it." But the Tories have been swept along by the tide of time and necessity, and in 1867 they themselves forestalled the inevitable, trafficking time for popular gratitude. Yet they have followed, not led, the march towards universal suffrage, and with lamentations.<sup>9</sup> They, also, are the last to accept the doctrine of the member of Parliament as delegate,<sup>10</sup> especially if dependent on trade unions. They are the last to assert the possibility of an enlightened democracy, and insist more than any other party upon the ignorance of the electorate and its unfitness to govern, and more, the natural impossibility of its ever being able to govern, since this ability is,

apparently, derived from hereditary talent to be found only in the descendants of those who have so far enjoyed governing power.<sup>11</sup> This, again, leads back to a fundamental tenet—that there is virtue in heredity, more than a presumption, that he who is born of socially powerful and wealthy parents has qualities above the average, rightfully entitling him to govern others. They incline to independent executive leadership, as trustees for the people. Therefore, too, the inveterate defense of the House of Lords, and the belated search for utilitarian arguments in its defense in an age when everyday facts, as well as biological theory and historical research, have spread the view that the doctrine of "blue blood" is solemn nonsense.<sup>12</sup> Therefore, also, the disbelief in the right of self-government for other peoples, especially those within the Empire who are too weak to enforce their rights. Not that the Tory is always wrong in this view—but he insists on it with much greater emphasis as an inevitable and irremediable fact, than do Liberals and Socialists.

Other parts of this study have shown that in the nineteenth century, men became increasingly occupied with the pursuit of a high standard of living by new methods of production. Almost concurrently, equalitarian ideas became widespread, and social sensitiveness to the misery of the poor caused the commencement of a movement to establish a minimum of comfort, economic safety, security, education, and health. What was the Tory response? Two fundamentals were involved: private property and state interference.

Conservatives have been fierce defenders of private property, and this against the two main forms in which it can be practically attacked by the state—taxation and control of use. Conservative taxation theory has recognized the right

<sup>8</sup> Cf. G. S. Veitch, *Genesis of Parliamentary Reform* (London, 1913); Thomas B. Macaulay, *History of England* (London, collected works, 1866).

<sup>9</sup> So, too, in regard to women's suffrage and the age qualification for voting.

<sup>10</sup> Cf. G. Lowes Dickinson, *The Development of Parliament during the Nineteenth Century* (London, 1895), p. 77 ff.; cf. more recently, L. S. Amery, *Thoughts on the Constitution* (Oxford, 1947).

<sup>11</sup> E.g., Sir Henry Maine, *Popular Government* (London, 1886).

<sup>12</sup> Cf. A. F. Pollard, *The Evolution of Parliament*, 2nd edition (London, 1926), Chap. XV. Cf. also *Parliamentary Debates*, October 28, 1947, 715 ff.

of the state to take the least obtainable from private pockets, and has been the inveterate foe of direct taxation in all its forms, on income, land values, and legacies. It has attempted to create a circle which is sacredly beyond the reach of the state, for, as we have remarked, it will not have national unity and strength at any price. It has attempted to show, with some success, how the whole state suffers from the frustration of certain instincts, like acquisitiveness, enterprise, and family affection, by heavy taxation. It has ever been more friendly to indirect taxation, which tends to act degressively and to put the burden on those who least can bear it.

Further, Conservative taxation theory has denied the right of the state to limit the uses of private property.<sup>13</sup> It is true that a number of Tory philanthropists have devoted themselves to social reform<sup>14</sup>—early factory legislation being the first example of this, the promises of Tory democracy<sup>15</sup> its middle period, and comprehensive social insurance and pensions, the most recent tribute. All of these subjected property to state control. But for the most part they were conceded only after a period of electoral and Parliamentary agitation, not at all willingly from the conviction that a measure of justice might produce a better England, but out of a spirit of part surrender, part charity, when action had become inescapable. Even during World War II the Tories were obstinately unfriendly to social security and family allowances. In regard to the latter they preferred to offer school

meals to the child rather than money allowances to be spent by the parents. The theory is plain: no one has a right to demand these things; it is better not to give, for this will sap the springs of individual enterprise and virtue, but if anything must be given, let it be given of charity and not of right. In our own day the defense of private property, which was once a principal tenet of the Liberals, has become vested mainly in the Conservatives. They remain its adamant defenders. This attitude was most clearly seen at work in the problem of the coal industry, and in that of municipal and private industry generally. It was found that the coal industry could not attain anything like its full efficiency without reorganization which, by reducing competition and amalgamating the private property units of production and distribution, would avoid tremendous waste. Conservatives were the constant and vigorous defenders of the inertia of the coal owners:<sup>16</sup> the pits were private property, hence no one had the right to interfere with their management. In the crucial election of 1945, the Conservative policy promised little more than investigation of monopolies, while its general theme closely followed Hayek's *Road to Serfdom*.<sup>17</sup> It has always been the curb on the power of the trade unions and is the strongest opponent of the "closed shop."

The Tory, at one time state interventionist, is now the defender of *laissez faire* and the "individual." Most people who are well endowed with all that they want of wealth, education, and pleasure are inclined to insist that they are better left alone, and if they resist statutes restricting individual rights for themselves, the rights are available to the poor and the middle class if they want them. It cannot be denied that Toryism is embraced and propagated by such people. They are not

ungenerous in unprompted giving, that is, when they may do as they like to do; but state command is anathema. Hence the Tory hatred of officialdom, which it calls, and teaches others to call, bureaucracy: less competent than private people, usurpers, eaten up with routine, dangerous to liberties, extravagant.<sup>18</sup> Now all these things are true in their time and place; they are false as well. But to the Tory they are an almost unchallengeable creed because officials are the instruments of state activity. Is the state, then, to do nothing? The Tory does not hold this view. The state is to establish and not to disendow a church; it may call, by conscription even, for the lives of its citizens when danger threatens; it must protect property. Nowadays, it may by protective tariffs divert the whole natural course of industry and commerce in order that "national" ends may be pursued, nor must one let the condition of the people sink dangerously low. Nor ought one to give free play to disruptive tendencies within the state, like the trade-union movement, or permit the untrammelled advocacy of strange doctrines like communism. It was never the progressive party where education was concerned; and in the Education Act of 1944 it insisted on including religious teaching in the syllabus of the elementary schools.

In the elections of 1931 and 1935, the Conservative party, by astute electioneering tactics, managed to stave off a Labour government. It stayed in office to the end of World War II (from May, 1940 in coalition with Labour and Liberals), finally with Mr. Churchill, an unorthodox Conservative, as leader in place of Neville Chamberlain, who as a City man, whereas Mr. Churchill was an admirer of heroes rather than City men, was much more to the heart of the regular Tories.<sup>19</sup> In the election of 1945, its unpreparedness for

war, its preference of the "dole" and the "means test" to great public-relief works to combat unemployment, and its tolerance of Mussolini and even Hitler, caught up with it. Wartime sufferings had sharpened the memories of the British masses.<sup>20</sup> It had lagged behind the times in its stubborn refusal to see the vast ideological and social changes. In that election the party received some 8.66 million votes and obtained 189 seats. But Labour won 11.99 million votes and 393 seats. The Liberal Party won 2.23 million votes and 12 seats. The Communist Party won 103,000 votes and 2 seats.

It is difficult to conceive a policy which, within some decades even, might win back for the Conservatives enough votes to support a solid government. A fortunate and timely exploitation of errors made by the Labour government might succeed; but a considered series of measures satisfactory to a majority of the people—no! This view leaves out of the reckoning the more sensitive social conscience of the younger men of the party; but the Labour movement gives abundantly already what these, at most thirty or forty of the Conservative party, are prepared to offer.

Yet two things are important. The difference between the Labour and the Conservative votes is roughly 3 million. A large proportion of these are fluid votes, especially of the "white collar" middle-class groups. They could fairly easily go Conservative, once they had obtained economic security and the increased social services promised and provided by Labour. Many Liberals could go Conservative and carry with them the middle class, politically fickle as it is. Further, the Conservative party has declared its intention not to repeal the nationalization of the Bank of England, the coal mines, inland transport, electricity and gas, telecommunications and civil aviation;<sup>21</sup> and it is fully committed to the social security and social service measures already instituted whether before or since the Labour government.

<sup>18</sup> For a moderate view, Lord Eustace Percy, *Government in Transition* (London, 1934), Chap. V; for an even more liberal view, see Eyre and Spottiswoode (publishers), *Some Proposals for Constitutional Reform* (London, 1946), by "A Group of Conservatives."

<sup>19</sup> Cf. Keith Feiling, *Neville Chamberlain* (London, 1947).

<sup>20</sup> Cf. "Cato," *Guilty Men* (London, 1943), and "Gracchus," *Your M. P.* (London, 1944).

<sup>21</sup> Cf. *The Industrial Charter*, statement by the Conservative party, May, 1947.

*Liberalism.* The Liberal creed is more an amalgam than the Conservative. This is easily comprehensible, for the party of conservatism and defense is not, like the party of attack, compelled to seek new weapons and justification. But the very essence of Liberalism is openness to new experience and the vindication of free growth. It began in the religious struggles of the Reformation when the right of individual judgment and testimony in matters of faith was asserted, and developed soon into an assault upon the notions of a state Church and arbitrary government. These have remained fundamental propositions in the latest history of the party, its new and radical elements of the nineteenth century supporting them by personal character and interests. The machinery of government has been a constant interest of Liberal thinkers because therein they have seen the potentialities of freedom or despotism. Their quintessential preoccupation, the axiom of their existence, has been the ultimate and transcendent value of the individual personality. This stands out clearly in the careers of Gladstone, Asquith, and Lloyd George and, in the time of Locke and the Revolution was expressed in the doctrine that individuals freely make their government and assign to it only as much power as they think good. The theory was the product not of experience but of a wish, and that wish has unified and determined Liberal faith and policy.

The individual is prior in importance to the state. Only in the individual appear the principles of growth, of initiative, of creation, and the possibility of really assenting to its validity in other people. The ultimate goal of existence is to produce the greatest number of perfect individuals. The pattern is not to be dictated by those with coercive power, but freely accepted by discussion, reasoning, and judgment, for no one can say for certain whose truth is more valid, more beautiful, more vitalizing. The only hope, therefore, of discovery, lies in an equal opportunity for all to utter and evolve. Organized restriction, which prevents the destruction of this opportunity, must be reduced to a mini-

mum.<sup>22</sup> Its life breath is the impossibility of knowing all that is latent in human nature, the strong hope that what is there is good and will prove so, and the belief that without freedom nothing valuable can arise and that variety which proceeds from liberty is productive of a more beautiful world than any imposed uniformity. How has this generosity and optimism been applied in English politics by the party which is founded upon it?

It has not denied nationality and race—their beauty and the necessity of their preservation. Patriotism is the opportunity of service and the motive to free collaboration. It is a support and stimulus to the full growth of that peculiar difference which inheres in each special ethnic portion of the human race. It deserves defense and encouragement, for none can understand and promote it so well as those who naturally and freely share its biological and cultural heritage. It may even transcend the limits of its own frontiers, offering a guide to those whose condition or reason leads them to accept it. Thus it can have a mission, but not an imperialist mission. It may teach but not coerce. And if it should mistake the point where education becomes coercion, or find itself burdened by an Empire made by others, then its duty is to prepare the subjugated peoples for their freedom. Nor is it right to safeguard one's own civilization and national strength by "unduly" placing bonds upon those of other nations. But "unduly" has not been interpreted in as liberal a sense as the general tenets would lead one to expect; it has rarely received the interpretation placed upon it by the Conservatives, but it has not seldom approximated to it. It was Liberals like John Morley who prepared India for freedom and advocated Irish Home Rule.<sup>23</sup>

Human salvation may possibly come from some source other than ourselves. The civilization of others is to be respected. When they threaten our own in the ex-

<sup>22</sup> Cf. Chapter 5 on democracy; and also the attitude of mind expressed by William James, *Letters* (London, 1920), Vol. II, p. 100.

<sup>23</sup> Cf. John Morley, *Recollections* (London, 1917), Vol. II.

treme we may be forced to self-defense. That is a tragic necessity and not one over which we can rejoice; and it does not justify the piling up of armaments. On the contrary, for two reasons it requires that every effort be made to establish machinery for world understanding in order that all the acts of compromise and the mutual promise of toleration may be exhausted first. Those reasons are, *first*, that to kill each other is not to settle anything except that one side has caused the other to surrender, that the aftermath in terms of human habits of force and discipline is evil, and, *second*, that armaments are costly and every pound spent upon them by the state is a deprivation of individual liberty. Every means of international understanding and harmony is to be adopted; and this end is served as much by free trade, which avoids economic friction, as by the machinery of conciliation and international justice.

From the rise of the new industry and commerce, Whiggism received the impulse which caused it to become Liberal and sometimes Radical, and to overthrow the monopoly of political power of the landed interests by the passage of the Great Reform Bill and the reform of the municipalities. The economists and political scientists who provided that impulse were not, and perhaps could not be, sufficiently aware of the difficulties inherent in the full gospel of *laissez faire* applied to industry and commerce. But their influence made for free trade on the ground that thereby every country produced what it could most economically produce. In other matters they saddled their party with a doctrine which was destined to be its downfall at the turn of the twentieth century—that is, the doctrine that the “invisible hand” of competition would produce a harmony of economic interests, the greatest happiness of the greatest number being thus securable. The accession of strength from the commercial and industrial middle classes, schooled by a long experience of the glorious result (for them) of self-help, further emphasized the force of the dogma. Liberalism had not faced this difficulty: awful misery, and even death, is a

necessary incident of the state which is so designed as to let the strong win. We do not know what a really liberal civilization would produce in the long run, when the unsuccessful had been destroyed by the rest. It might be very fine, or not. No one knows; no one can guess; and even the greatest liberal philosopher, Kant, never made an attempt to find out. But we do know that men refuse to be trampled down, that onlookers are smitten with compassion, and the result is social control.

Bullied and preceded by the Tories, and harassed by voters, liberalism has become increasingly socialistic; once the promoter of competition, it has become its regulator. The scales must be equal to give the results which liberalism predicts. The good, in short, is to be obtained by regulation. The good, however, is still the greatest individual development of the greatest number, and the emphasis is still laid upon the fortune of the individual. This is the touchstone of all regulation; and the bureaucracy which is the necessary accompaniment of regulation must be popularly controlled, and liberalized by the nature of its education.

Property was once as sternly defended by the Liberal as by the Tory party; for each was the party of the propertied, and, if anything, the Tories were willing to recognize that property had some obligations, while the Liberals of the early nineteenth century believed that charity was demoralizing. Liberalism has, however, softened in this respect and, much more than the Tories, believes in the righteousness of considerable national expenditure for the provision of a minimum of amenities for the poor. Indeed, the years from 1906 to 1914 saw the introduction of important social legislation, the severe taxation of income and legacies, and the practical beginning of a policy of economic equality, social security (unemployment and health insurance, old age pensions, school meals), and housing. The Liberal government of 1906 gave strong status to the trade unions. It effected a major constitutional amendment by reducing the legislative power of the House of Lords. Sir William Beveridge,

author of the 1942 report on social security, is one of the leading members of the party. In the 1930's it produced plans for full employment. By 1945<sup>24</sup> the party came very close to Labour in all except "over-all planning," and it even favored nationalization of the coal industry—yet they disbelieve in the Conservative promise to curb monopoly, and would attempt regulation, failing which they would nationalize the industries.<sup>25</sup> This change is too late, however, for the party's survival as a significant force. It claims to be free of entanglements with vested interests, whereas the other parties are tied.

There is a clear and emphatic difference between the Tory and the Liberal creeds. Each stood and stands for a different view of human nature and its possibilities and the extent to which, and the reasons why, it should be free of control by the community. The desire to win victories for their general theories and office for themselves has sometimes caused them to carry out each other's policies, but this has never been done for long, or in any really serious matter.

*Sources of Conservative and Liberal Support.* Who have followed the Conservative and Liberal parties at different periods? The strength of the Tory party since the Reform Bill has always been in the rural counties and Scotland.<sup>26</sup> This does not mean that it has been badly supported elsewhere.<sup>27</sup> But the counties have been peculiarly Tory, for the land has been the source of both wealth and social prestige; it has bred rich men and attracted them. Further, the peculiar dependence of the church and the agricultural laborer upon the squire, strengthened by the laborer's ignorance and the belief that loss of employment would follow upon independent

voting, swept hundreds of thousands into the Conservative camp. Ignorance, charity, and snobbery cemented the workers in the country to the party of the rich men. Protection and the relief of local taxation were the gifts of the party to its supporters—and the maintenance of the Church of England. The issue of free trade once settled, the upper middle class of manufacturers steadily went over to the Tories, until nearly all the interests with property have moved into that party. Many were attracted, also, by imperialistic and aggressive foreign policy, for this appeals to many people, besides promising economic opportunities abroad, such as markets, concessions, and openings in foreign and colonial administration for sons who have been brought up on an income which they cannot earn in equal competition with others at home.

What interests now support the Conservatives?—banking, finance, investment, insurance, manufacturers, brewers, landlords generally and owners of large agricultural estates, the chief newspaper chains, the wealthier members of the professions, most high officials (especially those retired after imperial and military service), the middle and upper ranks of the Established Church, the shopkeeping groups, some working-class disgruntled voters not at ease with a trade unionism that includes the masses whether skilled or unskilled, and some who are authoritarian and imperialist. A substantial number of "white-collar" workers sway to and from the party, as each election raises hopes or reveals fears in the economic and foreign situation.

A vast number of people are attracted by the simple appeal of the stability and unity of the country. The suburbs—the home of superior clerks and the middling independent professional or business man, whose whole being is founded upon his inherited or acquired superiority—and the seaside resorts in the South are Conservative strongholds. They cannot admit the doctrine of equality. Thousands of working men and women are overruled by the splendor of the Crown, the history of the Union Jack, the deeds of the Navy. They

<sup>24</sup> Cf. Walter Layton, *A Fighting Faith* (London, 1945).

<sup>25</sup> Cf. Liberal Party Committee, *Monopoly* (London, 1945).

<sup>26</sup> Cf. the geographic distribution of the vote, given in the form of a map by *The Times* (London) immediately after each general election.

<sup>27</sup> Cf. H. Gosnell, *Why Europe Votes* (Chicago, 1930), p. 14 ff.; and Krehbiel, *Geographical Review*, December, 1916, pp. 419-32.

are nationalist without knowing why, because so many of us are proud without knowing why. Snobbery and charity win thousands. Others are disgruntled.

It should not be left out of account that the figures of voting themselves show that perhaps one third, perhaps even more, of the followers of Conservatism have no direct economic interest in the success of the party. But it is, of course, difficult to say how far the claim that employment and high wages are to be assured by Tariff protection brings followers. We cannot argue that the Tory party is a class party, if by class is meant a group founded entirely upon economic expectations. The Tory party is a spiritual party as well as an economic party: for a large part of its following genuinely seek satisfactions other than the mere increase or defense of their riches.

The Liberal party is, in the towns, followed by the middle- and lower-middle-class professional men and women—shopkeepers, small craftsmen, and the like—who are employers of labor on a small scale but who are not much affected by the economic policy of the Conservative party and cherish an affection for free trade common among those who are in fairly direct touch with their consumers. Many are Nonconformists. A working-class vote is presumable also, since the liberal and radical clubs still attract clerks and artisans who desire the schemes of social amelioration and economic renewal promoted by the Labour party, but are unwilling to leave the older party which pretends so much respect for individual freedom. A section of the people with much social generosity and considerable personal hope from state intervention think the Labour party dangerous and the Tories insensitive. The Liberal philosophy of self-reliance and toleration is a powerful attraction to those who have come, by experience or education, to realize the importance of human personality, freedom, and peace. Liberal strength is very evenly spread everywhere: it is most marked in Devon and Cornwall, Wales and Scotland (the rural areas), in the seaside resorts and pleasant towns, and in the big cities of the

Northeast and Northwest. To sum up, I should say that the Liberal following is now rather a residuary collection of elements which cannot find a comfortable home in either of the two extremes, much of its present strength coming from the traditionary allegiance once given to freedom and harmony as applied to the church, foreign affairs, tariffs, the franchise, and civil liberties. Until 1945 there was still a powerful attraction in Lloyd George, both as a fighting figure and as an advocate of the interests of the land.

The decline of the Liberal party may be seen from a comparison between its seats in the Commons in its heyday and in the last four elections: 1906—397; 1911—271; 1923—158; 1929—59; 1931—37; 1935—21; 1945—12. It is the passing of an age. The *humanitas* of the Liberal party in the twentieth century needs incarnation not in *laissez faire* but in positive governmental ways and means. The soul of the Liberal party has entered into the Labour party. It is also a tribute to the good parliamentary sense of the British electorate that it would not chance losing the effect of its votes by casting them for the Liberal party, whose powers (though it put up 300 candidates) were apparently insufficient to fulfill its promises; they mainly went Labour in 1945, and they might return and some be forced to the Conservatives by nationalization.

#### ENGLAND: LABOUR PARTY

THE Labour party was created as a challenge to both the old parties. Quite early in the nineteenth century, certain men had seen that to rely upon the existing parties for any great alleviation of the workers' condition was only to court disappointment. The Chartist movement was the first attempt of workingmen to lead workingmen to the assault upon political power. Why could they not leave the old parties to their own evolution, trusting to the competition of one party with another to give the workingman what they thought was his due? Manifestly all depends upon what was considered his due. The general theories of the older parties

may have been valuable for all men, but the groups who controlled them kept the values for themselves.

*Social Equality.* What, then, was to be done? The front and center of social inequality and demoralization lay in economic inequality. They who had the material means controlled society and many of its spiritual manifestations, for man is a greedy animal and will sell his noblest hopes, will even marry and breed, for money. All socialist thinkers have insisted upon the economic determination of social development, but Karl Marx, in a thesis which has been named the materialist conception of history, made it totally determinative of moral and political consciousness.

An important truth resides in this, but it is not the whole truth—certainly not for the British Labour party, for this has its vital roots in the Christian religious faith, stemming from the Nonconformist Chapels and the Christian Socialist <sup>28</sup> groups of the nineteenth century. Its bible is the Bible, not Karl Marx's *Das Kapital*. Parties seize upon broad and vital truths first, and acknowledge the reservations later. Economic inequality was the most powerful argument upon which to build a party, precisely because its truth hardly needed any demonstration to great masses of men, women, and children who dwelt in a society, the livelihood of which was made by that combination of machinery, factories, and management by private property owners, called the capitalist system. That system must be abolished, or closely and rigorously directed, for while it exists there can be no real equality, no real self-determination, no culture free from distortion, no collectively determined creation of anything valuable.

It was quite clear that mere discussion and argument would not persuade the leaders of the old parties into approval of this conception of history or politics, and into teaching their followers that change was desirable. At the most, the ugliest forms of misery were cured by health and

building regulations, which certainly cost money, and by occasional concessions of education, by the regulation of hours and conditions, by the payment of labor, and by the provision of public assistance. But all was done after a struggle, and not much, on socialist assumptions, even then. For the truth was that those who had a monopoly were not prepared to give it up until they were compelled. They could prove that they themselves had made some of their wealth, if not all of it, discounting the opportunities and the security maintained by the lawful behavior and the inventiveness of their fellow citizens. They could even show, with truth, that accumulation had vastly stimulated industrialization and economic development, and that this was of benefit to the whole country. They could persuade themselves that they were of a biologically superior stock, either by heredity, when the fortune had been inherited, or of themselves, when they had built their own fortunes; and their physical appearance and educated manner gave a semblance of truth to such a claim, for they ate more and better food. What! Give to other people's children opportunities as good as to their own? Allow their own children to go to publicly provided schools? Not pass to them those advantages of culture and cash that would protect them from the competition of the strong, and sometimes, if necessary, even from the full rigor of the law? It would be unnatural. So, indeed, it is: and every great reformer from the times of Plato and Christ has been dismayed by the granite crags of property and family, which, in other words, are nothing other than self-preservation and self-development. Few people will surrender these things out of rational reflection that the result may be a good society; society offers too few tangible securities for such a promise.

What we have so far described is the general attitude which caused socialist revolt against the existing state of society. But the organizers have not been able to lead vast bodies of men and women to an unqualified and immediate acceptance of all their tenets. For the Labour movement

<sup>28</sup> Cf. M. B. Reckitt, *Maurice to Temple* (London, 1917).

was born into an electorate already divided between the older parties, already organized in part to secure a measure of economic justice through its trade unions (waxing in strength in Britain since 1801<sup>29</sup>), surrounded and impressed by imperial obligations and foreign connections assumed in previous centuries by the old parties and permeated by the general culture which these had supported.

Stern and uncompromising as the faith is, it was born in a country profoundly habituated to parliamentarism, highly gifted for compromise. Its leaders firmly rejected reform by revolutionary methods. Its leaders were not proscribed or persecuted, as in Russia, into becoming an outlawed class, irreconcilable altogether to the state in which they lived. The traditions and institutions of English political life, created very largely by the liberal party and its radical wing, favored fair play and tolerance. The church and the universities felt their obligations for social justice; they gave life to the Workers' Educational Movement.

The system, in short, was not impervious to the socialist movement; this could live and thrive in the atmosphere on condition that it should sacrifice time. Its leaders and organization have been such that time was willingly sacrificed to avoid the tragic possibilities of destruction implied in revolutionary conflict. Neither the materialist fatalism of Marx nor the hatred that possessed Lenin vanquished their self-control. The essence of the movement's policy was to admit the continuance of the present state so long as the possibility of its ultimate attrition was granted and the necessary liberty allowed for progress toward its goal. From the first, the Labour movement recognized not only the inevitability of gradualness, but even its desirability. In English politicians and, it may be said, in the people as a whole, a strong sense has ever held sway that the material of the body upon which they are operating may be changed, wholly

transformed, but it must not be destroyed. It is a recognition that, however strong the claim for change, something is owed to one's opponents. Most Englishmen have something of Edmund Burke in them: "Magnanimity in politics is not seldom truest wisdom; and a great empire and little minds go ill together."

*Foundation of the Labour Party.* As a result, then, of many factors—parliamentary traditions, political liberty, a sense of obligation to the existing social, foreign, and imperial commitments, resolute and sane trade unions, and even infiltration of the Labour party by members bred in the traditions of other parties—the Labour movement pursued the most opportune path. This was the creation of a bloc of special Labour representatives in Parliament, to be supported by a federal arrangement among the trade unions and socialist societies like the Fabian Society and the Independent Labour party. Until 1918, then, the Labour party was an electoral organization composed of representatives of various societies, but not of individual members, without an official body of doctrine, although it naturally drew this from extraparty sources, and from the Independent Labour Party and the Fabians. Its main concern was entrance into Parliament, when the old parties could be made to deliver immediate concessions to the working classes in return for votes.

By 1918, the importance of the party had grown beyond this, and the aftermath of World War I seemed to offer golden opportunities of social reconstruction. The old party system was badly shaken, if not destroyed, and the war had exposed all the defects of capitalist civilization. The party reformed its composition and sought to state its aims in *Labour and the New Social Order*.<sup>30</sup> The reform of its composition was shown essentially in its appeal to workers "by hand and brain," and by its admission of individual membership. It established its own research and propagandist organizations, not relying as formerly upon the work done in these directions by the constituent socialist bodies.

<sup>29</sup> Cf. S. and B. Webb, *History of Trade Unionism* (new edition, London, 1920), and *Industrial Democracy* (new edition, London, 1920).

<sup>30</sup> Published in 1918.

However, the membership and weight of the party is still largely composed of the trade unions. In this respect we observe a difference from the Continental and American socialist parties. On the Continent there is a close connection, because it is a frequent, though not a constant, occurrence that a trade unionist is a member of the Socialist party; but the parties are composed of individual membership organized by local committees mounding in a pyramid to the central conference and executive. A member enters as a socialist, and not as a trade unionist: it is always an act of faith, not, as often in England, a perfunctory incident of trade-union membership. This has an important effect upon the policy of the parties: for, where socialism leads the trade unions, only parliamentary exigencies limit the scope of socialistic doctrine and the speed of its realization; while when, as in England, trade-union money and interests in counsel are so powerful, their own policy and prejudices must be respected and their membership not shocked. This, however, does not prevent the British Parliamentary Labour leaders and the wise men of the party, from stating their aims in clear and uncompromising terms. Thus the doctrinal development during the interwar years and during World War II heavily socialized the thinking of trade unionists.

The marked contrast between England and the Continent is that in England a comprehensive and consistent sociology has never been made the basis of all minor deductions of policy and tactics, and, in especial, the blithe ignorance of the Marxian theory or its good-humored pooh-poohing. Marx was indigenous to Germany, and his and Engels' works appeared in the German language decades before they became accessible to English readers. Perhaps the Germans are especially fond of a theoretical justification of their actions. But English politicians, as the English people generally, can always justify what they want in the process of obtaining it, or afterwards. The English politician is less a theorist than a man of action, acting with the few materials necessary for the burden of the day, and no more. When,

finally, Marx was translated, his theories mastered and set on their way, the Labour party had come under the leadership of those versed in two or three decades of Parliamentary opportunism, or those who were capable of a sound refutation of the gospel. The men who have fallen under the domination of Marx are found outside the Labour party, among the small number of communists.

The Labour aims, then, consist of the fusion of two tendencies: the radical tendency entering from the Liberal party (the fundamentals of democratic government and civil liberties), and the socialist tendency. It would not be, at this moment, too misleading to say that the tenets of the Labour party consist of sincere liberalism, with the addition of very strong communal safeguards against the waste and miseries incidental to laissez faire in the economic sphere.<sup>31</sup>

*Composition of the Labour Party.* The Labour party is the offspring of the trade-union movement and a variety of "socialist" tendencies and groupings, some with an origin centuries ago. But at the end of the nineteenth and the beginning of the twentieth, the trade unions made the party. What is remarkable about it today is the extent to which the trade-union leadership and following have become pervaded with a sense of state which can be characterized as "democratic-socialist": that is, neither a mere class outlook nor the blinkered vision of any single group of workers, but a comprehensive attitude to all objects of state life, international as well as domestic. It is the result of a dual process of political education, education by and within the trade unions themselves, typified by the workmen's colleges, which, in turn, were educated as well as supplemented by the non-trade-union organization, the Fabian Society, founded in the 1880's by the early socialists of the Independent Labour Party and made nation-wide by such men as the Scotsman, Keir Hardie.

<sup>31</sup> See *The Old Order and the New Society* (1942); and the short pamphlet *Let Us Face the Future* (April, 1945), which contains, in effect, the policy for the election.

Today the party is a full fusion of affiliated bodies—that is, mainly the trade unions—and individual members who have joined the local branches of the party. The National Executive Committee consists of 25 members: 12 trade unionists, 7 members of the constituency organizations, 1 member from the cooperative societies, and 5 women members, of whom 3 are from the trade unions and 2 from the constituency organizations. (In addition, the leader of the party, in opposition or prime minister, is a member *ex officio*.) The respective groups are elected each year by their own sections at the annual conference of the party, for the year, and are the chief executive authority of the party for that year. The separate nomination and election for each of the groups was instituted in 1937, up to which time the conference as a whole had nominated and elected, and therefore had allowed the overwhelmingly heavy vote of the trade unions to decide the non-trade-unionist representation. The party program is decided by the conference by two-thirds vote: but the conference is managed by the executive which receives and speaks on the resolutions submitted by its constituent bodies three months in advance.

In 1947, 73 trade unions provided a Labour party membership of 4,386,074; 649 constituency parties provided 608,487; 6 socialist and cooperative societies provided 45,738 members. The total membership was 5,040,299. Representation at the party conference is arranged so that each affiliated trade union has one delegate for each 5000 members or part thereof on whom affiliation fees were paid; so also for the constituency labour parties. They vote at the conference by casting one "card" for each 1000 members or part thereof for whom affiliation fees were paid.

Thus six sevenths of the party membership is trade-union membership. Taking the statement of receipts for the year 1947 the total was in round figures £315,000. To this the trade unions contributed in affiliation fees just over £96,000, and another £55,000 as party development dona-

tions and also, say, £30,000 for election purposes: in all £181,000, or about four sevenths of the total receipts.

The trade-union weight of voting and finance in the party is overwhelming. Therefore, the democratic sense, the drive for and loyalty to a planned, equalitarian, and productive economy, as well as a tenacious hold on civil liberties, are to be sought in the direct, original contribution of the trade-union members; but they have been enhanced, and the sense of obligation to the whole state is fostered by, the intelligentsia of the constituency Labour parties.

In the election of 1945, the Labour party promised to nationalize the coal mines, the iron and steel industry, fuel and power, transport, the Bank of England and the control of investment, to give comprehensive social security, to ensure full employment, to socialize medicine, to advance generous schemes of housing and education, and, where monopolies were otherwise unmanageable, to take them over. That program was rapidly and energetically fulfilled in the most reformatory five years since the passage of the Great Reform Bill in 1832.

*Followers of the Labour Party.* Who follows and composes the party? It is not all of the proletariat. For millions must vote Conservative and Liberal in the towns, and large numbers in the country, considering that the electorate consists of some 32 million and that the "gainfully occupied population" numbers about 20 million. But it is substantially a proletarian body: that is, of wage earners in industry and agriculture. It also attracts the subordinate and middle ranks of the civil service, because it is favorable to state activity and bureaucracy and because it declares those general principles of cooperation and social justice which a civil servant already spends his life in applying, and to which he is morally, by temperament and profession, a subscriber. Since World War I, and even more since World War II, an appreciable number of higher civil servants are included. Then its generous hopes of a perfectible society attracts many members of both wealthy and middle-class

## THE CHARACTER AND POLICIES OF MODERN PARTIES

families, with whom social justice is a strong passion, and who are the more firmly wedded to the party because they, as leaders, have the leisure and wealth to pursue and study argument, and even propaganda, without being required to make immediate and total sacrifice. The lower middle-classes, the white-collar groups, have found attractive the policy of equality of opportunity, especially in education and the chance of promotion in the public services, as well as social security. Agricultural laborers have also been pried loose from deference to the farmer and landlord.

A heterogeneous mass of followers has been collected by a number of special appeals: teachers by the emphasis placed upon education; pacifists by that on peace. Queer social misfits take refuge with the newer and hitherto pioneer party which contains so many eminent critics of life. Young men from the universities come for the thrill of social reform, and the ease with which office can be obtained. Many others enter simply because they think that "something ought to be done," and the older parties seem to have done so little.<sup>32</sup> The poorer white-collar workers sway to and fro, perhaps a million of them in 1945 to the party. Great strength comes from the 20 million people served by the Consumers' Cooperative Movement.

The England for which the Labour party appeals and works is not an England which would be of benefit to the wage-earning class only. There are many other ideals in its philosophy attractive to the small salary-earning groups, and others also. Indeed, it is uncertain whether the working class would follow with such force and number if the full social vision of such men as Owen, Morris, Webb, Shaw, or Bertrand Russell already came

within the range of practical politics. It is because the party asserts that it stands for these things, and because its present fortunes and activity are at least the promise of a morally and esthetically better world, that many follow it who have no direct economic interest in its success. Numbers of Church of England parsons and curates are Labour, since they believe that the ethics of the New Testament receive more heed in that party than in others. Quakers have long assisted its chief counsels as well as voted for it. Nonconformity generally is tending rapidly away from Liberal to Labour. Roman Catholicism supports candidates according to the impression and promises they make locally: it tends, at present, to help the Labour party in the poor districts since its congregations are in need of succor,<sup>33</sup> but suspicions of atheism and birth control militate against a complete adherence. Poor Jews are generally friendly to the most "progressive" party, not only of economic interest, but because such parties have treated aliens generously and have not insisted upon serious obstacles to their citizenship. But middle-class and richer Jews of the second generation tend toward Conservatism, though Liberalism is the political home of many of these. The Jew has been particularly interested in, and affected by, the politics of the nation in which he is domiciled, but this has been more emphatic, especially for the socialist movement, in Germany than elsewhere (a subject we shall touch upon, p. 352 in the discussion of German parties). In England ease of assimilation has reduced the hostility and offensive-defensiveness of the Jew to the vanishing-point. There is less anti-Semitism, because there is less social cowardice, in England than in any other country in the world.

*The Future of Democratic Socialism. A*

<sup>32</sup> The members of the cooperative societies (that is, the female ranks of the proletariat, regarded from a consumer's standpoint) and the employees also furnish a good contingent of voters and party workers. Cf. F. Hall, *Handbook for Members of Co-operative Committees*, 3rd edition (Manchester, 1928). There are formal agreements between the party and the cooperative movement allowing the latter a say in candidatures.

<sup>33</sup> Cf. the Papal Encyclical of 1931, *Forty Years Have Passed*, and its fulmination against socialists. Yet the Labour party of Great Britain was treated more tolerantly than the parties of the Continent. For the development of the British Labour party see G. D. H. Cole, *The British People 1746-1946* (New York, 1947), and *History of the Labour Party* (London, 1948).

few further observations on the British Labour party are necessary. The party grew to the strength necessary to take power in twenty-three years, counting from its obtaining 63,000 votes in 1900, 500,000 in 1910, and 4,300,000 in 1923, the point where it first took office. Its increase in votes was steady since 1923 (with the exception of 1931, when some of its members followed Ramsay MacDonald, its then leader, to join the Conservatives and the Liberals in a "National" government). This tremendous achievement occurred in spite of the fact that all the media of mass opinion—press, periodicals, films, space for placarding, and so forth—were in the hands of the other parties, excepting for the one big Labour paper, the *Daily Herald*, the property of the trade unions but run for them by popular commercial publishers. Hard personal work by thousands of workers who spread the principles of the party in the homes of the workers, throughout the trade-union movement, into the cooperative societies, and from door to door, made this victory possible.

The crucial question still to be answered is whether the masses will be happy with the policy they have voted for when they see its concrete provisions at work, and when, above all, the equality they have asked for, or rather the degree of it they have asked, and the subordination and hard work essential to provide the social benefits they want, must be paid for by their own efforts. A modern government cannot operate at the dictates of the producers' associations which are most concerned in the particular nationalized industry which takes in their work and gives out their wages. The government is at the top to satisfy the nation as a whole. That attitude has already been assumed, in fact and in doctrine, by the Labour government. Will the workers be happier and at least as productive in such a régime compared with the régime of private businessmen? It already seems possible; but we have yet to see. Will the workers observe the sense of responsibility declared (in 1946) as especially necessary by Sir Walter Citrine, General Secretary of the Trades

Union Congress? Above all, will they observe it by industriousness and by self-restraint in use of the right to strike? This is the testing time and place of problems which have hitherto been "solved" either by despotism, as in Nazi Germany or in Soviet Russia, or only by hypothetical thinking. It will throw light on the adequacy of elementary and secondary education, and the formation of the public mind by the political parties, to the intricate new tasks of a body of voters who are at once the owners of the means of production and yet also workers, producers, with responsibilities to the whole community of consumers.

After some four years of the first Labour government with a substantial majority, two things were clear. (1) The party and the trade unions firmly maintained the right to strike, yet the latter had resolved to use their power to strike only with the utmost responsibility.<sup>34</sup> (2) In the nationalized industries, the producers had been given the right to enter joint management-workers councils for consultation and negotiations, but *not* for the conduct of the industry, except indirectly; and claims to representation on the directorates of the industries had been decisively rejected, though experience in the organization of workers was set down in the nationalization statutes as a qualification for appointment.<sup>35</sup>

The advent to power of the Labour party has been possible by the loyalty to democratic principles of the other parties. They have accepted the rules of the constitutional game. The Conservatives, it is true, have now and again tried to defer the day of Labour victory by "stunts," and have several times succeeded. Nevertheless, not the slightest doubt ever existed that when the time came they would behave as a normal parliamentary and constitutional opposition. Apart from

<sup>34</sup> Cf. Chap. 35 below.

<sup>35</sup> Cf. R. Dahl, "Workers' Control of Industry and the British Labour Party," *American Political Science Review* (October, 1947). Cf. Herman Finer, *International Review* (March and April 1947), "British Planning and Nationalization."

## THE CHARACTER AND POLICIES OF MODERN PARTIES

the Communist party, hardly more than one confused person affected to preach that Conservatives would sabotage the socialist efforts of a Labour government.<sup>36</sup>

The Labour party puts democracy above socialism. Indeed, it seeks socialism only by the democratic path: that is, by persuasion of a majority by free and open electoral debate. This is the point at which it parts most sternly from the Communist party of Great Britain and parties of this same name elsewhere. The social content of its program is roughly the same, though the Labour party would not socialize for the sake of socialization, and though its followers would accept the great change only on condition of the retention of their civil liberties, including the right to strike. But above all, the difference is their belief in the right and the ability of the citizen, that is the masses, to decide for themselves the extent and pace and conditions of socialization and the government which must continuously implement it. They do not believe, as Communists do, in the right of a minority of highly conscious leaders to decide the fate of the majority and force it on them on Lenin's and Stalin's plea that the trade unionist cannot, as they can, see what is for the good of society, or that the masses are incapable of independent political thinking.<sup>37</sup> This is the decisive cleavage between Labour and Communism: and this is what poisons the hatred of the Soviet

rulers for Labour's policy. The Labour government may give all the benefit of Communist policy, more efficiently and as far as the path of liberal persuasion allows, at which point it will stop. What the public can welcome of its own volition is what the government will give. This is why the Labour party has again and again, and in 1936 decisively, refused to accept the affiliation of the Communist party as a party:<sup>38</sup> the Communist party denies the rectitude of loyalty, obligation, a single standard of morality for all, and democratic self-government. Labour's small Left representation is not Communist, but idealist, in the sense that it wishes to make Britain self-sacrificial in foreign affairs at a far quicker pace than the economy—that is, the standard of living of the wage-earning masses—can tolerate in one dose in a highly competitive world.

### FRANCE

For the United States, going back to the Civil War, there is no difficulty at all in making a table of electoral statistics, to characterize both justly and clearly the rise and fall of the fortunes of political parties. There is hardly any difficulty about English conditions for the last three quarters of a century, although the Irish and the free-trade problems cause certain complications. A little more difficulty is met in regard to Germany because the parties were many and fissiparous.

But for France most difficulty plagues us, for effective, nation-wide party organization was existent only in three parties, namely the Radical Socialists, the Socialists,<sup>39</sup> and the Communists, until the addition of the *Mouvement Républicain Populaire*<sup>40</sup> in 1945. Of these parties, the Communists and even more so, the M.R.P.,

<sup>36</sup> On this subject see E. M. Durbin, *The Politics of Democratic Socialism* (London, 1939).

<sup>37</sup> For example, Sir Stafford Cripps (then Minister of Economic Affairs), *Debates* (October 23, 1947). "It is not merely our economic survival with which we are concerned; it is something even more. We are in every sense fighting the battle of democracy as much as we were during the war. Our struggle is to maintain the decent standards and the freedom that our ever-expanding democratic experience has taught us, in circumstances in which it is only too easy for more violent and totalitarian methods to prevail. If our economy and that of Europe should collapse, our democracy will in all probability collapse too, and will disappear, and with it will go the last stronghold of Western democratic civilization in Europe."

<sup>38</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), p. 214, for Herbert Morrison's speech of repudiation.

<sup>39</sup> This is the S.F.I.O. (*Section Française de l'Internationale Ouvrière*) but we shall normally use "Socialist," for simplicity's sake.

<sup>40</sup> Henceforth referred to as M.R.P.

## FRANCE

are of recent parliamentary advent, the Socialists have had a checkered history, and the Radical Socialists do not and cannot thoroughly enforce discipline, and moreover, began to organize only at the beginning of the twentieth century. Gaullist groupings have been disciplined (R.P.F. and U.N.R.), but the former collapsed in 1952-53. From election to election the names of the organizing groups and committees used to change. From constituency to constituency the labels of the candidates varied, though they may have been sponsored by the same Parisian headquarters and later met in the same group in the chamber. From election to election, the names and membership of the campaign *blocs* and *cartels*, the *unions*, the *fédérations*, and the *alliances* were transformed. From parliament to parliament the groups of the chamber freely changed their names. No wonder that the official electoral statistics have had an ever-varied classification since 1871. Moreover, it is difficult to compare the parties of before 1871 with those after. Not until 1914 was there a regular official grouping, when a rule of the Chamber of Deputies required the inscription of names in groups for representation on the parliamentary commissions.

As important as any of these factors is the rapid growth and change of French groups since 1900. At every election—

1902, 1906, 1910, and so on, until 1936—new groups appeared. So also since World War II. No one can tell beforehand exactly which groups will cooperate in the government or the opposition, and certainly not the terms of cooperation or the occasion of secession. For though they may run in loose harness for the purpose of defeating an opposition bloc—as did the *Cartel des Gauches* in 1924, or the *Front Populaire* in 1936, or the *Front Républicain* in 1956—the component groups are independent, and proud of their independence. Nor is that all: in every chamber a number of members are independent of any regular grouping. The characterization of French parties is therefore difficult, and one is almost compelled to choose between the simple dichotomy of Conservatives and Liberals, or, what is very frequent, Right, Center, and Left, and the bewildering task of comparing a dozen programs and histories whose shades of difference may be the product only of personal animosities or loyalties and one or two differences of principles among a score. Let us attempt a combination of these methods and always remember the phrase of a critic: "The members of parliament, in their general forgetfulness of principles, have become as subtle as cardinals and the scribes and teachers of the Talmud."

One can construct a rough table of the

TABLE 2—FRENCH ELECTIONS: 1936

<i>Party</i>	<i>Number of Seats</i>	<i>Voter in Millions</i>
<i>Right</i>

fortune of parties since 1871: they pass from Right to Left. If we take the electoral results of 1936, the last pre-World War II election, we obtain the first general ground of distinction. The figures are shown in Table 2.

*Right, Center, and Left Distinctions.*

(1) The groups in the Center and Right almost always cooperated as socially and economically conservative, though the Left-Center groups sometimes split. Left of the Center groups are the socialistically progressive, but with very strong reservations for the Radical-Socialists. Further discrimination is necessary within the Left:

(2) All the Left groups toward the Center are normally in agreement upon governmental authority and efficiency, private property, anti-Sovietism and severe anti-Germanism; the most sincere representative is Louis Marin. Within the Left there is a very serious Right-Left cleavage, for the Socialists look to rather strict and wide governmental authority while the Communists are far more extreme in this respect. Both would oppose a bourgeois government, at the present stage of social development, which attempted to use the strong hand for capitalistic purposes. Until 1936 the Socialists were not prepared to enter a government but, granted concessions, used to vote for a coalition of Left parties, which they abandoned on the first signs of forceful capitalism. The Communists would not enter a government, though they electorally and parliamentarily supported the Blum Popular Front government of 1936. After World War II they changed tactics, as we shall see.

(3) Then the main wings differ as to the parliamentary system: the extreme Right has looked even to a dictatorship (some members are monarchist), and always to the strengthening of the permanent executive power, i.e., the President. It favors the idea of the separation of powers to restrain the assemblies and increase the unchallengeable stability of the executive (General de Gaulle's doctrines on this idea bring him a large following on the Right).

The Right bore the dreadful legacy of hatred of the principles of 1789—Liberty,

Equality, and Fraternity—and carried into a new age the conservatism of the French royal dynasty, in combination with the royalism and nationalism of the *Action Française* and Charles Maurras.<sup>41</sup> Its young group, the *Camelots du Roi*, mixed with the anti-Communist, anti-Left, anti-Bolshevik movements. Others who found a spiritual home with the Right, afraid of the social tendencies of democracy, became admirers of Mussolini and Hitler and even accepted subsidies from foreign fascist and nazi sources. A fascist movement under Colonel de la Rocque stirred an uproar in the streets until the bloody climax of riot before the Chamber of Deputies on February 6, 1934, gladly risking the subversion of the Third Republic.

As the Popular Front election of 1936 gave an overwhelming victory to the Left, the extreme Right veered in their foreign policy toward Hitler and Mussolini and against the U.S.S.R. This intensified the division of France and the passion of the conservatism which, suspended throughout the century and almost victorious in the Constitutional Assembly of 1871, now surged forward with a nation-killing rancor. It had been defeated in its support of the army against the Jew Dreyfus, when for its own pride and power it had been perfectly ready to condone and assist an act of corrupt injustice. Closely allied with the Roman Catholic Church, it had been affronted and wounded at the end of the nineteenth century by the campaign against clericalism, so victorious in the early years of the twentieth. It preferred Hitler's victory to democratic socialism in France. It constituted the main encouragement of Pétain, and the main support of his Vichy régime when the German victory precipitated capitulation and the overthrow of the constitution of the Third Republic. It preferred the motto: Work, Family, Fatherland.

From these groups (sometimes stigma-

<sup>41</sup> Cf. D. W. Brogan, *Development of Modern France, 1870-1939* (London, 1940); and *French Personalities and Problems* (London, 1946), chapters on Maurras, Bainville, and nationalism. Also cf. R. H. Soltau, *French Political Thought in the XIX Century* (London, 1931).

tized as *Black France*) leftward, through all shades of difference, the groups become more and more republican. In fact, if one goes back to the essential controversies of before 1871, groups even as far as the *Républicains de Gauche* must be included in the republican, anti-Monarchist camp. Yet still, on the extreme Left, appear the Communists, many of whom at least speak in terms of potential dictatorship, and foment extraparlimentary violence to cow Assembly and cabinet. Other elements disturb the simple division into Right and Left. Such are nationalism and internationalism, and Catholicism and secularism.

(4) From the extreme Right to the Radical Socialists there is a strong—at the extreme, a ferocious—nationalism. But in the middle of the Right this was, on the proper occasions, tempered by fascist ultramontanist; while, at the Radical Socialists, a rational recognition of the propriety of international peace—particularly a European Union, and therefore of reciprocal abnegation—begins to operate and finds its fullest expression in the internationalism of Socialists and Communists. The last-named, formerly affiliated with the Comintern, cherish a loyalty to the U.S.S.R. that has proved dangerous to the internal welfare and external security of France.

France, like Germany, is bound to have as a permanent rallying cry of the Right, and as a general permeation of all parties, the question of security. She has awkward frontiers, she has long, painful memories, she loves her own culture and people, and she is placed between other cultures and other peoples. Even as Englishmen are united regarding sea power, so are all French groups obliged to temper their liberalism by military defense. At any moment the "national" issue may take seeming and so-called republicans and radicals over into the camp of the Right and help either to support a "national" bloc which is also antirepublican and antiliberal, or to cause the downfall of a ministry founded on the Left groups which pursues a liberal policy at home and (alas!) abroad also. For economy's

sake a Rightist government may reduce military security, as that headed by Tardieu did in 1934; faced with military danger, the Socialists were split into militant and pacifist wings down beyond the defeat of 1940.

(5) Nor are the fires of religious passion extinguished. France still has a "religious" question to complicate her politics, unlike Britain, but like the United States in spite of the latter's rationalist constitution. The rational spirit of the eighteenth century sapped the foundations of the Catholic Church, the *societas perfecta*, the state by the side of the state, built on self-respect, general acceptance, and privileges established in the concordat centuries old. If liberalism had never come into the world outside the Church, the Church itself would have become (in part at least) liberal. But since liberalism grew up outside it, it was forced to react as an abnormally conservative institution and so vindicate tradition and the existing social order more than they deserved, and more perhaps than all the clergy in their heart of hearts believed that they deserved.<sup>42</sup> Liberals, then, were bound to think of the Catholic Church as the enemy of political and social progress; and, indeed, the life of the Church was bound up with the monarchy with whom it had made the concordat, and who, by the acceptance of religious ceremonies at the coronation and other state occasions, gave the Church an adventitious claim to public consideration and authority.

The Constituent Assembly dispossessed the Church and with violence incorporated it by making the clergy into civil-state functionaries paid by the state. But later the Convention and the Directory carried the secularization of the state to its logical conclusion and separated Church and state completely, partly from rationalism and partly because the Church was opposed to republicanism. Napoleon re-established the régime of the Concordat: the Catholic Church was once more recognized as an independent power, and the

<sup>42</sup> Cf. J. M. Thompson, *The French Revolution* (Oxford, 1944), Chap. VIII.

clergy were paid out of the public treasury. Thenceforward, the Catholic Church was the established church of France. It was found always on the side of the monarchy and the monarchists; it was the permanent opponent of social and political liberalism.

The republican parties and sects regarded it a double enemy. *First*, it was an obstacle to the lay state in its doctrines and organization: a foe, that is, of the state, which alone has authority and comprehends equally all citizens without intervening associations, and which permits to all faiths equal freedom and privileges. *Second*, it was a powerful political obstacle to their programs of reform, with sanctions more compelling and less rational than those at the disposal of rationalists.<sup>43</sup> When Gambetta surveyed the causes of republican failures at elections, he saw that the *curé* in the villages had the power to nullify republican efforts: hence the cry "*Le cléricalisme, voilà l'ennemi!*" The republican form of government was itself outlawed by the Catholics until the *ralliement* of 1892, when Pope Leo XIII declared in his encyclical that to accept the powers that be was not only permissible but necessary. To separate state and church became, however, one of the urgent portions of the policy of the republican groups: i.e., to abolish the Concordat, to make the Church, equal with other churches, a self-governing association without official connection with the government. The Dreyfus affair, in which the Church and Catholic generals were the ferocious supporters of the army and hostile to revision and justice, added zest to the pursuit of this object.<sup>44</sup>

Moreover, *congregations*, which had been expelled by the Revolution, had established themselves again, and the monks had been particularly the enemies of the impious republican state; and both these and the regular clergy intervened in elections. Under Waldeck-Rousseau a "*bloc républicain*" of all the Left groups, in-

cluding the Socialists, was founded in 1899 to defend the Republic against the nationalists, militarists, and their Catholic supporters. Waldeck-Rousseau, himself a moderate radical, created this bloc for a defensive purpose, but could maintain it only by conceding social reforms to the more progressive groups. His ministry proceeded further to make the Law on Associations of 1901, which required previous authorization for the establishment of *congregations*. The radical Left pressed more extreme amendments, and the *congregations* were subjected to supervision.<sup>45</sup>

The contest was continued by the bloc under Emile Combes, which issued from the elections of 1902 somewhat radicalized. Relations between the government and the Holy See became exceedingly strained. The Socialists were, however, in 1904 detached by the noncooperation decision of the Amsterdam International Socialist Congress. The anti-Church policy was too severe for moderate republicans, and little by little they moved into opposition. Combes' ministry fell in January, 1905. The Law on the Separation of Church and State was passed some months later. The elections of 1906 were fought on the question of the execution of the law, and the groups fell into two blocs, the republican groups of radical tendency winning a remarkable victory. The radical bloc supported Clemenceau for nearly three years, while the law was executed, and then fell a victim to various disorders, postal strikes, and destructive strife with the extreme radicals and socialists. Church and state were separated. The wounds of the battle still smarted when World War II broke out. The strength of the Church, thus separated, had little diminished, for, short of complete suppression, its political influence must always operate, especially in the rural districts—and France is still far more of a rural than an urban society. The state is secular, but society is markedly religious and its religion is Catholic. While clerical influence prevailed, politics were not fully secularized.

<sup>43</sup> Cf. Georges Weill, *Histoire du Parti Républicain en France, 1814-70* (Paris, 1900).

<sup>44</sup> Cf. J. Reinach, *Histoire de l'Affaire Dreyfus* (Paris, 1901-11), 6 vols.

<sup>45</sup> A. Débidour, *l'Eglise Catholique et l'Etat, 1870-1906* (Paris, 1906), Vol. II, p. 288 ff.

The parties of the Left were exceedingly sensitive to any movement, be it in education or otherwise, which might reintroduce the official influence of the Church.<sup>46</sup> Where that influence, which is generally socially and economically conservative, was desired, the Church was applauded by some parties—e.g., when the Church was opposed to votes for women (most political parties considered women to be peculiarly liable to clerical influence) or to egalitarian reforms. A numerous peasantry makes this possible, and the tendency is always in favor of conservatism; but a poor urban working class is also of its rank and file.

Although the Church had put the *Action Française* on the Index in 1926 and had disavowed its extreme antirepublican tenets (and it disliked its egoistic secularism), the effect of this on France's downfall was strong. The leaders of the Right Catholic nationalist groups were saturated with it; its essentially authoritarian doctrines produced a sharp and angry cleavage between them and the other political parties. They were constantly looking for revenge, for the day of church, army, and aristocracy—*les notables*—was inglorious and ending. The generals and admirals came of this stratum, Pétain and Weygand among them. The educational policy of Vichy attempted to reverse the laicization of the schools, not with complete success. Its "corporative" policy was in line with fascist development, and this had enough support, doctrinal and otherwise, of the Church, to produce unwholesome associations. Freemasons and Jews were purged from the Vichy civil service; not Catholics, as such. The Vatican did not denounce Pétain: it was, indeed, not unkind to him.

The Catholic trade unions and many individual antimonarchist, anti-conservative Catholics, and some lower clergy

among them, resisted the Vichy administration and joined the resistance. The upper and older hierarchy of the Church was in bad favor with large masses of population. Its reputation was barely saved by the socially progressive Catholic political groups, the *Démocrates Populaires* and *La Jeune République*.

*The M.R.P.* As a result of the war and the occupation, most of the Right is still in disarray, parliamentarily. But a political party with strong Catholic, progressive support, the *Mouvement Républicain Populaire*, has come into existence. During the years of occupation and Vichy it began in the resistance as the *Mouvement Républicain de Libération*: it carries on and enhances the *Démocrates Populaires* and *La Jeune République* and the *Jeunesse Ouvrière Catholique*. It is a Catholic party, supported by the Catholic trade unions (now numbering a million members and themselves strengthened by working-class revulsion from the Communists who had come to dominate the C.G.T.),<sup>47</sup> rather like the Christian Democratic parties that have gained strength or come into existence elsewhere in democratic Europe. Though a conglomerate, it is more fully Catholic than they except in Italy. It is led by left-wing Catholics: Bidault (once a professor of history), Schuman, Teitgen, and de Menthon. Their following is fairly large, comprising middle-class groups with a social-liberal outlook and accepting the democratic system, though this has no real or permanent countenance from the hierarchy. This intellectual leadership is closely followed and participated in by the Catholic trade unionists. Another group, by far the largest that follows the M.R.P., is the agricultural population, under the leadership, and not seldom the moral intimidation, of the local clergy. In the urban as well as the rural areas, the enfranchisement of the women, as was prophesied, has provided strong support for the party. There is, then, a hetero-

<sup>46</sup> In 1929 and 1930, the Left upset the Tardieu and the Chaumeaux cabinets on the religious issue; an attempt had been made to include M. Pernot as Minister of Public Works in those cabinets—he was professor of law at a Catholic university. Cf. André Siegfried, *Tableau des Partis* (Paris, 1930), p. 151.

<sup>47</sup> Cf. Notes Documentaires et Études, No. 420, *Le Syndicalisme Chrétien en France* (September, 1946).

geneous collection of Right-wingers who are, in fact, crypto-Rightist.

The M.R.P.'s policy is for wider social control, even in the shape of nationalization, than the Catholic groups of the interwar years would have come near tolerating: full social security, equitable taxation, developed social services, the universal encouragement of cooperatives in all industries and trades. It declares itself "anti-capitalist" and proposes the nationalization of monopolies, profit sharing, and joint management of all business. It also advocates the diffusion of private property—astute in a land in which a peasant proprietary has long flourished. In all these it is close to the socialists and the communists except for the accent on individual proprietorship and warnings against "excessive government." It is a Catholic democratic-socialist movement,<sup>48</sup> but it differs from these in wishing to restore religion in the schools. It is supported by intellectuals of Jacques Maritain's type. A leader described it to me as a party of *cryants*, that is, religious-minded.

Yet that it in reality harbors substantial numbers of Rightists is discernible from the fact that it was above all the party behind de Gaulle. His wishes for a strong executive above and even independent of parties was in the end too obvious and untenable, for the party has declared strongly for democracy. In 1947, the M.R.P. firmly declared its refusal to accept those who denied its anticapitalist program.

The Right reacted and, as early as 1946, organized itself in a *Parti Républicain de la Liberté*, which was, however, unsuccessful at the polls. It was superseded by the *Centre National des Indépendants et Paysans* (C.N.I.), an association comprising the old *Parti Républicain Indépendant* and the *Parti Paysan*. Under the leadership of M. Duchet, conservatives gained

thus some cohesion and, in 1952, for the first time since the war, one of their members, M. Pinay, became Premier. However, voting discipline could not be successfully enforced, the Independent Conservatives of the 1950's being, like the pre-war conservatives, dominated by their local electoral committees.

Meanwhile, the M.R.P. was also attacked by the gaullists. As early as 1947, de Gaulle declared:

We shall not reach our goal by division into rigid opposing factions. The Republic of which we dreamed during the struggle must be based on efficiency, harmony, and liberty. Otherwise it will become nothing but impotence and disillusionment, waiting for the time when it will disappear into one swamp or another, falling either under dictatorship or into anarchy. . . . The time has come to organize, for the welfare of the nation and the reform of the state, above party differences and within the framework of the law, the *rassemblement du peuple français*.

The new R.P.F. won a resounding success at the municipal elections of 1947 and a smaller but still important success at the general election of 1951, largely at the expense of the M.R.P. The collapse of the R.P.F. in 1952-53 did not help the M.R.P., since it was due to the pressure exerted by the Independent Conservatives who succeeded in bringing over to their side, first a small group, and eventually the largest part of the R.P.F. By the time of the general election of 1956, the R.P.F. had almost disappeared but another movement of the Right, led by a small shopkeeper of central France, Pierre Poujade, and aimed at representing the grievances of the "small men" in business and agriculture, had partly replaced the R.P.F. This movement was to be short-lived: when the Algiers crisis of 1958 brought about the collapse of the Fourth Republic, gaullism reappeared in the form of the U.N.R.; some of the electors gained by the Independent Conservatives, as well as many of the Poujadist electors and even most of the communist voters, were taken by the U.N.R. In the course of ten years, despite a considerable instability on the Right, the M.R.P. had thus been unable

<sup>48</sup> Cf. C. Viatte, *La Sécurité Sociale*; P. Bacon, *La Réforme de l'Entreprise Capitaliste*; P. Pflimlin, *Perspectives sur Notre Economie*; A. Gortais, *Démocratie et Libération*; all published by the party (Paris, 1947) as its policy. See also A. Spire, *Inventaire des Socialismes Contemporains* (Paris, 1945).

to recover the ground it had lost in 1947. During the whole period, it remained with about 10-12 per cent. of the electorate and it played a part, a necessary part, but only a part, in center-left as well as center-right governments of the Fourth Republic; it has been represented in the first government of the Fifth Republic as well.

The government of the center did not survive, however, the colonial crises. Shaken by Indo-China, the régime was only saved by the powerful personality of the left-wing radical Premier of 1954, Pierre Mendès-France. His new approach to colonial problems led France to grant independence to Tunisia and Morocco in 1955-56, but Algeria proved too difficult for the weak and divided governments of the Fourth Republic, always subjected to the conjunction of the opposition of the extreme-right (gaullists or poujadists) and extreme-left (communists). On Algeria, opposition also came from outside Parliament, and in particular from the Army, whose loyalty became more and more open to question. The Fifth Republic, created by de Gaulle in 1958, claims to have strengthened the Government; however, it resembles in many ways the Fourth in that the President of the Republic also has to steer an uneasy course between the extremists on both sides, who, if not so influential in Parliament, have remained vocal in the country and in Algeria. The communists still hold a large section of the electorate (20-25 per cent.) and their aim of 1948 remains valid:<sup>52</sup>

This program of national salvation can be put into effect only by a government of democratic

union in which the working class and its Communist Party play a decisive role. . . . The French Communist Party calls upon all workers, all republicans, all patriots and all Resistants to unite in the Committees for the Defense of the Republic in order to check the plans of the instigators of civil war. It calls upon all the workers, technicians and manufacturers to unite in the Industrial Defense Committees organized to protect industry against the threat of American expansionism.

Meanwhile, the extreme-right, if not organized in strong political parties, has ramifications of a conspiratorial character, probably within the U.N.R. itself, and certainly within the Independent Conservatives. From Louis-Philippe (1830-48) to 1958, France's governments have often been difficult coalitions of the center: the Fifth Republic, after 1958, appears to fall in the same category.

*Recent Elections and the Old and New Parties.* It is now convenient to exhibit the results of the elections held in France since the liberation and continue the discussion by reference to these, as well as to survey the movement of political opinion by a résumé of the *sondages* (soundings, or polls) taken by the *Service de Sondages et Statistiques*, the French Gallup polls. These results are shown in Table 3,<sup>53</sup> which does not include the referendum figures on the new constitution, as they have already been given on page 124 above.

It will not be amiss if the parties from Right to Left are described at some length as they stood in 1928 before the great Depression and the accession of Hitler. Thence deductions can be made regarding their recent evolution. As shown in Table 4, the parties on the Right were:

- (1) *Démocrates Populaires*,
- (2) *Union Républicaine Démocratique*.

The parties in the Center were:

- (3) *Action Démocratique et Sociale*,
- (4) *Alliance Démocratique*,
- (5) *Gauche Radicale*.

<sup>52</sup> *Ce Soir*, April 18, 1948. The Defense Committees are reminiscent of, and indeed, resemble, the groups of men and women of the party, who in the Communist *coup d'état* of February, 1948, in Czechoslovakia, took direct action, wherever necessary by armed force, against those who resisted the seizure of power commanded by the Communist leader. The pattern has sprung up throughout western Europe since the establishment of the Cominform.

<sup>53</sup> Prepared from data in Keesing's *Contemporary Archives* (November 16-23, 1946) and the *New York Times*.

# THE CHARACTER AND POLICIES OF MODERN PARTIES

TABLE 3—FRENCH ELECTIONS: 1946-58

Parties	November 1946		June 1951		January 1956		November 1958		
	% Votes	Seats	% Votes	Seats	% Votes	Seats	% Votes		Seats
							1st ballot	2nd ballot	
Communists	28.6	166	25.9	93	25.7	145	18.9	20.7	10
Extreme-left	—	—	1.0	4	2.0	4	1.4	—	2
Socialists	17.9	90	14.5	94	14.9	88	15.5	13.8	40
Radicals	12.4	55	9.9	77	13.6	74	11.7	7.8	35
M.R.P.	26.4	158	12.5	82	11.4	71	11.7	7.6	57
Ind. Cons.	12.8	70	14.0	86	14.6	95	19.9	23.7	132
Gaullists (R.P.F./U.N.R.)	1.6	5	21.7	107	4.6	16	17.6	26.4	188

	100.0	544	100.0	544	100.0	544	100.0	100.0	465

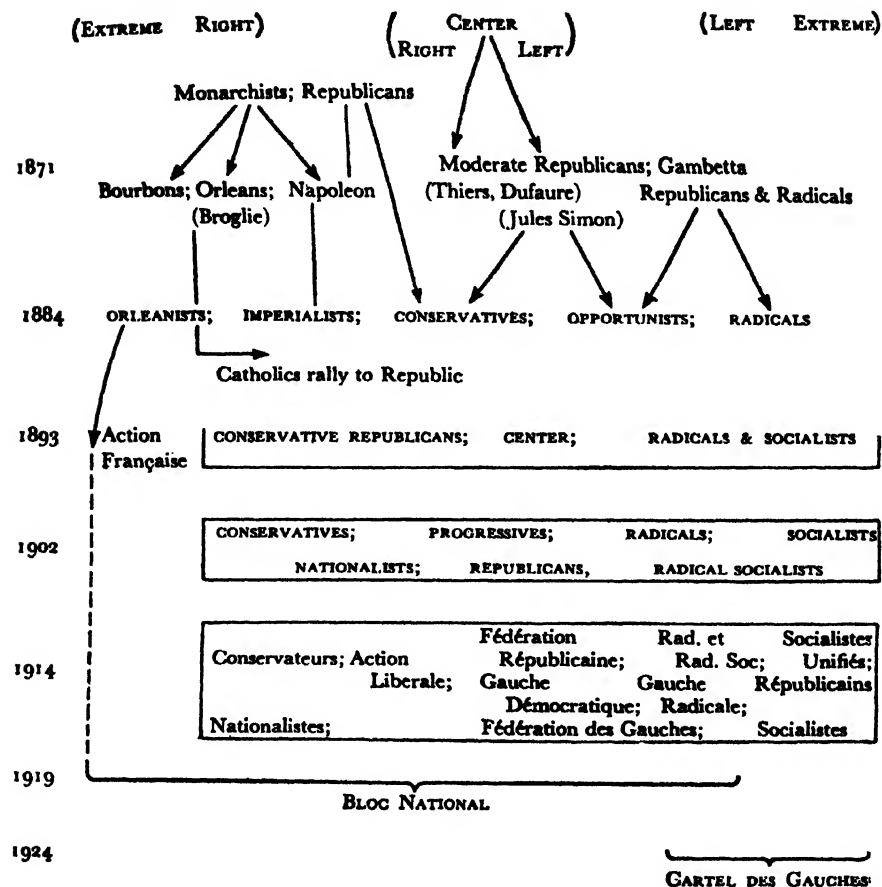

On the Left were:

- (6) *Parti Radical et Radical-Socialiste*,
- (7) *Parti Républicain Socialiste*,
- (8) *Socialistes*,
- (9) *Communistes*.

(1) The *Démocrates Populaires*, having established a grouping in November, 1924, were able to collect about fourteen members in that legislature. They claimed to be politically and industrially democratic, to accept the Republic as the dispensation

of heaven. They supported liberty of conscience, free education, and liberty of press and meeting. They promised to educate the civic sense and to respect religious convictions. They were at once nationalist and supporters of international cooperation and the League of Nations. They appear to have been socially generous, matching the English Liberal party and the German Democratic party. They themselves declared that if the Chamber were divided into two, Right and Left, they

TABLE 4—DEVELOPMENT OF FRENCH PARTIES: TO 1928

ELECTION ORGANIZATIONS:

Fed. Républ. Démocratique; Alliance Démocratique; Démocrates Populaires;	Gauche Républ. Démocratique; Parti Républicain Démocratique et Sociale;	Gauche Radicale;	Rad. et Rad. Soc;	Socialistes S.F.I.O.
		Républicains Socialistes;		Communistes

GROUPS IN THE CHAMBER:

Union Républ. Démocratique; Démocrates Populaires; Action Démocratique et Sociale;	Gauche Sociale et Radicale; Républicains de Gauche;	Gauche Radicale;	Rad. et Rad Soc; Républicains Socialistes; Independent Socialists;	Socialistes (S.F.I.O.)	Communistes
Independent Conservatives;	Center Independents;		Left Independents		

could be found well to the Left, yet French students placed them on the Right. (*La Jeune République*, founded in 1912, was a Christian-Catholic-democratic organization which could be found just on the left of the *Démocrates Populaires*, but it differed from these in its Catholic tinge.)

(2) The *Union Républicaine Démocratique* was the Chamber group of the party called the *Fédération Républicaine*. This was established in 1903 by a fusion of three organizations, with the informative motto of "Order and Progress," the maxim "Liberty, Equality, and Fraternity," and the policy of maintaining the principles formulated in the Declaration of the Rights of Man. It was antiradical; it became strictly conservative, in the modern sense; i.e., domestic individualism and international egoism. One of its past presidents was Charles Benoist; the present president is Louis Marin.

In 1920 the party received reinforcements in Lorraine. It insisted with remarkable obstinacy upon individual independence and guarantees for individual rights. Benoist's works emphasize the importance of the separation of powers and judicial review of the constitutionality of laws, in order to prevent Parliament from interfering by statutes with individual and corporate property and conscience, and the program included this. It was hostile to religious persecution. It ascribed the nation's financial troubles to state-socialistic activity and declared there could be no well-being unless the notions of retrenchment and respect for the family controlled society. Taxation ought not to be an engine of civil war. Nor should the guilt of Germany be forgotten—the only efficacious policy was that of "guarantees." No truck with socialism; freedom of testamentary disposition; abolition of estate duties! Citizens must obtain easy methods of defense against state services.

Much was to be done in the way of Parliamentary and administrative reform—the numbers of Parliament should be halved, professional associations were to collaborate constantly with Parliament and the *Conseil d'État*, the right to speak and propose amendments to the budget

was to be curtailed. In administrative reform, it demanded regroupment and distribution of services, less hierarchical control, decentralization, and a thorough reorganization of the cabinet.

The *Fédération Républicaine* strongly supported the Catholic Church: it supported the Catholics of Alsace-Lorraine, the embassy to the Vatican, the abrogation of the Law of Association of 1901 against religious congregations, the admission thereof to the benefits of the Law of Association of 1884, permission to such congregations to receive subscriptions and legacies, grants-in-aid to private schools (with state inspection), and the admission of the Holy See to the League of Nations.

This was the party of big industry and finance and landowners. It was harsher than the well-turned phrases of its philosophers suggest, and it seemed to be equivalent to the extreme English Tories. Though it insisted upon its republicanism, its spirit of social exclusiveness linked it loosely with the lost cause of monarchy. The party was a composition of new growths and revulsion from radical and socialist tendencies of its former republican colleagues. Among its leading members were Yves Guyot (died 1929), Arago, the Wendels, and François-Marsal (whom President Millerand in 1924 entrusted with a ministry in defiance of the constitutional objections of the Chamber of Deputies). It represented the new oligarchy created by industrialization, and was especially the spokesman of the "200 families" who ran the Bank of France, the Stock Exchange, and the great heavy industrial cartels like the *Comité des Forges*. It had powerful influence with individual deputies and senators and the higher officials.

The *Fédération Républicaine* was a strong supporter of the *bloc national* formed in 1919 as an electoral organization of the Right against the "menace" of Bolshevism and to see that the peace as well as the war was victorious for France. Both Millerand as president of the republic and Poincaré as prime minister received its steady friendship; and, in 1931, it preferred Doumer to Briand as

President of the Republic. It waned in electoral strength in the 1930's. This party was the full Rightist party and bears the heaviest responsibility for defeat and capitulation and Pétain in 1940. From this must be excepted Louis Marin and a small number of men who cared more for France than their own fortunes or fixed ideas; they are infiltrators into the Party of Republican Liberty of postwar France.

(3) A little on the left of the *Fédération Républicaine* (or *Union Républicain Démocratique*) was the *Parti Républicain Démocratique et Social*, reorganized in 1920, but going back to a group of Left republicans of opportunist tactics, and claiming personal links with Gambetta, Jules Ferry, Sadi Carnot, and Waldeck-Rousseau. Such claims were made by other groups, also—and in fact may truly be made, for all the republicans and Left groups of the present day have at least the element of antimonarchism in them. It was peculiarly the party of Poincaré. It was marked off from its friends on the Right by its secularism (though it was favorable to resumption of relations with the Vatican), and from the Left by its economic tenets, by its irreconcilability with the Socialists, and by its affiliations with the commercial, industrial, and agricultural defensive associations of the capitalist system. Thus, it corresponded roughly to the Left of 1871–1900. It was the left wing of the *bloc national* of 1919, and in fact was its instigator.

The *Parti Républicain Démocratique et Sociale* fell into three groups in the Chamber of Deputies: the *Gauche Démocratique*, the *Gauche Indépendante*, and the *Républicains de Gauche*. But several co-operated with the *Groupe Radical et Radical Socialiste*! Such a division into groups was, in fact, not deprecated by the party, for it made easy the detachment of members from implicated groups. The Senators of the party belonged, in the Senate, to the *Union Républicaine* and to the *Gauche Démocratique*. Active in the party councils were Barthou, Chéron, and Doumer.

(4) In between this party and the *Fédération Républicaine* was the moderate

Right group of the *Alliance Démocratique*, headed by Tardieu, Flandin (an appeaser of Hitler), and Reynaud (a member of this group who left it from antipathy to Flandin). Liberal with a Gladstonian flavor, it was composed of fluctuating groups.

(5) By the side of this party, formed by those who were expelled from the *Parti Radical et Radical Socialiste* in 1924 for voting with the *bloc national*, was the *Gauche Radicale*. It was opportunist, swaying now Right now Left, and could be described as Center Left. But a group of some fifty votes which sway here and there in a Chamber in which there are so many groups is very important and dangerous to the stability of government.

(6) Squarely in the liberal ranks was the *Parti Radical et Radical-Socialiste*. It was impiously anticlerical, supported the policy of uniform and secular public education and generous scholarship schemes, was genuinely concerned to secure international peace, and united a theory of private property with social services for the benefit of the poor and helpless. It insisted at once upon freedom and upon efficient administrative organization. Very spirited, it was antimilitarist, anticaesarist, the incarnation of the Jacobins, yet rather pallidly so. Its theorists and leaders have been Jules Simon, Gambetta, Clemenceau and Camille Pelletan, Bouisson, Edouard Herriot, and Daladier. Strong enough to urge, if not entirely to dominate, policy since 1898, it added to the statute book, in successive years, the Law of Associations (1901), reduction of military service (1905), separation of church and state (1905), workers' pensions (1910), and income tax (1917). It also championed peasant proprietorship and the *École unique*. The spirit of the party was well-characterized by Herriot, who indicated the sources of modern policy: the scientific attitude, unwillingness to be bound by nonevolving formulas, the hatred of oppression (which was especially awakened by the Dreyfus case), and social helpfulness of the state without bureaucratic routinization. Herriot's own words explain the party's differ-

ence from its Socialist neighbors on the extreme Left:

Is it possible to give to man his power of development, that which remains, according to us, the essential task of politics, if you refuse to him, in any object, and in particular in that which he has created, that right of property which, after all, given the brevity of life, can never be other than a right of use? [And yet] . . . radical socialists admit and proclaim the necessity of collective property for the profit of the communes or the state, cooperative societies or trade unions.

This political party most closely incarnated France prior to World War II. From 1885 to 1939 it supplied 16 out of 38 prime ministers. It had the major electoral following to 1932: 160 seats in the Chamber against the Socialists' 131. In 1936, the last election before World War II, it had 111 seats compared with the Socialists' 149. It was the broad-based "party of negation." It represented the better-off peasants, the shopkeepers, the petty doctors and lawyers, the middle and lower civil servants, the small urban bourgeoisie. They wanted to be left alone by government. Freemasonry played a considerable part in the party.

The party's main interest was in civil liberties, weak and do-nothing government, peace, and no taxes at all, if possible. Various internal groupings weakened it, even in its defensive negativeness: Herriot, Daladier, Chautemps jostled each other for leadership and influence. Its local committees showed much independence.<sup>54</sup> It was the chief single scapegoat of the *débacle*, for under Daladier, it led France to Munich and through the first six months of World War II. It was inadequately active in the resistance.

It is highly interesting to notice that France has rejected this "party of negation." Whatever the nation may do about governing with parties so different in their ethos as the big three, these, at any rate, are parties of governmental action.

In the debates on the new constitution, the Radical Socialists insisted on a strong popular assembly, a weakish executive, a bicameral system, and made heavy claims for a Declaration of Rights, harking back to 1789. They especially stressed "Liberty." A poll (*Sondages*, March 15, 1946) shows that 8 per cent of the voters would have voted for the Radical Socialist party, the towns being rather more favorable to it than the country, the men less than the women, the older more than the younger, the wealthy twice as much as the people of small fortune. The Communists, if they had had a choice, would have given no votes to the Radical Socialists; the Socialists would have cast 2 per cent for them, and the M.R.P. would have cast 5 per cent.

It is possible that if the Communists and Socialists attempt to realize a large program of state activity, the electorate may well swing over to the Radical Socialists, particularly if the Communists disturb the nation by violence in industry and by parliamentary misbehavior. Indeed, in 1949 the prime minister and the presidents of both chambers were Radical Socialists.

(7) Between this party and the Socialists was the *Parti Républicain Socialiste*, more usually with the Radicals than with the Socialists. However, not all the members of the Republican Socialist group in the Chamber belonged to the electoral organization. Some of them voted with the *bloc national*. The principal leader was Poinlevé, who sought a permanent alliance between all the Left groups excepting the Communists.

(8) and (9) We arrive at the Socialist and Communist parties. In the Chamber of 1936 there were 149 socialists belonging to the *Parti Socialiste*, *Section Française de l'Internationale Ouvrière*. Neither the Chamber group nor the party comprised all the socialist representation, for some of the group had certain affinities with some Radicals and some Republican Socialists. Moreover, there are socialist organizations and constituencies independent of the main body. The situation was the result of a long evolution of doctrine and organization, the year 1905 consti-

<sup>54</sup> Cf. A. Thibaudet, *Les Idées Politiques de la France* (Paris, 1932); Daniel Halévy, *République des Comités* (Paris, 1934); E. Berl, *La Politique et les Partis* (Paris, 1932); and "Pertinax," *The Gravediggers* (New York, 1946).

tuting a focal point. In that year the various lines of socialist evolution joined in a single organization: Rousseau's optimism about man if men were only equal; the class-conscious decentralization and self-aid in cooperative societies and the producer's syndicates of Proudhon; the revolutionary communism of Blanqui (drawing inspiration from Babeuf's "Conspiracy of the Equal" of the Great Revolution); the parliamentary state socialism of Louis Blanc; and the foreign but preponderant force of Marxism through Jules Guesde and Paul Lafargue. These tendencies had till then divided and wasted socialist efforts in a series of bitter animosities.<sup>55</sup> The "reformism" of Louis Blanc found its champion and developer in Jean Jaurès. The emergence of a unified party was no accident. From 1875 to 1905 was one period of the Third Republic, from 1905 to 1945 was another. In the first, the older, traditional, conservative, royalist, aristocratic, militarist, agricultural, and rural forces had been dominant though waning; after 1905 the urban, industrial, commercial, secularist, middle and working classes surged forward.

The new party, called the *Parti Socialiste Unifié*, accepted the basis of the revolutionary class war with the ultimate aim of a "collectivist society" but of immediate reforms, and of noncooperation with other groups in Parliament. Its electoral policy was not always so intransigent, its tactics often admitted transient alliances with bourgeois groups, its party discipline was severe. As in all other countries, so in France, World War I disrupted the Socialists, and the Bolshevik revolution set a seal upon the disruption.<sup>56</sup> In 1920, at the National Congress of Tours, a minority of the party formed the *Section Française de l'Internationale Ouvrière*, with a

doctrine and tactics similar to the British Labour party and the German Social Democratic party. The rest joined the Third (Moscow) International and formed the Communist party (S.F.I.C. or *Section Française de l'Internationale Communiste*.) Since then other scissions have occurred: in 1928, the *Union Socialiste-Communiste*, a small group standing between the S.F.I.O. and the Communists, and moving toward the former; there is also a small group of socialists on the Right of the S.F.I.O. The leaders of the S.F.I.O. acquired a European reputation: Léon Blum, Rénaudel, Paul-Boncour, Longuet, Ramadier; so also of the Communist party, Marcel Cachin, Rappaport, Thorez, and Duclos. In 1924 the S.F.I.O. entered an electoral pact, the *Cartel des Gauches*, with the Radical Socialists against the electoral arrangements of the Right; the Communist party, although urged by Moscow to make a "united front" with other socialists against the Right, could not reach a complete agreement with the bloc. Until World War II, the Socialist party was supported by the reformist trade unions grouped in the *Confédération Générale du Travail*, and the Communist party by the *Confédération Générale du Travail Unitaire*, formed in 1922 and affiliated to the Communist Trade Union Internationals.

The stresses of the interwar years and of the ideological conflict and the Nazi occupation produced a serious change in the fortunes of the Socialist and Communist parties. The Socialist party under Léon Blum formed and led the so-called Popular Front government of 1936. The Communists supported this, since it was antifascist, but did not join it. The Socialist party, being democratic, was their firm opponent; the Communists harassed it and weakened its influence in their own fight for power, by the bitterest defamation. The Socialist party, like all such parties in Europe, had its own internal weakness, arising from two causes. One is the pacifism which brings many men into such parties. A group headed by Paul Fauré voted for the Munich Pact, and badly weakened the power of the party in

<sup>55</sup> Cf. Paul Louis, *Histoire du Socialisme en France* (Paris, 1925); also J. H. Jackson, *Jean Jaurès* (London, 1943); also A. Zevaés, *Histoire du Socialisme et du Communisme en France, 1871-1947* (Paris, 1947).

## THE CHARACTER AND POLICIES OF MODERN PARTIES

the face of European difficulties, just when a party in a national state needs to be strong. The second and more deep-seated cause of internal weakness is the inherent unwillingness of the party to act otherwise than in the spirit of democratic constitutionalism. In an age when the subversive feelings of masses of the electorate can be whipped up against undoubted social and economic miseries and injustices, this gives an appearance of impotence to such parties, for they cannot get a clear majority. They not only lose prestige, but the very thought is self-stultifying.

In such a situation, the Communist parties, whose sanguine faith and militant ardor blind them to scruples since Lenin set them the example, have a clear political advantage. They can decry everybody else's policy and actions, propose the most radical schemes, encourage the most revolutionary feeling, gain adherents—and yet know that probably they will not win a majority requiring fulfilment of their program. On a relatively quite recent memory of violent action, and the cult of revolutionary violence in 1789-95, in the Commune of 1871, and the syndicalist doctrines of George Sorel, they base subversive appeals to riot in the streets and industry against the duly elected government. In 1932 the party in France had 10 seats in the Chamber; in 1936, 72; in 1946, 168—that is, nearly a third of the representation, and had polled five and one half million votes in the country, making 28.2 per cent of the total.

In the interwar years, though France was faced with the dreadful threat of Germany across the borders, the Communist party pursued a policy which was in part dictated by the Communist International, and in part spontaneously directed to favor the U.S.S.R. It sometimes made common cause with the French Right in order to discredit the Left-wing parties, and to keep the state in a perpetual condition of shock and instability. It was for military strength only when it suited the Soviet Union to have a strong France and not before. It organized and aggravated strikes in war factories. When the Nazi-Soviet pact was signed, it be-

came the enemy of French policy against Hitler. One fourth of the Communist deputies resigned from the party. The *Confédération Générale du Travail* expelled all Communists from office in its own organization and its affiliates. The government dissolved the party, and the Chamber of Deputies expelled its members by unanimous vote, including that of the Socialist party. It took little part in the resistance against Nazi occupation until Hitler's invasion of Russia. Thereafter it took a large and courageous part through *Le Front National* and the *Franc-Tireurs et Partisans*—keeping pretty strictly to itself and kept apart from other parties by their suspicion of it. It organized resistance even in districts in which it had hardly before been heard of. When Nazis killed hostages they were usually Communists. As the *parti des fusillés*, it capitalized on its part in the resistance, far beyond its undoubted services, since it has no scruples at all in making unverifiable claims.

In the constitutional convention of 1945-46, Socialists and Communists collaborated. Both were hostile to a strong executive, as a general theory, the Communists especially so, so long as they could not hope to be in sole power. They had their red eye on General de Gaulle. It was at the Communist insistence that the Chamber of Deputies was immensely strengthened, to the point of its formal choice of prime minister and cabinet. It also pressed hard for the long list of economic and social rights guaranteed by the constitution. It fortified its position by securing proportional representation, was hostile to the compulsory vote, opposed equality in electoral finances and propaganda, and preferred to deny the executive the right of dissolution. The first draft was defeated by the electorate: nevertheless Communist ideas are predominant, because the Socialist party needed to go along with them in order to hold off the M.R.P. and the Right. Yet the small positive vote for the constitution is a sign that Communist strength is not what it seems to be. *Sondages* has shown (March 15, 1946) that whereas 14 per cent of Socialist

voters would give their votes to the Communists, if they had to choose between it and other parties, only 6 per cent of Communists would give theirs to the Socialists if they had to make such a choice.

The essential difference between Socialists and Communists is that the Socialists, unlike the Communists,<sup>57</sup> are suffused through and through with the conscience of democratic humanism, and acknowledge an imperative morality which stands above economic acquisitiveness and therefore the warfare among classes. To them, justice, rights, brotherhood, virtue, truth, loyalty, are something autonomous, and not the by-product of an economic war in which different standards prevail according to the fortunes of war and in which ethics vary with the side on which one is fighting: the conscience of man lives above economic production. Since this is so, some rapprochement and the transaction of political business is possible between them and such men as those who lead the M.R.P.<sup>58</sup> and the Radical-Socialists. Since this is so, also, they are hated by the Communist party. The best expression of democratic humanism, though it is no exception, is to be found in the life and theories of men like Jaurès and Léon Blum.<sup>59</sup>

The Communist party has the tremendous advantage of never having been in office, or at least, so predominantly as to incur the usual disappointment of the electorate. The Communist party is particularly strong in the industrial North and around Paris, and in the *Midi*, notable for its passionately Left politics. What has given it so much extra strength, however, is its undoubted appeal to the rural areas. This has come from two causes: (1) anti-Right and anticlerical feeling (and yet it has in places avowed tolerance for devout Catholics), strengthened by the antagonism to Vichy; and (2) the misery and resent-

ment of what is now a large agricultural proletariat and small holders. There are, roughly, some eight million people in agriculture. Of these, less than one million own two thirds of the land privately cultivated. Nearly five million other owners have the remaining one third between them, in farms of from one to twenty-five acres. Nearly three million on the land are landless laborers. Finally, to the end of December, 1947, the Communist party enjoyed the support of the great trade-union organization, the *Confédération Générale du Travail*, which under Louis Saillant, a Communist, has been infiltrated and dominated by the Communist party, due to its tactics in the resistance.<sup>60</sup>

However, large as is the Communist party strength, it has its anxieties. It benefited abnormally from its part in the resistance, because it set up organizations before the other parties could do so, and because it shared in the vast wartime prestige of the Soviet Union. Both of these are wasting assets. Its physical and intellectual fight against the nazis was most vigorous. In times of turmoil the electors follow the virile and eschew the scrupulous. Yet the Communists are caught in the toils of the democratic principle while they remain a parliamentary party. They cannot avoid making a parliamentary record, which can be read by anybody. If it is obstructive, they will lose their more moderate supporters. They cannot avoid making a general public record, and so, since they are moving always towards the next election, they must tack and hedge. This takes away from their militancy, and loses them some of their militants. It also causes tensions within the party. If they are militant in the streets, as they were over their desire to defeat the Marshall Plan in 1947, they produce secessions of their followers who follow them for good economic conditions, for their action must

<sup>57</sup> Cf. A. Rossi, *Physiologie du Parti Communiste Français* (Paris, 1948), especially p. 375 ff.

<sup>58</sup> Cf. Jacques Maritain, *Les Droits de L'Homme et la Loi Naturelle*, and *Principes d'Une Politique Humaniste* (Paris, 1945).

<sup>59</sup> Cf. Blum's book, *For All Mankind* (New York, 1946).

<sup>60</sup> In the summer of 1948 it was commonly estimated that the C.G.T. numbers had been reduced to some three million; while the rival run by Jouhaux, the non-Communist trade union leader, had risen to one million, and the Catholic organization also numbered one million.

tend to thwart them. If they are militant in the trade unions, the more thoughtful workers—or the less idealistic, whichever way one cares to put it—will, feeling deceived, secede. In December, 1947, suspicions that the Communists were following the policy of the "Cominform," and strike after strike caused a revulsion against them, and produced a secession from the C.G.T. and the formation of the *Force Ouvrière*, a new confederation of trade unions, led by the veteran non-Communist leader of the C.G.T., Léon Jouhaux.<sup>61</sup> Thorez' declaration in March, 1949, that a war against the U.S.S.R. would be met with his party's refusal to obstruct the entrance of Soviet armies into France, is characteristic of the party and in time must sap its strength.

*General Observations on French Parties.* We may conclude the survey of French political parties with a few general observations.

For a while, after World War II, it seemed as if France was going to remain governed by a coalition of three disciplined parties, Communists, Socialists and M.R.P. In 1947, however, the *tripartisme* came to an end when the Communists were expelled from the Government and the center of gravity of governments tended to move towards the Right. This evolution favoured loosely organized parties, such as the Radicals and Independent Conservatives. Coalitions of M.R.P., Socialists and Radicals (named *Third Force*) were replaced during the second legislature of the Fourth Republic (1951-56) by coalitions of Radicals, M.R.P. and Independent Conservatives, except for the interlude of 1954 when M. Mendès-France, a left wing Radical, solved the Indo-China crisis. The third legislature (1956-58) showed a slight swing to the Left, and, for the first time since 1947, a Socialist, M. Mollet, formed a Government composed of Radicals and Socialists (the *Front Républicain*). After a year, however, he was replaced by a Radical Premier, and the legislature appeared once more to move towards the Right, when it came to an abrupt close in June 1958. The elections of 1958, the first of the Fifth Republic, showed that the newly formed gaullist U.N.R. was going to be the center of gravity of the Government. The situation does not however seem altogether stable:

Radicals, Socialists and Communists saw their representation reduced out of proportion with their strength in the country, independently from the setback which these parties suffered in terms of votes. Already in 1959, local elections showed that the Communists had recovered almost all their losses of the previous year. Communists and Socialists may gain from the disaffection to the new régime, particularly since the latter split in 1958 over the question of the acceptance of the new Constitution and of de Gaulle's return to power: the minority formed an autonomous Socialist Party, later to be called *Parti Socialiste Unifié*, which the ex-Radical Premier, M. Mendès-France, joined in 1959. Dangers of dictatorship from the Right are not excluded either, especially until the Algerian question is solved. Nevertheless, the liberal forces in French society may prove strong enough to prevent the emergence of a Spanish-like, Right-wing dictatorship, as well as that of a Leninist-Stalinist Government dominated by the Communists.

The tension and confusion of French political parties is due, it will have been observed, not merely to the diversity of economic interests but to doctrines of society and government. Even if Thibaudet's designation<sup>62</sup> of six strands—Traditionalism, Liberalism, Industrialism, Social Catholicism, Jacobinism, and Socialism—exhausted the subtleties, and it does not, it would be complication disintegrating enough.

*The Penalty of a History Full of Civil Wars.* The many revolutionary and reactionary crises suffered by France since 1789 have left most political minds seared with historic thinking.<sup>63</sup> It is one thing to have party differences; it is another to push them to the point of civil war ten times in a century and a half. A viable party system requires that many past battles shall be forgotten. But it is difficult to forget the kind of battles the French have so recently fought with bloodshed among themselves. It is hard to decide whether this is the result of a passionate,

doctrinaire state of mind, but many observers place much weight on this view.

Few countries contain so many contradictions. Catholicism, and the place of the Church in the state, is one. It divides Left and Right, but not all the Left and all the Right, and yet it severs the M.R.P. from both Left and Right. Monarchism and aristocracy divided the Right itself, and set some of the Right against the Republic as the form of government—and this would produce coalitions of the Left to defend it, but they again would be torn and severed by different social policies. Monarchist and aristocratic ideas and status produced contempt for parliamentary institutions, and helped to sponsor and inspire extreme nationalist and dictatorial groups and fascist formations. It found its way into the administrative services on the highest level at home and in the colonies—for the sake of France, but not the France of the Chamber of Deputies.<sup>64</sup> But this produced a tension between the Chamber and the officials; and the Left groups, not being able to control and use the administration, treated it as an enemy and so intensified its hatred of them. The higher administrative services did not adequately prepare for war against Germany, nor did the regular army; they were ready to cooperate with the nazis through Vichy.

Furthermore, the parties of the Left were always conscious of the legacy of "Caesarism" embodied in the *ancien régime*, and Napoléon, and Napoléon III, and later pretenders and swashbucklers like Boulanger. Therefore, though democratic, they were not energetic in social reforms which required a strong government. Liberty and equality were at loggerheads in values and timing. All the Left were afraid of Bonapartism, the glittering dictatorial leader using plebiscitary forms to bolster personal power. Hence, they were as jealous of a fierce Jacobin-like leader, Clemenceau, whose idea of democracy was a great surging solidarity of the people obedient to powerful government, as fearful of a Colonel de la

Rocque, whose formations of fascists produced the antiparliamentary riots in February, 1934.<sup>65</sup> All parties as far as the moderate Right had accepted democracy, but were seriously split many ways as to its governmental forms, the respective places of extralegal, forceful dissent and the coercion properly exercisable by government pursuant to electoral mandates. The socialist Left shared the common belief in democracy and social justice, but it was disintegrated by the varying emphasis placed on the legitimacy of majority or minority rule, and on gradualism against abrupt change. Here some of the more radical Socialists, and certainly the Communists, expressed the revolutionary tradition of the barricades; the right of the Directory to take full powers on behalf of the people, as their forbears Danton and Robespierre had done and as the Commune of 1871 had exemplified. All parties knew that national defense was an ultimate obligation, but they were divided on alliances, and on the extreme Left some members of the groups were pacifist, sometimes by persuasion, sometimes for fear of domestic militarism and hatred of monarcho-aristocratic Catholic military society. And even conservative leaders would cut down the estimates for economy's sake by reducing the size of the armed forces and the length of conscript service. Other groups joined in with such policies for their own purposes only, and then seceded.

Thirty or forty years of peace from about 1905 might have produced a forgetting of old rancors, and a forging of new reconciliations. But the pressure of ideas from outside, and the enemies on the frontier, fascists and nazis, two wars, and the world-wide ideological battle between the different interpretations of liberty, equality, and fraternity, democracy and despotism, and especially the brutal in-

transcendence of the Communist International, exacerbated all the contradictions, and kept fresh the sharp light and fierce heat that came from the past.<sup>66</sup>

The particular conditions of the emergence of the Fifth Republic have once more brought to the forefront the issues raised by Bonapartism, as if periods of internal peace were never sufficiently long to enable French politics to become stabilized and French political parties to crystallize their program around the economic issues which are the major elements of division in other Western democracies.

#### POLITICAL PARTIES IN GERMANY<sup>67</sup>

*Between the Wars.* A picture of the political strength of German parties at different periods in the interwar years must precede any discussion of the history, nature, and future of parties. The figures in

<sup>66</sup> Cf. Herman Finer, *The Future of Government* (New York, 1946), Chap. IV, for a dynamic account of the decline and fall of the Third Republic, and bibliography. Especially worth consulting are: "Alain," *Éléments d'une Doctrine Radicale* (Paris, 1925); D. Halévy, *La Fin des Notables* (Paris, 1930), *Pour l'Étude de la Troisième République* (Paris, 1937); and *La République des Comités* (Paris, 1934); André Tardieu, *L'Heure de la Décision* (Paris, 1934); "Pertinax," *The Grave-diggers* (New York, 1944); J. Fourcade, *La République de la Province* (Paris, 1936); M. Thorez, *France Today* (London, 1936). For the nascent Fourth Republic, see Paul Marabuto, *Les Partis Politiques et les Mouvements Sociaux sous la IVe République* (Paris, 1948).

<sup>67</sup> Cf. H. Finer, *The Future of Government* (New York, 1946), Chap. III; S. W. Halperin, *Germany Tried Democracy* (New York, 1946); Mendelssohn-Bartholdy, *The War and German Society* (New Haven, 1937); O. Braun, *Von Weimar zu Hitler* (New York, 1940); H. Sturimthal, *The Tragedy of European Labor* (New York, 1943).

Table 5<sup>68</sup> refer to January, 1919, when the Weimar constitutional assembly was elected; to May, 1928, after some of the gravest of German adjustments to the problems of the Treaty of Versailles had been settled (including the almost complete lifting of reparation payments); to November, 1932, the last free election before the advent of Hitler; and to March, 1933, under the Hitler terror, with constitutional guarantees suspended.

Certain facts stand out immediately. The *first* is the multiplicity of parties, a serious confusion to the voter, not making for responsible choices of the government, but (as in France since 1875) only for the pieces of the mosaic that would eventually join together (out of his view) to form a government, on terms he did not know or endorse. *Second*, the small parties were kept alive by proportional representation. *Third*, it will be observed that some of the parties are definitely local parties, a result of the particularism of the German states going back centuries, and only partially overcome by the successive stages of federalization. Also, as the parties only acquired full authority in 1919, when the first democratic *Reichstag* was inaugurated, they were faced by the many well-organized economic groups and interests. They were harmful for their influence in narrowing the vision of the German people, so that the center of their *Reich* could get out of hand. Notice especially, for example, the Bavarian People's Catholic party and its steady strength.

*Fourth*, four great parties stand out as the pillars of the Weimar Republic: the Nationalist party (later largely merged but not completely identified with the Nazi party); the Center party, predominantly Catholic; the Social Democrats; and the Communist party. Together, in November, 1932, they mustered some 32 million votes out of 35.5 million votes cast.

*Fifth*, the practical erosion of the Democrats will be noticed, rather like the Liberal party in England in outlook, the last poor remnants of a great historic party, worn down by the extremes of militarism

<sup>68</sup> After S. L. W. Mellen, *American Political Science Review*, August, 1943, pp. 612-613, and *Nuremberg Documents*, V, 253 ff.

and conservatism, and by the parties of masses intent on social and economic reform.

*The Nature of the German Parties.* In view of the analysis of the content of party doctrines in other countries, it is here only necessary to offer some general observations on the German political parties.

(1) The nationalistic parties stemmed from the agricultural, authoritarian, Junker, Protestant, royalist strata that had made the absolutist Prussian state and pushed forward to the Prussianization of the German *Reich* of 1867 and 1871 to World War I. Their interests are clear from this characterization. But all interests are mixed. Accordingly, they were not merely Prussian; in other parts of the *Reich* there were authoritarian groups who cooperated with them. They were not entirely an economic interest, that is agricultural, though they were that predominantly. But with the industrialization of the *Reich*, especially from the 1870's, they were intermeshed with heavy industry: the Krupps, Hugenbergs, and Thyssens. They were imperialist, colonialist—they were for tariffs, for strong growth of cartels, for mighty German armies and navies, for the Kaiser's unqualified authority—they were antiparliamentary, antisocialist. Before 1919, they not infrequently joined with the Center party against the Liberals and Socialists, although there was the great religious cleavage between them. Their shining lights were Bismarck (though they had their doubts about him) and Wilhelm II. They nourished the German general staff, and formed the backbone of the twin pillars of the German state: the officer's corps and the civil service.

Though they were losing ground from election to election in the pre-World War I period, they persisted through it into the Weimar era, which they detested and never really accepted. Finally, they almost entirely lost their following to the Nazis. But a distinction must be drawn between them and Hitler's movement. They joined him not for everything he afterwards did, for some were conservative patriots with

a sense of religious obligation and their anticommunism was inherently different from Hitler's. But, like the French Right, they preferred Hitler to the Social Democrats or the Communists. The so-called "baron's government" (there were so many *vons* in it) of 1932, paved the way for Hitler, who was indeed recommended to von Hindenberg, the President of the *Reich*, by von Papen. They opened the door to Hitler, in part because they were hostile to a proposed investigation into their use of subsidies granted by the *Reich* government to the hard-hit agricultural estates of their quintessential homeland, East Prussia. In the *Reichstag* of March, 1933, they voted Hitler full powers. World War II, the Allied war trials, and especially Soviet severity in East Prussia and the break-up of the estates, left but a handful of the old guard. Pastor Niemöller is an example of the purer of the German Protestant Christian conservative nationalists.

More will be said presently on the Nazi movement, which had affinities but not identity with the German Nationalist and Conservative parties. They were anti-Semitic before Hitler was born.

(2) The Center party, founded in 1852 to defend Catholic missions and university education from attack by conservatives in the Prussian government, consisted, in the immediate pre-World War II years, of a rank and file following of 56 per cent of all the Roman Catholic voters in Germany, the rest being divided among other parties. It has been estimated that of practising Catholics, about 80 per cent followed the Center party. It attracted many non-Catholics. Its strength lay in the Rhineland, Bavaria (the Bavarian People's party), Baden, Westphalia, Upper Silesia, and Hohenzollern.

The Center party had a Catholic outlook and policy: that is to say, independence for minorities, religious and local; a paternal labor policy; and a loose federal *Reich*, for this gave freedom to its communicants. It wanted at one time a declaration of rights in the Bismarck constitution; it withstood Bismarck's *Kulturkampf* against it, but joined him on tariff

protection for decentralist concessions. It opposed the policy of aggrandizement and military expenditures in Bismarck's early years but later voted for them in return for concessions to the Church, that is, private education and no exceptional laws against Catholics. It supported the war of 1914, but seceded early from the militarists, and with the Left parties helped to bring the war to an end. It had supported advanced social legislation for the benefit of the workers, and continually stood for the maintenance of a strong middle class, the petty commercial and industrial bourgeoisie, and an independent peasantry.

It joined the Social Democrats and the Democrats (or Liberals) in establishing and supporting the Weimar constitution. Its chief distinction from the Social Democratic policy of world peace and social welfare lay in (1) its defense of private property and enterprise, and (2) its anti-centralization. In the interwar years, it was involved in many contradictions, which would seem to be unavoidable in a party which pretends the defense of Catholic Christianity and yet seeks secular power. It was an enemy of the Treaty of Versailles; it supported substantial armaments and forces for Germany; and it advocated protection for agriculture. Its trade unions attracted 13 per cent of the German organized workers and 33 per cent of the organized salaried employees. It was suspected of being democratic, not because it accepted the ideal of equality and freedom for all men but because it wanted protection for its own faith. Its leaders headed several cabinets, and just prior to the forceful incursion of the nazi movement, its chancellor, Brüning, had held office for some two years, ruling by emergency decrees. Through ineptitude and shortsightedness, its parliamentary leadership voted for Hitler's suspension of the constitutional guarantees in the *Reichstag* of March, 1933. But during World War II, some of its high dignitaries did much to maintain the faith of millions against nazi oppression. Its resuscitation in various forms is coming about in the

various state Christian Democratic parties, which include non-Catholics. The similarity to the M.R.P. in France deserves notice. It may also be observed that such a direct complication of the party system as a party founded on Catholicism does not exist either in the United States<sup>69</sup> or in Great Britain.

(3) The Social Democratic party was organized in 1869 on the basis of smaller groups established earlier. It was a party for the defense of the workers' rights. It united the Lassallean and the Marxian strains of socialism, and in the days of the intensest crisis, in World War I and in the struggle against Hitler, suffered because of the mixture. From 12 seats in the *Reichstag* in 1877 it progressed to 110 out of 397 in 1912, and would have had more if the electoral constituencies had been redistributed with the changing occupational and territorial distribution from a mainly agricultural to a mainly industrial nation. Its general tenets need not be discussed: they are the same as those of all democratic socialist parties. But in Germany there was the peculiar need for changing the unfair three-class system of voting in Prussia; for securing real sovereign democracy of the electors in the *Reichstag*; and for resisting the Bismarckian and imperial determination to crush the movement altogether as a treasonable party. (From 1878-90 Bismarck attempted physically to crush it.)

The party was distinguished by the remarkable philosophical services it rendered to socialists everywhere through the work of Bebel, Liebknecht, Luxemburg, Kautsky, Hilferding, Bernstein. Broadly speaking, they were zealously Marxian as to ends, but decisively non-Leninist as to

<sup>69</sup> Yet it is interesting to notice the indirect effects in the United States: for example, its relationship to Alfred E. Smith's Presidential candidacy in 1928 and his failure to be nominated in 1932. Cf. R. V. Peel and T. C. Donnelly, *The 1928 Campaign* (New York, 1931), and cf. James Farley, *My Story* (New York, 1947), *passim*, for his continual preoccupation with the relationship between his religion and his desire to run for President in 1940. Though a Jew has been Prime Minister of England, no Catholic has been, nor most probably could he be.

## THE CHARACTER AND POLICIES OF MODERN PARTIES

democratic means.<sup>70</sup> They formulated the theory of imperialism and the economic causation of wars long before Lenin followed. But they were democrats, and they warned Lenin and his followers that their way of a small vanguard of revolutionary leaders must lead to the dictatorship of a small group over the workers and not the dictatorship of a 'mass workers' party—two vastly different things. For though the German Social Democrats tended to be agnostic or atheistic, they were not historical materialists.

The second characteristic of the party was its enormous administrative machinery for establishing policy, for running schools, and for promoting mass literature and leisure-time activities and social benefits of various kinds—its basis for an all-embracing and flourishing trade-union movement.

The Social Democratic Party was, *in excelsis*, the party of the Weimar Republic. It participated in many governments and led some. But, in the testing time it failed: failed to rid the government of saboteurs, failed to scatter the Right elements, failed to lead the voters against the combined onslaught of Nazis and Communists. It had shed its own Left wing by 1922. The Right had killed its brilliant agitators, Liebknecht and Luxemburg, as well as many smaller lights. It was steadily democratic in a land which was tempted away from democracy by other values (mentioned in the note on the Nazi movement to follow) and which was then so torn by the Right and Left extremes, that a viable majority government could not be found. It lost membership to the Nazis when unemployment made men desperate and young people could be given no hope; it lost millions to the communists who could make the most irresponsible promises and even unite with the Nazis to bring the socialist leaders into contempt. A general strike at the right time (like that which in 1923 foiled a Rightist *putsch*) might have rallied more than the party's own supporters against the advent of

Hitler's horrors, but appeasement and genuine democratic scruples had frittered away the party's *elan*. It did not vote for Hitler's constitutional measures, like the Center—and in the concentration camps and in the workshops, millions of its members kept their souls. Wherever the Soviet occupation ruled, its fate was bitter, as all pressures, including assassination, were used by the Russian-sponsored Communist leaders (brought out of Russia where they had found sanctuary for years) to compel a fusion of the Social Democrats with the Communists. Election results show that they have successfully resisted. It would seem that the future of German politics will be dominated by the Social Democratic party (especially since the occupation government will institute at least some of the socialism which the party did not institute when the mild revolution of 1918 occurred), and by the Christian Democratic parties.<sup>71</sup>

(4) The Communist party was strong and will always be a contender for power, because the German mind is inclined to socialized authority, to full philosophies, and is close to Russia whence comes the light, and because a peculiarly hard-and-fast social class system oppressed the nation. Karl Marx himself was born in 1820 not only of German parents but of German social and economic conditions at their most class-ridden epoch.<sup>72</sup> In the interwar years the party thrived on economic depression; on laudation of and encouragement by the Comintern; on the impatient recognition that changes by the democratic method must inevitably be gradual; on the rise of fascism in Italy and the Hitler movement in Germany. It was a fighting creed, and its members took to

<sup>71</sup> The role of the various parties in the German resistance movement is estimated by W. Kraus, "The German Resistance Movement," *Journal of Social Issues*, August, 1946, and by Gabriel Almond, "The Resistance," *Political Science Quarterly*, March, 1947, pp. 27-61.

Cf. also Hans Rothfels, *The German Opposition to Hitler* (Hinsdale, Illinois, 1948).

<sup>72</sup> Cf. Isaiah Berlin, *Karl Marx* (London, 1938); and for the interwar phase see Ruth Fischer, *Stalin and German Communism* (Cambridge 1948), a splendid account of the Soviet's pressures and Machiavellianism.

<sup>70</sup> Cf. Herman Finer, *America's Destiny* (New York, 1947), p. 237.

## POLITICAL PARTIES IN GERMANY

the streets against the Right and the Nazis. This suited the Soviet rulers: so did the combination of Nazis and Communists to overthrow the Social Democrats and the liberals. The party for a long time after the advent of Hitler still declared that this was good for Germany because the fall of Hitler was imminent, whereupon *they* would take over office. Most of the conditions which favored the rise of the party are dissolving. Only artificial help from outside Germany is likely to keep it of any importance in the future, assuming the party does not seize power by force, and even that could not last.

(5) Were there then no liberal parties in Germany? In the nineteenth century, Prussia had a great Liberal party which spread over the whole of Germany. But it succumbed to Bismarck, who eviscerated it by creating through force the federal *Reich*, the unity, which was the Liberals' main purpose since unity would have widened the area of commerce, the free press, freedom of opinion. But Bismarck gave no really free constitution in return for the Liberals' votes of military credits and their condonation of his constitutional breach in 1863-65. He gave universal suffrage, but not to a responsible *Reichstag* and a responsible government.

Against the rising tide of social democracy and the traditional strength of the Prussian Right and the princely houses, these big and middle commercial men and manufacturers and *rentiers* divided into a Rightist conservative party—the German People's party—and the more liberal German Democrats. Both of these participated in the Weimar Assembly, the latter taking a leading part in the coalition which produced the constitution (one of its leaders, Hugo Preusz, drafted the constitution), while the former took part in the discussions but voted against acceptance of the constitution. Its strength lay in commercial, shipping, and financial groups, in the middle classes of the large towns, and in members of the free professions (officials, teachers, and lawyers in particular). It was anti-Prussian, and for private enterprise and civil liberties. In a Germany ridden by the devil of humili-

ation over a lost war, and never till 1919 with the experience of democratic government, and with ideological extremes mounting to ferocity, it had, alas, no chance.

(6) The Nazi movement<sup>73</sup> (the *National-Sozialistische Arbeiter Partei Deutschlands*, the National Socialist Workers' Party of Germany) was the combined creation of Hitler's adolescent, prophetic patriotism and the forces of the Right who desired to use him for the restoration of their war-stricken agricultural and industrial wealth, and their imperial, military pretensions and social and political authority. His patriotic fanaticism, nourished by the intensest suffering at Germany's defeat in World War I, gathered around him elements of the Right, officers no longer employed, adventurers from the shock troops of the late war, men who could not find their way back into peaceful society. "The shame of Versailles" was not in reality the shame of the treaty but the shame of defeat for a proud nation whose history had been a glamorous succession of victories over other peoples but never over its own passions and civic docility.

The Nationalists had millions of followers in the postwar years, and in the end these almost *en bloc* went over to Hitler for reasons of national prestige and aggrandizement, and enmity to the Soviet Union. This must be remembered, as weight is usually and wrongly placed upon the economic depression of 1930-32 in bringing followers to Hitler from among the unemployed and the youthful unemployables. The Hitler movement made its

<sup>73</sup> Cf. *National Socialism* (U. S. Government Printing Office, 1942); *Nazi Conspiracy and Aggression* (U. S. Government Printing Office, 1947), Vol. I, and appropriate references therein to subsequent volumes; Joseph Goebbels, *My Part in Germany's Fight* (London, 1935); and Fritz Thyssen, *I Paid Hitler* (New York, 1941). T. F. Abel, *Why Hitler Came into Power* (New York, 1938), is the best sociological study of the subject.

An important light is thrown on the Nazi movement by Joseph Goebbels, ed. by Louis Lochner (New York, 1948), and *The Von Hassell Diaries*, by U. von Hassell (New York, 1947).

striking debut in the Munich uprising of 1923: thereafter the party pretended constitutional and democratic methods. Yet its propaganda genius Paul Goebbels later admitted that the claim of legality and democracy was designed only to make the approach to power easier, and that they entered Parliament only to destroy it.

Hitler's program was anticommunist, antiliberal, anti-social democracy, anti-Semitic. It was racial or national (or *völkisch*); that is, it saw the significance of the individual in his complete immersion in the objectives of the state, his significance in obedience to that social focus of human attainment. But it denied to the individual the right of democratic self-determination, on the ground that only one genius appeared to lead the nation from time to time, and such was Hitler. Only one nation (or race) in the world showed the highest human virtues, demonstrated by its domination of all others, especially in war: that was the Nordic, and of this the Teutonic branch; and, of this, again, the German *Volk* was the supreme élite. All liberalism, with authority coming upward to its leaders from the free people, must produce political chaos and destroy national cohesion, as it had done to Germany at the end of World War I. Hence, organization must be based on the principle of the inequality of men, on all authority downward and all responsibility upward.

This doctrine of utter contempt for average men, or of equal minds, where they disagreed with Hitler, would have been rejected for the corrupt nonsense it was, except that the leader, for parallel but not identical reasons, was supported by the Junkers, the industrialists, the militarists, the imperialists, the conservatives. The resurgence of Germany was what brought him his main support. But when the depression came, millions who had never been employed could not enter the disciplined ranks of labor, and millions of others could not find work. Thousands had been uprooted in the aftermath of the war and the inflation which followed. The ideological battle was fiercest in Germany—located between Russia and the

West. It is a morbid nation. The Germans sought salvation. It is not surprising that they capitulated to a quack. Yet only a small proportion could have had any inkling of what this leader finally intended. Hitler's following was weakest, relatively, among the urban workers; white-collar employees were heavily represented, and compared with their proportions in German industry, the skilled artisans, merchants, shopkeepers, professional workers, and officials were considerably overrepresented, while the peasantry were much underrepresented.

Extremism, irresponsibility, dramatic meetings and processions, riots in the streets, threats and manhandling of opponents, unscrupulousness, and *The Big Lie* brought hope and excitement and therefore belief in the leader (perhaps cynical damnation of all responsibility for the consequences to others and the state).

Yet even in March, 1933, Hitler's movement had no majority of votes.

*The Political Context.* Some additional observations are needed to complete the sketch of German parties. They were not sovereign parties until 1919, for though Germany had universal suffrage from 1867, she never had a government founded upon the parties: the chancellor (or prime minister) was chosen by the Kaiser. The parties had some influence, but no final power, and especially not the power to cashier and appoint the executive. While other nations were learning the art of popular government and of party cooperation, German parties, having no direct responsibility, could be doctrinaire, extreme, and divided.

In an age when the state needed to be strong and active, owing to the way of its economic life, these political parties did not create the state, as did the parties in the United States and Britain and even France: they succeeded the state already created by the royal oligarchy. They never learned the lesson of governing it, until the fission in German life, through occupational, capitalist-worker, and sectional interests, made a democratic majority control of the state impossible. Only Hitler appreciated the need, and his purpose

was corrupt and antithetic to the collaboration of others in the formation of the state's will.

German parties did not operate in a society that felt the need of individual freedom and self-determination. In Britain, the United States, and France, kings had been beheaded or expelled for freedom's sake: never so in Prussia or Germany. What accounts for German political placidity when it comes to individual rights has not been decisively determined by historians. Hegel is really Germany's God. But the world is full of temptations, unbridled economic welfare, power, national prestige, sadism against political opponents, honors that society can bestow—and these are competitive with civil liberties (for others) and self-government, which is another word for self-control. If a people's tradition is long, it can survive hardships, and eschew seductions hostile to self-government. If self-government has never been in operation, or felt by the middle as well as the working classes, it stands no chance of surviving any hurricane of economic distress or fanatical leadership. Hard experience alone will re-educate Germany, and World War II is part of such experience.<sup>74</sup>

#### AMERICAN POLITICAL PARTIES

*Indifference to the Choice between Parties.* It will have been observed that the distinguishing mark of political parties in Britain and Europe is that they are parties of *principle*: that is, they profess the purpose of governing or of opposing government in the name of a general design of political values. They may represent an interest—economic or of an historic power-position in society—and may prosecute it; of course, being men, they

must and do. But over and above their special interest, they profess a broader social goal: that of conservatism, or liberalism, or communism, or Catholicism, or social democracy. Their interests are contained within a framework of value. They have made an order, or hierarchy, of items in their program—what shall be done, to what degree the relationships between individual and society shall be fashioned by law and administration, and what things shall come first, middle, and last. A long cultural history has obscured the answer to whether material or more spiritual values came first or which were more masterful. But there is considerable firmness in the definition of the pattern of social values. The absence of firmly defined and broad social purpose, consistently pursued over many decades, is the diagnostic mark of political parties in the United States.

It is not possible within the compass of this volume to sketch the history of American political parties throughout their long career. Their chances and changes may be found in many other volumes.<sup>75</sup> For long stretches they will be found saying the same thing, exactly, flatulent in phrase and combining the most inconsistent quasi-promises. So far is this the truth, especially for certain epochs, that cynical remarks have been made about the Republican and Democratic parties, the two which have held the field, gathering over 90 per cent of the votes cast, for about one hundred years. Bryce declared that they were like two bottles, each with different labels and both empty. Holcombe, American born

<sup>74</sup> Cf. *Facts about Occupied Germany*, by American Association for a Democratic Germany, January, 1947; Karl Mahler, *Die Programme der Politischen Parteien in Neuen Deutschland* (Berlin, 1945); R. Barzel, *Die Geistigen Grundlagen der Politischen Parteien* (Bonn, 1947); and *Aufsätze und Skizzen zu Fragen der Zeit* (Essen: Deutsche Zentrums-Partei, 1947); and Heinrich Fraenkel, *A Nation Divided*, (London, 1949).

<sup>75</sup> Among others, W. E. Binkley, *American Political Parties* (New York, 1943); A. N. Holcombe, *The Middle Classes in American Politics* (New York, 1940); Charles Merriam and Harold Gosnell, *The American Party System* (New York, 1949 edition); E. M. Sait, *American Parties and Elections* (New York, 1948 edition). See also A. N. Schlesinger, Jr., *The Age of Jackson* (New York, 1945); E. E. Schattschneider, *Party Government* (New York, 1942).

These works among them furnish bibliographies covering the development of party organization, ideas, and conflicts, so that more specific references need not here be given.

and bred and a Harvard teacher for over forty years, says, some forty years after Bryce:<sup>76</sup>

Why, young men and women inquire of their elders and of one another with growing frequency, should a new voter become either a Democrat or a Republican? It is not easy—indeed, it is not possible—to give a convincing answer, if the reply is based upon no better evidence than is afforded by the planks of the party platforms and the declarations of the party candidates. Party platforms have tended to grow longer with the passing years, and less intelligible.

If the reader will compare two political biographies which came out within a year or two of each other, one English and the other American, they will appreciate the dismay with which American political parties may be regarded. In the biography of Neville Chamberlain they will find an intense concern and ambition for the highest office it is in the gift of the nation to bestow—but not a single page is without its deep anxiety about policy, the social purposes for which the premiership will be used. In the autobiography of James Farley they will see practically nothing but a concern for electoral victory, with hardly a trace of interest in a political program (except that the New Deal seems to jeopardize vote catching). In Mr. Farley's own cogitations about his ambitions for the Presidency, and in his estimates of his own qualifications, there is never a word about the Presidency as a medium for the national good. The difference is not altogether a difference between men.

*Causes and Consequences of Political Indifference.* For good or ill, indifference to the choice between parties could not possibly be postulated of British or European parties. This is the striking and controlling truth about American political parties, and the causes and consequences deserve some brief consideration. Somewhere in his *Age of Reform*, Professor E. L. Woodward, speaking of English political parties in the eighteenth century, likens them to "two rival stage coaches

spattering each other with mud, going along the same road to the same destination." This is true of American political parties today, except that it is a little difficult to discern the destination, even as it was, perhaps, in the eighteenth century in England.

(1) Let it be noticed that two parties dominate and organize American political life, not eight or ten. All the "occasional" parties, of a third- and fourth-party kind, have never, in any Presidential year, gained more than some 3 per cent of the vote.<sup>77</sup> Nor have many of them lived for more than ten years. This, at any rate, is an advantage to the nation, that its party organizations can gather the various sectional and occupational groupings into which the land falls into two opposed nation-wide confederations. Too many parties are confusing; the job of organizing the electorate must be done, the voters brought out, and provision made for a standing opposition of magnitude sufficient to threaten the government.

(2) The "third" parties have in the main been sectional or occupational groupings; that is to say, they have emerged from a fairly definite area of the country, or from an economic interest. For example; Free Soil, Know-nothing, Greenback, Populist, Labor, Farm Labor, and—if we go beyond occupation—Prohibition and Communist. They have beset the other parties with some intensely passionate ideas and claims, and have persuaded (the word "forced" would not be too strong) one of them to carry into law its desires. Examples are antitrust legislation in the 1890's; the Greenbacks and silver-purchase legislation; the Non-partisan League and government assistance of many kinds to farmers; and again, the Anti-Saloon League and Prohibition during World War I. The Political Action Committee of the CIO continues the old story, to waylay candidates of the two dominant parties and hold them to legislative ransom.

(3) The two dominant parties have been

<sup>76</sup> E. B. Logan (ed.), *The American Political Scene* (New York, Harper, 1938), p. 5. By permission.

<sup>77</sup> Excepting Theodore Roosevelt in the Presidential campaign of 1912. But is this really an exception?

# AMERICAN PARTIES <sup>78</sup>

<sup>78</sup> From J. L. Burdette, *Political Parties* (National Foundation for Education in American Citizenship, Washington, 1946), pp. 16-17.

round, firm, and fully packed on certain occasions of which four are especially conspicuous: (1) Federalist and Anti-Federalist at the inception of the Republic; (2) the Jacksonian Democracy of 1828 and the opposition thereto; (3) Republicans and Democrats on the issue of slavery and union; (4) Republicans and Democrats during the New Deal, 1933 to 1941. What were the characteristics of these periods? Each shows a compound of three elements: a moral and intellectual issue of the highest importance; an agonizing practical emergency; and on one side, at least, a "great" man, though the degrees of greatness vary. When these three elements coincide, American political parties assume the characteristics of British and European ones: they become for the time a purposive, partly ideological fellowship of like-minded persons throughout the country, inspiring an intense, sincere, and steady loyalty.

However, normally such conditions do not obtain, and American parties are at once without ideals or spine. They "straddle" in their policy, as the ironic saying goes. Many had hoped that the era of popular reform which the Great Depression of 1929 onwards necessitated and stimulated would have ushered in the rule of parties with a social purpose of an enduring kind, both loving their country, their whole country, but each with different but genuine gifts for it. The Democrats might have been the more "liberal" and concerned with mass welfare, the Republicans more stern and in favor of private enterprise and the limitation of governmental activity. But the mind and personality which had been able to attract to himself loyalties transcending those normally manipulated by the local bosses died. The grand national texture was involuntarily abandoned by Roosevelt's accidental successor, Harry Truman, who understood neither the nature of the weft and warp, nor the contribution that weaving from the center could make to the national welfare and liberty.<sup>79</sup>

Twenty-four million votes in 1948 could not supply moral stature at the point where Nature herself had stopped.

Why are American parties so full of electors that they are empty of sustained purpose? The answer is comparative and relative, a matter of degree.

(1) Neither has as yet come to depend for its support on a distinctive gathering of interests: both appeal to all sections of a land of enormous territorial range, geographic diversity, economic interests, and racial and cultural groupings. Both are impelled to seek their support, since they long for office, not somewhere but everywhere. The exception to this is principally the hitherto "solid South" where, for reasons bygone of race, economic interest, and a fairly accidental party alignment in the 1850's and 1860's, the Democratic party has a monopoly. Something of an exception also is New England, where the Republican party, without anything like a monopoly, is particularly well-favored. First, then, the enormous geographical span and diversification of the nation.

(2) The constitution has settled, or seems to have settled, a number of issues which continue to animate British and Continental parties: there are limitations on the activity of state and national governments. Declarations may be made on these subjects in the platforms, but they are empty and not to be taken seriously. The party which gets the majority will never be sovereign in legislating on these matters, for the amending process and the Supreme Court enfeeble the party, its authority, and its sense of responsibility.

(3) The vast size of the nation makes for localism. The United States is the largest area and population ever in all history to come under a single government in which the people rule. Extraordinary effort is required to overcome distances, density of population, and its variegated urban and rural patches. What do I mean by localism?—that people's interests, their everyday thoughts and pursuits, are largely fo-

<sup>79</sup> Should this reflection seem too severe, Boss E. J. Flynn's *You're the Boss* (New York, 1946) will justify the observations, especially the

pages concerned with the nomination and campaign of 1932, 1936, and 1940. They tell more than Mr. Flynn may have intended.

cussed on and engaged by the life of their neighborhood. Since the constitution has considerably consecrated this by leaving to the states a very substantial range of authority, the natural localism is reinforced by elections, legislative authority and office and graft on the spot. This has two results:

One is to throw power into the hands of the local bosses—"machines" is no misnomer—especially those of the cities, from which their vote-gathering machine is operated—the Hagues, the Crumps, the Pendergasts,<sup>80</sup> the Rorabacks, the Vares, the Kellys, the Curleys, and so through many generations. For they can deliver the vote at the state and national conventions, the primaries and general elections. The second result is to some degree to confuse and take the mind off the national, and, in our day, even the international issues. Washington is very far away, and therefore the nation as a unit also when the screen of local bossism, irresponsible for the national vision, not versed in its national and international problems, is set between the everyday mind of the voter and the central problems. (I learned first to appreciate this when I lived for a year in Knoxville, Tennessee.) In other words, the centralizing function of party, and therefore its purpose-determining, coherent-making, integrating function is riddled, torn, and obfuscated. If loyalties are nurtured and harvested by the local boss, and political office is impossible without him, why should a loyalty to the center be developed? It may be expensive.

(4) The constitutional separation of powers and diverse terms of office break up the vision of unified purpose. Any vote cast at any election is not a vote which carries a total mandate. It is only a fraction of one, going to the House, the Senate, or the President. How it shall be cast is, therefore, not so momentous a consideration to a voter. So also, who shall be the trustee of its use at the center demands less searching of conscience and

less purposive loyalty to the party as a creative association. This cause is accompanied by the disintegrating element of the variety of terms for which the central legislative and executive body are elected, and the different election dates. If they were all elected simultaneously at least, and for the same term (say, four years), a unity of judgment and decision, stimulated by an enforced unity of program, would result.

(5) America has two assets as a polity which reduce party fever. Its people are materially acquisitive in a specially high degree and, compared with the size of its population, the vast expanse and rich resources of the land offer an optimistic sense of continuing opportunity. (The student must have lived in Europe to appreciate the tremendous power of these two factors.) Hence, the electorate is of a middle-class, bourgeois type, even if its members are impoverished farmers or unskilled laborers. They are not inspired by the heated winds of philosophic doctrine or transcendent ideology, which is more than wealth itself. They are moderate and good-tempered, generally speaking and omitting a Huey Long, a Bilbo, or a Father Coughlin. They do not take sides; and if the electorate does not take sides, there cannot be any sides.<sup>81</sup>

American political parties cannot therefore have much gristle though they may be fat. It is not possible to change this situation by constitutional fiat. And if the people are broadly content, why should there be more than virtually one all-inclusive party? Serious consequences must flow from this flabbiness of party structure. The parties being infirm of purpose, either party's legislative and executive policy and choice of men are rarely such as to meet the severe trials of modern statecraft. Laws are not passed in time; or they are muddled with riders; or they are kept till the last moment of a session; or confusion arises when a veto interposes itself between President and Congress and when party

<sup>80</sup> Cf. M. Milligan, *Missouri Waltz* (New York, 1948).

<sup>81</sup> Cf. *Fortune*, February, 1940, showing that 79.2% of the American people regard themselves as middle class, and January, 1946, for a poll on the hopefulness of American life.

## THE CHARACTER AND POLICIES OF MODERN PARTIES

voting is unclear; or Congressional voting cuts extraordinarily across parties, thus making for electoral perplexity; or coordination fails between legislation and its execution, or even between the departments of the administration. A clear stream of controlling tendency is lacking.

What is worse, there is no central responsible *thought* for the future and the relationships of the various governmental decisions to each other. The best examples of the latter are the immediate lifting of many controls on V-J Day, and the impossibility of recovering the controls; the fumbling labor-management, wage-price relationship as the war ended; the different doctrines published by Truman and Wallace on the same subject of wages; the fumbling with OPA; the failure in deliveries of promised food contributions to Europe; the rise in prices and the effect on wage demands of central fumbling; and the consequent damage to all those countries to whom the foreign policy of the United States require it to make loans—at one time, 50 per cent being the estimated loss in their value!<sup>82</sup> The position of labor in the nation—only a group, even if a very important group that deserves cherishing—is similarly the object of confused counsels, as the parties are morally flabby on this also. Labor is no homogeneous body, but a number of occupations. Each and all have a responsibility to each other, without the understanding and fulfilment of which they cannot fail to do each other damage by making claims incompatible with the welfare of all and each. For the wages of each constitutes part of the cost of production and the family budget of the others. And all of them have a responsibility to the nation as a body of consumers, a responsibility for using the investment of capital and invention in their industries to the maximum productivity and welfare of all. How can these responsibilities be explored and defined, and carried out, except through

<sup>82</sup> Cf. British House of Commons, *Debates*, August 7, 1947. Many other examples of incoherence in the practice of government will become apparent as the following chapters unfold.

political parties? Unless political parties have a mind compact of standards of social justice, what kind of order can there possibly be in the tempestuous world of industry? The tergiversation of chief executive and Congress on labor legislation in 1948 and 1949 will long be remembered.

If no national disaster follows from all this, great damage does, losses of production and justice to social groups who vainly demand what is truly theirs. Often when government should give only a reason for saying "No" it yields against its own reason.<sup>83</sup>

*Possible Remedies For Political Indifference.* Is there a remedy? For the discovery of purpose, there is none: time and vicissitudes, emergencies, and the chance of a born leader will settle what purpose shall animate a party by educating the popular conscience, beginning with the fifteen per cent of "opinion leaders" in the communities<sup>84</sup>—above all, time. Can constitutional changes assist? Yes, though they cannot solve the problem completely. It is useless to insist on the smaller gadgets, like questions in Congress to the heads of departments, for questions depend on the efficacy of the party organization outside Congress. But something valuable might well come of (1) fixed identical terms of office for House, Senate, and President, and election and commencement of office at the same time; and (2) abolition (by the power of Congress to fix the terms of its own election) of the traditional rule that members must be residents of their Congressional districts, and the constitutional rule that they must be residents of the state. These reforms would add weight to central leadership of the party.

How much government owes to the parties, and how weak American political parties are, may be seen from this quo-

<sup>83</sup> For example, the Truman speech in October, 1946, abandoning OPA.

<sup>84</sup> This is the percentage Paul Lazarsfeld found in his Erie County, Ohio, study, *The People's Choice* (New York, 1944). This is bigger than the immediate active leadership of the parties, which I estimate at about 2.5% of the electors, in Illinois.

tation from the *Report of the Joint Committee on the Reorganization of Congress*:<sup>88</sup>

The present steering committees, an informal and little-used device, seldom meet and never steer. . . . We recommend that these be replaced with the formal establishment in the House and the Senate of majority and minority policy committees. The majority policy committees of the two Houses would meet jointly at frequent intervals, as would those of the minority, to formulate the overall legislative policy of the two parties. The majority policy committee of each House would also hold frequent meetings to consider its role in expediting consideration and passage of matters pledged to the people by the party.

It should be borne in mind that these functions are in British and European systems the normal functions of the parties. Then, the feet of clay appear in the Report, for it continues:<sup>89</sup>

*No member of either party would be required to follow such announced party policy except as he chose to do so. Each member would be free to vote as he saw fit, but [oh, bathos!] the record of his action would be available to the public as a means of holding both the party and the individual accountable.*

This proviso will kill the effective virtue of the reforms. The character of American parties is further underlined by the Committee Report when it says:<sup>87</sup>

Your Committee recognizes the need for freedom of action on the part of the individual Member of Congress and his right to vote at any time against the announced policy of his party.

If the parties are not marked by firm purpose, they are still organizations for the improvisation of legislative and administrative answers to emergent and unevadable practical difficulties of social and economic life. But, being such, they are very like each other in their organizational basis, and their appeal to all classes and occupations and areas. There is a differ-

ence in that rather more of the poor vote for the Democratic party and rather more of the rich for the Republican. The S.E.S. (social and economic status)<sup>90</sup> is a little different in each case, and the bias of their legislation attracts the appropriate beneficiaries, even as the would-be beneficiaries press the party forward in the direction they like. The writhing of the Democratic machines and local bosses against the policy of the New Deal in 1936 and 1940 is described with unconscious humor in Boss Flynn's memoirs—to keep their jobs, the men who tended the local machines—even had to do something for their voters! The likeness and the difference between the constituents of the parties can be seen from Table 6, showing voting over three Presidential elections, at a time when governmental problems were especially acute and reforms were markedly accelerated.

TABLE 6—COMPUTATION OF PERCENTAGE OF OCCUPATIONS VOTING DEMOCRATIC IN PRESIDENTIAL VOTE<sup>90</sup>

Occupations	1936	1940	1944
Professional	49	38	42
Businessmen	47	34	41
Farmers	59	54	48
White-collar workers	61	48	51 <sup>90</sup>
Skilled workers	67	59	59
Semiskilled	74	67	62
Unskilled workers	81	69	65

<sup>88</sup> Cf. Lazarsfeld, *op. cit.*, Chap. III.

<sup>89</sup> Cf. E. G. Benson and P. Perry, "Analysis of Democratic-Republican Strength by Population Groups," *Public Opinion Quarterly*, September, 1940, pp. 464-73; and press release of American Institute of Public Opinion, March 3, 1945. Cf. also D. Anderson and P. E. Davidson, *op. cit.*, p. 143 ff. for similar tables; and Paul Lazarsfeld *et al.*, *The People's Choice*, p. 19 *et seq.*; also Ogburn and Hill, "Income Classes and the Roosevelt Vote," *Political Science Quarterly*, 1935, p. 186 ff.

<sup>90</sup> Anderson and Davidson admit that it is a puzzle "why people of no wealth and meager income should be arrayed against each other in opposing political parties." They hazard: "perhaps it cannot be explained in terms of their economic stake at all but is the result of other factors—such as the failure of either party to espouse their cause, subterfuge and chicanery impolitics, ignorance of their true economic stake, the party tradition in which they were nurtured, their social surroundings,

<sup>87</sup> *Ibid.*, p. 12.

## THE CHARACTER AND POLICIES OF MODERN PARTIES

Of course, the consequence of the all-inclusiveness and mental and moral fluidity of the main political parties is the *incoherence of the parties in the legislative and administrative process itself*. Lacking either the leadership of men or the leadership of ideas, the parties in Congress are undisciplined and vote across party lines. This was first shown by President Lowell of Harvard,<sup>91</sup> but more recently Stuart Rice<sup>92</sup> and others<sup>93</sup> have shown even more clearly the looseness of party discipline and cohesion in party policy. The Stuart Rice index of cohesion showed only 63.1 per cent for the Democratic Party and 66.3 per cent for the Republicans in the Senate in the Sixty-eighth Congress. The consequences for legislation and executive leadership are considered later. Table 7 (opposite) of some crucial votes in 1947 shows the disarray.

The upshot is both good and bad. It is good in that the surging social forces in the country have come within the bond of two parties, so that the nation is not torn by the kind of factions which Madison feared as a disintegrative force. This has occurred in such a way that millions of people have lived in peace in an enormous area which has had to adapt itself to the tremendous strain of swift, sometimes abrupt, and always massive, economic, technological, and social change: at any rate, wholesale violence has been avoided. Simultaneously, as the tax burden will bear out, government has been endowed with a great range and depth of regulative, remedial, conservational, and philanthropic functions. Yet it still must be remembered that "one-third of the nation is ill-housed, ill-fed, and ill-clad", and it may be added, ill-

provided with medical care. Perhaps the New Deal spirit will not be entirely lost to either party, and especially not to the Democratic; while the problem of social security, civil rights, and full employment may offer the opportunity for one or both to draw a sharper alignment of following and loyalty, and therefore of organization and purpose, than ever before.

### CONCLUDING OBSERVATIONS OF POLITICAL PARTIES

THE intimate connection between political parties and the legislature and executive is manifest. Indeed, it is not extravagant to say that the legislature and the executive are hardly more than the formal, centrally organized, and authoritative assembly places and will-making agencies of the parties. The sounder the organization, the more cohesive its association, and the more defined its purpose, the more is it the soul of the legislature. The less so, the more the indecision, the derangement, the creaking and unserviceability of the lawmaking and executive bodies.

The contemporary mind cannot totally dictate to the institutions produced by history and geography. Yet it may well reflect that two parties are better for the happiness and duty of nations than many parties, and two parties contesting seats everywhere. For then lies and error may be in all places challenged, while distraction of will and disintegration of outlook are reduced.

If we regard parties as a kind of mountainous pyramid, with their broad base in the people and their summits constituting the legislature and executive, then the British system can be represented by a single mountain, from base to summit, all of one piece, including the opposition. The American system ends in three peaks, separate and of different dimensions, and awkward bridges are needed to allow to and from communication between them, not too successfully. In France, the mountain as it rises upward is cleft by a multitude of fissures. In dictatorial states, only one firm sharp summit arises, which weighs

the influence of party bosses, and others." *Op. cit.*, pp. 185-6.

TABLE 7—VOTING—BY PARTY—ON SOME KEY ISSUES IN THE UNITED STATES CONGRESS

		<i>Total</i>		<i>Republicans</i>		<i>Democrats</i>	
<i>Voting in the Senate, 1947</i>		<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>No</i>
May 28	First income-tax reduction bill	34	52	2	45	32	7
July 18	Override veto on tax reduction	36	57	3	48	33	9
May 13	Omnibus labor bill	24	68	3	47	21	21
June 20	Override veto of labor bill	25	68	3	48	22	20
May 29	Hawkes amendment to increase rent 15 per cent	26	48	2	40	24	8
June 18	Reed-Bulwinkle bill	27	60	3	43	24	17
April 22	Greek-Turkish aid bill	67	23	35	16	32	7
April 30	\$150-million foreign relief cut	64	19	32	12	32	7
June 18	Wool-tariff bill	38	48	12	36	26	12
April 3	Amendment to recommit Lilienthal appointment	52	38	18	31	34	7
				<i>Republicans</i>		<i>Democrats</i>	
<i>Voting in the House of Representatives, 1947</i>				<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>No</i>
March 27	First income-tax reduction bill			3	233	133	40
June 17	Override veto on tax reduction			2	233	134	35
July 18	Override veto on second tax reduction			2	236	105	63
April 17	House (Hartley) labor bill			22	215	84	93
June 20	Override labor-bill veto			11	225	71	106
May 9	Greek-Turkish aid bill			126	93	161	13
April 30	\$150-million foreign-relief cut			36	190	128	35
June 16	Recommit wool-tariff bill			46	154	119	37
June 24	Overseas information, "Voice of America"			152	62	150	
May 27	Agricultural appropriation cut			12	180	161	0
April 25	Interior appropriation cut			9	186	130	11
July 15	Civil rights for federal employees			33	191	99	57

down heavily upon the mass of dry powder beneath.

Modern parties must bridge the gap between the narrow range of factual observation, the self-regarding economic interests, and the special spiritual attractions of masses of diverse individuals and the small and larger groupings. For the comprehension of duty and the recognition of the interrelationship between the rights and welfare of the individual, the nation, and the world, demand the assistance of men who especially devote their time and particular skill thereto. In democratic government there is a proper vocation of leadership to which all can freely aspire: and leadership is essential. In our own day, the advent of great firm collectivities—in the occupations, in social groupings, in churches, and so forth—more than ever demands that parties shall

serve individuals, for it is there *at the individual focus*, that loyalties are engendered. If a reasonable and flexible unity in diversity is wanted, then the *party must penetrate through the associations, through the collectivities to the individual, and there teach its own doctrine of the relationship between its whole and its parts*. If not, as especially shown in the United States, parties become the sport of the lobby. The lobby exists everywhere, since interests exist everywhere, but it is chiefly in the United States that parties are unable to resist, as their superior loyalty is not sufficiently lofty or self-assured to fend off the lobbyists.

#### DICTATORIAL PARTIES

IN MARKED contrast to these considerations concerning democratic political parties, we

may recapitulate what has been said about the dictatorial parties.<sup>94</sup> In such régimes one party alone exists. Hence the *legislature is emasculated*, as it cannot be the *forum of a confrontation of different wills*. The legislatures are facades. As the party is in the service of a person or a doctrine (like the Marxist-Leninist) paramount, unqualified, final, to which possible alternatives are not admitted, and, above all, fanatically sanguine in temper, the single party acquires several peculiar characteristics. Its duty and discipline are severe—the cause is above all other loyalties, forever. To secure dynamic *élan*, the party is kept small relative to the population. To achieve the triumph of doctrine and to be assured of loyalty, a most careful process of selection compared with democratic parties is installed, with candidacy, endorsements, apprenticeship, formal preparation. To give the sense that this is a leadership of quality, an *élite*, the numbers are limited and purges periodically undertaken. Since no opposition is tolerated, the dictatorial party is used to challenge and destroy the opposition that mounts in the breast of any man or woman of common sense. In democratic systems, such opposition not only is expressible in parties and all other voluntary associations but is safeguarded by well-founded civil liberties. Since in dictatorships a spiritual following could not be relied on, not being spontaneous, and since only outward obedience could be enforced, the party is and continues to be cruel in its mental and physical attacks on a population which is simultaneously silenced and divided. Dictatorial parties are not parties, but doctrinal or personal despotisms; they do not spread and encourage leadership but monopolize it.

Parties are the power behind all thrones. Whatever the form of the state, parties govern by directing the energy which moves the machinery. Their peculiar power is that in their absence the political fires would run too low for activity, or the wheels would obstruct each other

instead of working smoothly in their appointed positions and functions. About forty years ago an American statesman referred to parties as the "invisible government" and contrasted the institutions and activities expressly permitted by the constitution with the real sources of power.

Party has ceased to be the invisible government, and has become not only the visible but the acknowledged government in democracies. Already it increasingly finds its place in statutes and written constitutions, and in the only example of a democratic unwritten constitution, the British, the acknowledged part played by party is enormous. When we have penetrated into the secrets of parliaments and cabinets, presidents, kings and departments of state, we shall have good cause to underline, and underline again, this judgment founded as yet only upon the party's electoral activities.

For without party the electorate would be "atomized," as it was intended to be, in the vague speculations of the school of Rousseau. Today it would be split not only into millions of personal fragments, but into groups and congregations: wherever there is an associated activity of man there is conscious organization. Without party there would be but churches, trade unions, employers' and professional associations, schools and universities, various kinds of consumers' associations, states in a federation, and municipalities—in short, all the organized human fellowship bands, seeking for all and for themselves that which their own ethic dictates. Modern political parties, not all in the same measure but all in some measure, absorb the members of these associations into their larger and wider fellowship. They act with an interest in, and a doctrine of, the state. The hard and fast line between them and smaller groups is not to be found. They cut across these groups, include them, marshal them, and form wider fellowships, seeking the solution of problems which arise altogether, or in part, outside these lesser groups—problems which may arise out of the relations between them, and which concern not only

<sup>94</sup> Cf. H. Finer, *Future of Government* (London, 1946), Chap. 2, and above, p. 302 ff.

those immediately affected but others away beyond, who may be affected thereby.

By degrees which to the ordinary citizen were imperceptible, these nation-wide fellowships have come into being and organized themselves with a gigantic and complex apparatus. They possess buildings and newspapers, printing presses and advertising experts, songs and slogans, heroes and martyrs, money and speakers, officials and prophets, feast days and fast days; like all religions, they disrupt families and ostracize heretics, and among their agencies of discipline and subordination are the novitiate and penance. They bear many resemblances to the churches militant, but their eyes and minds are directed more immediately to the legislature and the departments of state, for there lies the power and the glory.

It is apparent already, and the next chapter will more abundantly show, that in our own day political parties have partially usurped the power of the legislature. They make policies, create platforms, obtain seats in the legislative assemblies, and, if they attain a majority, their platforms tend to become laws. No sooner, in fact, did party organization in England suffer the change connected with Schnadhorst, Chamberlain, and the Birmingham caucus, than people coined the term a "Parliament outside Parliament." But, though in a different measure in different countries, the power more and more departs to parties. So far has this process gone that the English system has been deliberately characterized as "plebiscital." To the question of why the House of Commons has ceased to be a deliberative assembly (insofar as it has), the answer was given by Lord Robert Cecil in the 1930's:<sup>95</sup>

I should say that if you really looked into the real principle of our constitution now, it is purely plebiscital, that you have really a plebiscite by which a particular man is selected as Prime Minister, he then selects his Ministry himself, and it is pretty much what he likes, subject to what affects the rule that

he has to consider—namely, that he must not do anything that is very unpopular.

Indeed, the phenomenon of party government is, if we regard it at a distance, really remarkable. Does it not need an extraordinary restraint upon human passions to permit, as part of the ordinary machinery of government, an organized opposition which undermines the government of the day, enters upon weeks, nay years, of demagoguery and militant electoral tactics, excites the people, and returns, perhaps, with the power of reversing former decisions, and in England, even of amending the basic institutions? It sounds, and in other days would have been judged, like treason, disruption, revolution, a battering at the foundations of the state. George Washington warned against it. James Madison was so terrified by party, or what he called "faction," that his concern is today difficult to understand. He said (in *The Federalist*, Paper X):

By a faction, I understand a number of citizens, whether amounting to a majority or minority of the whole, who are united and actuated by some common impulse of passion, of interest, adverse to the rights of other citizens, or to the permanent and aggregate interests of the community. . .

The change in manners in the Western world is immense for, though not every kind of tactics is allowed, the laws (written and unwritten) regulating them are equally binding on all the combatants and they are severe, considering the rather untameable disposition of man. Not all countries which adopted parliamentarianism were able to create and maintain these rules of electoral self-control. In some, as for example in Italy, parliamentary and electoral tactics were singularly corrupt and victory impure and simple, being the paramount consideration, victory for office the next consideration, and victory for policy the last. It was as though the morals of *The Prince* had been pawned with the parties, and the difference between one age and another simply an affair of the one or the many, the court or the caucus. Millions in Ger-

<sup>95</sup> L. S. Amery, also a Conservative politician, does not like to admit this in his *Thoughts on the Constitution* (London, 1946), and this constitutes the central defect of his whole thesis.

## THE CHARACTER AND POLICIES OF MODERN PARTIES

many could not stand it. Lenin and Stalin could not face the rigors of party strife. At critical times in the years between the world wars, French parties were so intent on stabbing each other that they almost killed their nation, which indeed was only revived by foreign arms.

Democratic government will not stand or fall, it is not efficient or inefficient, chiefly in the measure of the legislature's qualities: it rests, in its hopes and doubts, upon the party system. There is the political center of gravity. If the parties are divided upon sincere issues, fully conscious of their public duty as of their public power, equipped with the expertness which tempers zealous desire with calculated possibility, and if they conduct their campaigns with restraint, making the commonweal, and not victory, the standard of their rhetoric and militancy, then we may hope not only for the continuance of democratic government but for its improvement. If the divisions among men correspond to merely personal, factional, or sectional disputes, and, further, cannot be amicably assembled in parties not confusing to the electorate; if desire for complete victory wrecks temperateness and passion blinds to truth; if the men who form the organizations are not considerate and patient in their research and pursuit of policies and do not establish a permanent and generous reciprocity in matters electoral; if they cannot rise above the level of catchwords, office for office sake, and narrow-minded belligerency of phrase and tactics—in that measure not only is democracy despised by those who are the victims of party tactics, but a rot enters the vitals of the actors themselves. This is the testing time of democracy: and this means the testing time of political parties.

The remarkable thing is, as we have already mentioned, that there are so few parties, even in the countries where there are so many. Why are there not more? Any singularity of view is, by hypothesis, held by a small number, and a small number cannot by itself, and independent of the aid of any large party, carry through its

policy.<sup>96</sup> It cannot, as we shall show abundantly in Chapter 20, even obtain sufficient time to state its case in the representative assembly, so large is the amount of business, even the routine, of the modern state. The priority and the substance of parliamentary discussion is necessarily settled by the larger parties. The protestant then has the choice, either to maintain his principle and be forced into conscious political impotence, or to swallow his doubts and take them inside that party which is otherwise most favorable to his policy. From the outside the heterodox has rarely a chance of success: once inside the party he may, perhaps, barter his counsel, support, and services for some concession of his own demands. This practice has been commonest in England, and has gone to swell the chorus of Continental opinion that the Englishman is hypocritical. But in fact the Englishman's common sense is devoted to results in action, not the satisfaction of knowing that he is consistently supporting an entirely hopeless principle for its own sake. Even on the Continent, compromise must be and is practiced, for, in fact, men want government to continue, whether a majority is found or not. Principle, some might call it philosophic idiosyncrasy, is, however, not so easily sacrificed here to the necessary unity which is the prelude to power.

Another cause of the fewness of parties is the method of election, which by splitting up the country into constituencies, necessarily splits up the supporters of the small groups as well as of the big parties. This dispersal of the votes leads in the single-member constituency system to a loss, perhaps, of any representation: unless all the voters are sufficiently concentrated in one or more constituencies. Proportional representation, as we shall see, keeps them alive; but even so, the hopelessness of a small minority encourages adhesion to some larger entity. Though dissentients may be condemned to political exile, because of the tremendous difficulties in

---

<sup>96</sup> Cf. E. E. Schattschneider, *Party Government* (New York, 1942), an excellent analysis, especially on the relationship between class and groups and the major parties.

building a new party, this is, however, no justification for not clearly avowing opinions honestly held, nor any justification for the cowardice of not going into the wilderness to attempt the formation of a new party. For the gains of office, power, and half measures or promises, will be lost the possible effect upon opinion, whose strength can, after all, not be really gauged until one has staked one's career upon its exploration. Too often life is killed by office.

For the man of religion some are saved and others damned; for the teacher some are ethically right and others wrong; for the politician the world is divided into the righteous We and the wicked They. For if life is to be lived, it requires successful assertion; self-belief springs eternal and is fostered as realization demands it. But the scientist who seeks to understand and not to govern must be content with observation of the source of these differences. It is for him to say that all parties to a controversy are inspired, that what is considered ugly, vicious, and cruel by one side, is, for the other, all that it can know of the sublime, causing those who cherish it to experience here and now the delights which men have ascribed to Paradise, moving them to a sacred nobility and self-sacrifice, to a happiness immeasurable when

ventures are successful, and, in the days of adversity, to sorrow and longing of overwhelming poignancy. Where men can live in harmony, then, let us be thankful, but when they war against each other, in parties, nations, or by "crime," let us understand first and judge afterward.

Along these diverse channels, men would move to the extreme boundaries of their faith were it not for the organized counter action of parties. For men are impelled to a complete establishment of their own good, and even its forcible fixture upon others. Parties mutually check and control the militant extension of ideals. In this organized interplay of forces, each learns the most important truth in politics: that in order to win one's way to development, some part of the way must be given up, either substantially, or in terms of time; that it is possible to destroy every hope by insistence upon all at once.<sup>97</sup> These organized bodies more easily find and hold to the terms of reciprocity than do dispersed, inarticulate persons. For they have the technical apparatus with which to accomplish this purpose, and they tend to acquire a sense of honor and self-respect: that is, a sense that promises given and accepted must be promises fulfilled.

<sup>97</sup> On the effect of time on political behavior see below, Chapter 38.

#### *Proposals and Devices for Improving Democratic Legislatures*

A political institution is a machine; the motive power is the national character. With that it rests, whether the machine will benefit society, or destroy it. Society in this country is perplexed, almost paralyzed; in time it will move, and it will devise. How are the elements of the nation to be blended again together? In what spirit is that reorganization to take place?—D I S R A E L I

The general will is always in the right, but the judgment which guides it is not always enlightened. It must be got to see objects as they are, and sometimes as they ought to appear to it; it must be shown the good road it is in search of, secured from the seductive influences of individual wills, taught to see times and spaces as a series, and made to weigh the attractions of present and sensible advantages against the danger of distant and hidden evils. The individuals see the good they reject; the public wills the good it does not see. All stand equally in need of guidance.—R O U S S E A U

## Legislatures: General Problems

LEGISLATURES, assemblies, chosen as we have already described, meet to accomplish a variety of functions: to make laws, to control the executive, and to carry out a few judicial functions. In Chapter 6 we found that although there is no absolute separation of powers, there is a strongly marked distinctiveness of function, and that although each institution is occupied with a mixture of functions, its central occupation is different in kind from that of its collaborators. The function of legislatures is to apply the presumed will of the people to the creation of laws and the superintendence of their administration. Their judicial power is of small and residual importance, for it nowadays is almost wholly exercised by extremely specialized bodies.

### THE MANDATE OF THE LEGISLATURE

THE relationship between the will of the electorate and the legislature has already been treated in some measure, but as we explained, that relationship must be viewed from the angle of the legislature as well as from the angle of parties. The candidates have been nominated, they and the party have associated, they have duly become members of one or other of the assemblies. Now what is their duty? How far may they proceed? What powers have they? Are they now free agents to do absolutely as their own discretion dictates?—or must they seek instructions from those who elected them?

These questions were raised as soon as legislatures began to meet on the express or implied assumption that they "represented" some body corporate or area. They were raised, for example, in relation to the *États Généraux* of France, where it was accepted that delegates could not think or act, *faute de charge spéciale*<sup>1</sup> they were raised in England in 1647<sup>2</sup> in the Agreement of the People. They were raised in America with a special emphasis after the War of Independence.<sup>3</sup> The subject was

<sup>1</sup> Cf. G. Picot, *Histoire des États Généraux*, 2nd edition (Paris, 1885), Vol. V, p. 145 ff.

<sup>2</sup> Cf. S. R. Gardiner, *Constitutional Documents*, 3rd edition (Oxford, 1906, pp. 368-69: "That the Representatives have, and shall be understood to have, the supreme trust in order to the preservation and government of the whole; and that their power extend, without the consent or concurrence of any other person or persons, to the erecting and abolishing of Courts of Justice and public offices, and to the enacting, altering, repealing and declaring of laws, and the highest and final judgement, concerning all natural or civil things, but not concerning things spiritual or evangelical. Provided that, even in things natural and civil, these six particulars next following are, and shall be, understood to be excepted and reserved from our Representatives . . . That no Representative may in any wise render up, or give, or take away, any of the foundations of common right, liberty, and safety contained in this agreement, nor level men's estates, destroy property, or make all things common; and that in all matters of such fundamental concernment, there shall be a liberty to particular members of the said Representatives to enter their dissents from the major vote."

<sup>3</sup> Jefferson said that "all the powers of Government result to the legislative body" and

fiercely discussed by the French Constituent Assembly,<sup>4</sup> and in England, the claims to parliamentary representation of the new and powerful commercial interests first forced a famous opinion from Burke<sup>5</sup> and next compelled a reform of Parliament, and this, naturally, put the matter in a new light. The issue raised was, and is, that of the mandate of the member: is it imperative or is it discretionary, and if discretionary how far may discretion go?

*Law and the Mandate of the Legislator.* In English terms the problem has resolved itself into the problem of delegate as against representative. The British constitution offers no written guidance upon this, but where there are written constitutions (though not everywhere) a definite rule is laid down, which squares with Burke's reading of the British constitution in his own time and the general view rather vaguely held now by most members of Parliament. The Organic Law on the Election of Deputies of France (1875)<sup>6</sup> says: "All imperative mandates are null and void"; and that of Weimar Germany said: "Members are representatives of the whole nation. They are subject to their conscience only and not bound by any instructions."

These are counsels of excellence rather than rules enforceable in the courts, for no country has established practicable machinery for their enforcement. As regards Germany, it has been said that the rule belongs "rather in a catechism than in a constitution."<sup>7</sup> Once only has punishment

followed upon a definite acceptance of a mandate in France: invalidation of the election of the successful candidate who accepted a mandate, but, since the *bureau* of the Chamber which examined the case was composed politically, and not judicially, we may suspect that considerations of party advantage determined the issue.<sup>8</sup> Law and practice have since then inclined toward the freedom of the member, for the commission which prepared the law of November 3, 1875, deliberately refused to accept the grave penalty of annulment of the election.<sup>9</sup> It accepted the alternative, which not only gives the member his freedom, but gives him a statutory defence against exigent constituents: it declared the imperative mandate null and void. Virtually, the law says to the candidate: "Declare what you like, that business is between you and your constituents, and if you make any definite promise you will not be punishable by the Chamber; but whatever you have promised, know hereby that it has no effect. You are absolved!" The Chamber of Deputies decided against the nullity of an election contested because an imperative mandate has been accepted.<sup>10</sup> It decided also that article 13 of the Constitutional Law of 1875 prevents any penal sanction from confirming the nullity of mandates: for no member of the Chamber may be prosecuted for opinions or votes uttered in the exercise of his function.<sup>11</sup> Against those who clumsily obtrude the mandate (which, in fact, all members ask for and obtain, and to which they, in a certain degree, feel obliged, but which they pretend to ignore), a stiff though dignified protest can be made; for example, the president of the Chamber, the reporter of a commission, must protest when a mem-

"173 despots would surely be as oppressive as one." Cf. Charles Merriam, *A History of Political Theories* (New York, 1920), p. 110.

<sup>4</sup> Cf. E. Pierre, *Traité de Droit Politique et Parlementaire* (Paris, 1924), Vol. I, p. 311; and Chap. 12 above.

<sup>5</sup> Address to the Electors of Bristol (1774):

"Parliament is not a congress of ambassadors from different and hostile interests; which interests each must maintain as an agent, and advocate against other agents and advocates; but Parliament is a *deliberative assembly of the nation*, with one interest, that of the whole, where, not local purposes, not local prejudices, ought to guide, but the general good, resulting from the general reason of the whole."

<sup>6</sup> November, 1893.

<sup>7</sup> Pierre, *op. cit.*, *Supplément* (1924), p. 437.

(This immunity from prosecution, detention, etc., is reaffirmed in the constitution of 1946, articles 21 and 22.)

<sup>8</sup> November 30, 1875, article 13. This stipulation does not appear either in the constitution of the Fourth Republic or in the election laws of 1946.

<sup>9</sup> Cf. F. Morstein Marx, *Rechtswirklichkeit und Freies Mandat, Archiv des Öffentlichen Rechts* (Berlin, New Series, XI), p. 435.

<sup>10</sup> Pierre, *op. cit.*, p. 312.

<sup>11</sup> *Ibid.*, p. 313.

ber refuses to withdraw an amendment because he says he has received a mandate to defend it.<sup>12</sup> There is thus theoretic freedom, but if, in electoral practice, the member is bound, there is no punishment. So do men play hide-and-seek with their consciences; for to admit the existence of a thing which does exist may, they believe, cause its pathological growth. There is much good sense in this view.

In Weimar Germany the constitution spoke, as we have seen, with uncompromising directness, and Anschütz said that "the exercise of this function [*Organschaft*, or action as an organ of government] should take place in complete independence of everybody: of party, social class, groups seeking special interests to which the member belongs, and even of constituents. That is the intention of the second sentence of the article."<sup>13</sup> He said further that it is a moral duty, but a legal one too: and one, moreover, which binds you to consider all your actions and connections in the light of their compatibility with the public welfare. It was even argued that one cannot be bound by a caucus of one's party.<sup>14</sup> It is clear, however, that these desirable things are not secured by the law, and in fact the whole discussion soon takes on that same negative character which it has in France. It all comes to mean that the member cannot legally be bound to instructions; that is, that he is free of them: for it is against the constitution to be otherwise. But the real political question was not answered: if the candidate makes promises, or if they are demanded of him as a condition of votes, is there an institution to uphold his constitutional independence? The law created no institution to deal with such a breach of the constitution, if we except the electoral court, which has never decided such a case. The law only provided that any such arrangement was legally null;

that contractual arrangements whereby gifts and other amenities were accepted to promote special interests could be punished as bribery. One important case occurred in which a Communist member of the Hamburg Parliament was caused to resign by the handing in of a declaration which he was alleged to have signed in blank as part of the regular procedure of his party, but which he denied he had done. He also denied any wish to resign. In debate the Communists argued that such blank-form resignations were regular features of their organization, justified because "the member held his mandate not as a person but as a member of the Party, and that therefore the Party could always exercise its influence upon the carrying out of the mandate<sup>15</sup> at any time, and also had the right to nullify his mandate."<sup>16</sup> The committee declared its indifference whether the signature was the member's or not; the Hamburg constitution included the terms of article 21 of the *Reich* constitution, and this settled the issue. For such a signed declaration would make it impossible for a member to act according to his conscience. Moreover, it deceived the voters, for they give their votes to the candidate on the assumption that he is not bound to an undisclosed obligation. Against this decision the spokesman of the Communist party argued that as Germany had a list-system of proportional representation and as the lists, rather than the individual members, were voted for, it was unavoidable, as well as desirable and proper, that the party should discipline its members and alter its list. Nor was that all. The democratic principle required that the party should have the right of removing a member who defaulted from the terms of their united policy!

The German *Reichstag* was peculiarly liable, for reasons noticed in our discussion of parties, to the entrance of representatives of special groups, and it attempted to control them by requiring di-

<sup>12</sup> *Ibid.*, p. 437, footnote 9.

<sup>13</sup> G. Anschütz, *Die Verfassung des deutschen Reichs* (Berlin, 1930), p. 115. The history of this subject for Germany is given in J. Hatschek, *Das Parlamentsrecht* (Berlin, 1915).

<sup>14</sup> Cf. G. Anschütz and R. Thoma, *Handbuch des deutschen Staatsrechts* (Tübingen, 1930), Vol. I, p. 419.

<sup>15</sup> F. Morstein Marx, *op. cit.*, p. 432.

<sup>16</sup> This is an excellent though unintended illustration of the distinctive emphasis put by Communists on the superiority of party to the masses.

rectors of corporations to report their connections to the *Reichstag*. The British Parliament excludes government contractors and government officials; in France, officials and government contractors are excluded. This branch of politics and constitutional law has by no means received either the theoretical or practical attention it deserves.

According to English law, the Parliament is sovereign. The constitution knows nothing about the people. Therefore, in strict law, once a person has become a member he is free to act as his own mind dictates and is entitled to reject demands made by anybody.

In the United States the constitution also speaks in the words of the Bill of Rights of 1689: "and for any Speech or Debate in either house, they [Senators and Representatives] shall not be questioned in any other Place."<sup>17</sup>

Thus the laws, whether ancient or modern, incline to freedom of the member and ignore the actual nature of his present relations with his constituents. Yet in every country the facts deviate from the law, though the facts themselves allow the member considerable freedom. How much he is bound depends clearly upon the nature of the electoral process, and the part played therein by the local and the central caucuses of the political parties, a fact with which the law has not yet attempted to reckon. As the nineteenth century wore on, there was in England and America, and later in Germany, a gradual strengthening of the idea of delegation and a weakening of that of representation. This was due to the more conscious operation of democracy and the feeling that democratic government required active participation of the citizen.

*Theories of the Mandate.* Burke's theory (p. 228 ff.) gave the balance of power to the member. The movement of opinion leading to the franchise reform struggle of 1832 consisted, naturally, of the Whig claim for delegation and the Tory claim for virtual representation.<sup>18</sup> What was par-

ticularly in the mind of the former, and what gives the question its present-day importance, is the fact that it is manifestly impossible for legislatures to be dissolved and re-elected so often that their will and that of their constituents can be deemed to be in perfect harmony. To act with effect, even to act at all, in an age of inconsistent social demands for laws, legislatures must have such a length of life that the difficult problem arises of the connection between the constituents and the delegates during the time between elections. How can this problem be solved? It is soluble by strict instructions at the outset, and to this must be added the short duration of legislatures—and even that is not enough, for the people must exercise pressure upon legislatures through public meetings and other agencies in the interval between elections.

Tory doctrine rested upon two pillars: (1) the incompetence of the constituent to legislate for himself, and (2) the lack of the right locality to press its views to a conclusion against the interests of the country. We shall see that these are material elements of the problem not only deserving but commanding an important place in the final decision of the question. But the whole tendency during and especially after the Reform Bill struggle was toward definite pledges. Francis Place tells, for example, how the National Political Union decided that the opinions of all candidates on all the great leading questions should be accurately obtained and pledges on those alone demanded. The pledge became more and more acknowledged as a proper connection between members and constituents and more widely given. In the early days after Reform, the Whigs were not for strict pledges, and even James Mill was less radical on this matter than one might expect from the *Essay on Government*.

The last philosophical discussion upon parliamentary institutions written before the Reform Act of 1867 was John Stuart Mill's *Representative Government*, and Mill devotes a special chapter to the discussion of the question, "Ought pledges to be required from members of Parliament?"

<sup>17</sup> Constitution, article 1, sect. 6, para. 1.

<sup>18</sup> *Edinburgh Review*, November, 1812.

The spirit of that chapter is as remote from our days as the Flood. And to explain why is to reveal the nature of the present political environment. Mill says that many members of Parliament, even apart from the prospect of re-election, solely as a matter of conviction, allow their constituents the power of judging them. Are they right or wrong? Mill tries to answer the question by the application of two principles: (1) that government must be responsible to the governed and, jointly therewith, and (2) that government shall acquire "the benefits of superior intellect, trained by long meditation and spiritual discipline to that special task." But how are the electors to decide which among a number of candidates can best give these benefits? Their judgment is unsound. Showiness rather than mind wins them; therefore they would be foolish not to exact a pledge. Nor can opinion be dismissed: Liberals ought not to vote for a competent Tory or Tories for a competent Liberal—the more competent, the worse for the constituents in such cases. Hence, again, pledges must be exacted, especially since in England the electors have no choice except between two or three rich people who are of a class superior to their own and who are certain to vote for measures in their own class interests. "This would not be needful under a political system which assured them an indefinite choice of honest and unprejudiced candidates."

It seems, says Mill, impracticable to lay down for the elector any political rule of duty. It depends on the general tone of the electors. Some look up to superior talent, some are distinctly without reverence. For the old politician, his record will guide the electors; for the untried one, a pledge should be exacted. Even when the electors seek wisdom and attainments, their own personal opinion must not be suppressed; but, apart from fundamentals, they should allow the member his freedom.

What is missing from this analysis? The factor which today is of the most importance: the political party. And much of the essay on *Representative Government* is stone-dead for the same reason: the omission of political parties.

*Parties and the Mandate.* It is clear that discussion after the rise of parties must proceed upon entirely different lines, for the whole relationship of the elector to the legislature has been altered. We have already displayed the nature of that alteration in the principal democracies of the world. The parties have become recognizable entities, secure of a large body of steady loyalty. These are the bodies which have applied themselves to the task Mill ascribes to the constituents; they search out qualities among men and ascertain the value of policies. They make or endorse the nominations. The caucus or the primary nominations on the basis of party membership and party program. The constituents expect the program to be followed. They expect the member to follow the instructions of the party whip. The party organization itself disciplines the member. If he does not vote with the party, then he ceases to receive the whip, or is expelled, or does not receive "endorsement," or does not receive aid in propaganda and funds—an important consideration. (However, it is true that the caucus is less authoritative in the United States and France than in Britain, where it is most authoritative of all, and Weimar Germany.)

The old-time discussion is, therefore, out of date. But its main considerations deserve recapitulation. The first was the need to overcome the gulf between isolated elector or electors and the assembly of the representatives. Hence the strong emphasis upon freedom of the representative at a date when communications were so rudimentary that the locality could not learn the views of others without a personal meeting between all representatives. It was the representatives who thus insisted, because they realized, as any person with experience of deliberative assemblies does realize, that it is impossible (1) to foresee all the points which may arise and (2) to know what is for the good even of the locality until the other representatives have fully stated their case and have revealed their emotional determination and social power of resistance. Identical considerations powerfully and almost

unanimously moved the French Constituent Assembly, and essentially they remain true for our own day. *First*, the question arose, was the nation a unity, or not? If it were a unity, then its meaning lay in the power of the majority to will for all, after due deliberation. This is the test of corporate sovereignty. Unity was desired; therefore sovereignty lay with the whole nation, and not with any part. Hence, all the parts were subject to the will of the whole and could not prevail against the majority. The *intérêt général* dominated the *intérêt particulier*. The condition of unity was the condition laid down in debate: "*Il n'est pas permis de protester, de réserver; c'est un attentat à la puissance de la majorité.*" This condition is recognized generally today. *Secondly*, enlightenment on the general will was impossible without free discussion. For to bind to instructions is to destroy deliberation. Opinion cannot be known in advance.

When representatives from different parts of the country have to assemble and discuss in common objects which are as yet undetermined, which are neither foreseen nor known by the commissioners, it would be strange and absurd to shackle their wills by imperative mandates. Upon what could these absolute decisions be broken? They would necessarily be incoherent and destructive of all harmony; each district in occupying itself separately with different subjects, a general result on anything would not be reached.

Every constituency must have the nation in mind when it is choosing its representative: the theory of democracy is indeed, says Siéyès, that each deputy is chosen "in the name of the totality of constituencies; the deputy is of the entire nation." Who can know the national will elsewhere than in a national assembly? We must propose, listen, discuss and modify our opinions, and, in common, form a common will. When people meet it is to deliberate, to know the opinions of others, to profit from each other's illumination, to confront particular wills, to modify, to conciliate them, and finally to obtain a common result by a majority vote.

The terms of the argument have changed radically in the last century: com-

munications have become abundant and almost instantaneous; indeed, party organization of the whole electorate became possible as this, along with the press, developed.

What then becomes of the constitutional clauses about mandates? They might be removed and no harm at all would follow; they cover up a patent fact. *The party gives a mandate to the member: he has his instructions from it; more, he generally carries them out.* As we shall presently see, even the speeches he may make, and other opportunities of activity in the parliament, are settled by the party, ultimately on behalf of the constituencies but immediately on behalf of the party itself. The imperative mandate was the constituencies' only safeguard in the days before party: and freedom was possible and desirable when the only means of meeting the minds of friends and opponents was in the national assembly. Those days have gone. Party is the great intermediary.

In the United States the power of the local mandate is consciously interwoven with that of the party. The practice of the British constitution before 1832 required that the candidate should be a resident of the place for which he sought election, although the statutes providing for this were very old (1414 and 1430) and were evaded. This no longer prevails in the British system, and more than half of the members are residents of districts other than their constituencies. The older practice was put into the American constitution in the fairly mild form that the member must be an inhabitant of the state in which he is chosen. It still applies, but it has been strongly reinforced by the statutory requirements of some states that the member must reside in the district which he represents, and convention supports the rule. This is based upon local patriotism of a rather predaceous kind, upon the interest of the local boss, and upon the general view that a member is a spokesman of local interests. The member is expected to further the special interests of the constituency in the matter of the "pork barrel": that is, expenditure upon public improvements in his district, such as river

and harbor works, post offices, and the public jobs for his district or state. Further, as we have already remarked, the queer remoteness of the American Congress from popular needs—a separation produced by constitutional prohibitions and the separation of powers—makes the party less sensitive to public issues (though more vocal and apparently excited about them), and it is, therefore, not always so insistent upon party discipline as the English parties. The member is often prepared to hold up the legislature for some local advantage; there are always other members who are ready to support him for reciprocal benefits; it is a custom well known, to be taken good-humoredly and exploited with gusto. Therefore the constituencies can expect profitable “logrolling” by their members: and the electoral bargain is more than implied. This causes the mandate to be double: the local-predaceous and the party mandate. A member must bear both in mind: in regard to the latter, he knows that, owing to the Congressional weakness of American parties, he has more latitude than an English member; in regard to the former, he lifts up his eyes unto the “boss” of the state, whence cometh his help.

In pre-1939 France, the question played a more considerable part than in England or the United States, because there were few great party organizations to take the burden off the constituencies and assume responsibility for party discipline.<sup>19</sup> In 1871, Victor Hugo renamed the imperative mandate the *mandat contractuel*: “a contract between the mandate-member and the mandatories creates between the elector and the elected the absolute identity of aim and principles.”<sup>20</sup> In 1881 a proposal was made in the Chamber of Deputies that the “*professions de foi*” of the members should be collected and reported upon, to demonstrate the difference between the promises and the achievements of members, and to cause pressure to be

placed on the latter. The commission in charge of the proposal rejected it, the reporter saying that the electoral committees could not be considered as the faithful expression of the views of the country and that mandates may not be imperative since no one could foresee all questions which would arise in the course of four years. In 1894 a socialist project sought to make an imperative mandate really imperative by giving the justice of the peace in the constituency the right to declare breach of mandate and to annul the right to sit!<sup>21</sup> This ridiculous suggestion, natural to a party in a hopeless minority, was refused consideration. Duguit appreciates the fact that modern parties have eviscerated the legal clause, and he remarks that even though we consider electoral districts a mechanical necessity and lacking specific character, yet they do play a part as the medium of expression of the electorate, and members are, in fact, rather closely bound to their constituencies.<sup>22</sup> Esmein, on the other hand, excessively formal, begins with the conception that representation is representation of the whole nation and concludes with the idea that there is no place for a mandate. History, which Esmein invokes, cannot, in fact, settle matters of this kind but only contemporary conditions.<sup>23</sup> *The mandate is, in fact, given by the party where the parties are strong, and where they are weak it is almost idle to talk of a mandate.*

Now, German doctrines on the subject were of a remote, metaphysical nature before World War I,<sup>24</sup> and devoted to the support of the constitutional clause which was borrowed from French constitutions. Support was widely given to it because the

<sup>21</sup> *Ibid.*, pp. 272-73.

<sup>22</sup> L. Duguit, *Traité de Droit Constitutionnel* (Paris, 1921-25), Vol. II, pp. 504, 505, 510.

<sup>23</sup> A. Esmein, *Droit Constitutionnel* (Paris, 1921).

<sup>24</sup> Cf. J. Hatschek, *op. cit.*, and Paul Laband, *Staatsrecht* (Tübingen, 1876-82), Vol. I, p. 356 ff. But Laband says (p. 356, footnote 1): “On the contrary, there is a political responsibility which is demanded of the member of the *Reichstag* by caucuses, election committees, meetings, political clubs, the Press, etc. Such a demand cannot be legally enforced, neither is it legally denied.”

<sup>19</sup> This is the burden of D. Halévy, *La République des Comités* (Paris, 1934).

<sup>20</sup> G. Weill, *Les Élections Législatives* (Paris, 1913), p. 271. This is an address to various electoral committees who asked him to stand for the National Assembly.

whole system of government was unfree and the monarch was not anxious to assert popular power. After World War I there was a significant change in theory, but the upshot in terms of written law was the same. At the very moment when this change occurred, a system of proportional representation was established. That is, a system of election in which tremendous constituencies are combined with the placing of all the candidates for each party on a single list, that list to be accepted or rejected in its entirety. In other words, the method of voting for a single representative among a number of individual competitors was abandoned. Who now is the mandatory? It is, in fact, nobody but the party, and, indeed, the party in its least personal and most mechanical form.

The full significance of this cannot be discussed at this point, but it is treated in detail later. But this must be emphasized: the moment there is a departure from small single-member constituencies, the very question of an imperative mandate, of delegation or representation per member *to a constituency*, becomes highly unreal. There is no longer any direct apportionment of a member or members to a determinate group. All the psychological conditions of that relationship are disturbed by the size of the constituency, the predominance of the party doctrine, and the composite personality of several groups of candidates, each seeking a composite victory in a conjoint campaign. More than elsewhere, the party caucus is obliged to control the campaign and the nominations; and it does so. The members are bound in the first place to the dictates of the party machines.

*Delegate and Representative.* The conclusion, then, is this: that owing to the growth of party organization the question no longer is whether a candidate should hearken to his constituents, but how far he ought to obey the party. It is not in the legislature that the individual, sectional, or group mandate is so important but in the party councils, and it is there, indeed, that the relationship to the national interest is decided. There reconciliation takes place according to local urgency, the

courage and talent of the members, and the ability and policy of the national leaders. But nowadays any local problem of importance which is capable of being settled by the party is looked upon as a national affair. As elsewhere in government, the distinction between local and national is being rapidly obliterated.

It is important to keep the parties alive to their duty. The electorate can do this through direct intervention, by deputations, through the lobby, by individual communications, or by mass appeals. Suppose a member of the legislature changes his mind in the course of a legislative term, or is negligent of his duties; what remedy ought the electorate to have? In Britain, the local party has sometimes called on a member to resign. It is the general theory that he should not. But sometimes he has done so. But in the Western democracies it is exceedingly rare for the member to be either politically unfaithful or negligent. If he is, the next election will remedy that. (So in the case of Sir Oswald Mosley in 1935, after he had formed *The New Party*; and the tension between Sir Stafford Cripps and his Bristol constituency on his expulsion from the Labour party in 1939, and in March, 1949, the Labour party's refusal to re-endorse Konnilliachus for the 1950 election.)

Would it be wise to institute the recall: that is, the right of the local electorate to request, decisively, the resignation of a member? At first sight this proposal seems attractive. It should, however, be repudiated. For its institution would be an encouragement to all minorities to offer petitions against the sitting member. At some time in the term of a legislature, its work could be disrupted by such a concerted onslaught. It is, therefore, of cardinal importance that, for the sake of the regular march of business, for stability, and for the assurance of being able to reckon on the governmental events of the near future, some surrender of the immediate will of the electorate must necessarily occur—for the nature of modern economy and welfare requires legislative and executive stability. The more urgent is the need, therefore, for close connec-

tions between constituencies, the legislature, and the executive through a continuing party organization in constant operation, and through access of all sorts of organized interests and petitioners to government.

(As we have already observed, in its anxiety to vaunt its affection for the people, the Russian Communist party declared for the recall.<sup>25</sup> The power has been used very rarely indeed; and where it has, it has been the instrument of the Communist party for removing representatives the party leaders have ceased to favor. It is interesting to find that during the debates on the formation of the constitution of the Fourth Republic the Communist party in France proposed—unsuccessfully—the recall of deputies *by the party*; no other party agreed with them.)

*Functional Associations as Mandatories.* Very rapidly in recent years, alongside the parties as mandatories have grown associations of citizens, often nation wide in their purpose and membership. These are always active, and intercede with the government departments and with legislatures by personal conference and written communications. They operate in elections (supporting candidates and supplying money) and in the legislatures; they exercise influence upon cabinet ministers and upon the administrative departments. We have much to say about their significance later (p. 458). Here it should be observed that their electoral business is the extraction of pledges from candidates when these are most susceptible. Deputations are sent to the candidate, but more frequently, elaborate pledge forms are sent to him for signature, and it is pointed out, more or less explicitly, that a block of votes in the constituency depends upon the answer. Many candidates throw these in the wastepaper basket, but some are intimidated.<sup>26</sup> Most give a "straddle" an-

swer; that is, one specious enough to gain votes without committing the candidate. So in all democratic countries, but in the United States the practice has gone further than elsewhere. There are more "groups" formed, especially by women voters and church leaders, and more money available for printing. We are not now referring only to lobbyists. On the democratic assumption, associations are quite right in asking for pledges, and members must expect to rebuff them at their peril. Functionless or ill-willed frustrations by members of the legislature must be corrected. However responsive and capable the party system may be even where it is best organized, it is good that it should be stimulated from outside, as it usually is, by groups which feel passionately about some particular public affair. It would be highly dangerous to representative government to allow the parties a monopoly of political thought, for they—the party leaders and organizers—like all guilds, tend to be content with the minimum of thought that will obtain power, and when in office they have little time for thought at all. As the frank will admit, they begin to act not on information but on instinct. This is quicker and less troublesome. We shall show, further, how the party organizations are less the inventors than the brokers of policy, and that without independent philosophers and critics they would be wellnigh sterile.

#### THE GENERAL VALUE OF LEGISLATURES

*The Multiplicity and Confusion of Issues.* Legislatures are about to begin their work; the parties have accomplished theirs and have given pledges to the country. What is the meaning of these pledges? The parties carry a large basketful of projects. These are the things by which

testing, at the coming General Election, and also to decline to receive Deputations of persons other than electors in the particular constituencies which they are contesting . . ." (April, 1929). This agreement, together with the proposed letter, is reproduced in the *Report of the Labour Executive Committee, 1928-29* (published in the Labour Party Annual Report, 1929, p. 10).

<sup>25</sup> Cf. p. 228 above.

<sup>26</sup> "It is hereby agreed by the Headquarters of the Conservative, Labour and Liberal Parties that each shall send to all its respective Candidates a letter recommending them to refuse to answer all Questionnaires, received from outside the constituencies they are con-

rational men would judge their worth in terms of votes. But owing to the desire for victory they parade these commodities not conscientiously, for experience of the electorate's mind shows that victory cannot thus be won. An issue embodied in a slogan is raised as the main object of the electoral struggle. One, two, perhaps three issues of relatively greater immediate importance than the rest are made the subject of contention. This procedure results in two things: first, cynicism of large numbers of people about the whole electoral process, and second, a heated discussion immediately after an election about what the voting really means, a discussion which may become particularly acrid and even grave when new problems arise and are dealt with by the government issuing from the election.

These are unfortunate results, and there is much to which the rationally minded may object in the practice of singling out issues for prominence and keeping others in the background. A mandate is incurred in respect to one thing or several things. Groups otherwise heterogeneous are brought into the same camp, and afterward some may feel cheated. Neither the government nor the people know exactly what they have done or engaged themselves to do. Exactly what proportion of the majority voted for what sections of the common platforms? But the answer to this is, if not entirely satisfactory, at least somewhat reassuring:

*First*, the general attitude of mind of the party and the character of its leaders are evoked in the course of discussing the special issues, and electors may be as much impressed by this as by the merits of the specific proposals. That is something they may rely on for the future. *Second*, the conduct of parties cannot be raised far above the level of the mass of the electorate, and until that is improved, chicanery is bound to prevail. In fact, in England, at least, the best of slogans and the most alluring of issues are modified in effect by the widespread if vague knowledge of party history and personalities. As to new problems raised in the course of a legislature, this is an inevitable occurrence

wherever they last more than a few minutes. The safeguard is complex: a reduction of their term, a party system with sensitive electoral antennae, a permanent party organization with its eye on the next elections, and a system of by-elections. In many places the referendum and the initiative have been not only widely advocated but adopted. It is also a good argument for decentralization to local authorities, and federal systems, that the more the authorities that participate in public affairs, the less is a confused complex of problems unloaded upon a single electorate at one stroke. (Up to a point: balance the advantages and disadvantages.) For it must be admitted that the mandate is confused and partly warrants the many letters written by unemployed clubmen to the leading newspapers after each election. It will appear as we go on that the evils can be and are mitigated by a good party and legislative system.

*General Value of Legislatures: the Interpretation of the Mandate.* It is at this point that an appreciation of the value rendered by legislatures in an age of high party organization begins. All legislatures, with varying quality, but all in an important degree, render three services, beyond the mere function of lawmaking and controlling the administration:

(1) When the members returned by election confront each other and compare thoughts and speeches, a sorting out of the generally confused mandate of the election is undertaken. A process of reflection occurs, in physical conditions more propitious than the stormy, wordy, nationwide debate without detailed confrontations that is an election. An order of priority and values becomes more definite and settled: and sometimes has to be supplied afresh where the verdict was ambiguous.

(2) Numbers of votes do not tell all: they do not exactly indicate the duration of electoral opinion, and, above all, they do not register the intensity of the feeling of either majority or minority. This has to be discovered by meeting the other persons: there are vocal inflections and turns of phrase that can be met only in a small

assembly, where, also, expression of face and gesture will tell what a sacrifice it will be for some group to be forced to submit to a vote. This nonstatistical relationship must be heeded, if it be desired to obtain the maximum welfare by the law, with the minimum of avoidable coercion. The knowledge that some day the other side may be in office is a powerful support to such tolerance.

(3) And this leads to the final point, namely, that in a legislature common to all parties, close to each other, continuously with each other, engaged in common labors, appeasement takes birth and tends to grow. It is one thing to damn the other party's doctrines during an election in the crude, imprecise way that the enormous terrain of an election makes rather inevitable; it is another to look into the other man's face a few yards away. He now seems almost human: he has ceased to be a disembodied doctrinaire extremist. Many men have testified to this appeasing quality of common legislative service. Some men do not like it: they consider that their deputy is being seduced or that he sells out. This is usually not the case: legislators have learned that other men are not insincere or rogues, cowards, bloodsuckers, and that there is something in some parts of their philosophy that sometimes deserves support. To those who look to unity and mercy among men, such a function of legislative life is of importance; those who do not even banish their rivals altogether.

#### LEGISLATORS: THEIR GENERAL NATURE

WHETHER the mandate comes from the constituency or from an association or the party, its exercise requires the member to think, discuss, and determine—the last being expressed by his vote. We shall see that in modern legislatures everywhere, the large majority of members does little more than vote, that only a few discuss, and that a very small minority thinks effectively. The composition of these functions varies a little from country to country, but generally the emphasis is upon will or power—that is, upon the vote. This is a direct corollary of the majority

principle; and it seems a parlous condition until we reflect that, after all, the real thought has already been accomplished outside the legislature and will yet be accomplished, completed, and applied to all points of practical detail by the opposing groups of leaders and the permanent officials. Fundamentally, a legislature is a forum where men may measure the strength of each other's will as expressed in their numbers and in other demonstrations of strength of feeling and purpose, and may either enter into agreements by mutual concessions or vote each other down.

*Legislators as Policy Makers.* Our survey of political parties gave this result: that, broadly, policies are made or adopted by them. This does not always or chiefly mean that the members of a party or its leaders are inventive, that they conceive and elaborate schemes of reform or conservation. They are certainly disposed to do this by character and the stimulus of their experience. Some, indeed, do discover the answer to problems and the means of fulfillment. Upon reflection, however, it will be seen that not many such inventions are due to party and legislative persons. The politician is a broker rather than an inventor. And not infrequently he must be prompted vigorously before he satisfies his clients.

Those who discover issues, and explore and plan the means of their settlement, are the thoughtful and sensitive among the population, though they may be, and in our own day usually are, voluntarily attached to some specific party. Consider the immense industrial and commercial associations, the social groups of all sorts with which every country now teems, the municipalities and their associations; consider the reformers and thinkers like Bentham and Chadwick, Tom Paine, Judge Lindsey, Henry George, Bernard Shaw, the Webbs, Lassalle, Mazzini, Raffcisen, Plimsoll, the Prohibitionists, the Bimetallists, Adam Smith, Rignano, Tolstoy, Marx, Marie Stopes, Veblen, Jane Addams, Octavia Hill, Florence Nightingale, Bellamy, Jevons, Keynes, Havelock Ellis, and others who first pursued lonely

paths and were later joined by disciples who surged forward to harass, press, and sometimes to convince political parties. All these geniuses of sensitiveness and intellectual comprehension, these masters of history and moral value, are the true manufacturers of the politicians' stock-in-trade. This is quite natural, for to govern well has always required the rarest degree of knowledge and wisdom.

The application of this truth to our own day is especially important. Populations are vast, the division of function, economic and social, minute and complex. They are incomprehensible without long and patient study. Each individual has his own peculiar nature distinguishing him from all others and from human nature in the abstract. Abroad, in places so distant that the average person cannot even conceive that a full all-round life is lived there, are woven connections that will be beneficial or destructive in proportion as we learn to read the secrets of their mastery. The scale of society is so stupendous, the detail is so minute and manifold, the interests so special, the studies of the technicians so microscopic, that only the comprehensive mind, the patient, deep insight of the genius, and the vivid feeling of the fanatic, can master and reproduce their meaning for the purposes of philosophy or governmental control. Nor is that all. If states were indeed static, if humanity ceased to spin problems involved in the attempt to control the future, the larger half of the difficulty of government would be removed. Area and complexity can be mastered in proportion as they remain unchanged, but, since the idea of progress advanced to the center of civilized aspirations, the whole of futurity has become a building site, and the philosopher is needed to prophesy not only the important events and conjunctures of a year's time but those of a decade and even a century hence. The actual rapidity of change in the mechanical basis of our civilization and in fashions in thought, the swift increase of population in the nineteenth and early twentieth centuries, have encouraged this pioneering, which has ceased to be of the dream-

like order of the old writers of Utopias, and has become the hard, directed foresight of people like H. G. Wells<sup>27</sup> or a Sir William Beveridge in social security and full employment, or the planning surveys of the United States National Resources Planning Board.

Leadership, then, comes first from the masters of thought, feeling, and moral apprehension. This leadership is the difference between man as a shortsighted beast and man as a noble, purposive human being of dignity. It is the duty of a democracy to cherish these leaders and allow them the first word: this does not deny the other principle, that the electorate has the final word.

The world of special groups, philosophy, and social speculation, then, furnishes the politician with his material. Nor must we forget that in that world the politician has his own salaried professional philosophers and contrivers—the civil service, which not only thinks and plans but also explores and formulates what the rest of the world is thinking and planning. It is a professional machine to acquire, to assimilate, to cut and dry the world's intellectual and emotional produce and put it up in the form which politicians may understand and employ. Of major importance is it also that, in our own time, international secretariats of the specialized agencies—first—in the League of Nations and now in the United Nations Organizations—have grown up to add to their carefully formulated thoughts and ideals.<sup>28</sup>

*Politicians not Philosophers.* The politician is not always chosen for his knowledge, nor always for his character. He is chosen because he represents the views of a certain party, and because he can win

<sup>27</sup> When I once ventured to congratulate Mr. Wells on the success of his *Anticipations*, he answered: "That was easy. I merely had to project certain lines which were already visible. But now I have to go further; to find what is latent and then build upon that for an even remoter time." See *The Shape of Things to Come* (London, 1933) and *The End of Homo Sapiens* (London, 1939).

<sup>28</sup> Cf. Herman Finer, *The Economic and Social Council of the United Nations* (Boston, 1945).

the seat (and this implies, quite naturally, that talented men without campaigning qualifications—kinetic, pachydermatic, confidence-winning—are rarely chosen as candidates). In other words, the policy has been largely made before he becomes a member. The party has already tapped the real sources of policy, and he becomes its representative. The only exceptions to this generalization are *first*, where the party may be weak, as in the United States, so that the politician, being less dependent, may himself, however unqualified to do so, compose or gather ideas; or *second*, where, the party being strong, a politician happens to be a person of abnormally creative mind. The party's character also continually grows.

Indeed, it is not the intention of the people or the parties to get philosophers elected; the prime object is *number*, the modern political medium of legitimate power. The member is a vehicle of the party, and the party is chosen because, fundamentally, it embodies the material and spiritual interests of the people who choose, and it is chosen to dominate the state, as far as it can, in the sense of its avowed and explained policy. As far as it can! In that phrase resides the virtue of legislatures and politicians! For in spite of the extralegislativè activities of the parties—their researches, their considered formulations of policy, their crosscountry debates, and the incessant war in the press—the policy of each party is not complete and cannot be complete until the other side is heard. When members enter the legislature, were they conscious of anything but their electoral victories and the messianic programs of their "side" and the chances of reform and distinction, they would solemnly admit (1) that much in their program was tactical, included to "catch votes;" (2) that a good deal in heaven and earth had not been thought about at all; and (3) that they must expect the unexpected: events, contingencies, calling for quick thought and the improvisation of a policy. They would realize, upon a little reflection, that even when the policy was not tactical, but had been considered in all its facets with care and

with a calculation of their opponents' strength, not all could be foreseen, not every detail sifted, not every force truly evaluated until it had been discussed with hostile elements possessing the parliamentary power to enforce some at least of the drive of their opposition. Not until there is a personal confrontation in a small assembly, with systematic procedure, can the detailed expression of policy, which means everything, be considered, or the full spiritual force of majority and minority be measured and applied. Further, the good in dialectic is not only that it causes one person or party to triumph over another, but that it sometimes causes some truth to triumph over both by provoking the explanation of self to self.

Therefore legislatures and politicians still have their invaluable place in the modern state, and deliberations and debate still occupy a central place in their functions. The forms are mainly those of the age before rapid transport, fast communications, and party organization. They still take little account of these and so provide for ample debate, as though there had been no preparatory and even decisive stages in the country already; as though the legislature were the creator, not the creature, of discussion. We shall see that much is antiquated, wasteful, and dead in legislative procedure and forms. Perhaps this is, in general, of value in protecting debate so that the balance of welfare against coercion embodied in the laws may be thoroughly pondered.<sup>29</sup> The remarkable thing is that the minority is still allowed some opportunity of influencing the laws and administration—rightly in our opinion—and that, cleverly led, it can convert this opportunity into power.

*The Politician as a Broker.* The politician is, therefore, as near as any single term can signify him, a broker. His business is to apply the power resident in his constituency to convert desires into stat-

<sup>29</sup> *The Third Report of the Select Committee on Procedure, British House of Commons*, No. 189-91, 1946, exhibits very clearly the reluctance, for this reason, to depart from traditional forms in the quest of modern efficiency.

utes and administrative action by alloying them with the possible. He attempts to get as near the desirable as he can, and what is possible he will learn, whether he is in the government or in the opposition. The ways are many and devious. But let us attempt to paint a portrait in broad outline of the best type of member. The portrait will do for all legislatures. And we sketch, not the art of succeeding to high place or of obtaining favors—that will appear as we proceed—but simply the equipment of the member to convert his mandate (poor, poor word!) into governmental realities.

*The Legislator as Scholar.* He need not be a scholar, and indeed, this would entangle and embarrass rather than help him, for his function is to act, to fight, and to seize advantages, not to meditate upon them. Were he a scholar, an expert, he would be encumbered by doubts and details, and it is notable that scholars who have entered legislatures have either been silent or silenced (think of Acton, J. S. Mill or de Tocqueville); and Francis Bacon, a member of Parliament, and Lord Chancellor some 250 years before explained why this must be in his *Advancement of Learning* on the mentality of scholars. Or they have had to jettison their scholarship and become men of affairs, carrying the least baggage and allowing passion to vanquish their scruples. The legislator has no need to be a scholar, for he can get all the information he needs for debate in a desiccated preparation from the party pamphlets and newspapers (or, in the United States, from the Legislative Reference Division of the Library of Congress). Further, if he has to a sufficient degree the energy of reform, or the desire to shine in the legislature and the constituencies, the government printing offices turn out a spate of reports by official experts and investigating committees. Only the few more serious members make any pretense of trying to master these, for again the party and the press offer short versions (though it has been recounted by a witty member of the French parliament that a member has been known to sleep on the reports in a

literal sense, owing to poverty so great that he could not afford a bed!).

Truth compels me to say that very many members are unable to master the meaning of a lengthy and complicated report by their own efforts, owing to insufficient native ability and education. A few, however, are able to understand the complex and technical information. Some, realizing the impossibility of being masters of all trades, wisely specialize. The specialists and others who are less fortunate may have friends who are experts; and then successful intervention in debate may be assured by persistent and acute interrogation, so that the most abstruse points are cleared up. Indeed, this is a very important part of the work of an able member—to discover the experts and philosophers and get himself coached by them. He may easily do this if he is a little energetic, for such people are usually good-natured and easily succumb to the flattery that they and their knowledge are of practical importance, and the belief that in this way they become the real sources of government, that "philosophers are kings." Nor are the hopes of these expert friends altogether vain, but they are imperfectly realized owing to practical exigencies—or, in other words, the confounded obstinacy of other people, and the fact that the advice of rival experts and philosophers has been taken by the other side.<sup>30</sup> But what the legislator cannot learn from print he may learn from verbal exchange.

*The Legislator as "Politician."* The member who has gone so far has gone very far, and it now behooves him to keep friendly with other members. Popularity on personal grounds is exceedingly important, for it takes the edge off sharp truths and opens a way for their acceptance. It is even more important to be popular with opponents than with friends, for they will grant concessions on that account, believing that such "a jolly fellow" could hardly be ill-willed or stupid; or at least the concession is granted before

<sup>30</sup> Cf. T. V. Smith, *The Legislative Way of Life* (Chicago, 1940).

they come upon these truths, by which time they have lost the battle.<sup>31</sup> Hence the lobbies, the social life of the legislature, *la buvette*, and the political clubs play a large part in the evolution of the member and of policies. The full list of ingredients for success in this direction, universally valid, cannot be given—each person is born with his own way to the hearts of other people. The need to do social favors involves an incessant vigilance for friends who have social graces and power. Their value must be justly estimated—that is, their value in the political exchange—and they must be held in corresponding regard and offered corresponding respect and political favors. Friends must be made and dropped in accordance with this rule. If you wish to waste time on useless people you may do it, of course, but it should be recognized as waste. Here, in the activity of the man in politics, as everywhere in life, the function has its specific nature, and its commands are peremptory. On the political exchange, men and things are valued in terms of the desirable power which can be purchased with them: quite properly, for victory must not be jeopardized by giving way to a desire to gaze at the stars.

*The Legislator as Parliamentarian.* To the qualities already described, another is indispensable. It is a knowledge of the rules of legislative procedure. There the member will find all the permissions and prohibitions affecting his right to intervene in discussion. He will discover weapons to defeat his rivals and opportunities to advance his own cause, obstacles to his progress, and roads which will require a process of sapping. By adroit use of these rules he may exact concessions by threatening to obstruct his opponents' path with amendments; and in modern parliaments so much has to be done at the insistent call of the constituencies that men are willing to concede in order to proceed. He will also be able to obtain concessions by the intrinsic merits of his argument, his rhetoric. These together will

stem the tide of his opponents' policy by exhibiting to them its results, as the simple technical consequences they have not had sufficient imagination to foresee, and as the extent of human opposition which will be aroused and has been underestimated. Further, a speculative portrayal of results in terms of votes at the next election will help.

*The Legislator as Party Member.* Where the party is in opposition, the member's activity is favored by the leaders and it may bring him reputation and power (Senators Vandenberg and Taft in the first two sessions of the 79th Congress were outstanding examples). For then any stick is a good weapon; and the government must be unmercifully harassed. But when the party is in office, then the private member is sworn to cheer and vote, to cooperate and not to oppose. Even a trifle is a waste of time and may wreck the strategy resolved upon by the leaders. The party has many means of enforcing this unwritten rule, the principal method being to set officers to watch the conduct of the member, or to meet together and discuss and determine their course, and to threaten the refractory with expulsion or the withdrawal of aid at the next election.<sup>32</sup> The discipline is effective, for as we have seen, without the party there is no nomination, and no opportunity to play an effective part in the legislature, and the expenses of election are so great that most members must rely upon party help.

Thus it is an illusion, and a quite un-

<sup>32</sup> The British Labour party's Standing Orders, *q.v.* reproduced in each Report of the Party's Annual Conference, are particularly severe. Practice is far more lenient, though it is not possible to refrain altogether from disciplinary measures, as indiscipline spreads. In May, 1948, for example, two Labour members were expelled from the party: one for publicly denouncing the Labour government's intention to nationalize the iron and steel industry, and another for contumaciously leading a group of members against the government's policy of fighting against the Left-wing Socialists of Italy who were in company with the Italian Communist party during the crucial election of April, 1948. The expulsion took place after a long process of persuasion and a hearing at party headquarters.

<sup>31</sup> Cf. D. Kirkwood, *My Life of Revolt* (London, 1935), pp. 202-307.

necessary one, to believe that members of the legislature are creators of policy. They are parts of an embattled national host whose objective and strategy have long since been prepared, and they are needed for the purposes of minor tactics, which are not, however, without importance. Or, to change the metaphor, they are merchants buying votes in the cheapest market, the constituencies, and selling in the dearest, to the forces opposed to them, which is always the official opposition, and often to their own colleagues and leaders. It is not derogatory to the function and dignity of legislatures to say this; for we merely say that not in the members do the initiative and the need for thought reside, but in the party leaders. The work of the assembly is important, but the ordinary member cannot, does not, and need not, contribute much to its execution. To say that the average member was ever in a much (if any) better position, in a parliamentary "Golden Age," is to repeat legend, not history. Where, indeed, as in France, the private member has much independence and the parties are of small authority, *no* business is done, and the work of the legislature dissolves into an interminable series of oratorical skirmishes, with guerilla tactics and destructive ambushes.

This is far from meaning that the quality of a legislature's work is independent of the ability and work of its members. We have seen by what methods and for what ends the member may become effective. But we are concerned to say that almost everything depends upon the leaders, and that is due to electioneering methods in large populations with universal suffrage, to the complex technical nature of modern civilization, and to the large amount of business which legislatures must get through. However, the better the followers the better (though the more embarrassed) the leaders. Above all, for the day-by-day supervision of executive policy in action, the work of the departments of government, the multifarious acts of administration by hundreds of thousands of career officials, and the diverse outlook and critical attentions of

the popular representatives are of the greatest value.

On the whole, then, in a country with well-organized and purposive parties, the constituencies do not cause much damage in returning mediocrities, but so far as such qualities are lacking—as in France and the United States (especially in the South)—their choice may be very damaging not only to their civilization but to the very notion of parliamentary government. Even this evil is partially overcome by that disbelief in the logical extreme of democracy which shows itself in the establishment of permanent, professional, career administrative officers. Now, if we examine the composition of legislatures, we shall see that no member is, in fact, likely to be expert in more than one subject of a rather narrow scope. Though all members taken together do have knowledge of most national and international interests, yet there is no distribution of members in arithmetical proportion to those interests.

*The Representativeness of Legislators.* The correspondence between members and the aspects of national life upon which they are expert varies in different countries as the accompanying tables (8, 9, 10) show.

The outstanding features of these tables are: (1) the small proportion of legislators who can, by the major occupation of their life, be expected to have an expert comprehensive opinion and make a useful contribution to general policy: hence, on each specific policy a large proportion of the assembly is bound to be silent and take things on trust; (2) that there is a spokesman for almost every aspect of national life; (3) the large number of teachers who find their way into the legislature; (4) the large number of professional politicians: authors, journalists, party officials, trade-union officials, "other professions," and "law." These, (3) and (4), usually have, in fact, the best all-round knowledge, but the knowledge is frequently superficial. The large number of "lawyers" is due to two facts: that so many men who have taken the qualifying examinations for the legal profession are incapable of earning a living in it, and

<sup>a</sup> Not including deputies from the Empire. From *A Constitution for the Fourth Republic* (Washington: Foundation for Foreign Affairs, 1947), page 82.

therefore drift into the profession where a living can be picked up and prestige won—politics; and that there is a tradition that the man who knows the law can make the law.

*The Qualities of a Representative Legislator.* Is there a single royal road to the recruitment of the truly representative legislator? The answer depends on the qualities useful for his function. He needs sensitiveness to the life, difficulties, aspirations, and future emerging problems of the world outside the assembly. He needs not perfect knowledge, but knowledge enough to challenge and criticize the executive and the officials and opponents, and an understanding of where to go for more information if the situation requires. Any knowledge above this is valuable but excessive. He should have tenacity and stoutness of heart in advocacy as in criticism. He requires to be adept in the use of procedural ways and means. Above all, it is not special expertness that he needs to contribute, but wisdom, shrewdness, logi-

cal power, and an insight into human nature. He needs the general power of judgment, which enables him to say on all occasions, but especially on the most critical, "This course will in the long run be good or bad for the nation as a whole, and for this cause, such and such a sacrifice is meet."

It is clear, therefore, that no particular profession or training offers the royal road to the proper legislator, but that any way is eligible which has involved immersion in the life of the society and has required rigorous reflection and the use of mind. The more ample the variety in the legislature, then, the better. (Plato has some clues on this subject.)

## THE DURATION OF LEGISLATURES

*The Views of the "Federalist."* We saw that those who desire a strict correspondence between the legislature and the will of the people believe that representativeness is to be produced by the frequency of

legislatures, or, put in another way, by their short duration. What particular reasons have swayed men in their settlement of this question, and what should determine our judgment today?

In the United States the strength of democratic enthusiasm at once caused the new states to fly to such extremes as half-yearly and yearly elections,<sup>33</sup> and both John Adams and the author of the *Federalist* tell us that there was a current maxim running, "Where annual elections end, tyranny begins."<sup>34</sup> The constitutions explained themselves: that of Massachusetts, for example, saying, "in order to prevent those who be vested with authority from becoming oppressors, the people have a right . . . to cause their public officers to return to private life." The first urge, then, was to ward off tyranny; the claims of efficiency were naturally ignored. The federal constitution seems to have adopted a biennial term for the House of Representatives with little or no debate, but the *Federalist* supplies a sound set of arguments for two years rather than one, and, we might say, for a longer period than two, though it was speaking to the more limited brief.

What were the circumstances, as the *Federalist* saw them? *First*, there was less need to control the House since it was to be checked by the constitution itself, by the state legislatures, and by the other federal organs. "It is a received and well-founded maxim, that where no other circumstances affect the case, the greater the power is, the shorter ought to be its duration; and, conversely, the smaller the power, the more safely may its duration be protracted." *Second*, "No man can be a competent legislator who does not add to an upright intention and sound judgment a certain degree of knowledge of the subjects in which he is to legislate." *Third*, attainment of this was possible only by actual experience in the station that re-

quires the use of it. To settle the question, then, broadly, the *Federalist* asked the question, "Does the period of two years bear no greater proportion to the knowledge requisite for federal legislation than one year does to the knowledge requisite for state legislation?" The *Federalist* answered that the field of federal jurisdiction required a knowledge beyond that needed for the government of a single state. The condition of the states was diversified; the legislation of foreign trade demanded an acquaintance with the ports, usages, and regulations of the different states; taxation required a wide knowledge of internal conditions; so, too, regarding the regulation of the militia and foreign affairs. The *Federalist* argued (Paper LIII):

Some portion of this knowledge may, no doubt, be acquired in a man's closet; but some of it also can only be derived from the public services of information; and all of it will be acquired to best effect by a practical attention to the subject during the period of actual service in the legislature.

These, then, were the main grounds for a term longer than one year; time for business, and the need of expertness. The French National Assembly argued, generally, as the *Federalist* did and added the argument that a long duration was necessary to avoid the technical inconveniences of dissolution and re-election. However, short duration commended itself to them, also, as a means of overcoming the expression of transient feeling at any one election.

Actually, is it not tenable that if the House of Representatives were not of two years' but four years' duration, its laws would be better conceived, better drafted, better coordinated, perhaps even fewer per session, and its relations with the executive wiser, more reflective, effectuating more, and less sensational? Would not political parties be thereby stimulated to organize and plan policy more steadfastly? But more on this shortly.

*European Thought and Law.* The struggle has always been between a shortness of term—to bring pressure upon a monarch, or to prevent the legislative body

<sup>33</sup> Connecticut and Rhode Island were half-yearly, and the rest (save South Carolina, which was biannual) were annual.

<sup>34</sup> *Federalist*, p. 272; Merriam, *op. cit.*, p. 78. Cf. also the various declarations of rights in the state constitutions.

from becoming a corporation closed to the popular will—and the necessities of legislative technique. The English Act of 1641, calling for a parliament at least every three years “for the preventing of inconveniences happening by the long intermission of parliaments,” was designed to intimidate the king by its simple presence. Then in 1716,<sup>35</sup> the Whig majority, taking advantage of disorders following the Jacobite rebellion, lengthened the duration of Parliament to seven years by the Septennial Act: this would avoid troublesome campaigns, “remove expenses” and disaffection. The arguments against this bill naturally pointed to the unrepresentative character of any house based upon such long tenure. The bill was naturally supported by all the placemen. The Septennial Act was not repealed until 1911, when the Parliament Act was thought to have so weakened the power of the House of Lords that more frequent appeals to the people were deemed necessary as a counterbalance to the power of the Commons.

The Parliament Act meant that the period of tenure had necessarily to be reduced. For, in accordance with the maxim of the *Federalist*, the greater the power of the House of Commons the stricter the need for its control; and the reform of the House of Lords certainly made the House of Commons the most powerful legislative body in the world. The idea that a slight majority—a transient majority—could override a large minority in fundamental matters naturally caused a search for safeguards. The referendum was proposed and rejected: the only thing that remained was a reduction of the term of Parliament, or, in other words, the greater frequency of necessary electoral appeals lest members

“outstay their mandates.” This was fought by some among the Conservative opposition on the grounds that more frequent elections would increase the power of the party machine and further depress the already depressed condition of the private members, would increase the power of the cabinet because it decreased the power of the ordinary member, and would raise the expenses of a Parliamentary career. The arguments on the Liberal side were as irresistible as its numbers. Now the Parliament Act contains a clause, inserted upon pressure by Conservative peers, to the effect that the period of five years should never be lengthened by the exclusive action of Commons and king. It is easy to see that if any Parliament extended the term, the power, the “suspensive veto” left to the Lords, would be almost entirely swept away because, in order to suspend effectively, the opportunities of the House of Commons to propose laws must be restricted to a short term. Lengthen its term and the pressure ceases. The question now, however, is whether the period ought not to be less than five years?

France has a period of four years with, conventionally, no power of dissolution in the hands of the government. The Constitution of 1946 made no change in this respect, but the Election Law of October 5, 1946 (article 36) provides for election of members for five years. Weimar Germany very deliberately prescribed a period of four years,<sup>36</sup> with a right of dissolution which was exercised several times.

*The Four-Year Term.* What is there to be said for a period of four years rather than three or five? It is clear that frequency of appearance before the electorate is essential: not so much that the members be judged but in order to exercise a pres-

<sup>35</sup> In 1689 the introduction of an annual Mutiny Act and the granting of annual supplies added to the triennial frequency of parliaments the necessity of their annual session. The Act of 1691 positively provided for the discontinuance of any parliament after three years of life, and the motives at work in the passage of this Act were the House of Lords' jealousy of the Commons and the Whig desire to shackle the Crown. Cf. J. G. Randall, “The Frequency and Duration of Parliaments,” *American Political Science Review* (1916), Vol. X, p. 665.

<sup>36</sup> Constitution, article 23: “The *Reichstag* is elected for four years.” Similarly the Prussian *Landstag*, Prussian constitution, article 13. The old constitution (article 24) established a term of three years until 1888, when a law extended the term to five years. The law of 1888 was passed in order to avoid too frequent appeals to the people. Originally three years had been included in the constitution by the *Reichstag* instead of the four years proposed by Bismarck.

sure upon the party. The stronger the parties, in fact, and the weaker the individual member, the more necessary is it that the leaders be shaken in their convictions and out of their dogmatic self-satisfaction by an electoral shock. We have already spoken of the growth of a guild consciousness in the group at the head of each party, and the intensive research of Michels bears out the common observation that the leaders tend to become oligarchs remote not only from their constituents but also from their legislative following. The nearer the election, the more carefully they scan their own consciences and the movements of opinion in the constituencies.

This was most strongly urged by the Independent Socialist party of Germany during debates in the Constituent Assembly of 1919, and they were therefore in favor of a biennial term. Preusz and the Social Democratic party had suggested three years. Preusz refused to accept the proposal of a term of two years on the grounds that the shorter the period, the less favorable for the *Reichstag* since it is weakened as against the electorate and as against the cabinet. On the other hand, a large minority of the Assembly were in favor of quinquennial terms. It was remarked that a short period is incompatible with steady and good work and that, in default of this, the *Reichstag* must lose prestige. We think this argument sound. It was also rightly observed that a good deal of time is lost at the beginning and the end of each *Reichstag*—novices take time to find their stride—while, at the end of the term, deputies and parties are already busy with electoral plans and their thoughts are elsewhere. The longer the period, the shorter the proportion of time lost in this way. Further, it is necessary to avoid frequent excitement of the electorate. This argument is good only when it is measured: how frequently will excitement have a bad effect? No one can say this, and in fact elections are not so exciting and impassioned as is pretended. It is suggested, too, that the more elections, the greater the popular apathy and the smaller the number who vote. Again,

this is an unmeasured argument: and between four years and five years we venture to believe that there is no difference in this regard at all.

Thus a compromise must be made. For England I think three years is too short for the necessary novitiate and *expertise*, and five years too long. Four years might with advantage be adopted: for neither written constitution nor Second Chamber checks the power of the House, and the referendum has been rejected. Other countries have other problems: Weimar Germany, for example, had no by-elections in her system of proportional representation, and therefore lacked that impressive electoral weather vane<sup>37</sup> which is still of such intense interest in Great Britain.

There is one other argument for a reduction of the electoral period; it applies to all countries, and therefore to England. But so far we have not met in it any legislature. It is this: Since the electorate and the party are almost in direct touch and the main issues of government are thus decided outside the legislature, it has become all the more important that the electorate shall be politically capable. Political institutions may enable the electorate the better to fulfil its task or may have the reverse effect. A short duration of the legislature has the effect of consulting the people and causing the parties to renew their mandates after they have explained their case to the people and, to the degree we have previously analyzed, educated them. But shorter terms have a further effect quite as important as these: they make it possible for the elector to compare promises with achievements on a greater number of occasions. This constitutes his political experience, and it is important that he should have as much of it as is compatible with efficient government. At the present time an English voter who gives his first vote at twenty-one and his last, say, at sixty-six, has an electoral life

<sup>37</sup> Cf. Katzenstein (Social Democrat), National Assembly (*Heilfron*, p. 3113): "They are, as we all know, political weather vanes, the barometers by which one can tell the changes of electoral feeling." The occupied *Länder* follow the same system.

## LEGISLATURES: GENERAL PROBLEMS

of forty-five years; that is, he votes a minimum of nine times—lives through nine campaigns, sees nine sets of leaders, nine sets of promises, nine Parliaments—and their results. If the duration of Parliament were legally four years, then the resultant electoral experience would be a minimum of eleven campaigns—and the rest. If experience teaches, we have the right to expect that this would be a gain in electoral wisdom; it experience does not teach, then the case for democracy is weakened. If this reform is of little moment, it can only be said that all reforms are but of small moment and that the great changes in civilization are produced only by an accumulation of trifles.

My judgment that a four years' term is a modern necessity is reinforced by reflection on the obvious mounting trend to national planning. A longer term than four years is inadvisable because the broader the activity of government, especially when it is (as much must be) still of an experimental nature, the more opportunities ought there to be for reference back to the citizens. The way back must be kept open. The more massive and complicated the administrative apparatus, the more ought it to be subjected to the periodical lashing waves of popular opinion.

Since the consumers in a planned economy have lost their direct individual influence, as customers, on the variety, quality, and cost of goods and services produced—an influence they exercised by buying or not buying at the prices asked—it is the more important that they be able to challenge and stimulate public enterprise (the national and municipal monopolies) through elections and all the turmoil of electoral will that goes with them, and to censure inefficiency and to exact improvements. The parties and their ancillary organizations will be the main directors of production, the agency of the consumers.

On the other hand, the government's need for ample time to carry through its pledged policy is well understood. It ought not be harassed into stupidities. It requires time to draft the formidable scores of clauses in its legislation. It must have time in which to negotiate quietly with

the various groups who will have to bear the burden of obedience once the law is made.

Empirically, then, the duration might be set for four years, with earlier dissolution if circumstances require it in those constitutions which permit so valuable an arrangement.

### THE SIZE OF LEGISLATURES

SINCE 1945, the British House of Commons has had 640 members; the French National Assembly 580; the United States House of Representatives 430; while the Weimar *Reichstag* had 500 or thereabouts. What number is advisable? The considerations are these. The bigger the number of representatives, the smaller need the electoral districts be. This conduces to heightened representativeness. For good law, representativeness is of cardinal importance; all men get the sense that they are being duly heard in the uses of authority. On the other hand, too large an assembly may be so unwieldy as to defeat effective procedure. In my own opinion, the claims of thorough representativeness have a very high order of validity. As for procedural clumsiness, since so large a part of legislative work is already done in committees, there is very little harm in increasing the size of the legislature. Indeed, I strongly favor the increase in size of the lower house to eight hundred in all modernized democratic states. This increase is to allow for more representativeness, and for the full manning of the many committees which a modern assembly must have to prepare the laws and, above all, to supervise the administration. I fully appreciate the need for a small, well-knit, coherent assembly, to attain coherence above all. But the other claims are powerful: it is the business of internal procedure to meet them, and to provide for coherence also. In a planning age, the legislature must be bigger. If time cannot be stretched beyond three hundred and sixty-five days in a year, then the legislature's burdens must be borne by multiplying its working members.

## DISSOLUTION—AND BY-ELECTIONS

### INCESSANT PRESSURE ON LEGISLATURES

It is wrong to imagine that the proximity of dissolution and re-election is the only check upon the enterprise of legislatures. This would be to allow to modern party organizations only a fragment of their actual effectiveness. Party organization is permanent, and the central machine and the legislative leaders are linked to the localities by continuous ties. It has the means of knowing what people feel about its legislative activity, through the local caucuses and election agents. The private member is sensitive to the views of his local committee and the local press, and this is not slow to complain when there is cause. Further, in times of crisis, members are approached by letter, telegram, and deputation, and they cannot avoid a response if they value re-election. Since the rise of the caucuses, these are a natural vehicle for the expression of constituents' opinion. The effect is that the electorate functions between, as well as during, elections. Moreover, all the vocational, cultural, and local associations are incessantly vigilant and clamant. Modern development has given the lie to Rousseau's criticism, sound in its time:<sup>38</sup>

On this point I cannot but admire the negligence, the carelessness and I dare to say, the stupidity of the English nation which, after having armed its deputies with the supreme authority, demands no check whatever to regulate the use which they can make for seven whole years of their commission.

And again:<sup>39</sup>

The English people thinks it is free; it makes a great mistake, it is not free except during the election of members of Parliament; as soon as they are elected, it is a slave, indeed nothing. In the short moments of its liberty, the use it makes thereof deserves that it shall be lost.

That state of affairs, as we have seen, has passed away, and all representative assemblies are tethered to the people by thousands of living ties. The connection was weakest in Third-Republic France,

for the lack of parties gave full rein to a personal connection founded upon the changeable opinions and fortunes of individuals and the personal and local favors which the deputy was able to obtain for his constituents. There is in a party an impersonal force and stability, a loyalty, which comes of the belief of each individual member that he is accountable to a large and powerful entity, that he cannot change his mind without the consultation and consent of others. This constitutes the essence of any membership, and it prevents change for narrowly personal reasons. Parties of this kind—of varying quality, however—exist in England, in the United States, in Germany, and in the Fourth Republic in France. This type of association results in fairly continuous accord between the central authority and the members. Sometimes, however, especially in the United States, the impulse from the localities is fictitious, emanating from some interested association which urges the constituents to send special instructions to their members. Examples of this are to be found in the policies for Prohibition, woman suffrage, labor relations, and price control. Thus again we are in the circle of influences which makes the center think with the mind of the localities, and the localities think with the mind of the center.<sup>40</sup>

### DISSOLUTION—AND BY-ELECTIONS

LEGISLATURES have a legal term, at the end of which they are dissolved. In the United States Congress, that term is not curtailable by dissolution but is fixed. In England, France, and Weimar Germany, the law permits an earlier dissolution, if necessary, and practice has so far kept the law alive. In England, the quinquennial period is a maximum, but the Crown may dissolve Parliament, and has often done so, before the end is reached. In pre-1946 France the Chamber could be dissolved by the President (with the consent of the Senate),<sup>41</sup> but convention worked against

<sup>38</sup> *Gouvernement de Pologne*, Book XV.

<sup>39</sup> *Social Contract*, Book III, Chap. XV.

<sup>40</sup> Cf., at once, the diagram, "The Viscera of the Modern Leviathan," p. 546.

<sup>41</sup> Law of February 24, 1875, article 5.

the practice and the Chamber had, practically, a fixed term of four years. The new dissolution provisions of the Constitution of 1916 are discussed in Chapter 24 on the French cabinet. We are, therefore, concerned with the intentions and effects of dissolution in England and Germany and the causes and effects of the convention which grew up in France.

*England.* In England the right of dissolution lies with the Crown. In earlier times it was used by the Crown to get rid of an uncongenial Parliament at a moment favorable to its own friends' prospects of success. But with the democratization of the constitution and the rise of the convention that the cabinet requires the confidence of the House of Commons, it naturally happened that the initiative in this matter passed into the hands of the prime minister. Not that the Crown was not in earlier days advised by its ministers, but now the advice is given not in the personal interests of the Crown, but "in the interests of the country." This means, of course, that the party view of the national interest rules. Thus, then, authority to dissolve is located in the cabinet.<sup>42</sup>

By what motives have cabinets been moved, and what is the generally expected rule of dissolution, which will govern the advice tendered to the Crown? The history of the nineteenth century shows that on one occasion only did a Parliament run its full seven years: the Parliament of 1867-73, when the Liberals, led by Gladstone, had a large and homogeneous majority<sup>43</sup> gathered from among the new voters by going "on the stump." Before this Parliament, parties were either so evenly divided after elections, or so cut across and heterogeneous, through religious issues and sudden foreign contingencies or by the protectionist-free-trade struggle, that frequent changes of ministry occurred without, however, adding any strength to the new government. So great was the need to end parliamentary stagna-

tion, and the uncertainty of balanced opinion, that both parties agreed upon dissolution.<sup>44</sup> Majorities and minorities of less than a score of votes marked this time, their composition being different on each division. And after the Parliament of 1867-73 the serenity of majorities was troubled by a new difficulty: the parties were split by Irish Home Rule and Coercion, and the House rejoiced in a solid block of some sixty Home Rulers who derided the calm and stability of English politics. The impasse of 1885 could be escaped only by an understanding between the Liberals and Conservatives to dissolve. A year later it was necessary to consult the country, for the Liberal Unionists went over to the Conservatives to defeat the Home Rule Bill. A fairly long parliament was the result, during which the Liberal opposition was excogitating the Newcastle program and the Conservatives strangled Ireland. The election of 1892 gave the Liberals a majority only with the help of the Irish; it could not last and was defeated on a minor matter of supply. In 1895 another election occurred, and a seven-years' Parliament followed the Conservative successes.

The "khaki election" of 1901 was fought on the Boer War issue. The Conservatives obtained an enormous majority. The Balfour cabinet succeeded to the boredom which is the aftermath of war excitement, when victory has to be paid for, and it was smitten with intestine strife when Chamberlain began his tariff reform movement. Prominent members, including Chamberlain, resigned from the cabinet. The issue of Chinese labor and the Taff-Vale judgment arose. By-elections were disastrous.<sup>45</sup> Irish troubles beset a government which could neither leave Ireland nor crush her, and in December, 1905, two years before it was legally necessary, Mr. Balfour resigned. The govern-

<sup>42</sup> This subject is treated further, and from a slightly different angle, in Chapter 23 on the British cabinet.

<sup>43</sup> A majority of 120. T. E. May, *Constitutional History* (London, 1912), Vol. III, p. 73.

<sup>44</sup> E.g., in July, 1852, after Palmerston's exit from the weak Russell government. Cf. Spencer Walpole, *Life of Lord John Russell* (London, 1889), Vols. II, XXII, and XXIII.

<sup>45</sup> Cf. J. A. Spender, *Life of Sir Henry Campbell-Bannerman* (London, 1923), Vol. II, Chap. XXV.

ment felt that it was not wanted, that its mandate had been outstayed. What is of even more importance than these events and doctrine was the fact that Balfour, faced with a new policy of a rather fundamental kind, had declared that it would be neither possible, nor right, for the government to adopt any system of fiscal reform unless it had first been submitted to the country.<sup>46</sup> Resignation was one way of clearing up the internal difficulties of the party.

The next dissolutions of interest were those of 1910, in January and December. They were deliberate invocations of the electorate to decide upon two issues, the social and fiscal reforms of Lloyd George, and the consequent reform of the House of Lords. In 1918, after the Armistice, a dissolution took place; Parliament had sat since 1910, through the war, and Mr. Lloyd George now sought a mandate for his policy of peace and reconstruction. Four years afterwards, in 1922, the coalition government dissolved owing to the difficulties of continued cooperation between the Conservative and Liberal elements of the cabinet, neither side feeling satisfied with its share in making policy. A Conservative majority followed, but in 1923, the question of Protection becoming once more acute as a remedy for unemployment, Mr. Baldwin resigned on the ground that so great a reform ought not to take place when his predecessor, Bonar Law, had given a pledge against it at the election.<sup>47</sup>

Then began a period of parliamentary difficulty. The Labour party, which had been a third party, suddenly developed great electoral and parliamentary strength, while the Liberal party did not disappear. No single party then obtained a clear majority over the other two. The Liberals helped the Labour party to overturn the Conservatives, and did not vote the Labour party out of office until nearly a year had elapsed. When the inevitable defeat occurred, the question arose, "In such a state of parties what is the rule for disso-

lution?" When there is no certainty that a majority government is attainable, ought the minority in office to advise the Crown to dissolve in order to escape from parliamentary difficulties and perhaps improve its electoral position? The vista of a long and indecisive series of elections at short and disturbing intervals appeared. The ostensible question revolved around the position of the Crown: could it reject the advice given by the cabinet of the day? In its proper place we discuss that aspect of the problem, but the real question was: what rule should guide the party in advising dissolution?

Again, when in August, 1931, through the defection of Mr. Ramsay MacDonald, the Labour prime minister, a coalition government, so-called "National," of Conservatives, Labour, and Liberal members were formed, they found themselves in difficulties of conscience and interest, though they had made a so-called "agreement to differ." The free trade *versus* protection issue, with the latter as a conservative principle for trade revival and device for balancing the budget by tariff receipts, destroyed the agreement and aggravated differences. It was, therefore, decided to dissolve and seek from the electorate a "doctor's mandate," that is, governmental latitude to find a policy and some condonation of the coalition.

History gives no precise authoritative answer, but, as we have seen, it tells us in what circumstances dissolution was thought advisable. Those circumstances are:

(1) When the position of parties is such as to produce deadlock, preventing legislation which any party liable to be called on to be a government conceives necessary, or when criticism of the administration is so emphatic that the government can no longer preserve its dignity.

(2) When a government sees convincing signs that it is no longer trusted by the country or is unsure of its authority and following.

(3) When a policy of fundamental importance is newly evolved and there has yet been no opportunity of plainly consulting the country upon it.

The psychology of average members of

<sup>46</sup> J. A. Spender, *op. cit.*, Vol. II, p. 168. Cf. also Sir Almeric Fitzroy, *Memoirs* (London, 1925), Vol. II.

<sup>47</sup> See p. 137 above.

Parliament indicates the effect of a threatened dissolution. It throws them all into a state of frightened self-inquiry which is followed by a tightening of party discipline. If the opposition is sanguine of its chances at the next election, it closes its ranks and becomes less yielding. If its chances are weak, the threat of a dissolution—which need not be actually made, for it is known by all that such must occur upon any first-class defeat of the government—will cause it to search its mind once more and, as with the Liberal party in recent years, to yield more than it would do in independence. As for the followers of the government, the threat of dissolution is a means of consolidating them in support of the cabinet—for to expose one's own party to the risk of overthrow, to surrender one's own seat, and to invite the anxiety and expense of fighting to regain it, to take the risk that the other side's policies may be triumphant, is more than most members will do. Dissolution thus throws power into the hands of the leaders, for they are in the best position to ascertain when it will be most advantageous to their side, and they are able to decree that electoral aid shall be given or refused to a candidate in proportion as he has served his party well.

*Weimar Germany.* The German constitution of 1919 contained a clause (article 52) empowering the *Reich* President to dissolve the *Reichstag*, but only once for the same cause. What did this mean? The spirit of the Constitution was strongly democratic. Now the experience of France influenced Germany very powerfully—but by its pathological qualities. The Germans were anxious to avoid the evils inherent in French parliamentarism. Therefore, in giving the cabinet large powers, safeguards were created against developments like the barren and even harmful activity of the French Chambers. The referendum and the initiative were introduced. So, also, was a President, elected directly by the people to act as a counterweight to the *Reichstag*. The instrument of his power in this particular respect was the power of dissolution. At once difficulties arose; was the cabinet to countersign the order for dissolution, or

not? If this was affirmed, then the cabinet would have at least as much authority to order a dissolution as the President, and, then, the President's power would be smaller than the Conservatives, and even the Liberals and some Social Democrats would have the power to intervene, and the center of political gravity would be shifted from the political parties to a single person—a proposition unacceptable to the majority of the Assembly. Although popular election of the President reduced the opposition to his independent power of dissolution, ministerial responsibility was adopted. The result, then, was that the President might declare himself dissatisfied with the parliamentary situation and suggest to the cabinet the desirability of a dissolution; or he might refuse a dissolution asked for by the chancellor. The first case never arose in practice. The second did. Ministers might desire a dissolution and could resign in order to get it—but they could be successful in their demand only if the President could not find another practicable set of ministers. This might easily occur owing to the large number of parties, and the size of the extremes who might join in overturning a government but could not cooperate in a new one. In fact, not all cabinets which threatened dissolution were able to secure it. It was granted them on three occasions of parliamentary impasse. It was also refused by President Hindenburg, who preferred to urge the cabinet to continue in office and carry through its less controversial business. Let us consider (1) the circumstances in which it was conceived dissolution was appropriate; and (2) those in which it has already been used.

The first occasion was in March, 1924. The Marx cabinet was based upon a coalition of the middle parties (Democrats, Center Popular party, Bavarian People's party, and two ministers not in the *Reichstag*). These together mustered about 189 members; and the potential opposition was, therefore, 270 members. The German Nationalists with 71, the Social Democrats with 102, and the Independent Social Democrats with 84, could, between them, overturn the cabinet at any time. The

government, therefore, lived on sufferance. This was already the eighth government since the elections of June 1, 1920. One had fallen owing to the London ultimatum; another fell through its own internal weakness and the impossibility of forcing the German People's party to coalesce with it; the irruption into the Ruhr caused a reorganization; a sixth fell when this combination failed to survive the antipathies of the coalition parties; and the seventh shattered upon the difficulties between the *Reich*, Bavaria, and Saxony. And now the minority government expressed the desire that certain decrees based upon the Emergency Powers Acts (October and December, 1923) should be continued. It was folly, however, to create a new ministerial crisis which would produce a fresh ministry when the general elections were only three months away. Perhaps the elections would settle the question? They did not. The parties came back as ill-assorted and each as weak as before. Within six months it was found to be impossible either to maintain the existing government (the Marx coalition as before) or to found a ministry with any better prospects of life. In October, 1924, therefore, the *Reichstag* was dissolved again. In July, 1930, the Brüning government, a coalition of minority parties, dissolved in face of a coalition of extremes.

The object of the dissolutions was clear and laudable. Parliament was impotent, and it was believed that reference to the electorate would produce a shift of votes sufficient to break the deadlock. Doubtless if there were numerous general elections the disturbance would in time produce a pre-parliamentary coalition of parties or voters and thus provide stability for the government.<sup>48</sup> The parties and the people would be continually faced with the problem of instability in government caused by small, numerous, and irreconcilable parties, and the question would arise: why not sink your minor differences for the sake of good government? Germany might have learned the proper lesson that the power

of dissolution is a wholesome and necessary one if Parliament is to learn a proper dependence upon the people.

But disaster to democracy in Germany, from the parliamentary coalition of the extremes—Nazis, Conservatives, and Communists—overwhelmed the experiment in dissolutions. Brüning, after two years of masterly balancing of Center and Social Democrats and casual allies against the extremes, was pushed out by President Hindenburg, who, persuaded thereto by his Junker friends, used his power of withdrawing his confidence from the chancellor and asked Brüning to resign, May 29, 1932. He acceded. The new "barons'" cabinet advised Hindenburg to dissolve: he did, and the July elections were held in a quasi-terroristic uproar. The President continued the barons in office as he had once supported Brüning. Without a standing in the *Reichstag*—for the elections were still unable to appease and unite the contenders for power—the new chancellor, von Papen, was given a blank dissolution order by the President to use when he thought fit—it was to be a weapon against the Nazis, now on the threshold of power and afraid of dissolution lest their strength be reduced. The von Papen government received a vote of "no confidence," 512 to 42, and, remaining in office, dissolved the *Reichstag*. The next elections took place in November, 1932. The electoral returns left the *Reichstag* still so divided as to be impotent. A Hitler government followed in January, 1933; and then came the dissolution, granted February 28, 1933. This was accompanied by the use of article 48 of the constitution to suspend the constitutional rights of civil liberty and political-electoral freedom. The dreadful part played by an overstrong Presidential counterbalance to the cabinet may be pondered, and ought not be repeated.<sup>49</sup>

<sup>48</sup> Perhaps the new constitution of Bavaria, October, 1946 (under American occupation) foreshadows a move away from an executive divided into rival cabinet and President. There is no separately elected President but only a Minister-President—that is, a Prime Minister—and he is elected by the legislature. Dissolution of the *Landtag* is possible only (1) by majority decision of its own members;

<sup>49</sup> Such as that attempted by the German Democratic party and a number of small groups in the election of 1930—they formed the *Staatspartei*.

*France.* In France, the constitution of 1875<sup>50</sup> gave the President, with the assent of the Senate, power to dissolve the Chamber of Deputies. The debates of the National Assembly show that this body (which was strongly monarchical) was mainly influenced by the desire to give the Presidency, which they had designed as nearly as they could to be the niche for a king, a weapon of defense against encroachment by parliament. Prévost Paradol in his *La France Nouvelle*,<sup>51</sup> which had a great deal of influence upon the more thoughtful members of the Assembly, had argued that the greatest peril to liberty and order in parliamentary government was a discordance between the constituted authorities and public opinion. In a country with a ministry based upon parliament and the people, this danger was produced by the gradual or sudden loss of support, and the stubborn retention of office, by the ministry. Dissolution and new elections are the only sound remedies. Could you give this power to a president who was himself elected by a party? Dependent upon its friendship after his term, his sense of duty would hardly be strong enough to force it to the country. "It is to count too much on the idea of duty. It is to demand too much out of pure love for the public good, and when institutions sin by this noble excess, human weakness has its revenge by leaving them unused or destroying them."<sup>52</sup> The power of dissolution may well be given to a king who stands above parties and has an independent love of his country. It is useless to give it to the cabinet, for this will never utilize the power against itself or its followers. But a king supported by an upper chamber could, with public advantage, exercise such a power.

We must observe that Prévost Paradol

imagined no other case than the loss by the majority of its support in the country. But he did arrive at an inkling of what has actually become the stumbling block of French parliamentary life: too many parties, violent intransigence, a surplus of personal advertisement, an excess of histrionic tactics—factors which have not only deprived the parliamentary majority of social support in the country, but have prevented a stable majority with an appetite and ability for work from ever coming into existence. The National Assembly followed Prévost Paradol and its own desire to strengthen the executive and vested the right of dissolution in the President, with the consent of the Senate.

The right was used once, in circumstances so unfortunate as to cause the destruction of the power. The Chamber of Deputies of March 8, 1876, contained a large republican majority. Marshal MacMahon, monarchist, elected President by the monarchist National Assembly upon the fall of Thiers, sought to overcome the anticlerical and republican impulses of the Chamber. He caused the resignation of Jules Simon on the *Seize Mai* ("the sixteenth of May," 1877), and, faced with an exceedingly restive Parliament, asked the Senate to support a dissolution. By a small majority (149 to 130), and after grave debate, consent was granted, and this in a Senate one quarter full of life members appointed by the monarchist Assembly. A constitutional right had been used in an unconstitutional spirit, not in order to serve the electorate but directly to thwart it.

The power to dissolve fell into disrepute, and has never since been used. France has seriously suffered in consequence. As Leyret has put it: "*Le Parlement est tout: la nation n'est rien.*"<sup>53</sup>

Discussion of the question in pre-1945 France proceeded, however, on rather unreal lines: as part of the theory of the separation of powers. It assumed that liberty cannot be secured unless powers are separated. If, therefore, the Chamber attempts to control too much, and thus in-

(2) by popular recall on petition of one million citizens; or (3) when a Minister-President has resigned or died and the *Landtag* has not elected another within four weeks, in which case its own presiding officer must dissolve it. (See articles 18 and 44.) Cf. R. G. Neumann, "New Constitutions in Germany," *American Political Science Review*, June, 1948.

<sup>50</sup> Law, February 25, 1875, article 5.

<sup>51</sup> (Paris, 1869), pp. 143-47.

<sup>52</sup> *Ibid.*, p. 144.

<sup>53</sup> Henri Leyret, *Le Président de la République* (Paris, 1935), p. 196.

fringes the rule of separation, the power of dissolution is required to free the executive from encroachment. But such matters ought rather to be judged by their direct results than as a corollary of a general proposition in government. The fact, radical and striking, is that no cabinet in France until the constitution of 1946 had the power to counterattack an insurgent Assembly. The members could and therefore did allow themselves all liberties until the proximity of an election. They wasted time, overturned ministries, staged interpellations, and, as Faguet has said, labored without accomplishment. It is not the cabinet which was so much at fault (as Prévost Paradol calculated) but Parliament; the executive needed defense, but never so much as the country itself. Though a government might be busy with the most urgent affairs, its work could be stopped by an interpellation, for the interpellation was a threat to its existence. Nor could it, by making the subject a question of confidence, permanently quash the interpellation and frighten the errant deputy by the thought that the cabinet would fall and crush him as well as them. If the Commission on the Budget played with the finance bill all the year round, the cabinet could not reduce it to order. If its program was disturbed by purely obstructive amendments and discussion, it was forced either to sit by (vociferous, or sighing, but idle) or to resign—which is exactly what the attacking aspirants for office wished. There was no power to secure the working strength of the government, or the correspondence between public opinion and parliamentary activities.

It must not be forgotten that the power to dissolve was less employable because of the part the Senate was required to play in it. Though the Senate had few enemies, it was barely tolerated, for its powers were considerable, and its emanation from popular election, although by an indirect route, gave it a conceit of which the Deputies were jealous.

*The Significance of Dissolution.* To 1934 the true importance of dissolution was misunderstood by French thinkers. Professor Redslob's then current views (*Le Régime Parlementaire*, Paris 1924) were these:

To dissolve is to demand arbitration by the people between the ministry and the Assembly: but arbitration is possible only as between two equal subjects, not between subjects of unequal strength, and the Chamber is necessarily weaker because it has to be destroyed before the arbitration can take place; that is, the ministry is stronger, and is for a short time even free from the competition of its rival. To destroy the Chamber is an act of authority: only a strong institution can do it. But the President is a weak institution, derived as it is from Parliamentary election. Hence there cannot be a dissolution, especially since the cabinet is itself appointed by this weak institution.

The whole attitude is erroneous. The principal fallacy resides in the notion of arbitration and the assumption that equality is necessary for it. Even if this were right—which it is not—this has no application to the case considered. The real issue is between an appeal to the people to remedy internal conditions in the Chamber, or omitting it, to leave the Chamber free for the display of disorganized and incoherent animosities. If the latter is preferred, and it has been since 1876, then the cause is no solemn nonsense about arbitration and its supposed nature, but that the Chamber and the government knew and know that the people do not care enough about regular and systematic government to support either the one or the other in any action they may take. The Chamber is still regarded with cynicism, the ministry with suspicion, the President with humor. The causes are the experience of former régimes and national character. In 1934 it was vainly attempted to revive the power of dissolution, in 1946, the constitution contained a qualified power to dissolve, which was only used once (1955). The constitution of the Fifth Republic gives the President, for the first time in the history of republican France, a full power of dissolution. See below, p. 646.

In England dissolution is permitted because all are convinced that, whatever party governs, there must be government. Deadlock and verbal contests are insufficient as fruits of parliamentary en-

deavor. They must be ended by an appeal to the people, which it is better than the government should make than that it should not be made at all. Though it pains the government and members of Parliament to give up office and a seat in the House, these are felt to be necessary and proper, if reluctant and belated, sacrifices. What Chamber of Deputies or French cabinet has, since the rise of the French Republic, been imbued with such a spirit? Has even the new National Assembly? No French President can do what these bodies are unwilling to do. That which has obstructed good party organization is equally the cause of this—a lack of practical governing sense in the people, which is content to do without results in action and behavior, but to “unpack its heart with words” and gestures. It is true that the British Crown, by its hereditary position, presents, in a dissolution, an appearance of impartiality and national concern which is not reproducible in France where the chief of state is elected—but this is not why dissolution is possible in England and impossible in France. All these institutions are founded on the national character, and Redslob only begins to touch the problem at the close of his discourse, when he says: “Finally, the current of opinion hostile to the executive which characterizes France and derives from the vicissitudes of its history does not exist in England.”<sup>54</sup> The question is not really one between chief of state and Parliament, but between Parliament and the cabinet. It is whether the cabinet shall have the right to challenge a fractious parliament, and say, “Now consider well: is your attitude dictated by personal considerations or by considerations of benefit to the state; are you thinking of yourselves or of your constituency? Compare and choose! If you

choose to overturn us, you must answer to the people for it!” This often gives the cabinet a coercive power over its followers and the opposition; but government is not perfect. The problem receives further attention in Part V on *Cabinets and Chiefs of State*. Let us add that Redslob’s doctrine influenced Preusz in his drafting of the German constitution of 1919.

*By-elections.* When sitting members die or retire, an election is held in the district concerned, though not for the United States Senate—and not where P.R. prevails, for there, usually, the member’s party appoints to the vacancy.<sup>55</sup> In Britain the by-election is regarded as an important indication of the popular will. Despite the fact that in the vast majority of cases the same party is victorious (and despite statistical studies<sup>56</sup> to show that this has been so in the past), British parties do not know for certain that they will win. Therefore, past figures notwithstanding, the government and the opposition are very excited, attach considerable significance to the election, and scan the slightest change in the voting figures for signs of the times. Did more voters come out? What issue most stirred them? What arguments were circulated about the contest? How did the results for the contestants compare with those at the general election?

Thus mandates, and the frequency and dissolution of legislatures, formally maintain the correspondence between people and legislature. But we are not yet free to observe how legislatures use their powers, for they themselves are not organized upon the simple basis of one chamber, but for various reasons and from diverse causes are divided into two. We must, therefore, pause for an inquiry into bicameral arrangements, and having discovered how power is divided between the assemblies, we then can proceed to a discussion of the procedure and activities of the more popular chamber.

<sup>54</sup> Robert Redslob, *Le Régime Parlementaire*, p. 181. Both Esmein (*op. cit.*, Vol. II, p. 180 ff.) and Duguit (*op. cit.*, Vol. IV, p. 572 ff.) incline away from the treatment of the subject as a branch of the separation of powers (i.e., the right of dissolution as a defense of the executive) and recognize the importance of the right of dissolution as an instrument for clearing away difficulties in the Chamber of Deputies and in the relations between this and the cabinet.

<sup>55</sup> The subject is considered further below, p. 646, in connection with French elections.

<sup>56</sup> J. K. Pollock, “British By-elections Between the Wars,” *American Political Science Review*, June, 1941. The student is invited to consult the British press on the Gravesend election of December, 1947.

## Second Chambers

### ORIGINS

WE must distinguish. Legislatures are bicameral for two broad and different reasons: as part of federalism, and as the result of a desire to check the popular principle in the constitution. This does not mean that in federal states the second chamber was designed only to represent the states. If we take the records of the constitutional conventions as evidence, it is likely that there would have been some sort of second chamber, even if it were not required by the federal principle. There is not absent from the United States Senate and the German *Reichsrat* of Weimar the intention or spirit of a curb.

*A Multitude of Counselors.* If, then, we contemplate the history of government, we find that two basic motives have contributed to the establishment of bicameral systems. The first is, perhaps, the more universal, and is likely to be the more enduring. Most human beings desire a multitude of counselors and all the advice they can obtain: whether from self-doubt, the fear of taking responsibility and the desire to absolve themselves from blame if matters go awry, or from the wish to repair their lack of knowledge or judgment. It is not that others need to be convinced, but that the mind is clarified by talking out, which implies thinking out the issue. Indeed, for most people, to talk is the only way to think. This tendency will be found everywhere operative and particularly in proportion to

the gravity of the object: in cases of real urgency, such as dangerous illness, the number of counselors is limited only by the resources at the patient's disposal. It is not a question of courage or fear to innovate, but a sound sense of self-preservation, which leads men to take counsel before proceeding: it is not merely a question of *whether* but of *how* to act. Generally, then, men are circumspect, especially in acts of government, whose burden is heavy and difficult to reverse, and therefore they establish institutions which compel judgments to be deliberate. They establish delays and adjournments, notices of resolution, and a multitude of advisory bodies. But in affairs of state the result of any resolution is widespread: hence even greater care to prevent abuses of power. Further, deliberation and solemnity strengthen the prospects of obedience and acceptance. They seem to have exhausted the possibilities of error and of the arbitrary, and assume the air of the inevitable, the decree of nature, and, since it is useless to rebel against nature, adaptation is the only road to relief. These motives are the constant and essential nucleus of most arguments in favor of more deliberation—or in other words, a second chamber. But the phrases in which arguments are couched are usually less conscious, more conventional, and often more picturesque.

*The Defense of Possessions.* Secondly, quite apart from the need for mature deliberation, second chambers have come

into existence for the same reason as so many other institutions: those who have power and possessions create all possible barricades to prevent their loss. Revolution is not the only movement of the human spirit to produce barricades: conservatism has produced more. Indeed, all second chambers have been instituted, and are maintained, not from disinterested love of mature deliberation, but because there is something their makers wished to defend against the rest of the community, especially inherited possessions and status. It is not always difficult to trace this motive to its sources and channels. The diminution of social inequality, and the downfall of social monopolies, may in time cause the disappearance of this protectiveness, but the spontaneous desire for careful unhurried deliberation in a vast complex society will not easily fade or lose its need for institutional embodiment, particularly as the community's functions expand through the state. The final question is, what form ought this best take?

We are concerned with the British House of Lords, the United States Senate, and the French Senate. The German *Reichsrat* has been discussed already.<sup>1</sup> We shall consider, first, the general conditions of their origin, and second, their composition, power, and political effect.

*Origins in England.* The House of Lords came into existence in the first blithe unconsciousness of political development.<sup>2</sup> It was perfectly natural for conquerors and the owners of large estates to give counsel to the Crown—natural, too, for the learned and propertied ecclesiastics to form part of the empowered circle of the great council. Soon the lesser property owners were excluded and, individually insignificant barons that they were, relegated to a class below the peers. The magnates even compelled the Crown to accept them as participators in government, on the basis of a right inherent in their position and not created by the Crown. They obtained safeguards against

the king's own judges in the institution of *judicium parium*, judgment by peers, which extended beyond the confines of law into the legislative acts of Parliament—the distinction in the fourteenth and fifteenth centuries being not yet as clear as it became when Parliament had become a body representative against, rather than a council with, the king. We cannot enter into the rights and wrongs of the learned controversies regarding origins. All we need to know is what all scholars accept; namely, that feudal land tenure, the hereditary principle, and peerage, a complex of political and legal privileges, became indissolubly associated, and associated by the forceful pressure of landed proprietors and their descendants.

It is interesting to observe that until Parliament had evolved so as to become a potential challenge to the king's will, and an independent source of authority, the magnates preferred to stay at home, "lord-ing it" in their territories. They had the estates; and to prevent their undue conversion into royal revenue was a virtue. Further, a power threatened is a power which arms. So when the Crown found itself surrounded by a customary circle of peers outside of whom convention dictated that none others should be summoned, it (Richard II, *circa* 1380) began the practice, which has had such remarkable effects in recent generations, of creating peers by letters patent. The presentation of estates (or a title indicating estates) followed in keeping with the ancient association.

Lastly, the House of Lords came to be founded not only upon the hereditary principle, but upon a particular application of this principle: of primogeniture. For this principle preserved the size of estates and had become a cherished rule of succession. Here, then, in this branch of the council were concentrated lords territorial and hereditary, lords created and hereditary, and lords spiritual but not hereditary. At first Commons and Lords met in common council. Towards the end of the fourteenth century, burgesses and knights drew more definitely and continuously together as one body, consulted

<sup>1</sup> Cf. Chap. 11 above.

<sup>2</sup> Cf. A. F. Pollard, *The Evolution of Parliament* (London, 1922); J. A. Jolliffe, *Medieval Constitutional History* (Oxford, 1938).

and acted in common, and separately, in a special place: the king, the lords, the chancellor and judges remaining, as it were, as a single body in possession. Little by little, two houses emerged in one Parliament, each with its own characteristic and now familiar offices and body of usages, while individual petitions requiring the judgment of Parliament as a high court had changed into general petitions. But general petitions are politics, and their result is law, for more clearly they represent the demands of one part of the population upon the rest.

This division into two houses was, then, the simple result of (1) the appropriation of governmental authority by those who possessed economic power and the prestige of conquest and social leadership and (2) the unavoidable consultation of representatives of the rest of the population, since the threat of unrest and fiscal resistance was ever emergent. The division was a division of interests, as the articles of Magna Carta show, and not the consequence of a desire for mature deliberation and a check upon a tumultuous and self-willed democratic assembly. That came later, much later, in the middle of the nineteenth century, when a powerful and self-conscious democracy began to ask the question *quo warranto?* of a House of Lords founded upon every sort of title except democratic functional utility.<sup>3</sup>

*Origins in the United States.* The modern political theory of a second chamber was, in fact, first developed by American statesmen in the convention of 1787, and is to be found in its *Records*, and, more systematically, in the *Federalist*. The convention was impelled toward the establishment of the Senate not only by the necessities of federalism, but by the practical and immediate fear of tumultuous democracy which, in the few years since the end of English rule in 1776, had acted very intemperately. Nearly all speakers who discussed the topic did so with refer-

ence to events in the states. McHenry of Maryland, for example, said: <sup>4</sup>

Our chief danger arises from the democratic parts of our constitutions. It is a maxim which I hold incontrovertible, that the power of government exercised by the people swallows up the other branch. None of the constitutions have provided sufficient checks against the democracy. The feeble Senate of Virginia is a phantom. Maryland has a more powerful Senate, but the late distractions in that State have discovered that it is not powerful enough. The check established in the constitution of New York and Massachusetts is yet a stronger barrier against democracy, but they all seem insufficient.

Madison took a large part in the debates relating to the Senate. The ends of a second chamber according to him were: (1) the defense of the people against their rulers—which might be secured by a "division of the Senate between different bodies of men, who might watch and check each other," and (2) the protection of themselves against their own transient impressions. The latter end was important since temporary errors were liable to result from (a) want of information as to their true interest, this being shared by representatives who were elected for only a short term and occupied, perhaps, with other affairs, and (b) fickleness and passion in themselves and a numerous representative body. Therefore, a fence was required, and this must be a body, enlightened, of limited number, and with the "firmness seasonably to interpose against impetuous counsels."<sup>5</sup>

Madison's thought, however, reached further than this. Liberty means the development of diversity. The constitution was designed to secure liberty. Then, said Madison, different interests may clash, for in all civilized countries the people fall into different classes having a real or supposed difference of interests.

We need not pursue the topic to the point of exhaustion. Members were agreed on these general principles.<sup>6</sup> The only

<sup>3</sup> Cf. Pinckney's analysis of the English constitution in the American Federal Convention, in Max Farrand, *Records of the Federal Convention* (New Haven, 1911), 3 vols., Vol. I, p. 410.

<sup>5</sup> *Ibid.*, Vol. I, p. 422.

<sup>6</sup> Sherman: "steadiness and wisdom"; Gerry: "stability of efficacy" of government; Mason:

controversy was regarding the composition of this assembly: its selection, the age of its members, its duration, and so on. After discussing the changes that might come in the course of time, Madison held that nine years were not too long; and it should come so late in life that the senator would not mind on public or private grounds if he were not re-elected. The opposition to a Senate of long duration was "that it might by gradual encroachments prolong itself first into a body for life, and finally become a hereditary one,"<sup>7</sup> and that long separation from constituents would cause "attachments different from that of the State."<sup>8</sup> But Hamilton's plan went furthest. In that famous intervention in debate which earned him the credit of being a monarchist, he scornfully rejected Randolph's proposition that a Senate of seven years was enough.<sup>9</sup> Could it save the few against the many, or the many against the few? No. Neither had a defense. But observe the British House of Lords!

It is a most noble institution. Having nothing to hope for by a change, and a sufficient interest by means of their property in being faithful to the National interest, they form a permanent barrier against every pernicious innovation,<sup>10</sup> whether attempted on the part of the Crown or of the Commons. Gentlemen differ in their opinion concerning the necessary checks, from the different estimate they form of the human passions. They suppose seven years a sufficient period to give the Senate an adequate firmness, from not duly considering the amazing violence and turbulence of the democratic spirit.

Did not the experience of the New England states prove that popular passion spread like wildfire and became irresistible? . . . etc., etc. . . . "What is the inference

from all these observations? That we ought to go as far in order to attain stability and permanency as republican principles will admit." How far? "Let one branch of the Legislature hold their places for life, or at least during good behavior. Let the Executive also be for life." Indeed, this would have produced what was claimed for it—a permanent will, a weighty interest! His suggestion was, then, a Senate of persons elected to serve during good behavior; election to be indirect. A later edition of the suggestion required that candidates should have an estate in land.<sup>11</sup>

In the *Federalist*<sup>12</sup> the Senate was defended. The age of thirty was proper since the Senator's duties required a "greater extent of information and stability of character." Choice by the state legislature constituted "a select appointment." The number would always be far smaller (two from each state) than the House of Representatives: this would counter "the propensity of all single and numerous bodies to yield to the impulse of sudden and violent passions, and so be seduced by factious leaders into intemperate and pernicious resolutions." A long duration (nine years) would promote "great firmness." A bicameral system doubles the security to the people against schemes of "usurpation or perfidy" where the ambition or corruption of one would otherwise be sufficient. A due acquaintance with the objects and principles of legislation is not to be expected from people called from pursuits of a private nature, and in office only for a short time. Recent experience showed this. A rapid succession of new members of Congress would cause "mutability in public councils"; but change of opinions and measures is desirable only in a temperate form. The effects of instability are loss of foreign confidence in the country, uncertainty of the law, opportunities to speculators, and perils to prudent producers, but most important of all is the loss of reverence for governments which are infirm and dis-

"weight and firmness" to "secure the rights of property." Therefore, also, a qualification of property should be annexed to the office.

<sup>12</sup> Essays LXII and LXIII.

appointing to men's hopes.<sup>13</sup> Further, only a "select and stable" body can become sensible to the opinion as to the qualities of foreign countries—in a small body, it is argued, the praise and blame, pride and consequence of each member are involved. Not so in large bodies. Moreover, the longer the tenure, the keener the sense of responsibility for long-period plans, like a "succession of well-chosen and well-connected measures which have a gradual and perhaps unobserved operation." Only those enjoying the result will care to create its possibility and watch for its advent with concern.

*Origins in France.* In France the fury of the revolution against inequalities of all sorts, and the burning, reckless belief in popular sovereignty, overcame both the wishes of some of the *cahiers* and the theories of Delolme and Montesquieu, which suggested a bicameral system of commons and lords. The ideology of Rousseau was accepted as a true description of the facts of the time: the constituent assembly accepted the argument that sovereignty was indivisible and the nation was sovereign, and hence that its representative body could not but be one.

This pedantic eloquence was the necessary consequence of two causes: the need of the revolutionaries to prove that sovereignty lay with the people, and their need to deny the inequality of men.<sup>14</sup> What possible second chamber could be established save on a basis which admitted that there were natural differences among men? To admit this was to return to the principle of aristocracy, which God forbid! <sup>15</sup> This argument is to be found in Siéyès' classic dilemma: "If the two assemblies agree the second chamber is unnecessary; if they disagree

it is obnoxious." <sup>16</sup> It is developed further in the argument of Mathieu de Montmorancy, thus: <sup>17</sup>

If the two chambers have the like composition, one of them becomes useless, because it can no longer be anything other than a body necessarily always influenced by the other. If the composition is not the same and the idea of a Senate is adopted, it will establish aristocracy and will lead to the subjection of the people.

A second-chamber system was suggested by Lally-Tollendal, with the already familiar arguments: that it stops too-hasty decisions; that a single body would be amenable to nonparliamentary influence; that a senate of elders adds wisdom to decisions, that two chambers in agreement have great authority, especially against popular turbulence. These arguments could not prevail: <sup>18</sup> revolutionists do not want obstructions.

Since Siéyès' dilemma has been accepted so easily by generations of later students, it ought to be demolished: not because a second chamber may be found to be ultimately unnecessary, but because it is one of those phrases which stop thought by stunning the mind. The answer to Siéyès' dilemma is this: "If the two assemblies agree, so much the better for our belief in the wisdom and justice of the law; if they disagree, it is time for the people to reconsider their attitude." Further, he provided otherwise for many checks and balances.

Elemental forces, other than doctrine, swept the members of the constituent assembly along. There was, therefore, no second chamber in 1791. Nor in the constitution of 1793 was a bicameral system established, but to the electoral colleges a right of challenge within forty days was given.<sup>19</sup>

<sup>13</sup> "No government, any more than an individual, will long be respected without being truly respectable; nor be truly respectable without possessing a certain portion of order and stability."

## SECOND CHAMBERS

The constitution of the Year III showed the result of the terrible experiences through which France had passed and was passing. Terror, intrigues, foreign danger, the dictatorship of the Commune of Paris—of the Mountain—of Robespierre: all pressed the convention toward any port which promised refuge. The experience of America was now invoked. A "*Corps législatif*" was created, of two chambers, the lower, the Council of Five Hundred, and the upper, the Council of the Ancients, numbering two hundred and fifty; the one was the Republic's "inspiration," the other its "reason."<sup>20</sup> The suffrage was already limited,<sup>21</sup> and both bodies emanated from election, one third being renewable each year. The lower house initiated laws and the upper house had the right of rejection when the law could not be represented until a year had elapsed, but the lower house could present another law in which the rejected one appeared as a part. Thus the upper house could provoke amendments. Napoleon dispersed these bodies.<sup>22</sup>

At the Restoration a Chamber of Peers established itself. The Revolution of July broke the hereditary principle: the king nominated to the Chamber from among select groups of notabilities, mainly civil, judicial, and military administrators and the eminent among the great bourgeoisie.<sup>23</sup> This body was so meek that the revolutionists of 1848 did not bother to disperse it; it was said that had they done so they would have flattered it.<sup>24</sup> The constituent assembly of 1848 rejected the bicameral system. The argument on both sides contained nothing new. Were they to return to aristocracy? No. Had the recent experience of notables been satisfying? No. Then 530 against 289 decided

for a single body<sup>25</sup> and significantly agreed to (1) a more settled and deliberate form of procedure for the creation of laws,<sup>26</sup> and (2) the short tenure of three years.<sup>27</sup> Further, a Council of State was established, elected by the assembly for six years (renewable), one half every three years. This body was to be consulted by the assembly in its projects for examination previous to discussion.

During the Second Empire a single-chamber National Assembly faced Napoleon III.

We have arrived at the Senate of the Third Republic. What was to be done? France had had a most disastrous constitutional experience. The neatest imported American doctrines had come to nought upon contact with the realities of character and existing social institutions, and seemingly every argument which had been made on the one side or the other in the perennial controversy had at some time been ridiculed by unexpected events. Two chambers had been unsatisfactory; one chamber had been unsatisfactory. The constitution was made, as all constitutions are made, not by the molding power of pure reason so illuminating that all could accept its direction, but by the power of numbers emergent from the immediate action and counteraction of social forces. The vital fact was that about 400 members of a total number of 630 were monarchical, and were determined that if they could not re-establish a monarchy, they must at least set up institutions into which its spirit might return at a propitious date.<sup>28</sup>

As for the composition of the Senate, there were three possibilities: hereditary in certain privileged families; nomination for life by the sovereign either entirely at his discretion or with certain restrictions; or election in a manner differ-

ent from that of the lower house. The democratic state could not accept the first; the second could not be recommended since it would not have the necessary authority, and it implied a monarchy. Election was left; and, in Prévost Paradol's opinion, it was good that this should be based on the local governing bodies. Supposing these (the *Conseils Généraux*) elected 250 members, the intelligence, the knowledge, the substantial position, and their conservative spirit would produce a first-class body of the type needed. Election for life would cut them off from touch with public opinion; hence election for ten years should be adopted. Since the chamber might well have 300 members, the remaining 50 seats could be given as of right to certain high civil and military officers. Thus, then, a place would be made for men useful to the state but not able or willing to run the chances of election to the lower chamber.

The Senate was established, by the first of the constitutional laws of 1875, as a carefully concocted compromise between the parties of the Left, which were in a minority, and the parties of the Center and Right (excluding the extreme Right), brought about by a series of subtle maneuvers. Although it was not the institution the monarchists would have liked to get, its very existence was compelled by their numbers in the Assembly, and, although the Republicans of the Center and the Left had obtained concessions and had good reason to be satisfied that their tactics had averted a Chamber of Peers, yet the Senate was not in keeping with their philosophy.

Let us consider the composition of the Senate down to its supersession in 1946 by the Council of the Republic. To 1884 it had 300 members, of which 225 were elected by the *départements*, and 75 by the National Assembly. The age qualification was forty. The elected senators in each department were elected by a body thus composed: (a) the parliamentary deputies of the department, (b) the members of the *Conseil-Général*,<sup>29</sup> (c) the

members of the *Conseil d'Arrondissement*,<sup>30</sup> and (d) one delegate chosen by each municipal council. Election was for nine years, with triennial renewal. The powers of the Senate were to control ministries, and to initiate and make laws in cooperation with the Chamber of Deputies; but financial bills were to be presented to and voted by the Chamber of Deputies first. Sessions of the Chambers must be simultaneous.<sup>31</sup> Before we consider the consequences of this manner of composition, and the political results of the powers, we must dwell a little upon the later constitutional history of the Senate, for it suffered amendment in 1884, as soon as the Republic was well established and the parties of the Left were strong enough to undertake a revision.

The Left Republicans set out to destroy the life membership of the Senate, and to reduce the overrepresentation of the small communes. By this time most of the Left had rallied to a second chamber, though they desired revision. In the election of 1881, revision played a principal part. The Senate, partially renewed in 1883, gave the Republicans large gains. The Senate was adroitly won by the suggestion of Jules Ferry that the law on the organization of the Senate should be de-constitutionalized, whereby the Senate obtained the assurance that in the future it would not be swamped by the Chamber's superior numbers in a constitutional assembly having for its object an ungenial change of composition. The composition of the Senate was transferred to an ordinary law. An elected Senator was to replace each deceased life member. Finally, a certain proportionality was established between the communes in the matter of their representation. In 1919 the number of the Senate was increased to 314, as a redistribution of membership among the departments on the occasion of the inclusion of Alsace-Lorraine in the French state.

<sup>29</sup> These are the locally-elected local government authorities in the next smaller area of local government after the department.

<sup>31</sup> Law of July 16, 1875, article 4.

<sup>28</sup> The *Conseil-Général* is the locally-elected local authority of the department.

ENGLAND: HOUSE OF LORDS

UNTIL 1832 the existence of the House of Lords raised no critical problems; disputes concerned personal and corporate dignity in relation to the House of Commons. The lower house was, indeed, until toward the end of the eighteenth century the *lower* house, in spite of the convention that its authority over finance was superior. In every aspect of government—legislative, critical of policy, formative of ministries—the House of Lords was superior to the House of Commons.<sup>32</sup> The houses were often in disagreement, but this was merely because alignment of personal and party forces in the two houses did not happen to agree, owing to the results of elections or the ambitions and intrigues of faction and court.

The main difficulty of recent generations, however, did not exist—that is, disagreement between the two houses as units, arising from the diversity of their very composition and character. On the contrary, the social elements which begot the constitution of the eighteenth century enabled the House of Lords, without any strain, to control the House of Commons, for two reasons: the personal position of the aristocracy, and the lack of constitutional challenge. The aristocracy dominated both houses because they acquired dignity (1) from their landed possessions—they possessed much of the territory of England, Scotland, Wales, and Ireland—which gave them the position of local sovereigns and the prestige of wealth; (2) from their ancient standing in many cases; and (3) in all cases, from the ennoblement by the Crown. "The King of England," said Disraeli, enamored of the *jeunesse dorée*, "may make Peers, but he cannot make a House of Lords. The order of men of whom such an assembly is formed is the creation of ages." These had always possessed the superiority in government; neither powerful reason nor force threat-

ened this legacy; hence they continued "naturally" to form ministries, with the occasional adjunct of a great commoner or learned judge. Moreover, a very large proportion of the constituencies of the Commons were in their pockets:<sup>33</sup> they were the all-powerful "bosses," who dispensed local and central patronage, bribed and intimidated the voters, to form their "connections." The House of Commons responded. Hence the real political struggle was hardly between two houses. It was between the inarticulate country and Parliament; and between king and Parliament. And, to come to the second reason why there was no strain between the houses, there was no continuous challenge from the people—at least until the era of reform which began about 1780 and ended its first phase in 1832. There was as yet no economic challenge; Lords and Commons were much of the same class and united by family ties—"cousins." There was a religious challenge, but it was damped down with the tacit and spasmodic connivance of the ignorant and bigoted multitude. There was no widespread sentimental challenge for freedom of opinion and self-government.

By 1832, the forces of an entirely new era had matured; they no longer "pitied the plumage and forgot the dying bird." The struggle over the Reform Act revealed their strength, and ended with the violent defeat of the House of Lords and the adoption of an electoral system for the Commons which was bound to make the House of Lords permanently hostile, continually defensive, and ultimately powerless. The foundations of authority had shifted, and whereas they ever more soundly buttressed the House of Commons, the House of Lords declined into a conscious excrescence. The representative principle continuously renewed, invigorated, and adapted the Commons, which

<sup>32</sup> Cf. C. H. Firth, *The House of Lords during the Civil War* (London, 1910); A. G. Tupper, *The House of Lords in the Reign of William III* (London, 1913), and *The House of Lords in the Eighteenth Century* (Oxford, 1927).

<sup>33</sup> Cf. L. B. Namier, *The Structure of Politics at the Accession of George III* (London, 1929). In Volume I, pp. 176-81, it is shown that a total of 51 peers nominated members of the lower house (or influenced their election) for 101 seats. Cf. *England in the Age of the American Revolution* (London, 1930) by the same author.

became the rightful bearer of power. That same principle was, and is, a continual reprimand to the House of Lords. It is suffered to exist—suffered, why?

*Present Composition.* At present (1949) the House of Lords is composed of four classes of members: (1) hereditary peers, about 779;<sup>84</sup> (2) Scottish representative peers (elected for each Parliament), 16, and Irish representative peers (elected for life), 8; (3) archbishops and bishops, 26; (4) ten law lords, or lords of appeal, appointed for life.<sup>85</sup> Class (3) become legislators by virtue simply of professional success in the ranks of the Church of England. They are not excluded from the legislative and executive functions of the House other than religious affairs. They may be said to represent the spiritual and proprietary interest of the Church of England in government, but vast numbers of religious people outside this church receive no representation as such. Class (2), the Scottish and Irish<sup>86</sup> peers, are elected by their fellows, and the peer members of governments have occasionally managed the elections to secure the success of the capable and those likely to support their policy.

Class (1), the hereditary peers, consist of two groups which must be distinguished: the "accidents of an accident" as Bagehot has called them, and those honored for proven or presumed virtue. The first group forms the great bulk of the House of Lords—their rank and title to sit and exercise power arises from the fact that they are the eldest sons of their fathers and mothers. All may, and some do, have the makings of capable legislators; but no test of their aptitude is applied, and even if ability were positively proved, the modern world has rejected the application of ability to government unless it is representative of the interests of

those expected to obey the law. With the exception of about a score, these hereditary legislators are usually absent from the proceedings of the House, whose benches are conspicuous by their red-plush vacancy. But the right to attend, speak, and vote exists: and it is used by large numbers when the interests of the country, in the estimation of the party managers, are in danger. We return to this presently. The second group, quite large in recent years, is, in the first generation, composed of those ennobled for political and social services. These services are of three kinds: (a) those securing the benefit of the nation by political office (as in the case of such men as Wellington, Disraeli, Iddesleigh, Sherborne, Rhondda, Asquith, Birkenhead, Banbury, Curzon, Balfour, Beatty, Reading, Ullswater, Samuel, Beveridge); (b) those more immediately benefiting a party, or its organization or finances; (c) charitable works or gifts, or eminence in science and art. Perhaps there should be added to class (2) some, of decent talent and certain loyalty, who are elevated to the peerage because the government of the day needs spokesmen in the Lords or must fill Household appointments: for example, Passfield (Sidney Webb) in the first Labour government, and nearly a score in 1945-46.

Thus there is no popular—or occupational—elective principle in the composition of the House of Lords. How far the mentality of the House divides according to the main divisions of public opinion is determined only by the interests and the individual mentality of the peers, and, in the case of recent creations, by the party to which the new peer belonged. Of those whose party membership is known, it is computed that some 600 members belong to the Conservative party, between 80 and 100 to the Liberal party, and about 20 to the Labour party.

Beneath their robes of red and ermine, the peers are predominantly an economic interest: they are not so much the representatives of, as they *are*, big private enterprise. Over one third of them are directors (some multiple) of the staple industries of the nation. One third of them

<sup>84</sup> Cf. also Debrett's *Peerage, Baronetage, Knightage and Companionage* (London, editions from time to time).

<sup>85</sup> Appellate Jurisdiction Act, 1876.

<sup>86</sup> The 11 Irish peers are the survivors of 26 who were elected for life under the Act of Union of 1801. The Irish Free State Act, 1922, abolished the machinery for electing these peers.

also own very large estates. Many of them are related by marriage, birth, and business connections with Conservative members of the House of Commons.<sup>37</sup> The existence of the House of Lords is a gross anomaly, without justification in this era.

Writing to Gladstone's daughter, Lord Acton said, in 1881 when the Lords opposed the Irish Land Bill<sup>38</sup> (to make tenure less unjust to the tenants):

But a corporation, according to a profound saying, has neither body to kick nor soul to save. The principle of self-interest is sure to tell upon it. The House of Lords feels a stronger duty toward its eldest sons than towards the masses of ignorant, vulgar, and greedy people. Therefore, except under very perceptible pressure, it always resists measures aimed at doing good to the poor. It has almost always been in the wrong—sometimes from prejudice and fear and miscalculation, still oftener from instinct and self-preservation.

*The Power of the House of Lords.* The House of Lords had, until the Parliament Act of 1911, four branches of power: judicial, legislative, financial, and executive. We cannot here treat of the first, the judicial, except to say that the House is the supreme court of appeal in civil cases for Great Britain and Northern Ireland, and that in this function the Lords of Appeal and the Lord Chancellor alone participate.<sup>39</sup> That work continued, untouched by the Act of 1910.

As regards ordinary legislation, public and private, the House of Lords was on a par with the Commons, having as full a right of initiative and amendment and rejection.<sup>40</sup> In fact, few bills were introduced in the Lords, since the political center of gravity had shifted to the cabinet based upon the Commons, and the cabinet was able to control the timetable

of that House. No arrangement existed to break deadlocks. The important question is how the House of Lords used its legislative power, and upon what theories it proceeded.

Somewhat similarly in regard to the financial power. In 1614 the Lords admitted the exclusive right of the Commons to initiate money bills. In 1671 the Commons successfully challenged and denied the right of the Lords to reduce taxes, while the convention that the Crown asks for supplies came to mean that the cabinet alone, and not ordinary members, could increase expenditures or taxation. The general convention that money bills could not be amended by the Lords, but only accepted or rejected "without diminution or alteration," was obeyed until the budget of 1909, but with some slight deviations concerned with customs duties, upon which occasions the Commons saved their privilege by introducing a new bill incorporating the amendment. The power to reject a money bill was used once, in 1860, when the Paper Duties Bill, repealing the duty, was thrown out after the enactment of a property tax and stamp duties which were intended to provide the revenue lost by repeal of the paper duties.<sup>41</sup> A furious controversy arose, the majority of the commons contending that the power ought not to have been used, or as Erskine May has it, "If the letter of the law was with the Lords, its spirit was clearly with the Commons." The House of Commons voted a solemn protest,<sup>42</sup> the import of which was that the Lords had no authority to touch bills to "grant supplies—to provide the ways and means for the service of the year." The paper duties were later repealed by the inclusion of the enactment in the Finance Act of the Year—by "tacking"—and the Lords could not fail to accept this, since rejection would have involved a further dispute of a more serious nature, directly concerned with the annual finances. A time came when the confusion of policy and finance raised

<sup>40</sup> Cf. W. R. Anson, *The Law and Custom of the Constitution*, 3rd edition (Oxford, 1907), Part I, Chap. VII, p. 260: "The House of Lords is, for legislative purposes, coordinate with the House of Commons."

<sup>41</sup> T. E. May, *Constitutional History of England* (London, 1912), Vol. II, pp. 104-12.

<sup>42</sup> *Ibid.*

fatal issues for the Lords, and their temerity drew upon them the wrath and destruction of the representative principle—in 1911; to that we return presently.

Finally, the House of Lords questions the government and debates its policy. It does not in any way control the executive in the sense we shall see to be true of the Commons, for this body is immediately in touch with the electorate and the parties, and is of the same flesh and blood as the cabinet. The Lords contributed members to the cabinet during the nineteenth century, but in an ever smaller proportion, and never overthrew or thought to overthrow a cabinet. They raised and may raise issues, as does the Commons, but they were never answered with the same earnestness.

*The Spirit of the House of Lords.* How were these powers used during the nineteenth century? The works of the House of Lords in the nineteenth and twentieth centuries are accompanied with a note of apology or of excessive defiance, as though that House were not only upon sufferance, but knew it was. It must find a reason for existing, and therefore it finds a reason in the only thing now considered capable of being reasonable: namely, the representative principle. It now claims to save the people from their own elected parliamentary representatives, by revising, amending, and rejecting bills sent up by the Commons, until such time as it is sufficiently clear that the people really desire the laws. (Thus the Duke of Wellington, and so, also, in various phrasing, all subsequent apologists.<sup>43</sup>) That is to say, while remaining in existence, anxious and prepared to use their powers, the Lords suffered an inner conversion. They conceded, under pressure, it is true,

their eighteenth-century superiority, some out of regard for the public welfare, others out of the last cry of their reason; and to justify, and maintain, a remnant of power, they were compelled to use an argument ultimately quite fatal to it.

The House of Lords, with such a mentality, had a large reserve of strength founded upon its social position and upon the extensive belief that there was something really virtuous in hereditary aristocracy and titles. How could, and how can, the inexperienced peasant or working man and woman, discern real merit apart from its wonted trappings? As Pascal says: "We need a highly refined reason to regard as an ordinary man the Grand Turk, in his superb seraglio, surrounded with forty thousand janissaries." Estates, money, society, intimacy with the court, commissions in the army and the navy, conspicuous and brilliant position at home and abroad, fine clothes, beautiful women, and thoroughbred horses—the consciousness of ancient authority, the conceit of family and a strong, if narrow, love of "country"—all these contributed to strength of purpose and safety from a direct and doctrinaire assault by Commons and people. Moreover, democracy was unpracticed. This was the strength of the House of Lords; and it proceeded to use it.

Almost every Liberal measure was amended or rejected, while Conservative measures which most accorded with its interest-begotten prejudices received usually a safe passage, until even Gladstone was moved to become the herald of the ultimate storm against the profession of the House of Lords that it represented the permanent opinion of the country.<sup>44</sup> The landlords' position in re-

<sup>43</sup> Referring to the Reform Bill, the Duke of Wellington wrote: "We here think that there is reason to believe that there is a very prevailing change of opinion in the country upon the subject of the Bill. At all events we think the House of Lords ought to give the country a chance of being saved by affording further time to consider the question" (Correspondence, Letter to the Marquis of Bath, Vol. VII, p. 531); cited in T. A. Spalding, *The House of Lords* (London, 1894), p. 155.

<sup>44</sup> August 30, 1884. Cf. John Morley, *Life of Gladstone* (London, 1903), Book VII, Chap. VIII. He says that since 1832, there were twelve Parliaments; ten Liberal, one divided (1841-47), and one Tory (1874). "Well, here are ten parliaments on the one side; here is one parliament on the other side . . . The House of Lords was in sympathy with the one parliament and was in opposition to the ten. And yet you are told, when,—we will say for forty-five years out of fifty—practically the nation has manifested its Liberal tendencies

gard to tenants' improvements was defended; religious and political equality was denied, the universities were kept closed to Dissenters; army privileges were maintained; counsel for poor prisoners refused, Ireland maltreated, municipal improvement thwarted; parliamentary reform (bribery and ballot laws) rejected or mutilated; humane measures (like the Deceased Wife's Sister Bill) held up for years; the first Employer's Liability Bill decisively rejected. The House of Lords bolstered the Church of England at the expense of Nonconformist rate-payers, and then, in the Liberal era of 1906 to 1914, they well-nigh stultified its great majority by defeating the Education Bill, the Licensing Bill, the Scottish Land Bill, and the Plural Voting Bill of 1912. The methods adopted were ingenious: principles were destroyed obliquely, without the enunciation of the true motives which caused their destruction; it was pretended that bills had come up to the Lords too late in the session for due deliberation; so many impossible amendments were added that the purpose and efficacy of legislation were frustrated (forcing a compromise).

*Nineteenth-Century Attempts at Reform.* The theorists of the Victorian era had not reckoned with the ultimate effects of such legislation as the Franchise Acts of 1867 and 1884. Its consequences in reform, especially social reform, speedily became apparent after these dates. The House of Lords could not but attempt to defeat them. Its leaders, however, saw that this must result in self-destruction, unless the House could improve its claim to conduct, which became only a representative body. Hence proposals began to be made for reform—all in the direction of denying the simple claim of inheritance to govern and admitting the validity of the representative principle. The first of these was in 1869, when Lord Russell's Bill

provided that the Crown should be authorized to create life Peers, but only up to the maximum number of twenty-eight and not more than four in any one year, and these life peers were to be taken from any of six given categories, namely: (a) Scotch and Irish nonrepresentative peers; (b) persons who have been members of the House of Commons for ten years; (c) officers in the army and navy; (d) judges of England, Scotland, or Ireland, and certain other high legal officials; (e) men distinguished in literature, science, and art; (f) persons who have served the Crown with distinction for not less than five years.<sup>45</sup> This timid proposition was defeated, because of its terrifying implications, by 106 to 76.

Two admissions made by Lord Salisbury in the debate reveal at once the view of the House which was shaping in the minds of some peers, and the palpable insufficiency of the House as a partner in modern government.<sup>46</sup> Lord Salisbury declared that the Bill would

tend to meet all the large advances of democracy as the third power of the State, as we must meet those advances by making this House strong in the support of public opinion, strong in its influence in the country, and strong in the character and ability of those who compose it.

And again,

We belong too much to one class, and the consequence is that, with respect to a large number of questions, we are all of one mind. Now that is a fact which appears to me to be injurious to the character of the House as a political assembly in two ways. The House of Lords, though not an elective, is strictly a representative assembly, and it does in fact represent very large classes in the country. But if you wish this representation to be effective you must take care that it is sufficiently wide, and it is undoubtedly true that, for one reason or another, those classes whose wealth and power depend on commerce and mercantile industry do not find there representation in this House so large or so adequate as do those whose wealth and power depend upon the agricultural interest and landed property. . . .

<sup>45</sup> Cf. T. A. Spalding, *op. cit.*, p. 108.

<sup>46</sup> *Ibid.*, p. 114.

by the election of Liberal parliaments, and once only has chanced to elect a thoroughly Tory parliament, you are told that it is the thoroughly Tory parliament that represents the solid and permanent opinion of the country."

We want, if possible, more representations of divers views, more antagonism. There are a vast number of social questions, deeply interesting to the people of this country, especially having reference to the health and moral condition of the people, and upon which many members of your Lordships' House are capable of throwing great light, and yet these subjects are not closely investigated here because the *fighting power* [my italics] is wanting, and the debates cannot be sustained.

Other attempts at reform were made in 1874 by Lord Rosebery, and in 1888 by Rosebery and Salisbury. In the first, Rosebery observed that the House did not command respect because it did not represent dissenters, medicine, science, literature, arts, commerce, tenants of land, the colonies, the laboring classes—a truly sufficient damnation. He suggested the institution of life peers, presumably from the categories of the hitherto unrepresented. The motion for an inquiry was defeated. Again in 1888 Rosebery made proposals. "The House of Commons rests upon the votes of some 6,000,000 persons. What we represent is not so easy to divine." He proposed that the House be decreased in size by the election of representatives of peers by their fellows: then there were places for members chosen by the county councils (then newly created), the larger municipalities, and by the House of Commons; and for life and official peers; and for representation of the colonies. Salisbury proposed the addition of fifty life peers, not more than five to be created in any one year. Of the five, three were to be chosen from certain categories and two from outside.<sup>47</sup>

No more was heard of House of Lords reform until 1907, for until then Conservative governments ruled the country. Is it not true, and true again, that few people possessing power will relinquish it out of simple consideration for the public good, and that only force or the threat of retaliation has produced concessions? In 1907 the House set up a select committee to consider the suggestions made from time to time to increase the efficiency of the House in legislation. The report <sup>48</sup>

suggested a new constitution for the House: (a) peers of the royal blood (a class always included hitherto); (b) the lords of appeal in ordinary; (c) two hundred representatives elected by the hereditary peers; (d) hereditary peers possessing special qualification; (e) spiritual lords of parliament; (f) life peers.

*The Struggle of 1910.* It was too late: <sup>49</sup> only under the pressure of attack of imminent and serious threat did the peers propose a new plan.<sup>50</sup> Too late! for they attempted to use their power of forcing a government to take its measure to the country, in relation to the Finance Bill of 1909. The House by a vote of 350 to 75 rejected the Bill.<sup>51</sup> This was to employ a power which had never been used since the modern budget system had been developed, which the House of Commons had solemnly claimed ought not to be used, and which was a direct challenge to the authority of the cabinet. The Bill was certainly provocative, for it introduced a steeply progressive income tax and death duties, a tax upon mineral royalties, and land-values duties. It was bound to provoke those whose estates and fortunes would be immediately affected. The

<sup>48</sup> Report from the Select Committee of the House of Lords. Appendix A (234), December, 1908.

<sup>49</sup> Note the Commons' resolution, on the motion of the Prime Minister (June 26, 1907): "That, in order to give effect to the will of the people as expressed by their elected representatives, it is necessary that the power of the other House to alter or reject Bills passed by this House should be so restricted by Law as to secure that within the limits of a single Parliament the final decision of the Commons shall prevail."

A second Commons' resolution (December 2, 1909) ran: "That the action of the House of Lords in refusing to pass into law the financial provision made by this House for the Service of the year is a breach of the Constitution and a usurpation of the rights of the Commons." Cf. also J. A. Spender, *The Life of Sir H. Campbell-Bannerman* (London, 1923), Vol. II, Chap. XXXV.

<sup>50</sup> Cf. J. A. R. Marriott, *The Mechanism of the Modern State* (Oxford, 1927), Vol. I, p. 427.

<sup>51</sup> At the time the House of Lords consisted of about 554 members, so that an abnormally large proportion of the membership was present.

<sup>47</sup> *Idem.*

Commons dissolved and a general election took place in January, 1910, the government returning with a majority, though a depleted one. The Bill was re-introduced and the Lords yielded. The Commons proceeded to the next logical step: the Parliament Bill of 1910. All-party conferences attempted to produce an agreed scheme. It was impossible.<sup>52</sup> The government dissolved, and a fresh election took place in December, 1910, the main issue being reform of the House of Lords. The balance of power in the Commons was unchanged. The intentions of the government were carried, but accepted by the Lords only after the declaration that the king had consented to the creation of sufficient peers to overcome obstruction. Various maneuvers followed, resulting in some queer crossvoting, but by 131 to 114 the Bill was passed.

*The Parliament Act and its Effects.* The Act<sup>53</sup> was declared to be only a stage toward a more fundamental reform, and confined itself to immediate tasks. It took away financial powers from the Lords, by providing that money bills, after passage by the House, must be sent up to the Lords at least one month before the end of the session, and if not passed without amendment within a month shall become an Act of Parliament with the royal assent and without the consent of the Lords. Money bills are defined, but not in such detail as to avoid possible conflict, and the speaker of the Commons is the ultimate authority for the certification that a public bill is a money bill.<sup>54</sup> Broadly, the Lords have lost all powers over taxation and appropriations for expenditure.

As regards other public bills, the absolute veto power of the Lords was con-

verted into a suspensive veto of the uttermost limit of two years: a bill passed three times in three successive sessions, two years having elapsed between the second reading on the first occasion and the third reading on the last occasion passes for the royal assent without acceptance by the Lords. This is the extreme power of the Lords—to hold up a bill for such a time. Within this time, it may amend as it will, with the possible pain of having amendments rejected if the Commons can hold out for the two years and find the time for repassage as demanded by the Act.

From the plain terms of the Act, and the general nature of political forces in the country, the following deductions could then be made as to the parliamentary results of this reform:

(1) That in times of Conservative rule the Lords would use their power of amendment on details, excepting where the government was swept along by electoral forces to undertake social reforms, but that ordinarily the Lords would be nothing but the stage on which verbal amendments, and the government's own voluntary amendments, were undertaken.

(2) That in times of Liberal or Labour governments the Lords would not hesitate to use their power when a serious clash of opinion would (a) put the government to the almost impossibly difficult task of finding time to do its work thrice over, and (b) obtain concessions where the government urgently needed the bill and could not find the time or did not wish to wait three years.

(3) That in times of Liberal or Labour governments the House of Lords would virtually be the supporter of the Conservative opposition in the House of Commons and work hand and glove with its leaders. As Lloyd George once said in reference to the past, the Lords would not be the watchdog of the constitution but the Conservative leader's poodle.

Experience since 1911 has amply borne out such deductions, but two subjects need special emphasis. The *first* is that the House of Lords has been used by all governments as a stage on which they themselves have introduced technical or

<sup>52</sup> The Constitutional Conference of 1910 numbered eight members including the Prime Minister (Asquith). It broke up without reaching any agreement. Cf. A. Fitzroy, *Memoirs* (London, 1925), Vol. II, p. 423.

<sup>53</sup> Parliament Act of 1911, 1 and 2 Geo. V, Ch. 13.

<sup>54</sup> The definition focuses on the hitherto normal budgetary provision—the expenditure and ways and means. A serious situation would arise if an attempt were made to enact socialist measures via the form of money bills.

political amendments suggested by the influence of the sense of the House of Commons, recommended by experts, or solicited by interested groups. It has offered the occasion and agency to the government for second thoughts and verbal clarification—a function of no mean importance. Yet it is obvious that any democratically composed body, a committee of the House of Commons itself, could serve this function. For the amendments we speak of, if rarely initiated by the Lords or by members of the Government, are plentifully suggested by independent members.

*Second*, the existence of a minority government, unsure of parliamentary support though normally possessed of it, becomes the sport of the House of Lords. It can be squeezed successfully, especially where a bill is urgent; and where a bill is urgent, any government makes concessions rather than enter upon a time-wasting constitutional conflict. Only the Home Rule Bill of 1912 and the Welsh Disestablishment Bill of 1912 were forced through the procedure of the Parliament Act. A survey of the legislative behavior of the House of Lords since 1919 to the present serves, further, to show the social groups to whom it has been generous and those to which it has been ungenerous. In the first class are landlords, the clergy, the taxpayers generally (where administrative institutions requiring the expenditure of money have been rejected), employers, rentiers, agriculturists, agricultural-machinery manufacturers, landlords who wished power of eviction from their property, criminals in the course of trial (regarding evidence, witnesses, grand juries, etc., but not sentences), private electric-power enterprises,<sup>55</sup> ordinary jurisdiction (Landlord and Tenant Bill, 1927), individual rather than governmental or municipal enterprise. It has

been positively unfavorable to state control over private enterprise and activities, local and central government expenditure, public libraries, housing efforts, agricultural laborers, the unemployed insured, allotment holders, education, and trade unions. In 1930 it once again killed a bill against plural voting, and rejected the restriction of the use of cars at elections. In 1931 it killed the Education Bill which would have raised the age of free education—the House took three months to handle it; the Lords killed it after four hours' debate. When, in 1933, a Conservative government proposed the abolition of whipping for juvenile delinquents, the Lords reinserted the power.

*Moral Position and Future.* On the whole, the Parliament Act, by its very existence as the embodiment of protests against the House of Lords, has tremendously weakened the moral position of that House. It is more on sufferance than ever.

One half of its membership has perhaps never spoken at all in the Lords. The number who have spoken several times is something like one in eight of the entire membership. Normally eighty or ninety participate in its divisions, which are rarer than divisions in the Commons. They bring up the big battalions, however, when the defeat of a progressive measure is desired—the "backwoodsmen."

Then why does the House of Lords still exist? For several reasons. (1) A second chamber, *any second chamber*, has some utility where legislation is complicated and only time and many minds can secure the soundness of its substance and the excellence of its drafting. (2) Next, the House of Lords is still a forum of debate on the administrative activity of the government, and lack of time in the Commons gives the other House an opportunity of useful service. (3) Again, the Lords contain a number of able legislators and administrators whose ability serves to weaken the full force of arguments against the existence of the House. It is helpful in the passage of private bills. (4) Further, no non-Conservative govern-

<sup>55</sup> In the Electricity Act of 1919, the Lords rejected the provision for compulsory amalgamation of small electric-power enterprises. The Conservative Lord Chancellor, Birkenhead, openly derided the Lords who did not read the bill or hear or understand the debate but voted solidly for their brother directors of electric-power corporations.

ment has yet come into existence with a sufficiently strong majority to make away with it (even including the Labour government of 1945), and the difficulties of mere reform are enormous. (5) Finally, it must be remembered that though the House does not issue from election, its opinion nevertheless coincides with that of some millions of people. It defends what they are glad to see defended. Yet there are Conservatives who see the need for reform. Some demand the strengthening of the power of the House, but that would certainly invite its abolition. Others seek to alter its composition, so that in the future it will be able to justify its power by popular elements.

If we treat the Conservative idea of a second chamber as impossible nowadays, there is hardly a halt to abolition, for reform of the composition of the existing House is impossible. It is this House by sheer inertia, or none at all by abolition, for almost every plan suggested since 1911 is impracticable.

*Reform Plans: 1911-34.* The Bryce Conference on the Reform of the Second Chamber,<sup>56</sup> which was the most scientific and careful inquiry, fell into two difficulties, each unanswerable: (1) the powers proposed were too great for progressives<sup>57</sup> and too small for conserva-

tives; (2) the indirect method of election was cumbersome,<sup>58</sup> too undemocratic for progressive politicians and not aristocratic enough for conservatives. Other schemes have come from the Conservative party, some in the House of Commons and others in the House of Lords, but they have been based on the principle that the House shall keep substantial powers as at present, or obtain even more, and upon a large element of hereditary representation.<sup>59</sup> But no Conservative government

tail the death of the bill) or return it without amendment, by a majority of not less than three. In the latter instance, acceptance by the House of Commons would enable the bill to become law even if the House of Lords should disagree.

<sup>58</sup> The indirect method of election involved the division of Great Britain into thirteen areas and invested "the election of the representatives for each area in the hands of the members for the House of Commons sitting for constituencies within the area." Secondly, there were to be eighty-one members of the existing peerage (a number to be eventually reduced to thirty). The method proposed was election by a "joint Committee of ten members, five to represent the new Second Chamber, chosen by the Committee of Selection for that Chamber, and five to represent the House of Commons chosen by the Speaker." The vacancies created by the gradual reduction in the number of peers were to be filled by the same committee, but without restriction to the peerage.

<sup>59</sup> The government resolutions of July 11, 1922 provided that "in addition to Peers of the Blood Royal, Lords Spiritual and Law Lords" there should be "(a) Members elected, either directly or indirectly from the outside; (b) Hereditary Peers elected by their Order; (c) Members nominated by the Crown, the numbers in each case to be determined by Statute." The reconstituted House was to consist of approximately 350 members. The decision as to whether or not a bill was a money bill was to be referred to a joint standing committee, appointed at the beginning of each Parliament and composed of seven members of each House, in addition to the speaker (ex-officio chairman). The Parliament Act of 1911 would be maintained with exception of "any Bill which alters or amends the constitution of the House of Lords as set out in these Resolutions, or which in any way changes the powers of the House of Lords, as laid down in the Parliament Act and modified by these Resolutions." The term of office of members under (a), (b) and (c) was to be fixed by statute, re-election being permissible. Cf. Lords Debates, 1922, Vol. 51, col. 324.

<sup>56</sup> Conference on the Reform of the Second Chamber. Letter from Viscount Bryce to the Prime Minister, 1918, Cd. 9038.

<sup>57</sup> The powers proposed by the Conference were:

(a) In the case of money bills, a finance committee composed of about seven members of each House, chosen at the beginning of each Parliament, to determine what constitutes a money bill. (Under the Parliament Act the Speaker is the arbiter.)

(b) A "Free Conference" composed of sixty members ("thirty chosen by each chamber, twenty members being selected for the lifetime of the Parliament, and the remaining ten *ad hoc* for each particular Bill") to consider a bill on which the two chambers disagree. The Conference was to sit in secret and to be empowered to reject or amend the bill. In case of rejection, the bill would die. In the more probable case of amendment, should either House reject the amended bill, a delay of one session would follow. At the end of this period the Conference could either fail to report the bill back in the same form (which would en-

really attempted reform: who knows where a war will end? In fact, the party leaders even deprecate discussion at party conferences. Progressive opinion inclines to the creation of a small body chosen by the House of Commons from among its own members or from outside at its discretion, with a revising power over ordinary bills to include (a) drafting amendments, (b) amendments of substance, and (c) power to require a short suspension, and then reconsideration by the Commons. But the Commons are supreme, and carry that supremacy even to the challenge of the rules of procedure of the revising committee.<sup>60</sup>

In December, 1933, in the heyday of the National government, the Salisburys were at it again. The Marquis introduced into the Lords a bill for the reform of the House. This time, the House was to be greatly strengthened! Thus, the definition of a money bill was to be more restrictive than hitherto, and was to be interpreted by a joint select committee of both Houses, with the speaker as chairman. No bill, other than a money bill, should be passed under the Parliament Act until after a dissolution. This would have meant that any substantial liberal or socialistic legislation, in the definition of the House of Lords, would have been obstructed and held up pending an election on each measure! To exercise this enhanced power, the peers were to select 150 from their own order, adding another 150 from

outside by a method to be prescribed by both Houses of Parliament. The bill was passed by the House of Lords by 84 to 34 on the first reading and by 171 to 82 on the second. Mr. Baldwin, leader of the Conservative party, brought about the discontinuance of discussion.

*Reform by the Labour Government.* In 1934, the Labour party, having suffered badly at the hands of the Lords when it was a minority government in 1929-31, adopted the following resolution:<sup>61</sup>

A Labour Government meeting with sabotage from the House of Lords would take immediate steps to overcome it; and it will in any event, take steps during its term of office to pass legislation abolishing the House of Lords as a legislative chamber.

If the Party obtained a mandate from the people in support of its policy, the Labour Government would regard it as its duty to carry that policy through by necessary legislation and administrative action. The Party will therefore at the next General Election, make it clear to the country that in placing its policy before the people, it was also asking for a mandate to deal forthwith with any attempt by the House of Lords to defeat the will of the people by rejecting, mutilating or relaying measures which formed an essential part of a program approved by the electorate.

Since that time the Labour party has obtained its majority. It was immediately asked whether it would proceed to abolish the House of Lords. The question was idle. So long as the House was not obstructive, no Labour government, with a full program of social security and socialization measures, and only five years to carry through the immensely elaborate legislation, means to waste its time on a frontal constitutional battle against the Lords. It would proceed with its program. If, on an issue stirring the people, it were obstructed, then it would be twice-armed to make short shrift of the House of Lords. The attack, then, if it came, would be oblique and two-armed.

Until the middle of 1947, the House of Lords had maintained an exemplary silence and acquiescence—not without a gentlemen's agreement with the Com-

<sup>60</sup> Cf. H. B. Lees-Smith, *Second Chambers in Theory and Practice* (London, 1923), p. 246 ff. This scheme is based on the Norwegian system, which is as follows: The newly-elected *Storting* elects one quarter of its members to form a second chamber (*Lagthing*) whilst the remaining three fourths (*Odelsting*) constitute the first chamber. The *Lagthing* may consider only ordinary legislation (i.e., neither finance nor constitutional bills) and may not initiate any bills. Its right of amendment is restricted: if it returns a bill with amendments already once rejected by the *Odelsting*, a full meeting of the *Storting* is required and a two-thirds majority necessary for the passage of the bill (cf. *ibid.*, p. 192 ff.). Cf. also H. J. Laski, *The Problem of a Second Chamber*, Fabian Tract No. 213 (London, 1925); S. Webb, *The Reform of the House of Lords*, Fabian Tract No. 188 (London, 1917).

<sup>61</sup> *Report, Annual Conference, 1934.*

mons' Conservative leaders—with the exceptions of the Coal Mines Nationalization Bill of 1946 and the Transport Bill of 1947. It is impossible in the present compass to traverse the sections of these Bills the Lords criticized and amended. The student is advised to see the Commons' debates on the Lords' amendments. There he will discover that on several matters, the process of second-chamber discussion did the Bill good. In the Coal Bill, it enabled the introduction of a proviso that the government in selling coal should not discriminate between the same class of users; that accounts should be kept in best commercial form; and that contracts made by the corporations after the advent of the Labour government, but not those before it, might be reviewed and terminated by the Coal Authority. It also made extra provision for workers' participation in the management of the collieries, and for representation of individuals of expert knowledge in the nationalized industry's advisory bodies; and it provided that the minister should be second in priority to the Coal Authority in managing reserve funds.

All these things were valuable. They would almost certainly have been done by the Labour administration. But it is just as well to have clarity on the subject. The Conservative opposition in the House of Commons smacked their lips over the amendments, some of which they had ardently urged in the House, only to be refused. They praised the work of a second chamber. They observed how necessary it was to have high-class legislation, and not mass legislation. All these things were true: though those who said them were thinking mainly of power.

Why did the minister accept them from the Lords when he had not wished to accept them from the opposition in the Commons? He could have resisted them. If so, it would have been necessary to go through the stages of the Parliament Act. If he had elected to do this, then (a) he would have lost most valuable time in a House already overcongested, and (b) the House of Lords would have played the devil with them on the government's

other socialistic legislation. All the bills would have had to go through three times, and these are bills, running into scores of the most complicated clauses. Or he could have taken a different course. He could have gone to the king for the appointment of enough peers to outvote the six hundred or more potential last-ditchers. Precedent would seem to require that the king not make these peers, unless after a general election in which the party were returned with a clear mandate on the subject. This would have blocked the party's program for a time. Or, they could dissolve on the very issue of the abolition of the House of Lords—and again be frustrated on their immediate program, until after the election. It is much wiser to accept some amendments. But this means also that the House of Lords runs risks:—it has a power arising out of its suspensive veto, which can compel progressive ministers but not compel them too much. Above all, the House of Lords dare not offer any amendment which is too clearly the object of its own special interests: that would lead to its mending or ending. Indeed, as we shall presently see, this sequence occurred in 1947.

When the reform does come, the importance of public-spirited and appropriately organized and regulated political parties will become even more essential than it is today. At present, the glaring and amazing truth is that Britain is formally governed by only a quasi-democratic assembly, for the House of Lords stands in direct and practical opposition to the principle of majority rule. This, whether for good or ill, is the result of Britain's nonrevolutionary development of political institutions, and the consequent lack of a declaration of absolute principles like those which appear in Continental and American constitutions.

Two other observations must be added. (1) The House of Lords conducts debates on administrative and foreign policy. It is hardly fair that a non democratic assembly shall have an authoritative status for its unrepresentative and irresponsible utterances. However, its wisdom may be

considerable; for even if it is different from that of the government in the Commons, it is nevertheless of popular interest simply by being different. Nor can it be ignored that the House of Lords contains, for the purpose now under discussion, many former officials—military, colonial, civil—former members of the House of Commons, men of abundant experience and marked sagacity who are valuable assets to the state. Yet there are alternative ways, besides an hereditary assembly with legislative power, to provide for the continued utilization of the elder statesmen, which should be the object of good policy. We must not lose sight of the fact that the leaders of the nazi movement were misled regarding Britain's staunchness against aggression by an excessive confidence in the special attachment of the Lords to appeasement. Rudolph Hess, it was said, was sent to Britain to make contact with Joachim von Ribbentrop's friends in and around the House of Lords. (2) The Lords possess the power, equally with the Commons, of rejecting rules and orders submitted to them by the Government when these have been made pursuant to statute. This power is not merely suspensive—it can entirely kill, and, indeed, a Conservative speaker, during the 1948 debates to be referred to, declared that this power if fully used, "could reduce government to a nullity."

On November 10, 1947,<sup>62</sup> after a rather abrupt announcement in the King's Speech in October, the Labour government introduced the Parliament Bill of 1947 to amend the Act of 1911. It left the statute intact, with one exception: in future, ordinary legislation would go through the procedure prescribed by it, but instead of a bill to which the House of Lords objected having to pass the Commons in each of three successive sessions, only two would be necessary; and instead of a two years' span between the second reading in the first of such sessions and the final passage of the bill, only one year

would need to elapse. In other words, the suspensive veto of the House of Lords was reduced to one year, while the House of Commons stage was made easier.

The project caused the fiercest storm in British political life for many years—and indeed, it seemed to come out of the blue. Two things are of interest here: the reason for the project, and the arguments advanced about it in debate.

All that the Labour party has said in its election platform, *Let's Face the Future*, was, "We give clear warning that we will tolerate no obstructionism to the people's will by the House of Lords." Government spokesmen had several times paid tribute not only to the generally good and unobstructive behavior of the House of Lords, but to the positive value of the many amendments it had offered to improve the government's own legislation. Why then the sudden change? Two problems arose. First, some of the government's supporters had been demanding the nationalization of the iron and steel industry; while some in the cabinet resisted this on account of the economic short-term difficulties the country faced, and the intricacy of the problem of nationalization. Therefore, to appease the former the reform of the Lords was offered; while, if the iron and steel plan could be worked out, the government would be nearing the last two years of its term before it was introduced, and therefore it was necessary to defeat the power of the Lords to suspend a bill for two years. But there was a second reason for the change. After the Commons, in August, 1947, gave the government strong powers to deal with the economic crisis, it adjourned for the summer, and thus the opportunity of immediate debate on the government's rules and orders was postponed. The House of Lords decided that it would sit in September, by itself if necessary, to debate the government's measures. It could, using its own rights, have vetoed the rules and orders. This raised important constitutional issues and was a direct challenge to the government. It may have been in the national interest; it certainly was in the party interests of the Conservatives. The

<sup>62</sup> See Commons Debates, November 10 and 11, Cols. 36 ff.

government did not forget this. Hence the introduction of the bill.

The arguments for the reduction of the veto power of the House of Lords were these. The will of the people must prevail, as expressed in the general election. For its economic policy, and even for overcoming the obstruction of the House of Lords, the government had a mandate. The economic and social planning on which the government was embarked required orderly sequence, and the various measures were urgent and contributed to the effectiveness of each other. Therefore the government could not tolerate a disruption in time or substance of its program. Suspense was dangerous; hence the period of delay must be curtailed. In a democratic system there was no place for a second chamber which steadily favored one party only—the Conservative party—and was prompted by its leaders. In a sense, the constitution had become unicameral, since the House of Lords always sided with the Conservatives. It was monstrous that great power should be in the hands of a body that was not subject to dissolution and election like the House of Commons. Why should a progressive government have an effective and assured life of only three years, and a Conservative five years? It meant that a minority had, when it wished, the right of government over the majority. It was the business of the Conservatives who had been in office for the major part of the nearly forty years that had elapsed since the Act of 1911 to have reformed the Lords long ago, as envisaged in the preamble to the Act. If it was true that in a democracy a revising chamber was valuable, and indeed, necessary, no case could be made for the exercise of a power to obstruct the government by a body founded on heredity. In any case, twelve months' delay was ample time for the Lords to revise and amend. All democratic countries had bicameral systems.

The Conservatives complained, in opposing the bill, that the work of the Lords had been valuable and so acknowledged.<sup>63</sup> They pointed out that the Parlia-

ment Act allowed a Government to resume the stages of a bill, if after termination of a Parliament, or resignation and dissolution, they were returned by the general election. Hence, if their iron-and-steel project should have merit in it, and the people's will should endorse it, then a Labour government would have lost no time, by having been held up for two years followed by an election. It was emphasized repeatedly that elections in Britain permit great fluctuations of party fortune, and that a very small majority of votes in the country could return a disproportionate majority of members in the House. Some check on behalf of the people was therefore necessary to see that the "real," "permanent," "persistent" will of the nation was behind the legislation. This argument was a massive part of the Conservative case, and Mr. Churchill, leader of the opposition, made particularly strong play with it. United with this contention were its analogues, that the power of government was today so wide and pervasive of the national life that checks, revision, delay, and deliberation were needed before such power were utilized. It was further urged that pressure groups might dominate a government from inside or outside, so that what appeared to be the majority's will would, in fact, be a minority view, which happened to possess strategic strength at a given moment. Nor was this all. It was stressed heavily that in the last two years or so of a government's term, whatever the will of the people at the beginning, the effectiveness of the mandate begins to peter out. Therefore, it was essential that some institution in the state should be able to challenge the government, and if necessary force it to seek a new mandate in an election. For such a purpose a twelve months' delaying power was insufficient.

Most of the speakers on all sides agreed on the need for a revising chamber. But the Conservative arguments were weakened by a universal admission that the hereditary principle was untenable. Who were they to decide, as against an elected government, when that government was not reflecting the people's will? But when

<sup>63</sup> Cf. especially *ibid.*, Cols. 56, 57.

the attempt was made to discover a more acceptable basis for the composition of the second chamber, all political leaders were nonplussed. As for the argument that the engine of the popular will must be refueled by popular re-election, and forced into the process by a brake from the Lords, the Prime Minister, Mr. Attlee, concluded the second reading debate by saying: "He [Mr. Churchill], regarded that brake as essential, and the engine had to go to be repaired every five years for a Conservative Government and every two years when a Labour Government was in power."

The Conservative and Liberal parties strongly pressed the claim that a constitutional reform as important as that of the Lords ought not to be pursued by the Labour government by the sheer use of its voting battalions. The matter ought, as in precedents for constitutional change (see p. 137 above), be submitted to an interparty conference for the exploration of an agreed solution. This, if achieved, would avert a conflict between the two Houses. The Labour government were responsive, of course, to this argument. An interparty conference, under the chairmanship of the Prime Minister, was convened early in 1948, the issue being the relationship of the composition to the powers of a second chamber. The conversations were arduous, inventive, in good faith, and in vain. An "Agreed Statement" was published (*Cmd. 7380*) on May 4, 1948. The Liberals had, on the whole, sided with the Labour party.

The Labour leaders had been prepared to concede more time to the Lords for the use of their powers of revision, the "period of delay," as the phrase went. Instead of insisting on a span of time for complete passage of a bill over the heads of the Lords within twelve months from its second reading in the Commons, they offered a period of nine months from the end of the third reading. This was a considerable concession, since the second reading and the committee and report stages on a controversial bill (to be twice enacted) might be quite long, and in the fourth and fifth year of a progressive

government's term might cause it considerable parliamentary anguish. But the Conservatives demanded a halfway period between the two years of the Parliament Act and the one year of the government's bill, that is, eighteen months. They were prepared to reduce this period, if they could have obtained the kind of reformed second chamber they had in mind.

However, when it came to formulating the details of the agreed general propositions regarding the composition of the reformed chamber, agreement was impossible on the Lords' terms which contemplated some partial survival of hereditary rights. Nor could a way of implementing the proposition that "the revised constitution should secure that a permanent majority is not assured for any one party."

The irresoluble conflict came over the powers of a second chamber: for Labour, a revising power, a short period of second thoughts, a body in which some legislation could be introduced, were genuinely appreciated (see, for illustration, Herbert Morrison's speech at the annual conference of the Labour party as reported in the official report, commencing page 211). But for such functions twelve months were enough. For the Conservatives, the function of a revising chamber was much further reaching: it was to check the Commons' majority, to delay its work while public opinion was called in to defeat or modify the will of the government of the day. Labour could not accept such a period of delay, which would ruin the fourth- and fifth-year program of a progressive government. Hence, the conference did not achieve the modification of the Parliament Bill of 1947 and the government's intention to carry it through under the Act of 1911, against the will of the Lords, if necessary. The Bill was introduced for the second time on September 20, 1948.

It is necessary now to restate the proposals regarding a reformed composition of the House of Lords, and then to conclude this account of an episode not yet itself concluded with some reflections.

## SECOND CHAMBERS

The proposals (dependent on agreement on powers!) were as follows:

The Second Chamber should be complementary to and not a rival to the Lower House, and reform should be based on a modification of the House of Lords existing constitution as opposed to establishment of a Second Chamber of a completely new type based on some system of election.

The revised constitution should secure that a permanent majority is not assured for any one party.

The present right to attend and vote based solely on heredity should not by itself constitute a qualification for admission.

Members should be styled "Lords of Parliament" and would be appointed on grounds of personal distinction or public service. They might be drawn either from hereditary peers or from commoners who would be created life peers.

Women should be capable of being appointed Lords of Parliament in the same way as men.

The foregoing study of the status and problem of the House of Lords was deliberately pursued in detail in order to show the intractability of a situation in which a number of starkly contrasted conditions have to be given rational accommodation in an age as distracted in its social tensions as we have seen other constitution-making nations to be (p. 122 ff. above). Here is an attempt to re-devise a second chamber where there is no federal-state basis for it, right or wrong as that basis may be. It is then proposed to leave the present basis, which is heredity, and is untenable since the contemporary justification of political authority is representative and responsible. But some lords still demand heredity as at least a claim for an elected number of their own peers to be members of the second chamber. If, again, the elective principle is suggested, it is feared that a body with rival authority to the first chamber will arise, and confuse the public in the inevitable controversies, as well as play havoc with the conduct of government and the enactment of promised legislation. If the government of the day is given the power of appointing life peers, it is not difficult to guess the untenability of the principle, in the long run, of not

shaping the second chamber to the advantage of one rather than the other party. Finally, though the reign of political parties and public opinion and the organization and spirit of parliamentary procedure, together, furnish guarantees of deliberation, care, and fairness to the minority, all parties in an age of vast legislative activity acknowledge the possibility of error or haste in the first chamber and would like a second: the question is still, how composed and with what powers? For long it will probably remain the present Lords, with powers reduced as in the Bill of 1947, and in some years' time there may come an exclusion of all but a few hereditary peers and inclusion of many life peers appointed by the government up to a certain number by each government in turn.

### THE UNITED STATES SENATE<sup>64</sup>

SOMETHING has already been said on the reasons for the foundation of the United States Senate. It is necessary to add only some remarks on the problems arising out of its operation.

(1) It is substantially more powerful than the House of Representatives (though its members, one third every two years, are elected for the period of six years as compared with what is always thought to be the more popular House, elected at intervals of two years). For it has not only the power of legislation equal to that of the House. Its authority to amend financial legislation which, by the constitution, must commence in the House, has been construed by it to be a plenary power to remake the budget sent up to it. By substitutions for original proposals made by the House, it is as much master of the financial provision of the nation as the House. And owing to its composition and operation, it is even more powerful.

Besides this, it has the power of assenting to or rejecting the Presidential nominations for offices not subject to civil ser-

<sup>64</sup> G. H. Haynes, *The Senate of the United States: Its History and Practice* (Boston, 1938), and p. 183 above.

vice.<sup>65</sup> These are still very many: and all the high appointments, the heads of departments, judges, ambassadors and ministers, are in its hands. In the balance of power which establishes itself between the two assemblies, and between the Senate and the President, this appointive power not only governs who shall be entrusted to administer the laws, but is a pawn in the give-and-take which decides policy. The Senator with patronage has influence with the House of Representatives' contingent from his own state and party. In addition, the prestige and power stemming from the authority to accept or reject treaties, with access, therefore, to a part in the President's conduct of foreign policy, is also of special potency in the status of the Senate.<sup>66</sup>

(2) Being so much smaller than the House, the Senate has not been obliged to swathe and tangle itself in limitation of debate or closure. Unanimous consent is required to stop a Senator from obstructing the work of legislation and administration. By continuous talking, without discipline for irrelevance, filibustering is possible.<sup>67</sup> This enables any individual or sectional minority to block legislation by the simple device of seizing on a time when the majority are keenly intent on passing important and urgent legislation. Thus the year's appropriations and various war measures have been held up, in order to prevent the reduction or abolition of the poll tax used by Southern Democrats to prohibit Negroes from exercising their constitutionally guaranteed right to vote, and more substantially to establish all the civil rights for the Negroes. Amplitude of debate does permit the Senate to debate at any time

the every day actions of the executive,<sup>68</sup> a necessary and useful function, but not one that needs to be accomplished by this forum in this particular setting of procedure.

(3) In view of these extraordinarily considerable powers, the composition of the Senate has been frequently assailed. In the first place, to placate the South, and effect the great compromise between the small states (then) and the large states (then), all states were given an equality of representation—two each—in the Senate. It was stipulated that no state might be deprived of its equality, even by means of amendment, without its consent. The growth of the Republic from thirteen to forty-eight states has produced some very serious anomalies in the balance of power. Thus, Nevada (favorite case) with 110,000 population has the same representation as New York with nearly 14,000,000. New York, Pennsylvania, Illinois, Ohio, Texas, and California have together over 50,000,000 people, but only twelve Senators together, or, with 12 per cent of the representatives, they have 40 per cent of the population. New England has 1,500,000 less inhabitants than Pennsylvania: the latter has two representatives to that region's twelve. And so on.

This produces a very disproportionate representation of economic and social groups. Can this be defended? Not very strongly, though a case may be made out. If the richer parts of the nation were not as rich as they are, they would not take the risk of carrying the sparser and poorer states along with them, with the power of taxation equally in the hands of the latter. They can afford it, though they may grumble at the charge put on them by the silver-producing states, whose Senate votes forced the United States Treasury to buy their silver. No one has yet adequately analyzed the real effect of the strategic application of the disproportionate vote of the minority-population states. But it seems not to have been seriously aimed at the disadvantage of the rest. It is

<sup>65</sup> Cf. A. W. Macmahon, "Senatorial Confirmation," *Public Administration Review*, Autumn, 1948.

<sup>66</sup> Cf. Q. Wright, *The Control of American Foreign Relations* (New York, 1922); W. S. Holt, *Treaties Defeated by the Senate* (Baltimore, 1933); D. F. Fleming, *Treaty Veto of the American Senate* (1930); E. E. Denison, *The Senate Foreign Relations Committee* (Stanford, 1942).

<sup>67</sup> F. L. Burdette, *Filibustering in the Senate* (Princeton, 1940).

<sup>68</sup> Lindsay Rogers, *The American Senate* (New York, 1926).

a fact, also, that the representation of some of these states is split by parties—one Senator Republican, one Democratic—which reduces the effect of their votes as states. So far, habit has closed the eyes of people in the states that pay in taxes and moral forbearance for the overrepresentation of the puny states.

If something is lost in equity to the populous states by equal representation, it must still be considered that, perhaps, their voting power gives to the less populous ones a lever against their being ignored in so extensive and diverse a land, the parts of which are not known personally to the representatives from other states. With so vast a territorial span, there is a strong case for the power of a state to protect itself from complete misunderstanding or roughshod treatment.

(4) What is more parlous is the inability to break a deadlock between the two Houses except by the appointment of conferees to negotiate and report back an agreement. In secrecy these conferees arrive at bargains so late in the session that the full representative bodies themselves cannot redebate the issues.<sup>69</sup> This is far from representative and responsible government. The law of August, 1946,<sup>70</sup> to amend the procedure and committee practices remedies this to the extent of setting up a joint committee on budget (sec. 138), and of not permitting conference committees to report on matters not committed to them by either House.

#### THE FRENCH SENATE

WE saw earlier in this chapter that the recruitment of the French Senate in the Third Republic embodied a triple basis: (1) a higher age qualification for senators than for members of the lower house; (2) a long term of office—nine years compared with the four years of the Chamber of Deputies; and (3) indirect election based on local government bodies with the rep-

resentation designedly favoring the villages and small towns.

What were the effects of this mode of recruiting the Senate? On the whole, it produced what was intended by the Center parties: a body, not antirepublican, yet of a conservative nature. Every one of its ingredients served to produce this result.

*Age and Conservatism.* It has ever been the belief of legislators that age will produce maturity of judgment and obstruct rash innovation.<sup>71</sup> We shall later see in what respects this object has been attained. It is more difficult to show a direct causal relationship between age and behavior, for there were other causes of the French Senate's deliberate slowness. We cannot isolate the effects of age, but we can say that age was more represented in the Senate than in the Chamber of Deputies. The minimum age was 40; available statistics to 1939 show that the actual average age of senators was a little over 60, while the deputies appeared to be an average of 50 years of age.

There are certain usual accompaniments of age: marriage, family, profession, property, experience, and physical change. Older men and women come to be satisfied with themselves: this is a powerful influence on their social complacency.

Whether the main cause is to be found in experience or physical change, there is no doubt that legislators act rightly in establishing a higher minimum age for senators than for members of the lower chamber, if their intention is to secure conservatism. But the gap in age must be large, at least a score of years. Yet there is no exact correlation between age and conservatism in each case or in general; and it must be remembered that the age of members of any lower house is itself apt to be rather high.

*A Long Term.* Election to the French Senate of the Third Republic was for nine years. The senator did not need to be

<sup>69</sup> Cf. A. C. McCown, *The Congressional Conference Committee* (New York, 1927).

<sup>70</sup> Public Law, 601: Legislative Reorganization Act.

<sup>71</sup> For example, the following countries have a minimum age-limit for members of the second chamber: Czechoslovakia, 45; Poland, 40; Belgium, 40; Canada, 30; South Africa, 30; Irish Free State, 30.

constantly concerned for the views of the electors, and though many strokes of his authority might be unpopular in nine years, they would be forgotten; nor was he, like the deputy, compelled even at intervals of four years to prepare an electoral profession of faith. Now it is impossible to argue directly from this duration of the mandate to conservatism: the better generalization is that the Chamber of Deputies and the Senate were never in exact accord in their opinions, since each had been constituted by different states of mind in the country. A senator at the end of his term was already five years behind a contemporary deputy at the end of his: and there was a nine-years' difference between the end of a senator's term and the beginning of a deputy's. The distance was even greater, for the senator did not owe his election to an immediate canvass of the people, but to bodies who themselves might already have been in office three or four years. But this is an eternity. In social legislation in particular, our time moves rapidly, and where popular election exists, even the most conservative political parties have been obliged to outbid the progressive parties. We can safely conclude that the nine-years' term, together with the leeway in time contributed by election by elected bodies, accounted for the divergence of opinion between the two chambers. That is not all. There were important "landslides" of votes for the first chamber from one election to another. These affected the composition of groups and cabinets; and it was often upon a subtle difference in composition, to the extent of a few votes, that differences between two elected chambers depended. Only by a rare accident, then, was there a coincidence of strength in the Chamber and the Senate. The normal condition was dissonance; and the method of election of the Senate, together with the weakness of party organization in its elections, aggravated this dissonance. But this did not always mean the conservatism of the Senate and the progressivism of the Chamber: it meant only dissonance, and sometimes the Senate, as between 1920 and 1930, was on occasion (during the time of the *bloc*

*national* and after 1924) more liberal than the Chamber.<sup>72</sup> Until World War I, however, it was more conservative, and this persisted almost entirely through the interwar years.

Nor is that all. Senators were frequently re-elected, as a matter of course, and some served for very long periods, with two results: increase in the distance in opinion between the Chamber of Deputies and the Senate, and enhancement of the knowledge of affairs and prestige of the latter.

*Indirect Election.* The Senate derived from indirect election: the public at large had little contact with the senator. The bodies which elected were small compared with the open constituencies of the Chamber of Deputies, and they were scattered—a handful in a large area, an average of something over one thousand.<sup>73</sup> The senators were themselves men of some experience in government, and acquainted with the arts of electioneering. There was, therefore, no question of crowd rhetoric or the undue predominance of the desirable over the possible. As a rule, speeches were made to the electoral body assembled, only on the actual day of the election, and then by the various candidates in turn. Their experience, in fact, tended to make them more conservative, more official-minded and negating, than the ordinary conservative citizen. Eminence of a kind was required; there had to be more than the average qualities which impress the average voter. Persons elected in such wise and on such assumptions are certain to insist upon their power and dignity. The campaigns of a senator were restrained and continuous; as a mayor, or departmental councillor himself, or as a deputy or, already a senator, he won little favors for the communes, was festive and

<sup>72</sup> Cf. J. Barthélemy, *Le Gouvernement de la France* (Paris, 1919), p. 67, and compare the defeat in December, 1930, of the Tardieu ministry, which was not upset in the Chamber of Deputies.

<sup>73</sup> E.g. in 1927, the smallest was Alger, with 280 delegates from the *communes*, and 33 of the other classes of electors; in Hautes Alpes, 276 and 58 respectively; in Gironde, 1187 and 120; and Nièvre, the largest, 2346 and 160.

generous with the kind of treating which cannot be brought home on so considerable a scale and so directly that the election will be invalidated. Since the electoral body was comparatively small, all, or at least the more influential, could be personally canvassed. Each vote was very important in such a body. An absolute majority was necessary to election; and on the occasion of second and even third ballots, the maneuvers and intrigues offered an extra entertainment, *vin compris*.<sup>74</sup> Thus when Pierre Laval had been rejected by his constituency for the Chamber of Deputies, his more refined qualities of "politicking" secured him a seat in the Senate—the price, persistent button-holding.

The constituent of the Senate which gave it the surest proclivity toward conservatism was the distribution of votes in the electoral bodies. The composition was revised in 1884 in order to avoid the predominance of the smallest rural communes. But the Chamber of Deputies and the Senate were not prepared to endow radicalism with more power than could be helped. In other words, they chose a way between, putting the chief power into the command of the townships of between 4000 and 5000. This is easily seen from the distribution.

No place could send more than twenty-four delegates, save Paris. But any commune with over 60,000 inhabitants and more had only four times as many delegates as communes with between 2500 and 3500 inhabitants, and not quite three times as many as places between 3500 and 10,000. For larger rises in population from 2500 and upward, there was only a uniform increase of three delegates per stage, even where that was as many as 20,000 (at the point 10,000 to 30,000). Barthélemy has shown, statistically, how unfair this method of election was, judged by the principle of the equality of voters. Lille, for example, had 216,000 inhabitants and sent twenty-four delegates, while twenty-four villages near it had together 4000 inhabitants and

sent twenty-four, and this with the twelve contributed to by twelve places with 6600 inhabitants, caused Lille to be quite outvoted. Of 945 senatorial electors in the Department of the Seine, Paris has but 110. This resulted in the predominance of about 75,000 (the total number of senatorial electors) middle *bourgeoisie*, officials, proprietors, merchants and manufacturers of middle-class status, and publicists.<sup>75</sup> Its adversaries were able to say that it constituted an assembly without the principle of life and without a sense of authority. Hence the importance which French politicians attached to the municipal and departmental local elections: hence also the special attention paid by Socialists and Radical-Socialists and later the Communists to the municipal authorities. The composition of the Senate was the fruit of a compromise between opposed theories, the result of an empirical transaction. Parliamentary critics have blamed the Senate's derivation for its slowness in economic and social legislation.

Owing to various circumstances, the Senate was a goal that forcefully lured the ambitious deputy. The senatorship rounded out a political career. In 1910, thirty-two ministers and ex-ministers sat in the Senate; in 1925-26 and in 1928 there were fifty-two. Despite its membership and constitution, the Senate still claimed close alliance with the people. Though somewhat removed from the people, the Senate held a tight grip on the constituents, and senators compelled the deputies to pay tribute to them by concessions in policy.

Further, its origin in electoral colleges consisting mainly of local government councilors made local government itself a channel of access to the Senate: thus, in 1930, 137 senators had been councilors-general (i.e. of the department), and 104 had been mayors of communes.

The Senate, then, had a constitution which gave it a curbing, deliberate, de-

<sup>74</sup> 1927, 112 serving the first term; 147 the second; 36 the third; 12 the fourth; and 3 the fifth.

<sup>75</sup> J. Barthélemy, "Les Résistances du Sénat," *Revue du Droit Public* (Paris, 1913). Other figures and facts to the same effect are given in M. Billecard, *De la Mode du Recrutement du Sénat* (thèse, Paris, 1912), p. 84 ff.

celerating bias and the substance as well as the consciousness of power. Whether it is more conservative, or for the time more liberal, it is different from the Chamber.

*The Powers of the Senate.* What were its powers and how did it use them? Apart from its position as a high court of justice, the Senate's constitutional powers were three: the partial or total revision of bills emanating from the Chamber of Deputies and the initiation of bills; cooperation in finance bills which must be introduced in the Chamber of Deputies; and control over the government.

Now, these were powers of real moment and exercised with decision and effect. For the ultimate fact was that the Chamber of Deputies had no power to compel the Senate to send back its bills in the shape it desired unless it could persuade that body that the electorate was, by a majority, continuously favorable to and even insistent upon its policy, or unless it could throw over into the Senate the grappling irons of party. It was only possible to do the first after the lapse of something like a decade from the original introduction of a bill. As for the second, party—which meant so little in the definition of attitude in the Chamber itself—this did not establish a discipline causing deputies and senators to march along a common legislative route. Even a small disparity between the strength of the parties in both chambers—ten votes in one or two groups—could do all the damage. No government could, therefore, be sure that the Senate would not reject or mutilate its bills, and none could be sure that when its administration satisfied the Chamber it would equally satisfy the Senate. Further, owing to the fact that the Senate had not relinquished its power to reverse governments, and owing also to the strong element of individual careerism in French politics, senators were ready to join ministries not supported by the rest of their party. Yet such a ministerial senator had no power to get the government's bill accepted, for he had no party supporting him. The party relationship of Senate and deputies, then, was: a series of groups not firmly tied by agreement upon policy, but

associating and falling apart on issues of the day.

Now in other countries where senates exist—the United States, as we have shown, and Australia—a real duality between the two chambers is overcome by the agency of party organization: a common electoral fight is fought. Or, as in Canada, the ruling party nominates enough members to overcome the recalcitrant nominees of its predecessors.<sup>76</sup> Some duality may yet exist, because no two bodies of men sitting separately, endowed with real power (be it ever so small) and having even the smallest diversity of composition, produce the same legislative result. But such duality is not insuperable, or at least, it is superable in a comparatively short time. The duality of the legislative assembly in France could not be overcome easily, or in a short time. For it reposed upon a basis of group independence so strong as to be almost indistinguishable from personal independence. This personal independence was of such a quality in the Senate as to be readily converted into that kind of group esteem which is eager to make its authority felt—in this case, as a spirit which almost always denied.

There was very little, then, to bring the Senate into consonance with the Chamber: only a strong government, its long persistence in a policy, and the clear verdict of the polls<sup>77</sup> at recent elections of the Chamber and the Senate could do this. And there were cases—like that of the fight for electoral reform until 1913, and of women's suffrage until World War II, and many proposals for social security—where no effective consonance was possible. But we must not forget that French cabinets contained on an average three or four members (in a total of about twelve) from the Senate.

*Ordinary Bills.* Let us see how the Sen-

<sup>76</sup> Cf. R. A. Mackay, *The Unreformed Senate of Canada* (Oxford, 1928), Chap. IX. Cf. R. McGregor Dawson, *The Government of Canada* (Toronto, 1947), Chap. XV.

<sup>77</sup> Relatively, of course, to French conditions. I am conscious of the disillusioning and disconcerting realities latent in this customary phrase.

## SECOND CHAMBERS

ate works in each of its three main functions. All depended on the power of the Chamber of Deputies to cause the Senate to bring the matter to debate and decision. But the Chamber of Deputies had no legal power to compel the Senate to proceed to the discussion of a bill.<sup>78</sup> It had only the psychological power of demonstrations in the Chambers and in the country, and the influence of those ministers, perhaps of the prime minister himself, who belonged to the Senate and could exert it.

Further, ministers, whether members of the Senate or not, had the right to speak in both Chambers. While neither chamber had the right directly to criticize the work, the procedure, or the members of the other,<sup>79</sup> it might pass resolutions begging the government to urge it onwards. Pierre sums up the experience of the Chamber of Deputies in regard to attempts to praise or blame the Senate in a manner which makes very plain the gulf between the Chambers:<sup>80</sup>

The mechanism established by our constitutional laws would be falsified if each of the assemblies which divide between them the legislative power did not deliberate in full independence, if the acts of the Senate or of the Chamber could at any time be cast into the balance of the votes of the Chamber or of the Senate. For the assemblies as for individual persons, there is an interior as well as an exterior court of conscience. In the interior one, Senators and Deputies can place whatever importance they wish upon projects which have been introduced or resolutions passed in a body other than that in which they sit. In the exterior court the Senators and the Deputies must regulate their conduct entirely according to the manner in which they conceive the public good. The balance of power would be upset if arguments drawn from the attitude or resolutions of one House were used in the parliamentary debates of the other: one would

cultivate the habit of voting by complaisance or by hostility, instead of voting in the sole interest of the community.

So much for form. But, in fact, the Chamber acquired the power to press the Senate, by resolutions of this nature: "The chamber, *the issue of universal suffrage*, faithful to the principle of the representation of minorities affirmed by its votes of 5th July, 1911, and 1st July, 1912, and rejecting any adjunction thereto, adjourns until Tuesday." The rule that one chamber could harass the other by debates on the same subject as those under its consideration was overcome by resolutions which could be debated, apparently directed to the government but in reality intended to impress the other chamber. Thus: "The Chamber invites the government to sustain before the Senate, in the matter of the personnel of workers and employees of the railways, the solutions which approximate closest to the votes already given on several occasions by the Chamber of Deputies, especially that of the 14th November, 1901."<sup>81</sup> It might also urge the Senate to continue its good works, lest it fall from grace. The Chamber might be more urgent and invitive action.

The Senate did not allow its constitutional right of revision and rejection to lapse. It even converted a power originally used only for financial bills, which contained so many unwise and disconnected clauses, into a weapon for dealing with ordinary bills: "disjunction." The obnoxious clauses of a bill are simply disjoined from the text by the Senate: they are not commented upon, but are ignored: thus they are neither accepted, nor rejected, nor amended.

To what effect did the Senate use its powers in ordinary laws? Great governmental measures were fully amended and rejected and this in a particular direction which we may, remembering the distinctions established in the analysis of party policies, call conservative. It retarded the projects for the weekly holiday for workers, for reducing the legal hours of labor,

<sup>78</sup> Cf. E. Pierre, *Traité de Droit, Politique et Parlementaire* (Paris, 1922, and Supplements), Vol. III, p. 1609: "The right imparted to each assembly of rejecting a proposition or a project of the law adopted by the other assembly is not limited by any constitutional or procedural text; in consequence, a project often voted by one of the two Chambers can be indefinitely repulsed by the other."

<sup>79</sup> *Ibid.*, Vol. I, para. 681.

<sup>80</sup> *Ibid.*, paras. 826, 827.

<sup>81</sup> *Ibid.*, Vol. III, para. 1015.

for workers' pensions, for state railroad-men's pensions, for income tax, for proportional representation; it sternly rejected woman's suffrage, projects for taxes on business, rent restriction; it was adamant against the recognition of civil service syndicates. It rejected a woman's suffrage bill on November 21, 1922, and also a bill of minor importance, creating an unpaid High Commissioner to deal with housing. Under the pressure of emergency and electoral trends, it accepted the Blum Popular Front "New Deal" measures: the forty-hour week, collective wage agreements, paid vacations. But it weakened the law to control the Bank of France. Finally, after a year of determined hostility, it overthrew the Blum government in June, 1937, by refusing to grant the strong financial powers necessary to deal with the consequences of the former reforms and the critical economic situation: exchange control, government loan, change in the parity of the franc, nationalization. Blum was again overthrown in April, 1938, when his finance bill was rejected.<sup>82</sup>

It is rather difficult to place the actions of the Senate crudely in the "conservative" category. Their aspect is dependent on the character of the Chamber of Deputies for the time being, and the commotion of ideas and personalities in the nation. Thus, between the advent of Hitler and World War II, the Senate was more amenable to social legislation than ever before, though with reluctance. But in the earlier part of that period it was a center of resistance to fascist and communist extremes. Is it "conservative" or is it "liberal" to be anticommunist? When it emasculated M. Blum's bill for the limitation of the libellous and violently defamatory tactics of the French press (a reform long overdue), was it "liberal" or "conservative"? Furthermore, in the field of foreign policy, the Senate was rather more nationalist than the Chamber, which was more flexible. In particular, the social divisions of the French between the rise of Hitler and 1940 were aggravated by the

Senate, which, when that dreadful choice was thrust on France, more and more favored Hitler, and less and less the Franco-Soviet alignment. When a robust answer was made to Mussolini's territorial claims on France at the beginning of 1939, 156 Socialists and 72 Communists voted against Mussolini in the Chamber, but the Senate had only 13 Socialists and 2 Communists to stand up against the 287 votes in favor.

*Finance Bills.* The financial powers of the Senate were just as important as its power in ordinary legislation except that it had no right of initiation, a power which, as in every democracy, was reserved to the lower house. As the most eminent of all French constitutional lawyers and political scientists, Jèze, says—the real question was not one of the interpretation of the text, but a question of political and social power (force). The text runs: "The Senate has, concurrently with the Chamber of Deputies, the initiation and the confection of laws; however, financial laws must be, in the first place, presented to the Chamber of Deputies and voted by it." This only meant, argued those who wanted a powerful Senate, that priority alone was given to the Chamber, but not decisive power: the Senate had a complete amending power—authority to amend so severely as to reject, or entirely to remodel. Further, the elective origin of the Senate gave it a right which perhaps might not be accorded to nonelective bodies. However, its mode of election gave the advantage to the propertied classes, and caused a large opposition not to trust its maneuvers, and certainly not to accept its economic and fiscal doctrines. Nevertheless, the Senate became the defender of republicanism against other forms of rule, and the repetition of the *Seize Mai* never occurred. Deputies and ministers have found their way into the Senate: consider such names as Bourgeois, Méline, Dupuy, Clemenceau, Ribot, Pichon, Poincaré, Barthou, Doumer, Millerand, Laval, Leygues. Finally, the Chamber of Deputies was not fully trustworthy alone in matters of finance—it had not the *expertise* or the self-control to make a proper budget in

<sup>82</sup> A. Soulier, *L'Instabilité Ministerielle* (Paris, 1939), p. 184 ff.

the proper time. Naturally, when the Senate was obstinate, the Chamber usually gave way, for it was not strong enough in the country to insist successfully, and knew it. When M. Blum was overthrown, he argued that the will of universal suffrage ought to be respected—but in vain. The Chamber was not sufficiently solid for him. Governments have not seldom induced the Senate to insert or omit appropriations which the folly of the Deputies, not held in check by suitable rules of procedure, had mishandled.<sup>83</sup>

The Senate therefore acquired important financial powers, extending not only to the actual budget but to laws with immediate financial consequences—as customs laws, and laws imposing any kind of taxes or regulating loans. The rule did not include laws causing expenditure, and thus the Senate had a power to initiate such legislation.<sup>84</sup> In financial laws other than the budget, the Senate had complete rights to modify the projects of the Chamber; that is, it could accept, reject, reduce, or increase the credits voted by that body. For example, in 1920 the Senate seriously amended the income tax proposed by the Chamber of Deputies. The Chamber conceded the right to reject any expenditure, and the right to reject any tax which appeared excessive. But it denied the right to substitute its initiative for that of the Chamber or the government in order to vote increases of any expenditure or taxation.

The Senate seized the opportunity to vindicate its rights. Its protest is of first-class importance:<sup>85</sup>

Not only do the constitutional laws assert nothing of the kind, but jurisprudence, more rigorous than the texts, has never reduced the financial prerogative of the Senate to this point. . . . The importance and the com-

plexity of the laws require that they shall be submitted to the free deliberation of the two Chambers. . . . It is necessary today more than ever, for there cannot be too much labor or ability of all the representatives of the country to bring to the budget the considerable resources of which it has pressing need and to divide the burden equitably among the body of taxpayers.

The Chamber of Deputies had the initiative in the matter of taxation laws; but the Senate cannot transform a tax voted by the Chamber "in such a fashion that it becomes in reality a new tax affecting taxpayers other than those included in the text of the Chamber of Deputies."<sup>86</sup> There were no other restrictions upon the Senate's rights regarding fiscal laws.

This report was drafted by Doumer and, having regard to his financial ability and substantial political talents, not to add his fine character,<sup>87</sup> we can understand why, when such men were in the Senate, the Chamber could not win and made concessions to Senatorial claims. However, the Senate's power was the subject of a battle in which the fortunes swayed now to this side, now to that, from 1875 to 1940. It favored the Senate: but the issue was still open.

*Control Over Administration.* We come to the third of the Senate's functions: its control over the administration, exercised through the medium of its control over the ministry. Its authority was derived from the constitution:<sup>88</sup> "Ministers are collectively responsible before the Chambers for the general policy of the government and individually for their personal acts." On a number of occasions the Senate was able to enforce its will by the threat to use the power implied in this clause, and sometimes it actually overthrew governments. If the power rested it never slept; it was always one which governments had to take into their serious calculation. It gave the Senate the sanction requisite for the insistent claims of its commissions to

question ministers and officials, and even to arraign them. True, ministers appeared less often in the Senate than the Chamber; true also, that the premier was but rarely a senator. But a power resided in the Senate, and ministers could not reduce their presence beyond a safety line. And, further, a senator was usually made *Garde des Sceaux*, which office carried with it, conventionally, the vice-premiership.

The early republican chiefs like Gambetta and Ferry had emphatically enunciated the doctrine that only the Chamber had the right to cause a ministry to resign.<sup>89</sup> The question came to a head in 1894 in an interesting situation. The election of 1893 had caused a defeat of conservative groups and a large victory for radical and republican (that is, the liberal-conservative) groups. But the situation of the Chamber and the country caused considerable parliamentary difficulties. Attempts to govern with center groups or liberal groups failed, owing to the strength of the radicals and the socialists. These in common sought to obtain a progressive income tax, while the socialists sought to safeguard anarchists and socialists who were then urging the "propaganda of the deed" from too rigorous prosecution. The Senate, full of conservative elements, was profoundly disturbed. Then a bomb was thrown in the Chamber of Deputies, Carnot was assassinated, and Casimir Périer forced to resign the Presidency by reason of a virulent personal campaign against him in the press and at meetings of the extreme Left. A petty judge was removed from his duties by the Minister of Justice of the Bourgeois (Radical) cabinet, on the suspicion that he was not properly pursuing the guilty in the scandal of the Southern railways.<sup>90</sup> The legal forms necessary for the withdrawal of the case from him were not observed and the Senate took the offensive. It voted a resolution of censure

against the government by 156 and 63. Bourgeois answered that this was aimed at the government's general policy (in particular the progressive income tax). The Chamber supported him by 314 to 45. The Senate repeated its censure; and raised the question of its constitutional rights. The Chamber gave the government its confidence by a large majority, though some who had previously abstained from voting were now found ranged against Bourgeois. The Senate replied by a vote of 175 to 59 in favor of the declaration that

the Ministry argues that it may govern without the Senate. . . . It assumes that ministerial responsibility cannot be involved before the Senate. We protest against this attack upon the clear dispositions of the laws of the constitution. . . . We affirm our right of control and the responsibility of ministries before the two Chambers.

But the Senate, nevertheless, did not sever diplomatic relations, as it were, with the ministry.<sup>91</sup> This showed that the Senate did not really believe in its claim, for if it had, it would not have scrupled to force an open rupture, and to trust to law and opinion to support it. The struggle divided the country into those who were for conservatism in government and those who supported a policy of social reform. The cry was on the one side "*Vive le Sénat!*" (at the fashionable Auteuil race course) and "*A bas le Sénat!*" in the Southwest of the country. Then the cabinet asked the Chamber to vote credits to send troops to Madagascar. They were accorded, and the Chamber was adjourned for the Easter recess. The Senate, now by itself, voted no confidence in the government, and adjourned without voting the credit. When the Senate returned, the leaders of the three majority groups declared:

Three times has the Senate refused its confidence to the Ministry, and that by considerable majorities. However, in violation of the law of the Constitution, this Ministry has kept itself in office . . . we will not refuse the credits, but we cannot grant them to the present Ministry.

<sup>91</sup> Cf. *Déclarations Ministérielles* (Paris, 1914), p. 82. The cabinet then included Senators.

the Assembly, then the latter would pass the bill. If the Council gave no opinion, then the Assembly would pass the bill. But if the Council disagreed with the Assembly, the Assembly would give the bill a second reading, and having done this, decide in its own right how much regard to pay to the advice of the Council, without further ado. Clearly, a very weak body.

Against such a solution, the M.R.P., the Radical Socialists, and the Right and Center groups fulminated: being minorities in an age of socialist trend, they demanded a powerful second chamber as an antibody. The M.R.P. and the Radical Socialists contended also that a bicameral legislature would be stronger than a unicameral—stronger in popular acceptance and in its relations with the executive—and that, by slowing up action, it would compel a search for compromises. The draft constitution was rejected; the second-chamber problem playing quite a part in the negative vote. "The régime of a single Assembly," it was declared, "was an open door to adventure."

The second draft was accepted (dubiously, see p. 124 above), and it gives to the "Council of the Republic" a more substantial status. However, the general report of the Commission on the Constitution clearly broke with the former powers of the Senate over the executive. Its report, presented to the Assembly by the *rapporteur* (M.R.P.),<sup>97</sup> rejected the idea of ministerial responsibility to both houses, because this had produced additional ministerial instability in prewar France—"one of the principal vices of the Third Republic."

Legislatively, the Council had a certain degree of power. Instead of the Parliament's being, as in the unsuccessful draft, the National Assembly only, the second draft declares (Title II, article 5): "The Parliament shall be composed of the National Assembly and the Council of the Republic."

It could have a membership of between 250 and 320, and, according to the election law of 1946, it was 315. For the first two years of its existence the Council of the Republic was elected on an indirect, but much more democratic basis: the 200 councillors (who rapidly called themselves "senators") representing metropolitan France were chosen by delegates themselves popularly elected on the basis of one delegate for 300 electors. This was the result of a compromise between the communists and the other major parties, according to which the communists agreed to an indirectly elected second chamber on condition that the first election would not be on the basis of an electoral college composed of local authority councillors. In 1948, a new electoral law was passed which marked a return, with some modifications in favour of large towns, to the tradition of the Third Republic. Rural areas became once more predominant in the electoral college. This change was felt even more at the level of the election of the Senate itself because, while smaller *départements* were to elect senators on a majority system, larger *départements* had proportional representation: big towns could not swamp the country areas even in these *départements*. The communist view had been defeated, and the socialist view prevailed, according to which the Council of the Republic would be "a chamber of reflection" which would "express the more durable, the more proportionate views" (Ramadier).

According to the constitution, the National Assembly alone "voted" the laws the Council of the Republic merely giving an "advice." This "advice" had, before a reform of 1954, to be given within two months, after which time the National Assembly could decide alone. The Council of the Republic could not diminish revenue or increase expenditure and it had no power over the Government. However, during the Fourth Republic, the Council increased its moral authority and even its formal powers, both by filling gaps left by the constitution and as a consequence of the reform of the constitution

<sup>97</sup> *Journal Officiel*, August 2, 1946.

## THE FRENCH SENATE

which took place in 1954. *Firstly*, the Council of the Republic itself decided in its standing orders that it was entitled to "question" ministers, to debate the questions and to vote after such debates: it was thus instituting an indirect form of censure which could have a moral influence on the life of the government. *Secondly*, the reform of 1954 made it possible for bills to go to and fro between the two Houses, during a period of 100 days (the old *navette*). *Thirdly*, and politically most important, the National Assembly was so divided and majorities were often so uncertain that the rôle of the Council of the Republic often became decisive: if it rejected a bill adopted by the National

recovered the powers it had in 1940. It is once more elected for nine years, one-third of the senators retiring every three years. The electoral college has been only slightly modified in order to keep in line with the new electoral college created for the presidency (see p. 646), but the principle of election by local authorities has been retained: rural areas and small towns are represented on the electoral college out of proportion with the numerical strength of their population in the country. Professor Duverger calculates that 53 per cent of the members of the electoral college represent 33 per cent of the population who live in local authorities of 1,500 inhabitants and less; the 41·5

Assembly, it could happen that, on return to the National Assembly, the original majority had disappeared, or the government had fallen, or time was scarce. As a result the political influence of the Council of the Republic grew larger and it became once more customary for governments to include a certain number of senators among their members. The constituents of 1946 had attempted to break the old Senate: they had already lost more than half of the battle when the constitution of 1958 restored almost all the original powers of the second chamber.

*The Senate of the Fifth Republic.* With only one major exception, the Senate of the Fifth Republic (the old name of Senate has significantly been reintroduced) has

per cent who live in towns of 10,000 and over are only represented by 21·5 per cent of the electoral college (the figures for 1948 were only slightly worse: 56 per cent represented 35·5 per cent in villages and 16 per cent represented 39 per cent in towns over 10,000). In fact the results of the election of the first Senate of the Fifth Republic showed almost no change in comparison with the last Council of the Republic of the Fourth; the U.N.R., which swamped the National Assembly, actually *fell* in the 1959 senatorial elections.

The Senate has been given powers equal to those of the National Assembly in legislative matters, except on one point: the Government can (but not private members) decide to stop the movement of a bill between the two Houses after a com-

plicated procedure analysed below, p. 487, and ask the National Assembly to give a final vote which will override the decision of the Senate. In this sense, the Senate of the Fifth Republic is less powerful than that of the Third. But it may be that the difference will, in practice, prove formal. Conversely, the Senate is given equal powers to the National Assembly for bills which the Government does not support and for constitutional amendments. Furthermore, the Government cannot dissolve the Senate, in contrast with what happens in Canada and Australia.

*Other chambers in the Fourth and Fifth Republics.* Actually, it is not altogether accurate to say merely that France is a bicameral system of government, since four representative chambers have been established by the constitutions of the Fourth and Fifth Republics. One of these chambers has, however, disappeared after one year of existence during the Fifth Republic. Two have already been discussed: that is the Parliament, composed of the National Assembly and the Senate (Council of the Republic in the Fourth Republic). Another body, composed of delegates from the vocational groups of the Nation, is the *Conseil Economique et Social* (*Conseil Economique* during the Fourth Republic). It has an advisory status, it being chiefly optional for the government and the National Assembly to consult it; and yet there is a quasi-compulsory character about it. Its status and powers are discussed later.<sup>98</sup>

In addition to these assemblies, an Assembly of the French Union was instituted by the Fourth Republic, renamed Senate of the Community by the Fifth Republic. The first conception was to establish a legislative body in which the overseas possessions of France as well as Metropolitan France were represented, and the purpose was to draw together all the parts of France and above all to give colonial peoples a long-denied share in

the building of the political will of the nation, indeed, to make them equal parts of a single nation. This original proposition was supported by the Communists and the Socialists, but was more and more contested by the Center and Right and the M.R.P. The final result was Title VIII of the constitution, comprising articles 60 to 72. Briefly, this created a Presidency of the French Union, who was the President of the Republic; the High Council; and the Assembly. The High Council was composed of delegates of the government of France and of the various overseas territories accredited to the President of the Union. Its function was to assist the government in the general conduct of the affairs of the Union. The Assembly was composed of half the members representing metropolitan France, and the other half of members from the overseas territories. The latter were elected by the regional assemblies; the former, by two thirds by the National Assembly and by one third by the Council of the Republic. The Assembly met when convoked by the President: it had to meet when one half of its membership requested it. Its function was to examine bills and proposals submitted to it, for its advice, by the National Assembly, or the government, or the governments of the associated states (that is, the various states under the suzerainty of the Republic). The Assembly had the power to express its opinion on resolutions submitted to it by any of its members, and if the Assembly approved, to instruct its secretariat to send them to the National Assembly. The Assembly of the Union could also submit proposals to the government and the High Council of the French Union. All the resolutions referred to had to relate to legislation concerning the overseas territories.

The constitution of the Fifth Republic changed the French Union into the French Community but kept many institutions in being under a different name: the President of the Union became President of the Community; the High Council became the Executive Council and the

<sup>98</sup> Cf. p. 347 below.

## CONCLUSION

Assembly, the Senate of the Community (a different body from the Senate discussed above); a Court of Arbitration was the only new creation (art. 77 to 87 of the constitution of 1958). However, the experiment was short-lived. Under pressure from the various African colonies which had become member States of the Community, the French government had to agree, in 1960, to give full independence to all of French Africa, including Madagascar, but excluding Algeria, still legally considered as an integral part of the French Republic. The Community did not disappear in name, but the Constitution was amended in order to enable independent States to remain part of it. As a result, the quasi-federal organization collapsed: the Executive Council ceased to meet and the Senate of the Community had its last session in the spring of 1960. Only the Court of Arbitration remains, but, by the end of 1960, it had not been submitted any dispute.

### CONCLUSION

BEFORE we pass to a consideration of the power and procedure of first chambers, we must ask what our survey of second chambers teaches regarding them. We have seen that when there are two houses there necessarily follows a contest for power. Each house gets and keeps whatever it can. No exact prediction can be made of the final outcome of any specific constitution, for this is settled by the balance of power (social, economic, moral) in the community, and this is so complex and so unfixable for any length of time ahead, that the nicest predictions are bound to be upset. If the houses are built on different foundations, the differences inevitably produce consequences in the balance of power, whatever the intention may have been. Only party can overcome the difference, but the very differences strain and break the unity of parties, by introducing a new corporate loyalty which collides with party. Even the same party, divided into two assemblies but stemming from different modes of election, supplies two different angles of vision.

The question, then, is whether the com-

plication of the constitutional machinery, the obscuring of ultimate power relationships, the disturbance of the unity of party, and the checks and brakes upon government, are together worth the security given by a second chamber. That security is of no value unless it implies the introduction of sobriety and wisdom into government. Suppose, however, that it is possible for the lower chamber to provide good sense, adequate representativeness, sober and conscientious debate and procedure, mature reasoning; then where is the need for a second chamber, at such a cost?

Of all political maxims, one is sound; it has the keenness of Occam's razor: never create an institution when it is not necessary. If other institutions fulfill the conditions of good government, a second chamber is not necessary. Whether such an institution should be set up obviously depends upon the answer which each country can give to these questions: Are the deputies wise? Do the parties think out their programs adequately, and are they sincere in their intentions? Is there a parliamentary sense of justice and tolerance which will prevent persecution? How far is the lower chamber aided and rescued from the blunders of ignorant benevolence by the expert, professional, but democratically-minded civil servants? How far does the lower chamber possess and master adequate sources of information about the state of the country, domestic and foreign? How far does it command a procedure which passes the laws after adequate thinking and debate, and in such style as to avoid internal contradiction or erroneous record of legislative intention?

These questions are answerable for each country from the facts we have already recounted; they will be even better answerable when we have analyzed the manner of action of the lower chambers. We may be sure, however, that wherever there are material or spiritual interests which desire defense against the grasp of the majority, a bicameral system will be claimed; for even the mere deferment of an undesirable policy is already a gratifying deliverance.

## *First Chambers: The Functions of Legislatures*

LOWER chambers occupy themselves with three main functions—lawmaking, control of the executive, and the development of policy<sup>1</sup>—which will be treated in this chapter and the two following, where we shall observe how the rules of procedure, written and conventional, provide for them.

Lawmaking falls into two main processes: the making of laws of general concern, or public bills; and the making of laws of private concern, or private bills. The latter are not treated in this work: <sup>2</sup> we deal only with public bills. Lawmaking is often considered under two separate heads: ordinary statutes, to be discussed in this chapter and the next, and the budget (or the provision of funds and determination of expenditures), to be considered in Chapter 21.

<sup>1</sup> The reader may compare this statement with that made by the clerk of the House of Commons to the Select Committee on Procedure, *Third Report*, October, 1946, p. xxii: "The main functions of the House are: 1. Representation of popular opinion. 2. The control of finance. 3. The formulation and control of policy. 4. Legislation. Though the list could be added to, these are at any rate the main functions of the House. But it will be readily perceived that the first function, representation of opinion, is not commensurate with the other three, since it cuts across the classification and pervades every form of proceeding." Query: does not the same hold good of "formulation and control of policy"?

<sup>2</sup> For the treatment of private and local bills in Great Britain, see Herman Finer, *English Local Government* (London, 1949), 4th edition, and *Municipal Trading* (London, 1941).

Lawmaking assemblies find themselves in need of (1) guidance in regard to the time they may spend upon particular subjects of deliberation, and the priority in which they are to be considered (pp. 437-446); (2) guidance by experts upon the substance and drafting of the law and instruction on its probable results (pp. 446-458); and (3) appropriate rules of deliberation (Chap. 20).

### TIME AND PRIORITY

It is clear that there must be some regulation, the minimum of which is to divide the time between majority and minority, and to settle which business is to come first. Further, there is need for setting a limit to the time allowed to each speaker and the proportion of time to be spent on each subject. The necessity arises from the size of the assemblies, the complexity and amount of legislation, the constitutional equality of every deputy's mandate, and the majority's ultimate need of decisive action. It is unnecessary to insist upon the amount of work with which modern assemblies are faced: some indication has already been given in the chapter upon state activity. But all of them are more than busy: they are pathologically congested, and this in spite of repeated attempts to relieve them by procedural reform. Business must be treated in order of urgency. Who is to decide that order, when all mandates are equal? That question is not answered by leaving the matter

## TIME AND PRIORITY

<i>Total per session</i>	145.4	

to the free decision of all the equal mandates, for then the answer would be the anarchy of a mob of uncompromising equals. It is answered by the need to secure a majority if anything is to be accomplished. This need gave rise to party groupings; today it is one of the forces necessitating party organization. The paramount necessity of a majority causes subordination; and in our own day that subordination is to the leaders of the parties. It is a remarkable subordination, and, when disputed, as it incessantly and desperately is, it is in the manner of those who sigh for a mythological Golden Age. The marshaling of voters into parties, the exchange of votes for programs, are the bloom of the majority principle. No government can escape from the clutches of its own program, and continue to be a government. The need for the regulation of time is intensified to the utmost by the large amount of business.

*Little Time for the Private Member.* The private member has an exceedingly small proportion of legislative time used at his discretion, or for business initiated by himself. In England the amount of time allowed by the rules is about 85 per cent for the government, and 15 per cent when added together at the initiative of private members. I am more than gratified to find that my estimate is very closely corroborated (14 per cent) by the evidence of the clerk of the House, Sir Gilbert Campion, since he had at his disposal the clerks of the House to research into many sessions. (It may be added that sessional rules dur-

ing the Labour government's term since October, 1945, sharply reduced this proportion of private members' initiative.) His evidence on the utilization of the time of the House of Commons was based on careful analysis.<sup>3</sup> His tables are based on two separate but related principles: the first (Table 12) is the general distribution of time between various functions, and the second (Table 13) is the general distribution of time among the government, private members, and the opposition.

It will be observed in Table 12 that the control of policy occupies no less than some 40 per cent of the total time. Also, in the last ten years some 24 days per session were devoted to motions for debate of government policy as compared with 18 in ten years before that. Note too the distribution shown in Table 13.

In France, the proportion allowed to the private member is much higher, owing to the time for interpellations, the weakness of the executive, and the intransigence of the parties: in Weimar Germany, the proportion was much as in England; the United States House of Representatives is perhaps more in the hands of the dominant party than in England. In all countries the power of the private member has deteriorated. He has the power only to worry his party, and the power to worry is effective according to strength of personality and representative argument.

Who, then, steers the work of the assem-

<sup>3</sup> *Third Report, Select Committee on Procedure*, Nos. 189-91. October 31, 1946, pp. 29 and 31.

TABLE 13—HOUSE OF COMMONS: DISTRIBUTION OF TIME AMONG GOVERNMENT, PRIVATE MEMBERS, AND OPPOSITION

	<i>Average Number of Days Annually, 1929-38</i>	<i>Average Annual Percentage, 1906-38</i>
Private members' days (Including bills, motions adjournment)	21.8	14
Opposition time	46.5	31
Indeterminate (Budget and finance bills, private bills)	19	12
Government time	70.4	43
<i>Total per session</i>	157.7	100

blies and decides upon the priority of debate? It is, of course, in all countries, the leaders of the dominant parties.

*Parliamentary Pilotage in England.* In England,<sup>4</sup> the government decides upon the allocation of time for particular bills; the opposition may challenge this allocation, but it cannot overturn the government's decision because it cannot muster a majority against the government, and if it did it would itself decide upon priority. Being in a majority, the government party is able to secure the alteration of the Standing Orders of the House, which already give a substantial priority to government business, and to ask for convenient sessional orders. But serious changes are by custom first reported on by a select, all-party committee of the House. However, it is one of the strongly recognized customs of Parliament that the government of the day shall meet the opposition as far as it possibly can: or in other words, that it shall not use its power intolerantly.<sup>5</sup> This is an ideal pursued for its own democratic value, but governments are also led to this by the unpopularity which meets a

government when it uses its right in a narrow spirit. For "freedom of speech," the "rights of minorities," and "careful deliberation" are powerful ideas. They embody objects of worth which can be offset against the good in the substance of the laws passed by their suppression; and a government is constrained by honor. Oppression also brings revenge; a government which uses it may later suffer from it; and in debate the opposition may convey this possibility and also point to their own liberality in the past. Oppositions have always favored the idea of a committee of both sides of the House to allocate time; governments are naturally less favorable thereto. Until the present the arrangements between both sides of the House have been made by informal talks of the whips—referred to as "the usual channels"—and ultimately by the fiat of the government. When the government is not in a majority, it is interesting to observe, it tends to lose its power over the timetable.<sup>6</sup> When it has both a large majority and a weighty mandate to legislate (like the Labour government of 1945), it is severe about the timetable, in spite of opposition protests. The government's sense of its mandate (referred to in the previous chapter)—its sense of responsibility for the fulfilment of recent promises and the promises made over the years

<sup>4</sup> Cf. T. E. May, *Parliamentary Practice* (London, 1946), 14th edition; G. Campion, *Procedure of the House of Commons* (London, 1937 and 1947); *Manual of Procedure, House of Commons* (annually); Reports on Procedure, Select Committee on Procedure, House of Commons, 1932 and 1946 (Nos. 189-91).

<sup>5</sup> Since the rise of closure, several suggestions have been made for the establishment of a committee of both government and opposition to allocate time for debate.

<sup>6</sup> It is only necessary to point to the fate of the Labour government of 1923 and 1929 in England and the Brüning cabinet in Germany in the summer of 1930.

by the party—is intense; and it expects the electorate to judge it by its fulfilment.

How differently the government's control of the time of the House looks from the private members' point of view (and from the whole opposition's for that matter), and from the position of the government, can be seen from observations made during the discussions on the reform of the procedure of the House of Commons:<sup>7</sup>

He [the government spokesman] showed a tendency merely to consider this House as a gearbox, on the lever of which the hand of the Government must always rest; and that the transmission of power and action must always reside in the hands of the Government and their supporters, thereby showing an inherent desire on the part of the Executive always to impose their will on the House.

But a government statement said:<sup>8</sup>

'The Government must be constantly mindful of their legislative requirements, and proceed with the main objective of facilitating through Parliament of legislation which the Government regard as necessary for the well-being of the nation.

Two other remarks throw great light on legislative leadership and the modern position of the rank and file of members. A Labour government spokesman declared, "My honorable friend said that democracy means debate and discussion, but it also means decision; it must be debate and discussion leading up to a decision."<sup>9</sup> Finally let us notice the implications of the following question and answer:<sup>10</sup>

Does it [the government's theory of the position of the private member] not involve . . . that a Private Member of the House could never have any scope whatever for initiating

anything unless he could do it within the councils of a large party, forming either the Government or the official Opposition?

The answer was:

Not too much, I agree, unless he can influence either the Government or the Opposition. But, broadly speaking, it is a two-party country. Broadly speaking, it is Government and Opposition in Parliament, though the others are, of course, taken account of, and I personally think it is a good thing it is a two-party country.

In a typical parliamentary year before World War II, the government initiated and secured the passage of fifty-nine public general statutes, including the financial legislation of the year, while private members had the time in which to initiate a number of measures, but were only allowed enough time by the government to persuade the House to pass eleven. In addition to such legislative time, the private member, whether on the opposition or the government benches, has time for introducing motions of various kinds (practical or theoretical) for debate, and has the opportunity of putting amendments to bills. And the opposition, as a body, has the choice of the estimates it would like to debate, since there is not time for discussion of them all. It is by no means an ungenerous division of time between majority and minority.

*The Legislative Timetable in France.* In pre-1945 France, the government struggled valiantly, often vainly, with the arrangement of a timetable. There was entirely absent from the rules of procedure of the Chamber of Deputies any such rule as those which, in the Standing Orders of the House of Commons, give so much time to the British government. But—and the exception is important—the constitution of the Third Republic recognised to the government a right of initiative (article 3; February 25, 1875), gave the President of the Republic the right of initiative, and, since Presidential decrees require ministerial countersignature, there was the warrant for governmental initiative. Duguit says that this gave the govern-

<sup>9</sup> *Debates, loc. cit.*, col. 1607.

<sup>10</sup> Report, Select Committee on Procedure, House of Commons, 1946, Nos. 189-91, Question 3612, by a Labour member; answer by Herbert Morrison, then Lord President of the Council, and leader of the House of Commons.

ment the largest freedom;<sup>11</sup> and there is no doubt that for the reasons given by him,<sup>12</sup> the French government obtained a large measure of parliamentary predominance. While the government's projects obtained immediate introduction before the House, bills initiated by members, equally acknowledged in the constitution, had to go to a special commission for report before appearing in the Assembly. Such an initiative is given directly to the government by the constitution of 1946 (article 14); and the right to be heard at any time goes to the ministers (article 53). Governmental bills received the dignity of being called *projets*, while the bills of members were mere *propositions*; the terms are indicative of a real difference in constitutional significance. Before World War II, ministers introduced slightly fewer bills than did individual deputies; but secured the passage about four times as many.

Until 1911, nothing but informal pressure of the government upon groups provided security for a regular current of business. The rules of the House provided only that the president of the Chamber had authority to set up the Order of the Day after consulting, and securing the agreement of, the Chamber. Certain days were regularly allowed to commissions to report; but they were often put off by the Chamber and its president when the government or nongovernmental groups were interested in something else. Further, the doctrine that "the Chamber is mistress of its procedure" gave legitimacy to sudden demands in the middle of a sitting for changes in the timetable. Thus the government had no privileged position, excepting the rule that a minister must be heard at any time he wished, which had its obvious limits. The government was compelled to bargain with its component groups and its rivals, working with little more strength than theirs. Further, it was not difficult to upset the Order of the Day by pleading urgency for some bill or resolution, though it was the custom to warn

the government that a request for urgency was to be made, and the president of the Assembly could hold up the discussion until the competent minister attended. The position of the government and of the Chamber in general under such a system was intolerable, and the abuse of these opportunities of upsetting the Order of the Day forms a principal ingredient in the criticisms of French parliamentarism before 1914.

The phrase "the Chamber is mistress of its procedure" is parallel to the English political dictum, "the House can do as it likes"—but remarkable differences in practice result from the facts of party organization, loyalty, and discipline. In the House of Commons, it is difficult to distinguish the House, the executive, and the parties as separate entities.

The Chamber set out to cure itself, and some improvements were produced by the wholesale reforms of procedure in 1911, 1915, and 1920.<sup>13</sup>

The presidents of the great commissions, the presidents of the groups, or, in their default, a member nominated by the bureau of the commission or the group, the vice-presidents of the Chamber, are convoked by the president of the Chamber, each week if it is necessary, to examine the state of business of the Committee. Their conference gives rise to motivated propositions concerning the order of business and the work of the Chamber and the regulation of the daily timetable. The Government, specially warned by the President of the Chamber of the day and hour of the conference, can be heard. The proposition presented by the conference is read during a session by the President, who submits it to the approbation of the Chamber. The timetable as fixed by the Chamber is put up in the precincts of Parliament and published in the *Journal Officiel*. It cannot be modified except by a vote taken either upon the initiative of the Government, or upon a demand signed by fifty members.

This system is reconsecrated in Chapter IX of the Procedure of March, 1947, except that groups with less than fourteen members cannot be represented, and a

<sup>11</sup> *Traité du Droit Constitutionnel* (Paris, 1921-25), Vol. IV, p. 308.

<sup>12</sup> *Ibid.*, p. 305.

<sup>13</sup> Résolution, May 24, 1920. Cf. R. Bonnard, *Les Règlements des Assemblées* (Paris, 1926), p. 535 ff.

commission can propose a change in the order.

What did this mean down to 1940? At the conference were assembled the knowledge of pending business possessed by the heads of the commissions, the desires of the different groups, and the policy of the government (which was, of course, also strongly represented in the groups). The government groups could, if strong and loyal to each other, win their way, if not by a vote in the conference at least by a challenge to the Order of the Day in the Chamber. The government derived a certain strength from the fact that it could challenge and perhaps overturn the Order in the House. It was obviously better for it to bargain with the opposition groups in the conference than try its strength in the open Chamber—always a dangerous encounter. The government was not put upon better terms than the other groups; it was on equal terms; it was not in a position, as in England, to extend mercies; happy was it if it could obtain them. So pressed was the government that, in 1922, all presidents of commissions were asked by the presidents of both chambers to try to send forward a notice of matters to be put down on the agenda at least the evening before the conference, in order that the government might have time to look over the dossiers before the meeting.

Other things are worth observation at this point, which will be seen in the full light of their significance later. The president of the Chamber and the presidents of the commissions were parts of this steering committee, and it was not in nature that they could be parts of such a conference without being able to exercise an influence upon its decisions. No government will make trouble for itself when constitutional rights have been accorded to certain officers. The knowledge and experience acquired by these officers made their consultation by the President of the Republic at a ministerial crisis important. Their importance then gave them power over the government. Hence these positions were sought after, and one way of obtaining them was to form a group and become its leader. In their due place, these facts light up the obscure labyrinths of French politics.

The conference which regulates the Order of the Day is concerned not only with law but also with interpellations.

The Fourth Republic followed the same tendency and the Government was as powerless *vis-à-vis* the time-table as it had been before 1940. Considering that this and other procedural matters had been one of the reasons for the weaknesses of the French executive, the framers of the constitution of 1958 restricted the power of the National Assembly over its own time-table. Art. 48 decides that:

The order of the day of the Houses includes, by priority, and in the order determined by the Government, the discussion of bills introduced by the Government and of private members bills accepted by it.

This power given to the Government is part of a series of procedural changes, such as the introduction of closure, which will be discussed below, p. 504.

*Time and Priority in the House of Representatives.* The United States House of Representatives is bound hand and foot by rules which tie it to a program determined by the majority party. No government, in the English or Continental sense, is responsible for the distribution of time and the decision of priority. No such smooth seamless connection between executive and legislature as in Britain reigns in the United States. The shortness of the legislative term—two years—and the lawmaking propensities of the American people, coupled with the procedural confusion between public and private bills, develop such an urgent pressure that the dominant party controls almost every second. In the 78th Congress, that is, in a space of two years, 7845 bills were introduced in the House and 5628 in the Senate. The laws enacted numbered 1157, of which 589 were private and local acts. This still makes the total of public acts nearly three times the number of those passed by the British Parliament. Some of the discrepancy is due to procedural consolidation in the British system. In Congress' mechanical debates, American party organization reaches its perfection, no pliability being admitted

## FIRST CHAMBERS: THE FUNCTIONS OF LEGISLATURES

at all. The power wielded abroad by the government, came, until 1910, to be here wielded by one man: the speaker of the House, who was, and remains, a deliberate and acknowledged partisan, almost to the complete opposite of the speaker of the House of Commons. He led the majority forces and secured discipline by his power, individually, to nominate members to committees. As the committees are the decisive stage in lawmaking and executive control in America, the speaker's power was that of political life and death over the members. By the assignment of bills to appropriate committees, and by the power of "recognition" of a member in debate, the speaker enhanced this power. He and his leading party friends controlled the time of the House. Control was exerted through the formal power of the Committee on Rules, which had the singular power of reporting to the House and changing the procedure and course of measures at any time; of this committee of five, the speaker, who nominated the rest, was chairman.

A revolt occurred against this system in 1910; the speaker was deposed from the Committee on Rules; and all committees were henceforth to be chosen by the House Committee on Committees. The party leaders (in caucus) control the nominations to this committee, and usually get themselves appointed to the chairmanship of all other committees by intraparty jockeying. This process is tempered by the rule of seniority. The speaker's power was thus disintegrated, and given to the controllers of the party caucuses. These leaders decide who shall be speaker (just as he contributes to the decision as to who shall lead in his party). They select a floor leader: that is, a manager of debates and tactics (in the Democratic party he is chairman of the Committee on Ways and Means, and chairman of the party's committee on committees; in the Republican party he is *ex-officio* chairman of the party's committee on committees, and of the informal steering committee). They settle also the composition of the committees and appropriate the chief positions thereon, and they (the Republicans)

settle who shall compose the steering committee.

The controlling power over the time and procedure of the House, then, is in the majority party, the speaker (whose aid in controlling the House is indispensable), the floor leader, the chairman of the Committee on Rules and the chairman of the Committee on Appropriations, and several other party personages who together form the steering committee—the name of which is sufficiently expressive of its function. These lead, control, and do business with the little clique of leaders on the other side; they settle the legislative program with the President when the party controls the executive branch also; they direct debate, and get the laws passed. Party caucus decisions supplement their personal influence. The steering committee is appointed to superintend generally the operation of the rules of procedure; but its special political business is to appear before the House when the majority party is in distress, and propose a rule that such and such a bill be given priority over everything else. It does not follow that the steering is steady and well considered. The party is volcanic and offers uncertain foothold. The steering is itself eruptive and opportunistic. Not all the followers follow.<sup>15</sup>

Another important aspect of the legislative activity of the United States House of Representatives deserves emphasis here. This is the role of the United States President in legislation. Although the legislative power is vested in the Congress of the United States, the President plays a very important part in making the laws, when he wants to do so, has the ability, and is not faced either by a politically hostile Congress or by a politically friendly one that contains personal enemies. He cannot, for reasons which will become much clearer in a following chapter,

<sup>15</sup> Henceforth the facts about United States Congressional behavior are founded largely in the hearings, the symposium, and the report of the Joint Committee on Reorganization of Congress, 1945 and 1946. Notice that the House of Commons was simultaneously re-examining its procedure!

exercise a legislative leadership on anything like the scale of the British cabinet or with its undoubted authority over the legislature. But he has four qualifications which enable him to take a not inconsiderable part in adding to the statute book. (1) First is the requirement of the constitution that he give messages to the Congress on the state of the union, both regularly and at his own wish. (2) He may veto legislation passed by Congress. (3) He has acquired something like nationwide party leadership. (4) Being in actual control of the day-by-day active government, he is stimulated by his own official advisers to amend and extend the laws in their particular provinces, and the clients of the various departments urge this upon them, and so upon the President.

Many Presidents have used their message-making and veto power as vehicles of lawmaking. But there is no virtue in the vehicles themselves: the state of mind of Congress, the parties, and the nation settles whether there is to be creative force in the Presidential instruments. The odds are usually against him: and he must triumph over them. In Britain no cabinet can ever assume the power to write a message until it has acquired the power to embody its contents in law and administration: that is the essence of the cabinet system. Men like Theodore Roosevelt, Woodrow Wilson, William Taft, and Franklin Delano Roosevelt used their opportunities with some success (the last-named especially). They bored into the precincts of Congress, and by all the arts of management pushed their suggestions to a legislative conclusion. They sent messages to the Houses and letters to party friends, held conferences and breakfasts in their room adjoining the Senate, and invited the chairmen of Congressional committees and the "floor leaders" to the White House. Their most trusted and astute cabinet officers were often sent to whip up support, and to exert the influence of the personal representation of the president. "Trouble-shooters" were sent up to the "Hill": men of the "brains trust" or the White House staff or party friends or confidants of the "kitchen cabi-

net." Heads of departments attended caucus meetings; information was poured into Congress through the attendance of officials at Congressional hearings, and sometimes less publicly—to a point where some Congressmen even complained that the restrictions on lobbying should be made to apply to the executive! Party friends were provided with drafts of bills and vindicating briefs. Many a bill was drafted in the departments;<sup>16</sup> many a Congressman turned to the executive departments for this assistance; and since 1921, by the Budget and Accounting Act, in order that the chief executive should know what is going on in his own house and to secure a minimum of coordination, the projects emanating from government departments were to be cleared with the Bureau of the Budget.

What has been the net result? We are indebted to Dr. Chamberlain<sup>17</sup> for illumination on this subject. In a most painstaking and objective study of the ninety major laws passed between 1890 and 1942, he shows that about 20 per cent fell to the credit of the President, about 40 per cent were mainly the fruit of Congressional initiative and industry, some 30 per cent were the joint work of President and Congress, while rather less than 10 per cent were initiated and carried through under the pressure of outside groups. Dr. Chamberlain had taken the greatest care in tracing to their roots the enterprise and original impetus which gave birth to the statutes, and, of course, they were complicated, interest sometimes commencing with a Congress or a President, the initiative being dropped by either and then resumed later by some other person. The President was strong in legislation concerning national defense and the control of business, but weak in regard to agriculture, immigration, labor, natural resources, and railroads. Congress evinced a major

<sup>16</sup> Cf. E. E. Witte, "The Preparation of Proposed Legislative Measures by Administrative Departments," in Report, President's Committee on Administrative Management, 1936, p. 361 ff.

<sup>17</sup> L. H. Chamberlain, *The President, Congress and Legislation* (New York, 1946).

influence in the regulation of banking, currency, immigration, labor, and conservation. Four out of a total of eight tariff statutes were passed under the steam of lobby pressure; two had their inspiration in Congress; and two (the Underwood and Reciprocal Trade Agreements Acts) were initiated and thrust through by the President.

*Legislative Priority in Weimar Germany.* The German constitution of 1919 accorded the right of initiative to the government or to the members of the *Reichstag*.<sup>18</sup> This terminology indicates the priority of the government;<sup>19</sup> and tradition, party organization, and necessity substantiated their priority.

German parliamentarians described the process of legislation without a mention of any other initiatory activity than that of the government, except that the private members' own initiative was often used for urgent laws of minor importance to help the government evade the need for consulting the *Reichsrat*. German rules of procedure provides for a Council of Elders (*Ältestenrat*): that is, a council representative of all parties, to plan out, but not enforce, the order of business. This arrangement had existed in the old constitution, and it was found to be particularly useful in a system where so many parties abounded. (We have seen that in the French system there is an analogue to this.) The Weimar rules (section 3, articles 10, 11, and 12) provided for such a council, composed of twenty-one members, representative of the parties, "to support the President [of the Assembly] in the conduct of affairs, and especially to bring about an understanding among the groups regarding the order of business. It also regulates the distribution of Committee Chairmanships and their substitutes." The report on these articles says

that it was considered impossible to give the Council of Elders compulsory powers, and the old practice had to be followed: that is, advisory power only, in which, "after long discussions on a question, nothing came of it if even one member stood out." Naturally! for that member might be the government or a minority which hoped for better treatment in the *Reichstag*.

*Government Commands Time.* Governments cannot avoid some time's being taken by the opposition, as an official body, or by private members on either the government or opposition side. But most of the time is commanded by the government, and where the cabinet system prevails, priority is settled by the cabinet, even though, as we have seen, the cabinet's authority in this respect varies in degree in different countries. What is important is the general acknowledgement of supremacy of the government (or, for the United States, the majority party), and the general recognition that the private member's role is subordinated to his group's leadership and the group's role to the government's. Even the generous desires of leaders to allow members independent headway is not—and on occasions when it was declared, could not—be fulfilled.<sup>20</sup> The results are, on the whole, good. It has often been said that to disperse power is to obscure responsibility. Representative government develops into a farce when power is divided minutely, for the electorate, when called upon to judge, is muddled. We have already seen to what a small extent the electorate can intervene with an independent and positive judgment, even under the conditions where power is divided among and contested by two or three well-known entities, like parties. No subtle argument is needed to demonstrate the necessary

<sup>18</sup> Article 68.

<sup>19</sup> *Vorlagen*. Members' bills are again distinguished by a less important title, *Anträge*—which is little more than a suggestion, and is almost synonymous with the French *proposition*. W. Lambach, *Herrschaft der 500* (Berlin, 1926), Section: "Wie eine Gesetzesvorlage entsteht." Cf. also Hauffe, *Der Reichstag hat beschlossen* (Berlin, 1931).

<sup>20</sup> This historical generalization is still substantiated by contemporary argument and practice. Above all see Minutes of Evidence of Third Report of Select Committee on Procedure of House of Commons, Nos. 189-91 of 1946; particularly evidence of Herbert Morrison and Mr. Glanvil Hall, Chief Government Whip.

failure of the electorate when these political parties are many, without a past and very probably without a future.

It is a disadvantage of modern legislative practice that the ordinary member is excluded from the power to determine the course of business, of legislation, of control over the government. Every member has something unique (if, in our opinion, silly) to add to discussion, and when the dictation of a government is regularly unchallenged, it may fall into error. The question, however, is, whether, on the whole, representative government functions better or not without every member's contribution. We have already seen that not all members, as a rule, have a vital contribution to make to discussion; neither special training nor formal profession nor conspicuous general sagacity fits them for it. Nor is there anything so special about the locality they represent that its voice ought to be heard. When it is, indeed, the party caucus knows it, and promptly includes it in the ingredients of the party's policy. It is enough if men of exceptional talent and character, evinced in open competition and without privilege, are guaranteed by procedure the opportunity to denounce the misdeeds of government and opposition when the occasion demands, if a right of criticism remains. We shall show, later, that for this there is ample—sometimes too ample—freedom, though it is not always used capably. The major necessity is a clear and decisive lead given by a plainly identifiable body which can be judged both during and after its actual tenure of office in government or opposition. Again we see that modern democracy demands a great deal of political parties. Without them, representativeness and responsibility are denuded of meaning. If able, forceful men are elected by their districts, they will have enough individual and collective kick in them to compel merit and wisdom in the leadership or its change. Within each party prevails a constant competition by which political talent rises and falls to its own level. Those who get to the top get access to other men's time.

#### EXPERTNESS AND INTERESTS

EXPERTNESS in making laws consists of two main qualities: a command of the knowledge of their substance, and ability to formulate the results with the minimum of vagueness and unintentional contradiction of other parts of the statute book. Here again, certain technical necessities have thrown the power into the hands of the executive, though arrangements are possible, and do exist, whereby the members of the houses may act independently and efficiently. In the United States, with its separation of powers, the actual dependence of Congress on the chief executive is less in fact and also less obvious—yet it is considerable, as we shall see, and ought to be still greater in fact.

The difficulties of modern lawmaking are colossal. The knowledge required for the simplest statute is complex and special. Even when that knowledge is available, it does not follow that the same person knows how far existing legal and administrative institutions can be used to obtain the desired results, or how far existing rights will be injured by the new law. The creation of good law involves the careful combination of (1) technical knowledge, (2) an understanding of the law as it is, (3) an ability to make sound estimates of the expenditure of money and the administrative energy, procedure, and machinery required to accomplish the necessary tasks, and (4) an appreciation of the general disturbance to be caused. This implies the cooperation of a number of technically competent authorities. If, indeed, one single member or a group of members could muster these requirements, there would still remain a condition which only the executive branch can fulfill in the modern state: that is, to scrutinize the obvious constituents of the policy and take responsibility for their soundness, and to decide upon their timeliness and harmony with all the other parts in the general plan of legislative, administrative, and fiscal evolution. This can only be done by trusted persons; such people as have won the public confidence in a major degree. That, at least, is what evolution of

## FIRST CHAMBERS: THE FUNCTIONS OF LEGISLATURES

the democratic theory and practice amounts to.

*Experts within the Government.* It is true that there may be experts outside the government ranks, and there are. But in government the people ask not only for an expert but for an expert upon experts, even as ordinary men and women tend to seek the opinion of those who know the possible shortcomings of the experts in law or medicine or architecture whose services they contemplate employing. Those who are trusted in this matter are, naturally, those who have had long experience of government, whether inside or outside of the legislature, and those, too, who have won confidence in a high degree by other qualities. This is no other than the government, in the first resort, and the administration or the civil service, in the second, and we shall see later that it is upon the civil service that the government itself relies very largely for its judgment upon the substance of legislation. This is the robust second line of defense—the real “second chamber,” as Graham Wallas has called it—of our own day. Without it, confidence in parties and their leaders would necessarily suffer serious shocks from time to time. For the civil service is a body of men and women professionally occupied for life in executing the law, in watching its effects, its merits, its failures, and in observing the reciprocal influence of government and society. This is true of all the countries of which we speak (even, perhaps especially, of dictatorships). It is to this court of judgment that the proposals of the public, of members of the legislature, of party leaders, and of ministers ultimately come, and it is from here that proposals not seldom emanate. I strongly re-emphasize this phase of the importance of continuous career statesmanship—the responsible civil service—to modern government, especially in planning.

*Outside Experts and Representatives of Interests.* The sources of law are, however, far from being confined to the legislature, to the ministry, or to the civil service, for neither their range of knowledge nor their range of interests is as comprehen-

sive as society itself. Legislatures possess the authority to make laws, but as already seen, in a varying degree, they only partially represent the occupational and spiritual composition of the nation; the men in the cabinet rise a little, but not much if at all, above the level of talent in the legislature itself. Indeed, these have not come into office entirely on their merits as governors; they express desire, will, claims. Nor can the civil service itself do its work unaided. All are obliged to seek the aid of outside experts and representatives of interests, lest they fall into serious mistakes not only regarding the particular interests, but lest, too, they do an injustice to that vast unseen intricacy called the public, which remains a phantom while it is unaffected but suddenly becomes a frenzied monster when molested. This is not an entirely new phenomenon in government; the ancient and the medieval state exhibited the same features. It is impossible for the ordinary institutions of government to penetrate the depths, and master the complexities, of any modern branch of society and law without the special aid of those to whom the matter is one of lifelong and intimate acquaintance, and to whom all things are revealed owing to the vitally felt quality of their interest in the result, “the felt necessities,” as one of Justice Holmes’ opinions has it. Nor is it necessary that government shall ask for aid: it is continually pressed by those who observe that the normal political institutions are ignorant or uncomprehending, or that their interests are inadequately represented and likely to be treated with insufficient care.

Hence modern governments—legislature, ministry, and civil service alike—have come, on the one hand, to depend to an extraordinary degree upon a variety of institutions to gather information and recommend policy, and, on the other, to be pressed by organized social and occupational groups. To leave these out of account in the analysis of modern law-making and government is entirely to miss its nature, to place an undue importance upon legislative creativeness, and quite to

mistake the character of modern methods of popular representation.

In the *first* category—that of institutions gathering information and recommending policy—are such institutions as royal commissions, departmental committees, and select committees in Great Britain; investigating committees and departmental committees in the United States; inquiry commissions and the Economic Council in Germany; the *Commissions Extraparlimentaires* and the *Conseil Nationale Economique* in France. To these must be added regular departmental advisory boards which have been set up in various countries, principally in Great Britain,<sup>21</sup> Weimar Germany, and France. Finally, there are the technical aids in the legislatures, like libraries, and more important to nascent American development, the Legislative Reference Bureau and the legislative counsel. In the *second* category are the private representative organizations which push an interest. These operate by deputations to departments at the request of the latter, deputations to ministers, and special “pressure” organizations located in the neighborhood or precinct of Parliament or Congress and the departments, and called by the American name of “the lobby.”

Now all these are simply expressions of the extent to which governmental action affects the life of the citizen, and of a social life which far surpasses in scope and depth that for the regulation of which legislatures originally came into existence. No metaphor can adequately convey the clamancy of these huge diverse surging waves of life and desire which are now forced forward to pass, filtered and controlled, through the narrow channel of the simple institutions of our simple immediate past. Lower chambers, upper chambers—they are miserably incompetent by themselves to accomplish a tithe of what is needed. They still seem to be important because the new ways require time to establish their repute and organization for

service, while the old are still ceremonial centers which invite pilgrimages. The real machinery is elsewhere, not occult, yet not in the center—and with good reason, for in the center is universal suffrage and its incidental ideology and trappings; it waves the Urim and the Thummim. It is authority. Life and movement, however, stir in the wings.

Hence, as we shall more amply show later, all controversies about the decline of legislatures and the need for a second chamber are unreal without a recognition of the actual, often the legal, significance of these accessory institutions. Moreover, these extralegislative institutions themselves, having grown up piecemeal in response to the special demands of casual events and needs, are now in need of co-ordination, and suggestions are plentiful to this end. Among them is the conception of industrial or economic parliaments or councils, and this we shall discuss later with particular reference to the experience of Germany and France. But before we do that, we ought to indicate (we cannot treat in detail) the principal types of institutions which now exist to make representative government more adequate to the demands upon it.

*Inquiries: the Social Microscope.* The form of inquiry employed in Great Britain to cover a wide scope of first-class political importance is the royal commission of inquiry. We are less concerned with its legal form<sup>22</sup> than with its service. A royal commission is usually established when Parliament or the government or the department within whose purview the subject falls has become convinced that more information and guidance upon policy are necessary; when a government which has been advocating a reform for years (when in opposition) is suddenly shocked by the realization that it is not omniscient. It is, of course, needless to say that some inquiries are commenced by a government in order to avoid the difficulty and responsibility of dealing with a subject at once: it is hoped that public

<sup>21</sup> Cf. R. V. Vernon and N. Mansergh, *Advisory Bodies* (Oxford, 1940).

<sup>22</sup> Cf. A. Todd, *Parliamentary Government* (London, 1892), Vol. II, Part V, Chap. 4, sect. 6.

opinion will be lulled by the assurance that the question is under consideration.

Every few years the opinion of the few thousand people intensely interested in politics reaches a point where it is generally agreed that something ought to be done. A departmental committee of the Treasury, reporting on the procedure of royal commissions, deprecated the appointment of royal commissions on subjects on which there is no reasonable prospect of early legislation.<sup>23</sup> This disapproval concerned only the expense involved. But there is another consideration. Urgency of the result is a spur to inventive thought—and some commissions have languished into a kind of somatic impotence owing to the lack of this spur. Legislators cast about for a policy, and since 1832 they have more and more come to rely upon the results of investigation by royal commissions.<sup>24</sup> The commissioners are experts or interested persons, with a chairman, usually of long and distinguished administrative, legislative, or judicial experience. The chairman is of importance to the success of a commission, since he can direct its inquiries fruitfully, can cause members to cooperate harmoniously, and can save its time by the conduct of its sessions, as his experience and personality determine. If he is like Lord Tomlin, chairman of the Royal Commission on the Civil Service (1930), an expert in excluding irrelevant evidence, he is particularly useful; yet, as the report of that commission ultimately showed, his legislative creativeness and doctrinal boldness may fall far short of his management of procedure.

<sup>23</sup> Cf. Report of the Departmental Committee on the Procedure of Royal Commissions, 1910, Cd. 5235, p. 6.

<sup>24</sup> A picture of the work of royal commissions of inquiry is to be constructed from Parliamentary Returns: Accounts and Papers, 1856, Vol. 38; Parliamentary Papers, No. 720 of 1850, No. 317 of 1862, No. 342 of 1885, No. 338 of 1896, No. 315 of 1904, No. 159 of 1913; also, Cd. 7855 of 1914-16; Cd. 8526 of 1916; Cd. 8916 of 1917-18. Cf. also H. M. Clokie and J. W. Robinson, *British Royal Commissions of Inquiry* (Oxford, 1938); and see also S. and B. Webb, *Methods of Social Study* (London, 1932).

It is not an easy thing to choose commissioners: are they to be disinterested experts or representatives of interests affected? Is it possible to find experts unconnected with bodies affected by the inquiry? In order that the truth may be discovered, the advantage on the whole lies with commissions of disinterested experts, or as near to this as one can attain in practice.<sup>25</sup> But governments are obliged to remember that what they are seeking is a policy, not the objective truth. They seek a practicable plan, given the existing interests which will try to resist any change calculated to damage their situation. Governments, therefore, believe it is better to consult those interests beforehand, in the hope that they will define the extent of acceptable reform and the concessions they require. Hence, representatives of interests are often put on the commission; and since they cannot agree with each other, they compromise, making mutual concessions not always for the public good. Governments have lost great opportunities to hear recommendations made on a national basis, through their desire to find an immediately viable plan: for example, in the Royal Commission on Local Government (1923). It would undoubtedly be best for widest exploration if the interests were excluded, but it is difficult to see how this course can be pursued, for once it has been admitted that government is by the consent of the governed, the representation of interests upon the commissions is an unavoidable conclusion. I personally agree with the opinion of the Committee on Royal Commissions, and I think its way would ultimately be the way of happiness for the general body of the people, but, on the present foundations of government, it can be accepted only by governments with exceptional

<sup>25</sup> Cf. Report, Departmental Committee on Procedure of Royal Commission, Cd. 5235, p. 6: "And it is of equal or greater importance that those selected as Commissioners should, as far as possible, be persons who have not committed themselves so deeply on any side of the questions involved in the reference as to render the probability of an impartial inquiry and a unanimous Report practically impossible."

courage which are prepared to fight hard against the interests controlling many votes. However, a large admixture of independent experts is possible only in the rare cases when the interests have not wide territorial ramifications. When, moreover, a matter is of high urgency, and the parties to it have hopelessly disagreed, as in the coal-industry disputes of 1926, the way is open for a commission of experts only.

Commissions function by calling before them independent experts and representatives of interests who give written and oral evidence. Commissions sometimes employ special investigators, as in the Poor Law Commission of 1909; or send assistants, or go themselves, to various parts of the country to obtain evidence by direct observation. A fault of the procedure is that the witnesses never confront each other to debate their differences before the commission. Another perhaps unavoidable defect is the truly awful ignorance of some of the chairmen and commissioners. The appointment of commissioners who are interested in and know, if anything at all, only one branch of the subject seriously wastes time, for the commission spends day after day in acquiring the most elementary facts, until such time as witnesses have coached them in the problems which they should already have come prepared to investigate. Meanwhile, they lunge about in the hope of coming upon a "revelation." Nor have commissions succeeded in working out a code of procedure with principles at once sound and always adopted. The way to authority is behavior based upon a systematic recognition of certain principles of inquiry.<sup>26</sup>

However, it cannot be denied that royal commissions have been of basic importance in the country's legislative and administrative progress. For even when they have split into majority and minority, they have put the issues clearly. It may

be that only a unanimous report is a policy. But again a divided report is a record, and that also has its usefulness. Even when recommendations have been foolish, and selfishly established at the expense of the general public, the evidence gathered in the interesting and revelatory form of question and answer has been of immense value. It is a bad mistake to attempt to state the value of royal commissions by an *obiter dictum* on the length of time which elapses between the recommendations and their realization. It is commonly retailed that this length of time is ten years. But what does ten years mean? That all the recommendations or some of them have been put into practice? Why, indeed, should they be put into practice at all, if they are deemed to be politically bad? All the great pieces of social legislation of the nineteenth and twentieth centuries have been made by royal commissions, or the other forms of inquiry, such as select committees or departmental committees.

In other countries also, similar bodies of inquiry are set up from time to time, and of much the same nature as those in England. In France, Germany, and the United States much more is done by the regular legislative committees and commissions which are normally concerned with legislation, and here the investigations and reporters are purely parliamentary, but evidence is obtained also by written communications from interests concerned (in France and Germany) and by personal hearings (in the United States). In these last three countries there are departmental inquiries, instigated by the executive, or especially comprehensive investigations, where not only officials or former officials cooperate, but where outside experts and members representative of interests participate. Consider, for example, in Germany, the great Economic Inquiry (1928); in France, the Committee of Financial Experts (1925 and 1926); in the United States, the Hoover Commission on Unemployment (1930), the President's (F.D.R.'s) Commission on Education (1938), and Mr. Truman's Committee on Civil Rights (1947).

<sup>26</sup> The student would do well to study the royal commissions on population, and on the newspaper press and on monopoly, established in 1945, 1947, and 1948: their procedure in organization, research, and mass observation.

German experience has given rise to the lessons that for success, commissions of inquiry, whether set up by the legislature or the executive, need to have a regular though flexible procedure; that the objective must be clear, for often, the clear formulation of the question is halfway to a valid answer; that the inquirers must be free from obligation to the appointing authority and the witnesses; that the commission should not be large; and that when the report is published, the evidence should be published with it.<sup>27</sup>

In the United States, there is a clear-cut distinction between Congressional committees of investigation and Presidential commissions, and in both cases they fall into the two broad classes of being narrowly departmental in their objective or being concerned with a big field of policy. In the Congressional committees of investigation the object may be to discover facts auxiliary to the formulation of law;<sup>28</sup> or it may be to understand and control the executive or to worry the executive so as to secure control over it; or it may be to draw public attention to fields of policy. Presidential commissions may be established to find fact, to formulate policy, to lead up to legislative proposals or administrative reform, or to defend the executive against some criticism made by Congress or the public. Whatever the motive or the purpose of either class of investigation, information is presented, and as a by-product, sometimes extraordinarily valuable facts are unearthed. The motives, of course, affect the facts presented, because they affect the extent to which they are unearthed, the form in which they enter into the report or the hearings, and the slant they are given when the evidence is weighed in the report. But even when the investigations are highly corrupted, they serve a useful purpose. American students have deplored

the separate appointment of investigations by legislature and executive, with no relatively impartial agency in between, because they hold that in too many cases the legislative members speak as the legislature wants against the executive, while Presidential commissions are very inclined to Presidential values. On the other hand, they observe, British royal commissions have no "employer", and are much more detached, objective, and "public-minded."

The congressional investigating committees are manned by Congressmen, and more latterly, assisted by expert counsel—expert, that is, either in handling the procedure of an investigation, or in the subject matter to be investigated, or in both. Notable examples are the Tennessee Valley Authority investigation of 1937-38 and that continuous body in wartime, the Senate National Defense Committee, under the chairmanship of Harry S. Truman until April, 1945. The Presidential commissions are manned by departmental and outside "experts." Some famous Presidential commissions are the Taft Commission on Economy and Efficiency of 1910-13; Hoover's Wickersham Commission on Law Observance and Enforcement of 1929; the Roosevelt St. Lawrence Waterway Survey of 1939; Hoover's Research Committee on Social Trends of 1930-33; the Theodore Roosevelt National Conservation Commission of 1908-09; Franklin Roosevelt's Committee on Administrative Management of 1936; and the Truman Committee on Civil Rights of 1947.

There seems to be an increasing use of commissions which contain a mixture of Congressional and executive appointees. Two are conspicuous: the Temporary National Economic Committee, and the Commission on the Organization of the Executive Branch of the Government. (1) The former was authorized by Congress in response to a request by President Roosevelt in 1938, to study the concentration of economic power on American industry and its effects on competition. The committee was joint executive-legislative: three from the Senate, three from the House, six from the executive branch. It

<sup>27</sup> F. Morstein-Marx, "Commissions of Inquiry in Germany," *American Political Science Review*, December, 1936.

<sup>28</sup> For example, the Senate's Special Committee on Post-war Economic Policy and Planning (1944) or the Senate Committee on Housing (1945).

did a mighty work—thirty-two volumes of hearings, forty-four expert monographs (some invaluable)—and its impact on the mind of the nation, through its impact on the minds of the several thousand who deliberately think in order to lead opinion, has on the whole been immense. (2) The latter was established in July, 1947 "to make a thorough study of the organization of the government with a view to securing the maximum efficiency in the performance of essential services, activities and functions . . . and to generally improve the Federal service and reduce the cost thereof. . . ." Its membership consists of four members, each appointed by the President, the president of the Senate, the speaker of the House; and in each case two are appointed from private life, and two from the executive branch, the Senate, and the House. Not more than one commissioner in each case is to be from either of the two major political parties. Ex-President Hoover was appointed chairman. The original appropriation was \$750,000; it spent about \$2,000,000. (See below, Chap. 26.)

Criticism of the form and methods of these investigating, fact-finding, and quasi-policy-producing bodies would not be appropriate here, since it would necessitate examination of the several varieties of each and their adequacy for their special purposes. Fortunately, attention has been given to this by other students.<sup>20</sup> The present author's own preference where the purpose is the eventual shaping of policy and the making of law is for the mixed legislative-executive type, with a chairman notable for brain and drive. For the rest, one is in the hands of the everlasting logical consequences of the separation of powers: to each his own.

*Principal Defects of Inquiries.* A larger view of these investigating bodies, especially the extraparliamentary bodies en-

trusted with important inquiries, reveals three qualities which have their advantages but also have disadvantages. (1) Inquiries are arranged for only when they are urgently required; (2) their terms of reference are narrow (an exception was the Temporary National Economic Committee); and (3) they cease to exist as soon as they have made their recommendations.

We have already suggested that urgency is a constituent of successful inventive thought; it prevents rambling, waste of time on unimportant details, excessive subtlety. And narrowness of the terms of reference is necessary to limit and concentrate attention; the particular question determines these limits. However, these advantages have their reverse side. Urgency may sharpen attention and inhibit preoccupation with the relatively unimportant, but it may also check exploration. The terms of reference may be too narrow: indeed, social and economic relationships are so much parts of one far-spun web that the whole difficulty of economics and sociology is to know at what point to penetrate and how much to include. If the inquiry is for immediate use—or is said to be—and if it is conceived as subordinate to a particular piece of legislation, only the immediate threads connecting it with cognate subjects are examined. It might be of public advantage, in the long run, if the terms were wide and if the commission were larger and sat longer. Finally, since the commission is not a permanent body, there is no one to watch the reception of its recommendations on its behalf, to give an authoritative answer to difficulties of interpretation, or to answer questions which have escaped attention.

Considerations of this kind—the belief that a permanent body of wide membership and large scope would be a useful supplement to existing institutions—contributed to the growth of the theory of an industrial or economic council, and even contributed to their establishment in Germany and France. It may be said at once, though the further analysis is reserved for later pages, that in Germany at any rate the council disintegrated into

<sup>20</sup> Cf. M. N. McGeary, *The Developments of Congressional Investigative Power* (New York, 1940); C. M. Marcy, *Presidential Commissions* (New York, 1945); and Hearings of the Senate Committee on Establishment of Commission on the Organization of the Executive Branch of Government, 80th Congress, 1st session, S. 164.

a number of special committees of inquiry, though permanently linked and functioning, and chosen, by an autonomous procedure, from a large body (two hundred) of representatives of interests. This is not what was intended, but was the result of practice.

Whether or not the bodies which already exist to inquire and recommend are organized in the best conceivable manner, their value is indisputably vital to representative government. They provide *expertise* very rarely possessed by the members of the assemblies, and they virtually add the representation of interests not otherwise adequately included by modern territorial representation. They lighten the task of legislatures, as to quantity, and prepare for their final decision, sometimes only for their information, the measured considerations on both sides of legislative proposals. This division of labor leaves to members the application of their political mind and will: that is, the pure assertion of their power in the direction they think best for the life of the state. The principle of number, authority, and valuation still operates, but only after the influence of science and the pleading of interests have been brought to bear on the confronted multitudes. Here, again, are things undreamed of by Rousseau, Jefferson, Madison, and the elder Mill. The process of education of parties and electorate never ceases while the legislature is in session and the executive (parliamentary or presidential) is in office, and in the intervals, a constant stream of scientific knowledge and declaration of need flows from commissions and committees, the parties, and the civil service. The professional and independent publicists and thinkers seize upon it, analyze it, break it up, and, according to their political lights, endow it with meaning. Their values are modified, their claims deferred or permanently suppressed, as their partial or complete impossibility is rationally demonstrated. Philosophers cannot be kings, but in our own day they advise and impress rulers through institutions such as we have examined.

*Departmental Advisory Councils.* A development which has accompanied that already described is the growth of permanent advisory councils of experts in the government departments. This is clear recognition that legislative and administrative initiative lies with the executive; an aid to sound thinking has been established at its most frequent source.

On a major scale, and as part of the regular administration of the state, this development first occurred in France. It was, perhaps, a product *first* of the fact that the French civil service was not until recent years recruited for its efficiency, but was largely a creation of political favoritism. Sound sense must necessarily be procured somewhere: even an oligarchy has an interest in the efficiency of its own monopoly. *Second*, and this is more important, since it is a more permanent feature: the French have—at least since the time of the physiocrats, and it could be even maintained since the time of Louis XIV and Colbert—insisted that experts, the intellectual *élite*, shall provide their lawmaking. It was observable in the economists who thronged the court of Louis XVI,<sup>30</sup> in the galaxy of intellectual stars who shone in the firmament around Napoleon, and in the continuous deference to the *Conseil d'État* (as a supreme court of governmental intellect). It was also observable in French political theories of vocational representation and democratic competence,<sup>31</sup> rife before World War II.

Various departments<sup>32</sup> of state are aided by consultative councils, some of which are already over a century old, although naturally their composition and

<sup>30</sup> Cf. G. Weulersse, *Le Mouvement Physiocratique en France* (Paris, 1910), Vol. II, pp. 155, 249-53.

<sup>31</sup> Its general aspects are discussed in S. de Madariaga's *Englishmen, Frenchmen and Spaniards* (Oxford, 1931). It is further to be observed in the program of practically every political party, especially the great study groups. See also the works of Léon Duguit.

<sup>32</sup> Cf. P. Pic, *Traité Élémentaire de Législation Industrielle* (Paris, 1930, and Supplements, 1937), p. 107. Cf. also H. Berthélemy, *Traité Élémentaire de Droit Administratif* (Paris, 1933).

function have been amended from time to time. I do not propose to enter into a detailed analysis of these features, but I wish to point out only their general character. They are composed of two elements: (1) the purely expert, when they may be officials (in service or retired) of the various departments combined for effective survey of the whole field, and (2) representatives of interests, though this does not necessarily exclude an expertness which would entitle them to be heard on this ground alone.<sup>33</sup> Thus the *Conseil Supérieur de l'Instruction Publique* began in 1850 as a body representative of groups whose vital aims would be affected by state control of education: along with professors and professions, which would combine the opinion of an intellectual and judicial *élite*, there was a majority of ministers of different religions, members of the Institute, councillors of state, judges; moreover, these members were chosen by their own groups. In 1880 the *Conseil* was converted into a body formed by members elected by the various groups within the teaching profession. Of fifty-seven members thirteen were chosen by decree, which means by the Minister of Public Instruction. Nine of the thirteen were members or past members of the administrative or professorial staff of the universities, and the other four were chosen from among non-state-supported education. Forty-three members were elected by the Institute and the teachers.

The work of these committees is substantially the same: to advise the government upon its projects of law and the orders which are designed to give detailed effect to the law. They have done important work preparatory to the passage of legislation and have cleared up difficult questions of law which have been raised in the course of administration. Since they are fairly large bodies, and since to convene them often would mean a disturbance in the ordinary administration in which they are engaged, they meet

rarely, and current work is left in the hands of a permanent sub-committee. An acute critic, Chardon, once observed that at the Ministry of Public Works great services had been rendered by the committees, but that there was always the danger that such institutions might be abused when they were made the means of replacing an urgent act by discussion; when the more instructed members were reduced to giving lectures to the rest; when instead of light proceeding from discussion there proceeded an illegitimate child of compromise; or when number triumphed over reason. Other criticisms of waste of time have been made.<sup>34</sup>

*Conseil d'État.* There was a time when the *Conseil d'État* was a sort of grand initiating legislative body. This was under Napoleon.<sup>35</sup> Its very success in those years, when it included men like Cambacérès, the Tronchets, Roederer, Portalis, Merlin de Douai, Molé, made it anathema to the Restoration. It fell, to rise again in the constitution of 1848 as the consultative body for all laws except financial and those which were declared urgent, and then it was elected by the National Assembly. Under Napoleon III it became an imitation of its former self at the beginning of the century, but the Third Republic, while making it the heart of the French administrative and judicial system, reduced its lawmaking powers. It must be remembered that it is composed of career officials.

The government must submit its projects of laws to the *Conseil*, which gives its opinion on them and proposes the amendments of drafting it considers necessary.<sup>36</sup>

<sup>34</sup> Cf. *Annales de l'Académie des Sciences Sociales et Morales*, "Les Réformes Administratives" (Paris, 1929).

<sup>35</sup> Cf. Léon Aucoc, *Conférences sur l'Administration* (Paris, 1882), Vol. I, p. 132, and Edmond Blanc, *Napoleon I* (Paris, 1888), Chap. III.

<sup>36</sup> Law of May 24, 1872, on the reorganization of the *Conseil d'État*, Part II, article 8: "The *Conseil d'État* gives its advice: (1) Upon projects of law initiated by Parliament which the National Assembly (then a single Chamber) decrees should be sent to it. (2) Upon the project of law prepared by the Government, and which a special decree orders to be sub-

<sup>33</sup> Cf. Jean Cahen-Salvador, *La Représentation des Intérêts et Les Services Publics* (Paris, 1935): the most complete and intelligent.

It prepares and drafts the texts of law when asked to do so. Its vice-president may at the request of a minister nominate a member of the *Conseil* to help their department in the elaboration of any particular project. The *Conseil* may, on its own initiative, call the attention of the departments to reforms of a legislative, rule-making, or administrative sort which appear to it to be of public interest. All this leaves the government free to take or reject advice and assistance.<sup>37</sup> But it must be consulted on decrees with legislative force that the government has been empowered to promulgate, as well as the rules of public administration and decrees taking such a form.

Ministers rarely consult it as regards the subject matter, the policy, of a bill; that, as we have seen, has been devolved upon special councils attached to each government department. It can, however, advise upon the form of the law and upon the effects of new legislation upon the existing codes.<sup>38</sup> A very important function in the modern state, where a legal link added or subtracted vitally affects the character of the whole chain; where security of existent rights is a part of the incentive to continue to make them fruitful; and where the economic and social edifice is so nicely composed of anticipations that a multitude of forces will act and interact in a certain way, and any brusque and careless movement may cause disturbances far beyond the range of immediate vision or control. We shall have occasion to discuss the administrative work of the *Conseil d'État* later. We may at this point, however, make this observation. Every country has produced something of saving excel-

lence in its machinery of government. Perhaps at those points the student will find the best means of exploring the characteristic governmental genius of each nation. In France the effective prop is the *Conseil d'État*. Indeed, its brilliant history has caused a number of critics of French parliamentarism to seek relief by a return to the obligatory consultation of the *Conseil* on all laws.<sup>39</sup> However, after the not-too-helpful services of the high administration in general in the events leading up to World War II and the Capitulation, the political parties emerging at the Liberation were politically too self-confident, rightly, to submit to a body of officials, however expert, some of whom had been monarchist or quasi-fascist.<sup>40</sup>

What we have said about France in regard to consultative councils does not require much modification to be applicable to the other countries of this study. But there are some differences of detail respecting the length of time for which such bodies have existed, their composition, and their functions. Of all of them we can say broadly that the representative element is only of recent inclusion, and that it is the result both of the maturity of the representative principle in the modern world and of the recognition that though legislatures may have the plenitude of authority, they have not the plenitude of wisdom.<sup>41</sup> Nor should one omit the advisory work done by such bodies as cham-

<sup>39</sup> These will be found summarized up to 1898 in L. Michon, *L'Initiative Parlementaire* (Paris, 1898), p. 310 ff.; and the trend of ideas since then is to be found in the party programs, and in such articles as those by A. Lefas in the *Revue des Sciences Politiques* for 1929-31.

<sup>40</sup> Cf. the characterization of the *Conseil d'État* by one of its former members, Pierre Tissier, *I Worked with Laval* (London, 1942), especially p. 7 ff.

<sup>41</sup> For United States advisory committees, see J. P. Comer, *Legislative Functions of National Administrative Authorities* (New York, 1927), Chaps. VII and VIII; E. P. Herring, *Public Administration and the Public Interest* (New York, 1936); Report of Attorney General's Committee on Administrative Procedure (1941), Chap. VIII. Regarding Germany, cf. my article, "Officials and the Public," cited in *Public Administration*, January, 1931.

lence to the *Conseil d'État*. . . " And cf. E. Pierre, *Traité de Droit Politique et Parlementaire* (Paris, 1922), Vols. I and III, paras. 82-85, for a commentary on this article. Cf. also *Ordonnance* of July 31, 1945, on the *Conseil d'État*, Titre II; also *Decret* of July 31, 1945, *Règlement Interieur du Conseil d'État*, contained, also, in *Conseil d'État, Études et Documents* (Paris, Imprimerie Nationale, 1947).

<sup>37</sup> Pierre comments: "They [the Government] are not bound in any degree by the collaboration which they have requested" (*op. cit.*, Vol. I, p. 85).

<sup>38</sup> Cf. Aucoc, *op. cit.*, Vol. I, p. 146.

bers of commerce, agriculture, etc., which in Europe have a public status.<sup>42</sup>

*Libraries and Reference Bureaus.* No results of a specially fruitful kind are to be obtained from a special analysis of such aids to the legislator as mere libraries. All legislatures have collections of books and documents and places where fairly quiet study is possible, and the librarians are usually persons able to indicate references and furnish material. But all legislatures seem to be cursed with the same vice: it is impossible for the member to find a convenient and comfortable solitude in which he may work in undisturbed quiet. Only the United States Congress has approached a dignified and useful accommodation for its members. Of the rest, the English politician's judgment is true: "The House of Commons is a place where you can't rest and you can't work." (Yet members do!)

In the United States special arrangements are made in Congress and in many of the states for expert aid to the legislator, not only for the form of bills but also for their material. Congress itself has created a special branch of the Library of Congress (the equivalent of the British Museum Reading Room) to which members may send questions and whence information and references are sent to them.

Until recent years the principal experiment of the United States in this respect was to be found in some of the states, following the lead of Wisconsin. (But the growth of the work and influence of the Legislative Reference Service of the Library of Congress, culminating in its reorganization in 1946, gives it the palm.) The Wisconsin Legislative Reference Department was established in 1901. It was a part of the Wisconsin Library Commission especially designed to help legislators. Its efficacy of course depended upon the intelligent anticipation of the staff and, while this was under the founder, Charles McCarthy, its work became the wonder of America.

The essentials of the scheme were: a carefully selected library conveniently placed; a talented librarian and indexer; compact and accessible arrangement of the material ("legislators have no time to read large books"); complete index of all past bills; records of all "political" as well as scientific arguments on bills ("we must remember that he often relies as much upon political or unscientific arguments as we do upon scientific work"); digests of laws, accounts of their operation, bibliographies; a nonpolitical and nonpartisan staff; a head of the department trained in the social services—with tact and knowledge of human nature; a trained legislative draftsman; and complete devotion as to hours of labor, quick work in an emergency, and continuous anticipation of the legislator's needs. Other states have adopted similar schemes.

The Legislative Reference Service was organized in 1916, after the Wisconsin model. It answers Congressional requests for information. In 1925 those inquiries totalled 774; in 1945, about 16,000. They fall into inquiries for the citation of laws, for compilations of law on various subjects, for information on whether laws exist on certain subjects, for facts (some very trivial), and for preparation of speech material. The Service maintains newspaper clippings, digests of Congressional reports and hearings—"to save the Congressmen's time"—and an index of federal and state laws. It answers many questions on international affairs. Beyond this, it has occasionally made "basic data studies": for example, the pros and cons of problems relating to Indian affairs, cartels, strikes in war industries, workmen's compensation, the regulation of trade unions, the constitutionality of the poll tax, and Communism in Action (the government of the Soviet Union). It prepares bibliographies. It is in telephonic communication with the Congressmen.

In the session of 1943, every member of the Senate and all but 20 members of the House of Representatives made use of the Service at some time; the Senators averaged 45 inquiries each, the Representatives, 18.

<sup>42</sup> Cf. Gény, *La Collaboration des Particuliers avec l'Administration* (Paris, 1930), pp. 180 ff.; E. Tatarin-Tarnheyden, *Die Berufsstände* (Berlin, 1923).

The Legislative Reference Service is organized as a branch of the Library of Congress but functions autonomously in its service of Congress. In 1945, it had 45 professional and 18 clerical and administrative employees and its appropriation amounted to about \$200,000.

The Chief Assistant Librarian of Congress and the Director of the Legislative Reference Service gave evidence to the Joint Committee of the Organization of Congress in May, 1945. They proposed a large increase in staff (to cost some half a million dollars a year) and a specialization of the services they could render to Congress. Their aim was, indeed, to have <sup>43</sup>

at least one person of front rank in each of the major fields of Congressional interest available to prepare studies of this type [the "basic data studies"] for the appropriate committee at the request either of the chairman or of the ranking minority member or of the committee as a whole. Such studies would be completely impartial, the pros and cons would be set out, and the basic data summarized. They would be authoritative analyses of the problem; they would not be mere compilations.

The attitude of such a legislative reference service to its work is of conspicuous interest as an indication of the nature of American government:

(1) It would not give an opinion unless asked for it; it would volunteer no recommendations; it would offer no opinion at all beyond the field of its expertise.

(2) Congress "should be able to call upon scholarly research and counsel at least equal in competence to the research and counsel relied upon by those who appear before congressional committees."<sup>44</sup> Neither the representatives of American business nor the representatives of the various departments of government should be able to draw upon expert opinion superior to the expert opinion available to Congress."<sup>45</sup>

(3) The relationship to the executive

is of peculiar importance. The director of the Service observed on this subject:<sup>46</sup>

It is largely, but not entirely, the function of the executive researchers to gather facts initially; it is their function to draw conclusions which their political chiefs may then decide to advocate before Congress and its committees with their help.

On the other hand, Congress is entitled to have before it on a given issue much more than just the presentation from the Executive. Congress must know what alternative proposals there are; what facts have been ignored, suppressed, or underrated; what criticism of one or another of the proposed solutions may be anticipated.

The central function of a research staff attached to the legislative branch is to analyze, not only the research findings and recommendations of the Executive branch, but the findings and recommendations of other research organizations and individuals . . . This will promote understanding and avoid duplication . . . the staff of the legislative branch must at all times maintain an attitude of complete independence and objectivity . . .

The executive has a right to expect from the legislative staff member that the former's facts and contentions shall be fairly and clearly represented. The legislative researcher has a right to expect from the Executive reasonable candor in warning against particular flaws in research done by others . . . the researchers in the legislative branch must not reveal information as to congressional attitudes or action secured because of their privileged position unless the member or members in question desire it.

(4) In the preparation of basic data studies on controversial questions, it was the policy to have them read by persons holding opposite political views, so as to be certain "that they are completely dehydrated politically."

I draw particular attention to the atmosphere of political aloofness and objectivity and impartial service it was believed should be rendered by the reference branch. Its terms are those in which it is properly customary to describe the "brains-trust" function of the highest branch of the British civil service. But whereas the latter serves both the executive and the legislature as these are

<sup>43</sup> *Hearings*, Part 3, p. 435.

<sup>44</sup> This is an attempt to limit the influence of "the lobby" by a method different from that discussed later, p. 458 ff.

<sup>45</sup> *Hearings*, Part 3, p. 432.

<sup>46</sup> *Ibid.*, p. 434.

severed, in the United States system of government, Solomon the Wise, and not the baby, is divided between Congress and the executive.

Study of the Legislative Reference Service of the Library of Congress shows that no other democratic government has come anywhere near the establishment of such arrangements—not Great Britain, nor Continental systems. The reasons for this contrast offer enlightenment on the character of the different forms of government. The need which in the United States is supplied by the Legislative Reference Division is in Britain supplied by the combined efforts of the political parties' research organizations, the government, and the civil service. Normally, a member of Parliament who wants assistance in finding facts, or a line of argument, or the sketch of bills or policy, can get very valuable help from the party headquarter's research and library staff. We have already noted that these are continuous agencies, commendably efficient. But above all, the leadership of the Parliament—that is, the government (roughly equivalent to the majority leaders and chairmen of committees in the United States Congress)—is served faithfully by its top civil-service career officials. Indeed, the language used before the Joint Congressional Committee in advocacy of the services of the Legislative Reference Division is almost identical to that which is so often used by the British to characterize the services of impartial advice and analysis of alternative ways and means and objectives and methods, rendered to the ministers (and through them to the Commons and people) by their civil service experts. I quote:<sup>47</sup>

They would give an opinion only if they were asked to do so, and they would not volunteer advice or recommendations, and beyond their field of expertness they would refrain from expressing an opinion . . . The staff of the legislative branch must at all times maintain an attitude of complete independence and objectivity.

<sup>47</sup> Cf. Dr. Luther Evans and Dr. E. S. Griffith, *Hearings, Joint Committee on Organization of Congress*, 79th Congress, 1st session, Vol. III, pp. 445 and 448.

Since this service is not directly provided by the United States executive to the Congress, it must be sought elsewhere. If the institution does not exist, the need for it does, as in Britain, and the method sought is characteristically American. It must be obtained from an agency which seems to have nothing at all to do with the government, especially the executive. For Congress does not trust the executive. It occasionally uses the administration's experts, lent to it for limited, specific purposes, but it insists on independence. Again, the executive is not in convenient and continuous contact with Congress. It could be if the distrust were not there. But that could only be overcome if party united them in one fellowship, or if the separation of powers did not exist to give each side, Congress and the executive, a corporate temper, setting one against the other. Once more, it is not only the chasm between Congress and the executive that is of importance, but also the independence that the follower of either of the great parties insists on from his own leaders. He, also, wants an independent channel for his own personal effectiveness, so that he may make his own contribution. Finally, the parties themselves have no research organization to which leaders and rank and file could turn for help. They have, therefore, come to look to the Legislative Reference Division. And this has through its spokesman abjured any concern for party policy—it will serve all, "objectively."

The upshot of the Congressional reorganization of 1946<sup>48</sup> is the establishment of special expert staffs for each Congressional committee, and, in addition, the expert staff of the Legislative Division: the former being more narrowly specialized, the latter of broader scope.

In Weimar Germany an experienced parliamentarian said:<sup>49</sup>

All of this [the four-storied, well-stocked library] is at his disposal. He should use it. Should speak not a word and make not a decision before he has consulted every aid in

<sup>48</sup> Public Law 601: 1946: Secs. 202, 203.

## FIRST CHAMBERS: THE FUNCTIONS OF LEGISLATURES

the archives and the library to test and explore his judgment. Poor Müller! The pressure of the vocation does not allow you so much as to take thought of, let alone come to, any profound research of the truth!

In France there was bitter complaint of the lack of library facilities and other help even in the commissions. The help of the civil service is available only for the government, and not for private members. If the rank and file are ever again to add to the wealth possessed by the party, instead of living upon it, only institutions of this nature (party research pursued seriously, and official but independent reference agencies) can rouse them from their slumbers interrupted only by the division bells. For committee work, particularly, is aid of this kind important.

So far we have been concerned with the influence upon legislatures of information procured by officially constituted bodies which serve fairly in a scientific spirit. In so far as these have influence, it is the influence of fact upon desire. Even when experts are representative of groups whose power affects the legislature, the intention of the fact-finding and policy-reporting bodies is, in the first place, to educe and express the facts apart from considerations of how many would vote for or against the recommendations based upon them. They are the evidence and policies of the disinterested, as near as can be in a political world. But men are fearful for their interests, and do not easily trust advocates so far removed from them as political parties, members of the legislature, civil servants, and experts. The tendency to scramble for the goods of life and to defend one's personality against attack never relaxes. Consequently, various groups with well-defined interests specially organize to influence the legislature and the executive. They are not satisfied that government knows enough about them to be fair when subjecting them to the burdens of citizenship. They feel that they must inform members of the true state of affairs, must call their attention to the numbers of peo-

ple who will be affected and to the opinion of these people upon the suggested measures. They cannot resist the desire to follow the legislator vigilantly and solicitously from the days of his candidacy, into the legislature, and thence through the various stages of legislation, teaching him the factual and justifying foundations and consequences of their claims. In an age of advancing specialization and conscious organization of interest groups, this sets democratic government a very serious problem.

All goes back to the vast scope of modern state activity and the fact that it is impossible for the existing organs of government themselves accurately to know the substance and the strength of the various claims in any given legislative and administrative situation. We should expect to find political self-help where help is otherwise not forthcoming: wherever the ordinary representative institutions are weak in their representative qualities, and wherever groups do not trust these, either because they are weak or because the groups are voracious. The two, of course, go together, but there are differences of emphasis in different countries. We should, however, notice, before we proceed to discuss the different countries, that all of them have been moving in the same direction in recent years: that is, in the direction of what in the United States is called the "lobby," or "third house" all, of course, because industry and social feeling have everywhere shown the same tendencies. Let us first discuss group representation before the Congress of the United States, since this country has developed furthest. Both the pathological and the healthy features of that system afford good criteria of the theory and practice of group representation.

*The United States.* The practice of "lobbying" is far from new.<sup>50</sup> From the begin-

<sup>50</sup> E. P. Herring, *Group Representation before Congress* (Johns Hopkins, 1929) and *Public Administration and Public Interest* (New York, 1936); T. C. Blaisdell, *Economic Power and Political Pressures*, Monograph No. 20, Temporary National Economic Committee, 1941; Kenneth Crawford, *The Pressure Boys* (New York, 1939); M. E. Dillon, "Pressure

ning of Congress there were people, not elected representatives, who understood and employed the means of influencing Congressmen to pass or obstruct legislation favoring specific interests. With the increase of state activity, and, therefore, of legislative power, the "lobby" of Washington became more and more the center of such business. Friends of Congressmen, hangers-on of the departments, former officials, Congressmen who had failed of re-election, lawyers and journalists, and members of Congress themselves, promoted special interests. Women were employed to trim the locks of Congressional Samsons. The terms "lobby" and "lobbyist" became expressions of contempt and vituperation.

Today the lone wolf has vanished; and there is no slinking about upon unsavory errands. Contempt is not entirely dissipated, but fear and respect have taken its place. For the "lobbyist" has come out in the open, advertises himself to the public rather than hides from it, and has sources of revenue which are cheerfully, if not fully, disclosed and even vaunted. The groups have vast territorial organizations, some of them nation-wide. They concentrate in Washington, in large suites of offices filled with trained officials and experts, executive staff, and all the modern equipment of research and propaganda bodies, rivaling the minor departments of the government.

Over four hundred such groups have representatives in Washington, and this does not include volunteer spokesmen who come to the capital from time to time on special deputations to the departments. Yet only about one out of five are really effective and "recognized" by Congressmen as being authentically representative of interests in the country and worth a careful hearing. The delegations represent an enormous variety of interests, and every part of the country. To give a summary view of these interests is almost to reproduce a census of production, every

plank in all the political platforms, and a register of social interests. Broadly, the delegations are of two kinds: those whose primary interest is to secure immediately selfish benefits, and those whose primary interest is to furnish themselves and others with some material or spiritual blessing. In the first category, we find such organizations as the National Association of Manufacturers, the Chamber of Commerce, the Farm Bureau Federation, the Association of Life Insurance Executives, the Motion Picture Producers and Distributors of America, the American Medical Association, the American Newspaper Publishers Association, the American Federation of Labor, and the CIO. Among the latter are the League of Women Voters, the American Legion, the National Catholic Welfare Conference, the Federal Council of Churches of Christ in America, and the Daughters of the American Revolution.

These organizations were founded and are maintained because they deem—each in its own interests—that popular electoral action every two or four years was and is insufficient to direct the activities of government in the direction they think right. As a well-known practitioner has observed:<sup>51</sup>

In Congress, from my experience, the fellow that makes the most noise, and the fellow that makes the most demands, that keeps his problems in front of them all the time, he gets service. If he doesn't: if he depends upon somebody else to do it for him, he is going to get what we all get when we don't go after the thing the way we ought to—nothing.

Their purposes concern not merely domestic policy but also America's foreign relations, affecting peace and welfare and justice all over the world.<sup>52</sup> They have elaborated all the technical means they require, they have become experts upon the sources and channels of legislative and administrative power, and they harness the

<sup>51</sup> Cf. E. E. Schattschneider, *Politics, Pressures and the Tariff* (New York, 1935), p. 219.

<sup>52</sup> Cf. Crawford, *op. cit.*, Chap. 9; Herman Finer, *Road to Reaction* (Boston, 1915), pp. 9 ff. and 199, and *America's Destiny* (New York, 1947), p. 370 ff.

Groups," *American Political Science Review*, June, 1942, p. 471 ff.; also V. O. Key, *Politics, Parties, and Pressure Groups* (New York, 1947).

aims and impulses of a coherent mass of citizens. They have acquired the name of the "third house," the "assistant government." They have emerged into a public and recognized position, because of the appreciation that parties in a country so vast as the United States cannot possibly, and certainly do not (for reasons we have advanced), do the necessary work of representation of so many different purposes, and Congress has itself admitted the groups into its counsels through the doors of its committees, where the effective work of legislation is done. The "muck-raking" period caused the institution of better traditions of government, and made it more difficult for Congressmen themselves to accept the briefs of special interests, while by the 17th amendment, Senators were subjected to a purified process of selection. A thorough investigation of the "lobby" took place in 1913 after certain scandals had alarmed and disgusted the Congress and the public. The conclusions of the committee of investigation recognized the need for public access to Congressmen, but they show that the committee was rather overawed by this huge growth. Its severity, though veiled in disarming phrases, was reserved for the "lobby's" threats against upright Congressmen to contrive their defeat at the next elections, but the propriety of "lobby" activities was admitted.

The note of the sinister has not passed away from newspaper or Congressional descriptions of the "lobby,"<sup>53</sup> but it is in part palliated by the openness of the lobby's activities. The organizers and the negotiators are naturally those with a special knowledge of the byways of legislation and the habits of Congress; and they are recruited from "lawyers," journalists, self-constituted agents and touts, "public relations counsellors," former civil servants, and ex-Congressmen. Many of the members of either House are professional poli-

ticians. Hence, the majority are dependent upon re-election or upon an administrative appointment. Not all can find a berth. But their services are of the highest value to the groups. They know their way to the offices and committee rooms of Congress. Up to 1933 "lame ducks" were especially amenable to pressure. All in all, these "legislative agents" are rumored to be abler than the average Congressman.

While the public in general is thus made pliable, and when a sufficient following can be counted upon, the lobbyist concentrates upon the Congressman. Every interest has a sympathizer in the seats of power, and he forms the permanent open door for successful prosecution of the special claims to accommodation in the law and its administration. It has even been said that "Many a seat in Congress is no more than a prosperous law firm's business-getting equipment."<sup>54</sup> A Congressman can give aid by reading into the *Congressional Record* whatever articles he may compose, so that copies may be obtained at cost.

With the sympathetic Congressman no difficulty arises. But the unsympathetic Congressman must be persuaded; and persuasion takes two forms: technical argument, and the threat that, since he misrepresents opinion, opinion will retaliate. Argument has a double virtue: it is intrinsically effective, and gives the Congressman the material for intervention in debate. These virtues, however, are insufficient to move the mind, and besides, Congressmen are so deluged with information of all kinds that the original evil has returned: the solicitous interests are too many for their time and legislative capacity, and, further, Congressmen tend to distrust the information on the grounds that it is uncertified and without counterargument. (They are, of course, incapable of discovering the technical counterargument themselves; and this is often provided by an opponent group.)

Success lies with those who get in first, and most forcibly. Hence the voice of the people must be conjured up. The method

<sup>53</sup> Crawford, *op. cit.*, demonstrates this. So also Hearings, Senate Committee to Investigate Lobbying Activities, 74th Congress (1936). Nor is the Howard Hughes' investigation by the Senate in July and August of 1947 a sign that matters have improved.

<sup>54</sup> Crawford, *op. cit.*, p. 19.

adopted is almost the same in every big organization. The local groups are consulted, and a policy is produced in Washington; the policy is compared with the attitude of Congressmen; the local groups are informed of the discrepancies; these begin to press upon their members by post, wire, and meetings. A steady fire from the constituencies is concentrated upon the member. He is warned that reelection is impossible if he does not alter his mind. His legislative record is ransacked and, with the exaggerations of politics, thrown into the balance at primary and general elections. One lobby helps another, unless they happen to be directly opposite in interests (which is infrequent), since coercion is more effective when the strength behind it is apparently overwhelming. The method is based upon the general truth that in a democracy no elective office is permanently safe: every vote may ultimately count, and therefore all must be canvassed. Through the Congressman's mind flashes the fact that the active groups may be small, but that they are more effective electorally than the apathetic mass, that unless they are placated they will continue to worry him.

The procedure of Congress gives the lobbyist good opportunities. The most important are the hearings before congressional committees. Decisions on bills are made in committees, and not in the full assembly, and it has become the practice for committees to take evidence from all interests concerned by any bill. (The reasons for this procedure are discussed later, p. 498 ff.) The lobbyist puts written and printed information before the committee, selects and sends up witnesses, argues his case. It is here, of course, that Congressmen are able to sift the evidence and to guess at the truth about the public support alleged by the lobbyist, and here that weight is given to the evidence in rough proportion to its authenticity. Congressional procedure is very intricate and offers many opportunities of destroying or deferring a bill: the lobbyist concentrates upon these points either for attack or defense. But there are occult approaches to

chairmen and other committee men with unusual influence.

How effective is the lobby? This is difficult to answer. It is possible to point to some very important pieces of legislation which result from lobbying activity.<sup>55</sup> Yet of all these it may be said that the full desire of the lobbyist was not granted, and that in some cases, it was only when public opinion was thoroughly roused that Congress actually legislated. But this last argument glosses over the fact (observed in detail in the Prohibition movement) that public opinion was roused or chloroformed or confused (as the case required) by the lobbyist, and that simultaneously with these operations upon the public, operations were conducted upon Congressmen.

Party organization is placed in a rather curious position by the lobby. Party has the ultimate control of policy and priority of business in Congress. It cannot ignore either the threat of a secession of a block of voters or the promise of support. Yet there are so many interests strongly and separately organized that the parties cannot possibly satisfy them all, and can only choose from among them from time to time when it is judged that legislation is inevitable in the near future. Then, as a rule, both parties are found on the same side. Usually they "straddle" to satisfy as many aspirations as possible, which means that none is completely satisfied, even in the program. We have already noticed that committees do most of the legislative work of Congress. The more important of these are seized, in the heyday of the session, with measures espoused by the party. Yet all committees have a large degree of freedom from party domination; that is to say, the party has not made up its mind and has made no promises about a good many things which arise, and does not see the necessity of adopting a party attitude. Here both sides are malleable and open to argument. Since, also, the committees at their largest contain only twenty-one members, influence upon them is fairly easily

<sup>55</sup> Crawford, *op. cit.*; and for New York state, Belle Zeller, *Pressure Politics in New York* (New York, 1937).

won. Moreover, we have seen that priority before Congress is determined by a small knot of party leaders; it is upon the pliability of these that ultimately depends the success of the lobbyist.

It is clear that the lobby in its American form and efficacy is a direct product of American conditions. What is elsewhere accomplished by the partial dissolution or blending of interests in parties and the legislature is accomplished in America by the explosive approach of two almost exclusive bodies: party and lobby. It is all that parties can do to overcome the checks and balances, the obstacles and separations of American politics; they have no time or energy left for further integrations. And the lobby is the necessary adjunct to the American party system, for it makes the policy while the parties are necessarily occupied with other functions. It is possible also that if the nation were less wealthy, the fight for a share of the wealth would be fiercer in Congress and the lobby interests would not be able to win their separate victories so easily. Whatever each takes, however large, is a very small proportion of the total wealth; their millions of dollars divided by the total population is small, so that the amount by which each individual citizen is thereby deprived does not matter enough to produce a real reform. The injustice and impropriety perhaps matters more, but the public is scattered over too wide an area to establish adamant standards of social justice.

It is gratifying that Congressmen have shown increasing and substantial restiveness about the lobby. The next step after the creation of a powerful institution is for the state to attempt to control it. In the case of the American lobby the state is represented in the first place by Congressmen. Their attack upon the lobby results from their fear of it, and from their recognition that it may acquire power to which it is not entitled either by its representativeness in terms of genuine numbers, or by the scientific reasonableness of its claims compared with those of the rest of the nation. Congress has had to steer between prejudicing the rightful freedom of any group to approach it for a hearing, and

undue pressure for privileges. Various proposals, whether in the form of statutes or as amendments of the rules of Congress, have included those (1) to define lobbying, (2) to compel lobbyists to register and disclose their purposes, their employers, and accounts of expenditures, and (3) to prohibit former members of Congress to lobby, "for money or other emolument," within two years of their term as members.

Such proposals for reform culminated in the recommendation of the Report of the Joint Committee on Reorganization of Congress and the measures to implement it. The committee recommended:<sup>56</sup>

That Congress enact legislation providing for the registration of organized groups and their agents who seek to influence legislation and that such registration include quarterly statements of expenditures made for this purpose.

The committee thus relied on publicity and on evidence of the origin, sincerity, and strength of the groups—a reasonable attitude. The Federal Regulation of Lobbying Act, 1946, provided as follows: Any person, individual, partnership, committee, association, corporation, and any other organization or group of persons

who by himself, or through any agent or employee or other persons in any manner whatsoever, directly or indirectly, solicits, collects, or receives money or any other thing of value to be used principally to aid, or the principal purpose of which person is to aid, in the accomplishment of any of the following purposes: (a) The passage or defeat of any legislation by the Congress of the United States (b) To influence, directly or indirectly, the passage or defeat of any legislation by the Congress of the United States

must file quarterly statements to show who has contributed \$500 or more and who has received any expenditures of \$10 or more, with the amount, date, and purpose of the expenditure. Persons engaging themselves for pay or other consideration for purpose (b) above must register with the officers of the House and Senate, with full particulars of their employers, purposes, duration of employment, pay, and expenses. Cumulative quarterly statements

<sup>56</sup> P. 27.

of activities, with expenditures thereon, and action through any form of the press are required from the Lobbyists, under oath. Appropriate forms are provided by the Congressional officers for purposes of registration and return of information. The officers of the Congress responsible for the administration of the act, so far as the filing and compilation of the information are concerned, jointly prepare an annual report compiling the information, and this is printed in the *Congressional Record*. The statements, preserved for two years, are open to public inspection. Violation of the law is punishable by a fine of not more than \$5000 and/or by imprisonment up to twelve months. Convicted persons are debarred from influencing, directly or indirectly, the passage or defeat of legislation. Debarred persons who continue to lobby are guilty of a felony.

In its first year of operation, the act showed some little success in achieving its main purpose, publicity. But it was very far from a full success, judging by the small number of organizations filing registrations and the paucity of information they supplied. Many were palpably withholding information that they could have given and which the law in terms, let alone in spirit, requires. Many powerful organizations did not file, either with no plea at all, or on the plea that they were not *principally* engaged in lobbying, or that their *principal* purpose was not lobbying: an opening for evasion supplied by the statute, provided by Congress in a fit of bad drafting or of confused intentions or of curious inability to prophesy how lobbying organizations might act. It is clear that all organizations ought to be included—not merely those that think themselves to be qualified by the adjectives used above; and that a far deeper fund of information, to disclose the internal set-up and composition of the policy leaders in the organizations, is required. Moreover, distinct responsibility for enforcement needs to be placed on the Attorney-General, since the Congressional officers have neither the authority nor the staff for the purpose. It would be as valuable to proscribe lobbying when exerted on adminis-

trative agencies and officials as when applied to Congressmen.<sup>57</sup>

*England.* The social relationships and the group life of England are almost as complex and subdivided as those of the United States if less extensive territorially, and there are consequently as many interests seeking for representation. On the whole, however, an organized lobby of the size, importance, and system of the United States does not exist. A large number of groups have headquarters near Parliament Street in order to influence the process of government. They are of the same general character as those in America; they approach members of Parliament and send deputations to the departments. But they cannot appear in Parliament, before committees or otherwise, though they are asked to give evidence before royal commissions of inquiry or to act as commissioners; they are normally confined to the lobby. Their electoral work is not propaganda in certain constituencies to secure a stream of communications from constituents to representatives, but questionnaires during elections, and the rather informal promotion of candidatures of members. Party is too strongly in control of English politics for members to be liable to influence by lobbyists. The Commons' committees are large and their work is dominated by the parties and led by a minister. They do not possess the power of Congressional committees. There is hardly a loophole between the constituencies and Parliament through which the lobbyist can slide to extort concessions. The doctrine of ministerial responsibility and its organization—such that the fullest light of publicity beats everlastingly upon the smallest number of answerable ministers, leaders of parties with high traditions—makes impossible transactions not

<sup>57</sup> For a remarkably cogent and thorough account of the operation of the law and suggestions for reform, see Belle Zeller, "The Federal Regulation of Lobbying Act," *American Political Science Review*, April, 1948; and her evidence before the Committee on Expenditures in the Executive Departments, U. S. Senate, 80th Congress, 2nd Session, on "Evaluation of the Legislative Reorganization Act of 1946," p. 98 ff.

publicly advocated, discussed, and authorized.

The lobbyist is obliged to influence the electorate by press propaganda. Or he must appear in the ranks of a party and operate as a member of Parliament, under all the restraints of party and parliamentary discipline, and this often happens. His doctrine must stand a severe test, and even if a clever Parliamentary representative of a special branch of industry, or of prohibition, or of divorce reform, found himself upon a committee with that very slight access of power which the private member enjoys in committee, he would need to persuade not only his colleagues, but the minister, and not only the minister, but the civil servants who stand at the latter's elbow invoking the claims of the country as a whole.<sup>88</sup> In fact, the representatives of the groups are usually members of the House of Commons, which is peculiarly rich, as we have seen, in the representation of the great vocational groups. The House listens with sympathy to an informed and reasoned case,<sup>89</sup> but any obvious advocacy of a brief in the House results in loss of influence, since the House has learned to beware of special pleading. The English "lobby" is more effective in Whitehall where deputations are received, and where advice is frequently asked for from interested groups, before legislation is put into a final draft. Such information suffers a quadruple sifting: once by the permanent officials, once by a cabinet committee or its secretariat, a third time by the cabinet, and another, also, by the House of Commons.

These, then, are the three hopes of English groups: to teach the public, to obtain direct parliamentary representation, and to persuade the government. The publicity attending these processes causes the narrow and disreputable groups never to

attempt organization, for they know that their chance of success is nil. Further, the rigid separation between public and private bills, with a procedure of judicial examination for the latter, marks off English from American habits, for it gives, even requires, the open appearance of interests and their counsel, to state the nature of the interest. And it takes away the remotest hope of success from any interest which is antisocial when tested by judicially sifted evidence of the balance between the public and the private benefit. The smallness of the country, the cohesion and intermixture of locality and interest, the nation-wide circulation of several metropolitan newspapers, the central quasi-governmental management of radio—all cause a whisper to be heard everywhere and make a fierce light beat upon the throne. (In the United States, the distances and diversity of interests, and confusion of responsibility at the center and in the localities, defeat the subjection of the lobbyist.) Until 1931 in Great Britain, the nonexistence of tariffs reduced the capacity of special interests to prevail against the common good. Digested in parties, the interests there sought mutual accommodations.

The labor unions, of course, constitute one of the lobbies. When the Labour government of 1945 took power, it was one of the first truly democratic systems to face the pressure of the unions, which in their political form had brought a party into power. The coal miners' union asked for a charter of ten points to be included in the nationalization law, or at any rate, to be promised them by administrative measures. Among these were a guaranteed week with a minimum wage, special welfare concessions, and representation on the National Coal Board, the everyday administrative authority managing the mines. The government refused any commitment. It was a Labour party government, but it was a government with a national outlook and responsibilities to be discharged to all occupations and all individuals within the nation. It did not even provide for representation of the coal workers on the board, though one mem-

<sup>88</sup> Cf. this point with the argument made by the United States Legislative Reference Service on page 456 above.

<sup>89</sup> Cf., for example, debate on Wool Price Orders, *Debates*, December, 1946. Cf. J. S. Ross, *Parliamentary Representation* (London, 1943), especially Chaps. VII and VIII; Simon Haxey, *Tory M. P.* (London, 1939); and 1946 Report, Annual Conference, Labour party.

ber is appointed with the qualification of "experience in the organization of labor."<sup>60</sup> "The nation" is a good card to play by any party, which has the courage to use it against the claims of any special group, whenever it is played sincerely and wisely: for millions of voters respond to its essential appeal—fair play for all.

The House of Commons has never, like the United States Congress, been clearly faced with the starker problem of lobbying. It has on several occasions affirmed it to be a breach of privilege of Parliament, punishable in various ways, if, to influence their Parliamentary conduct, members were subjected to bribery, threats of violence, abuse, loss of occupation or emoluments, or withdrawal of various social privileges (like membership in a club).<sup>61</sup> It is well known and officially admitted that some members of Parliament are paid by outside bodies.<sup>62</sup> But it is a rule that where a member has a private interest, he will admit it in debate, and allow the House to discount or put a premium on what he says, and in some cases he must refrain from voting. The rule on bribery and disclosure of interest might, if stretched far enough, include members who are paid wholly or partly to represent bodies outside the House, not being their electorate. But the rule has never yet been so extended, presumably because it has not been necessitated by undue violation of the conscientious duties of members.

An aspect of lobbying, though not on an exact par with the problem as it appears in the United States, was considered in 1947 by the House of Commons.<sup>63</sup> A member of the House claimed the protection of the House because the Civil Service Clerical Association—a labor union—had attempted to get him to terminate a life-

tenure appointment he held as their Parliamentary General Secretary. His agreement (made in May, 1943) paid him for dealing with all questions arising in the work of the Association which required parliamentary or political action, and for using his best endeavors to promote the work and objects of the Association. He was, especially, their spokesman in Parliament on civil-service matters. It was agreed that he should "be entitled to engage in his political activities with complete freedom," but on the other hand, should not be entitled in his political and parliamentary activities to purport to represent the political views of the Association, if any; and, should "only represent the Association" so far as civil-service matters were concerned.

In the course of time the general political views of this member clashed with those of many members of the Association, since it was largely Labour, while on the "closed shop," affiliation with the Trade Union Congress, and some other matters his views were seriously different. The Association's officers therefore attempted to persuade him to retire on full pay and a bonus, as it found a widespread misunderstanding among its own constituents that a paid officer of the Association should be at serious variance with it on public issues and in public discussion, and as, also, the Association suffered grave embarrassment at meetings of the trade-union world. To protect himself from the Association's persuasions (not to change his opinion, but to agree to retire), he prayed the House to declare that the Association was violating the Commons' privilege that members should not be put under pressure to speak otherwise than they freely felt they ought. The Committee found that the Association had not committed a breach of privilege. Its essential doctrine is not only important as a pronouncement on the main theme, but is also of conspicuous interest as an expression of British parliamentarism.<sup>64</sup>

Not every action by an outside body which may influence the conduct of a Member of

<sup>60</sup> Cf. D. R. Grenfell, *The British Coal Industry* (London, 1947), Appendix; also R. A. Dahl, "Workers' Control of Industry and the British Labour Party," *American Political Science Review*, October, 1947.

## FIRST CHAMBERS: THE FUNCTIONS OF LEGISLATURES

Parliament as such could now be regarded as a breach of privilege, even if it were calculated and intended to bring pressure on the Member to take or to refrain from taking a particular course. Thus a Resolution passed by some national organization, or a town's meeting in a Member's constituency urging him to speak or vote in one way or another would not normally involve any breach of privilege, even though it expressly or by implication indicated that political support would be given or withheld according to the Member's response . . . In Your Committee's view the fact that a contractual relationship does exist is not in itself one which must completely tie the hands of the outside body if it desires to criticise or comment on a Member's activities.

The relationship between a Member and an outside body with which he is in contractual relationship and from which he receives financial payments is, however, one of great difficulty and delicacy in which there must often be a danger that the rules of privilege may be infringed. Thus it would certainly be improper for a Member to enter into any arrangement fettering his complete independence as a Member of Parliament by undertaking to press some particular point of view on behalf of an outside interest, whether for reward or not. Equally it might be a breach of privilege for an outside body to use the fact that a Member had entered into an agreement with it or was receiving payments from it as a means of exerting pressure upon that Member to follow a particular course of conduct in his capacity as a Member.

It would also be clearly improper to attempt to punish a Member pecuniarily because of his actions as a Member . . . Your Committee regard it as an inevitable corollary that if an outside body may properly enter into contractual relationships with and make payments to a Member as such, it must in general be entitled to terminate that relationship if it lawfully can where it considers it necessary for the protection of its own interests to do so. What, on the other hand, an outside body is certainly not entitled to do is to use the agreement or the payment as an instrument by which it controls, or seeks to control the conduct of a Member or to punish him for what he has done as a Member.

. . . It must be assumed in the Member's favour that having voluntarily entered the relationship he has put himself beyond the reach of any improper influence to which either its continuance or its threatened termi-

nation might give rise. None the less your Committee consider that Parliament must be jealous to see that relationships of this kind are not allowed by Members or used by outside bodies to influence Members in their course of conduct.

Only three other things need be added. *First*, Mr. Churchill, who was a member of the committee, said, "We are very greatly interested in whether in fact we have a Member here who can give his conscientious service to the House or is regulated by an outside body." *Second*, it could, on even a strict construction, have been argued that some of the general political matters on which the Association was aggrieved at its agent's opinions and votes were "civil service" matters: thus the repeal of the Trade Disputes Act, affiliation with the Trade Union Congress, and even the "closed shop" are matters of moment to civil servants as civil servants, and not merely as citizens. *Finally*, though it is clear that Parliament had never yet decided whether it was or was not a breach of privilege for a member on the one hand, and any body of persons outside his constituency on the other, to enter into an agreement by which the member should pursue a certain line in Parliament, the privilege of freedom of speech is more than the individual right of a member which he is free to sign away in part, for the right is a collective right of the House as a whole.<sup>65</sup>

This particular case was followed by a government resolution accepted by the House after earnest debate:<sup>66</sup>

That this House agrees with the Report of the Committee of Privileges, and in particular declares that it is inconsistent with the dignity of the House, with the duty of a Member to his constituents, and with the maintenance of the privilege of freedom of speech, for any Member of this House to enter into any contractual agreement with an outside body, controlling or limiting the Member's complete independence and freedom of action in Parliament or stipulating that he shall act in any way as the representative of such outside body

<sup>65</sup> Select Committee Report, Clerk of the House Memorandum, *ibid.*, p. 87.

<sup>66</sup> July 15, 1947. Cf. Debates.

in regard to any matters to be transacted in Parliament; the duty of a Member being to his constituents and to the country as a whole, rather than to any particular section thereof.

The possible punishment of lobbyists in Britain can be inferentially deduced from a further case of privilege. Two members of the House of Commons were found guilty of disclosing information to newspapers of the proceedings at a Labour party meeting of Labour members of the House of Commons, held in the House.<sup>67</sup> The meeting had been discussing matters directly related to the transactions of the House of Commons, past, present, and to come. The facts were discovered when one of the members wrote an article on the way in which news about parliamentary and party transactions "leaked" to the public. It was alleged that members gave information for pay, or while in a semi-drunken state, or in return for favorable attention in the press. This article was held to be a gross libel on the House. It was found by the select committee which inquired into the libel that the very member who had thus accused others of giving information was himself the author of disclosures to the press, for pay (he had been a journalist for many years). Another member became implicated as the result of evidence given during the inquiry.

Several very important matters bearing on the conduct of democratic government were ventilated or effectuated by this episode.<sup>68</sup> The members were condignly expelled from the House of Commons after making a humble apology for their libels, and above all, for corruptly receiving money for the disclosure of information about matters to be proceeded with in Parliament. The payments were regarded as being in the nature of bribery. It was then thought by the government that this scandalous case and the severity of the action of the House, memorable as they were, ought to be supplemented by a resolution of the House, as a clear warning to

potential offenders. Therefore the following resolution was proposed,<sup>69</sup> and after strenuous debate accepted:

That, if in any case hereafter a Member shall have been found guilty by this House of corruptly accepting payment for the disclosure and publication of confidential information about matters to be proceeded with in Parliament, any person responsible for offering such payment shall incur the grave displeasure of this House; and this House shall take such action as it may, in the circumstances, think fit.

It is clear from this resolution that in future, any lobbyist attempting to influence the course of Parliamentary business by paying a member of Parliament would be taking an extremely grave risk of punishment by the House. And there being no definition of the word "payment," the risk is the greater. The House was warning the tempter, as well as the tempted, for in this case, the buyers had not been punished.<sup>70</sup>

Of more than passing interest are three ideas evoked by the case: (1) that meetings of a party in the House of Commons are entitled to the protection of privilege, (2) the duty owed by members to the good fame of the House and the House to the nation, and (3) the drastic nature of punishment by the House of Commons.

A majority of the Select Committee held that party meetings in the House had become so integral a part of the general functioning of Parliament that they ought to be regarded as conducting Parliamentary business. Therefore, members attending them ought to be punished in the same way as Parliament would punish a member who disclosed official transactions in the Chamber itself, and in the committees of the House itself. The report said:

In modern times the practice of holding private meetings in the precincts of the Palace

<sup>69</sup> December 10, 1947, Debates.

<sup>70</sup> One paper paid thirty pounds a week to a press agency to whom one of the members gave information: the agency acted for the member; the other received five pounds a week direct from a newspaper. The first member claimed this was his regular journalistic work. (Report, para. 17 ff.)

<sup>67</sup> Cf. Report, Committee of Privileges, H.C. No. 138; July 23, 1947.

<sup>68</sup> *Ibid.*, and Debates, October 30, 1947.

of Westminster of different parties has become well established and, in the view of Your Committee, it must now be taken to form a normal and everyday incident of parliamentary procedure, without which the business of Parliament could not conveniently be conducted. Thus meetings held within the precincts of the Palace of Westminster during the parliamentary session are normally attended by Members as such, and the information which is given at such meetings is, in Your Committee's view, given to those attending them in their capacity as Members. Your Committee therefore conclude on this matter that attendance of Members at a private party meeting held in the precincts of the Palace of Westminster during the parliamentary session, to discuss parliamentary matters connected with the current or future proceedings of Parliament, is attendance in their capacity of Members of Parliament. . . . It follows that an unfounded imputation in regard to such meetings involves an affront to the House as such. Your Committee consider that an unjustified allegation that Members regularly betray the confidence of private party meetings either for payment or whilst their discretion has been undermined by drink is a serious contempt.

. . . The information has come to him confidentially as a member; it is only as a Member that he can part with it. In Your Committee's view, therefore, the making of a payment in order that a Member should specially note what took place at the meeting and should disclose information about it, or the acceptance of such payment, constitutes a transaction in the nature of bribery of a Member in regard to what is part of his work in Parliament and is a breach of the privileges of this House.

In debate it was argued: <sup>72</sup>

To me this is not a question of punishing or not punishing the hon. Member for Gravesend. This is a simple question of our duty as Members of the House of Commons, with all that long tradition which we have been taught to respect and observe. The hon. Member for Gravesend has been proved by practically everything that has been said here today to be the wrong kind of person to be here representing any section of the British people. We are here primarily to act on behalf of the people as a whole, and not any particular constituencies . . .

<sup>72</sup> A Labour member, *Debates*, October 30, 1947, col. 1189.

It was further contended: <sup>73</sup>

I feel that I have a duty not only to this House of Commons of which I am a Member but also to my own political party, and, whatever the crime may have been of the Member for Gravesend against this House, as a strong party member I view his crime against his own party as being, at least, equally strong. . . . There is another side to this question to which I think we Members of this House of Commons have to give attention. This is the central governing authority of this country, and this question is being watched in every part of the country with very close attention. Difficulties of this sort arise in all sorts of Government Departments and in all sorts of local government departments, and if we are going to countenance an offence of this sort, which we have condemned to the uttermost degree, and not deal with it by the right sentence of this court, we shall be encouraging all sorts of difficulties, all sorts of wrong action, in local government and other types of organisation in this country.

Mr. Churchill, in suggesting that rather than a temporary suspension the members should be expelled, said, "It [suspension] simply means that, after an interval, the Member will return here, without in the slightest degree having lifted from himself the terrible stain, the indelible stigma, the House has inflicted upon him. . . ." <sup>73</sup> Another Conservative member, speaking on the motion to make the tempter punishable as well as the tempted, observed, "They [Labour members] feel, perhaps we all feel, that the two honourable Members should not have been so cruelly and harshly punished—for it is a terrible punishment, nothing could be worse, and we can imagine what a terrible situation it is—and that there should be no broad censure on those who have been equally guilty in having tempted them to fall into this error." <sup>74</sup> (The student may wonder, "What! mere expulsion from the House of Commons is so terrible a punishment?" In England it is thought to be so.)

It ought to be noticed that there was much division in the House of Commons

<sup>72</sup> A Labour member, *Debates*, same date, col. 1190.

<sup>73</sup> *Debates*, same date, col. 1164.

<sup>74</sup> *Debates*, December 10, col. 1147.

on the question whether private party meetings in the precincts of the House ought to be covered by parliamentary privilege, though the Select Committee reported on this affirmatively. Of course, no precedent could be found to fit, because it is only in recent years that political parties have come to be so intimately a part of the structure and functioning of legislatures.<sup>75</sup>

*Germany.* I have, in another work,<sup>76</sup> made a detailed analysis of the organized interest groups of Weimar Germany. In number and size and technique of organization, they are at least on a par with those of America. They had their roots in the German love of organization, in the rapid changes in German industry after 1870 (when all branches of economic life were in a process of both natural and statutory evolution and before political parties were actually sovereign), and in the need for organization where the civil service was a body of jurists and where Parliament had less to give than ministers and the emperor. Before Hitler, they operated directly upon the *Reichstag* by supporting candidates, and upon the departments of state by deputations. Their pressure upon the departments responsible for their particular branch of interest was continuous and intense. It was welcomed for its usefulness. Their representation in the *Reichstag* was made easier than in other countries because proportional representation enabled them to influence party leaders (they were themselves sometimes party leaders) to put them upon the electoral lists in safe constituencies. These influences were largely controlled by the parties, which were strong in discipline and conviction. But one must observe the growth of a number of specifically "interest" parties, with which we have already dealt in Chapter 16 on parties. An attempt was made to conduct group interests and *expertise* into formal and open channels in the Economic Council (the *Reichswirt-*

*schaftsrat*), discussed later (p. 546). Complaints about members who too specially represented certain interests were frequent, but no bill to cope with the matter, whether by the Rules of Procedure or the general law, was successful.

The Nazi régime, which replaced statute-making by ministerial ordinance, set up corporate representation of business and labor, though not in the legislature, which was merely a facade. Nazi Germany was ruled by the Nazi party, which meant the immediate relationship of the party hierarchy with the occupational groupings of every kind and at all levels, national, state, regional, and local. It even meant collaboration—but in the interest of the Nazi government's military-economic plans—in the very workshops and offices of the groups, and sometimes the acquisition of special advantage by leaders of groups who were personally befriended by Nazi leaders. The proceedings of the war-guilt trials, especially concerning the industrial and banking leaders, luridly reveal this situation. The legislature was no intermediate body between Nazi party and Nazi government and the interest groups: they starkly confronted each other.<sup>77</sup>

It is interesting to observe that the Senate of the postwar Bavarian constitution (Part III) is composed of representatives of economic and social groupings.

*France.* France is rich in the theory of group influence upon government (as witness the names of Benoist, Durkheim, and Duguit, to name only the most distinguished), but until recently was poor in actual organization. The notion of national sovereignty and the equality of citizens seems to have acted as an obstacle to it. There are, however, other causes. Until very recent years, state activity was small, for all the French outcry about *étatisme*. The chambers were intensely occupied

<sup>75</sup> Cf. Report, Select Committee, *loc. cit.*, Appendix and Evidence of Clerk of the House of Commons.

<sup>76</sup> Cf. *Representative Government and a Parliament of Industry* (London, 1923).

<sup>77</sup> Cf. Franz Neumann, *Behemoth*, 2nd edition (New York, 1945); Robert Brady, *Spirit and Structure of Nazi Germany* (London, 1939); M. N. Sweeney, *Structure of the Nazi Economy* (New York, 1941); L. Hamburger, *How Nazi Germany Controlled Business* (Washington, 1943); and Frank Munk, *The Legacy of Nazism* (New York, 1943).

with issues for which political groups are the better middlemen. The best thing for the interest, especially economic, was to have nothing at all to do with politics. Then, in so far as influence upon the chambers was necessary, this was exercised through ministers, and implemented by social gratifications. The advisory councils, of which we have already spoken, could be approached, and their members influenced, by powerful individuals, and little more than this was attempted. The state itself had created in its local Consultative Chambers of Arts and Manufactures, in the Chambers of Commerce and the Chambers of Labor, the normal means of communication upon industrial and commercial matters.<sup>78</sup> That is the Continental fashion (Weimar, nazi, and post-nazi Germany has it also): to put the mark and the discipline of the state upon such representative bodies. Further, the proportion of industrial and commercial interests, compared with those in other countries, to agricultural interests, which needed on the whole less state intervention, was and is small.

Since World War I, economic development stimulated the growth and pertinacity of a number of large associations like the *Comité de liaison des Grandes Associations*, and the *Union des Intérêts Économiques*, and the C.S.T. These organizations openly sought to influence legislation, and in election campaigns they sought to bind members to their program. In their directorates were often found distinguished deputies, more particularly senators, and there are connections between the parliamentary commissions and the associations. Neither French political logic nor the conditions of the day have allowed these voluntary organizations to remain masters of the field, for, following the example of Germany, and much influenced thereby, a comprehensive Eco-

nomic Council was formed in 1927. We later compare its composition and effect with the German Economic Council, but may now note that it was regarded as sufficiently valuable to be resuscitated in the constitution of the Fourth and Fifth Republics.

The rules of procedure adopted by the National Assembly in March, 1947, forbid the establishment within the Assembly itself of groups bearing titles "for the defence of individual, local or professional interests" (article 13). Moreover, the rules (article 116) prohibit a deputy, "under penalty of suspension or expulsion, from taking advantage or allowing use of his status in financial, industrial or commercial enterprises or in the exercise of liberal or other professions, and, in a general fashion, using his title for other motives than the exercise of his mandate."

We have now briefly reviewed the existing means whereby legislators supply themselves, and are supplied, with the expertness necessary to the creation of law. We may conclude that were it not for these agencies, parliamentarism would be incompetent to the tasks assumed by the modern state. We may also conclude that were it not for the civil service and modern parties led by a few talented men and helped by their research bodies, it would be necessary to demand of the ordinary elected deputy a critical ability which he does not yet possess and which he could not acquire without years of careful study. Nor can it be omitted that without parties, and the centralizing, national authority of legislatures, modern states would be disrupted by the schismatic demands of the group interests. (In the government of the Soviet Union much nervous energy is saved by the fact that all special interests are consciously and resolutely domesticated by the only party, the Communist party. Yet it is observable that the Russian people, grouped in factory and farm, do, through meetings and other contact with the party, bring home to the latter what they would like, how much they can endure, and the limits of their obedience. "Lobbying" is in the Soviet

## DRAFTING OF THE LAW

Union an incessant contest between the officials at the head of bureau, trust, mine, factory, and collective farm.<sup>79</sup>)

When we hear the current slogans, "the decline of parliaments" and the "crisis of democracy," we have to recall that it is an apparent decline only. New tasks have been imposed upon institutions which have not declined but remained the same. Other representative institutions, some with good credentials, have not yet been properly shaped and accommodated and granted a fully acknowledged place in the court of the sovereign.

### DRAFTING OF THE LAW

It is not enough to have rightly determined the substance of the law, for it may be entirely ruined by the manner of its formulation. Both Montesquieu<sup>80</sup> and Austin<sup>81</sup> placed the highest value upon the technical drafting of the law, quite properly when one considers the problems it raises:

(1) No law can be made without affecting, by contradiction or amendment, other parts of the statute book or case-made law. The new law must be formulated with due reference to these, else inconsistencies and litigation will follow.

(2) The law requires careful definition to embody the intention of the legislator with the least amount of ambiguity, for the law courts interpret mainly by following the letter of the law and not by reference to the intention of the legislator. For how should one discover that intention? By parliamentary debate? (It is vague and one-sided); by numbers voting? (many may not have heard the debate

and some may not have understood it). The judges are wise in looking only to the letter of the law, but we have already learned that this is an epoch of statutory revolution regarding property, civil liberties, and morals, an epoch bursting with the gravest problems. Moreover, it is desirable that the law should be as simply, that is, as economically, worded as possible. If then, it is badly formulated, the very intention of the legislator may be reversed; and *casus omissi* are the regular bread and butter of law courts. Serious accidents have occurred; ludicrous inconsistencies are reported from all countries, and to avoid them requires great care and skill.

(3) Last but not least, if a statute ends the legislative process, it begins the administrative. The administrators must have clear instructions. If not, they may either exceed their powers or be timid and confused, or public recrimination and litigation may result.<sup>82</sup>

Hence the tendency to place bill drafting in the hands of specialists, who become skilled with practice, who are able to use terms which have already acquired a settled definition in the courts of law,<sup>83</sup>

<sup>82</sup> As, for example, in the Rating and Valuation (Apportionment) Act, 1928; in the definition of "industrial" hereditaments, which were to be derated; in TVA's "planning" powers, and power to make "studies"; in NLRB's definition of "employed" (was it to include foremen?); in the "portal-to-portal" suits. An especially apposite case study of faulty drafting and the consequences on the deficient administration of the law is to be found in the Legislative Reorganization Act, in the part referring to lobbying: relating to the word "principal" (cf. p. 463 above).

<sup>83</sup> F. T. Lee in "The Office of the Legislative Counsel," *Columbia Law Review*, April, 1929, p. 390: "The essential and the time consuming elements are analyses of the problems and of the existing law and the administrative and technical details—in order that the general substantive policies may be built upon a sound understructure that will make practicable the accurate execution of the policies . . . It is the rare exception when a simple policy cannot be simply expressed. Usually the explanation of complex, indefinite, disorderly statutes is attributable to the existence of a complex policy, whose ramifications cannot be definitely ascertained, or else is attributable to political or parliamentary exigencies."

<sup>79</sup> Cf. A. Baykov, *The Development of the Soviet Economic System* (New York, 1947); V. Kravchenko, *I Chose Freedom* (New York, 1945); and *Communism in Action*, U. S. Legislative Reference Service (1946).

<sup>80</sup> Cf. *Esprit des Lois*, Book XXIX, Chaps. XVI-XIX.

<sup>81</sup> Cf. *Jurisprudence*, 1136: "I will venture to affirm, that what is called the *technical* part of legislation is incomparably more difficult than what may be styled as the *ethical*. In other words, it is far easier to conceive justly what would be useful law, than so construct the same law that it may accomplish the design of the law-giver."

and who, by centralizing the process, are able to exclude unintentional and mutually destructive provisions.

*England.* In England, for government measures only and for private members' bills befriended by the government, a special office of draftsmen, Parliamentary Counsel to the Treasury, is employed. The office has had a distinguished history since its creation in 1837 (Lord Thring and Sir Courtenay Ilbert were its incumbents for years<sup>84</sup>). The minister and the leading officials in the department responsible for the bill cooperate with Counsel in the inception of the bill, and then continuously with amendments which arise during its passage through Parliament; indeed, they are conveniently present during debates in the House and in committee. Moreover, Counsel provide memoranda on the clauses for the instruction of the minister, and search out and make plain the history, and the connection with other departments of state, especially of the Treasury. It is a vital, and an intricate, and a highly technical business. The value of the office of draftsmen has been thus assessed by Bryce: it produced harmony in the laws; a form at once shorter, clearer, better expressed, and less likely, all things being equal, to provoke litigation; and a means for consultation on the probable legal effects of contemplated proposals, and for reports upon existing law.<sup>85</sup>

*Germany.* In Weimar Germany no special draftsmen but the leading departmental civil servants were responsible. Indeed, this is why legal studies formed so large a part of the German civil servant's training. This dispersion of drafting responsibility was criticized as leading to ambiguous clauses and unnecessary additions to the law.

*United States.* In the United States until 1915, there was only the very casual

help of the administrative departments with their legal advisers when "administration" bills were being pressed. In 1918<sup>86</sup> special officers, called legislative counsel, were created, one each for the Senate and the House of Representatives, with adequate assistants to "aid in drafting public bills and resolutions or amendments thereto on the request of any committee of either House of Congress."

When the work of the offices of legislative counsel, in House and Senate, was reviewed by the Joint Committee on the Reorganization of Congress in 1945, it became clear that only about one quarter of the bills introduced into the Houses (if indeed so many) came to counsel for assistance. Many of them were not dealt with completely. Much time was spent—and, from a legislative point of view, wasted—on assistance to individuals instead of services to the committees as such. The recruits to the service were not of the highest possible quality, partly because of the rather low salaries offered. There was considerable turnover in the employees, hardly conducive to the proper exercise of this delicate and abstruse drafting function. Counsel frequently were at sea in ignorance of the subject matter on which they were expected to draft law. In fact, a very substantial proportion of the statutes had come from the executive departments, and in many cases, were adopted with sighs of relief by all concerned, almost exactly as they arrived from the departments that drafted them, it being recognized that Congress was unable and ill-equipped, through lack of knowledge and active experience in the subject, to formulate a sound law.<sup>87</sup>

The Reorganization Act of 1946 provided for more counsel and higher salaries. Congress cannot but still suffer from inadequate inwardness of connection with the administration, and so either must continue to produce rough-and-ready laws (a trouble to the public, the interests, and the officials who have to administer them, and a frequent source of con-

<sup>84</sup> Cf. C. P. Ilbert, *Legislative Forms and Methods* (London, 1901) and *The Mechanics of Law Making* (London, 1911); Lord Thring, *Practical Legislation* (London, 1877 and 1902); and Harrison in *Minutes of Evidence, Committee on Ministers' Powers*, 1932.

## DRAFTING OF THE LAW

fusion, litigation and re-enactment) or must accept the assistance of the administrative agencies.

*France.* In France, consultation of the *Conseil d'État* was made permissive, instead of compulsory, in 1878, and this, we have seen, is continued by the decree of July 31, 1945. Governments have relied upon the unsystematic aid of departmental officials, ministers' private secretaries, academic experts, commissions of inquiry, and experts who happen to get on to the parliamentary commissions. In one or two departments, some officials are especially

entrusted with bill drafting, but this is not common.

In so far as the operation of lobbyists is pernicious, it might be reduced to more reasonable proportions by the lengthening of the duration of legislatures which are now fixed at less than four years: the chief example is the House of Representatives. Also, an increase in the size of the legislature, important for other reasons also, might make it difficult for the lobbyist to sway its mind, and this might be followed by an increase in the size of Congressional committees.

## *First Chambers—Deliberation*

THE law has been conceived; it is drafted; outside influences have been at work and remain vigilant. How does the legislature proceed to convert it into law? What rules does it impose upon itself, and for what motives?

Rules of procedure have always been considered with peculiar regard by parliamentarians. For long, the right to make rules free from intervention by the monarch was regarded as a test of the independence of parliament and was one element in the battle for self-government. It was possible for a parliament with such rights to bind the Crown and its ministers to its will, since a price could be exacted for the lowering of each obstacle. But in our own day, procedure has an even more solemn meaning: it is the self-control of the sovereign people, the voluntary surrender of all parties to common considerations of utility and justice. This meaning is implicit in the rules and habits of the various legislatures and can be generally thus summarized:

- (1) Deliberation should be so arranged as to avoid members' being taken by surprise.
- (2) There must be sufficient deliberation.
- (3) The majority must have the ultimate power to pass the law and administer.
- (4) The minority must not be oppressed.
- (5) Deliberation must be orderly, earnest, and genuine.
- (6) The good faith of all speakers must be assumed.
- (7) The system of government by parlia-

mentary discussion and decision is accepted as proper and incontrovertible.

It is obvious that the use of the rules depends on the general sense of justice existent in the majority and in society at large, and, of course, on how far these are aware of the nature of the task to be performed. Upon the decision depends, in part, the general repute of the legislature and also, as has been shown, the extent to which people come to believe that one assembly ought to be checked by another, whether parliamentary or extraparlimentary. Thus the House of Lords has been defended by some because there is insufficient deliberation in the House of Commons, and the American Senate is defended as the only governmental place in which a minority can speak without restriction.

### THE PRESIDING OFFICER

ESSENTIAL to the operation of all the rules is an officer to preside, interpret them, and put them into effect. A presiding officer needs many qualities; for instance, tact and sufficient alertness during hours of speeches to detect and stop any disorder. The prime qualities are decision and impartiality. The need for a knowledge of the rules is obvious. Impartiality rests upon less obvious bases, since we find legislatures—for example, the French National Assembly and the United States House of Representatives—where it is almost a rule that the presiding officer

## THE PRESIDING OFFICER

shall *not* be impartial. Partiality results in waste of time by the challenge of the chairman's ruling. What is much worse, the more that government intervenes, the more likely is it that after the passage of the laws, the claim may arise that they were unfairly passed. Laws made under such conditions lose part of their authority. To these effects of partiality must be added the tumult which comes from enraged spirits, or resignation to a condition of apathy. The English Parliament has contrived to establish the conditions of impartiality better than any other legislature.<sup>1</sup>

*The British Speaker.* By convention, the speaker is elected by the House for the duration of a parliament, and once elected he will be reelected as often as he cares to stand, without competition.<sup>2</sup> This provides both continuity of practice, the authority of permanence, and the minimum of controversy. Although the House is at liberty to propose several candidates for the chair, the party leaders and whips attempt to arrange to avoid party competition and to secure unanimous election. This has usually been achieved, since 1839, by the forbearance of the opposition and the care of the majority not to propose a virulent partisan. The power of speakership issues from tradition, ceremony, and the possession of present-day rights by practice, rule, and statute. The office is of unbroken continuity since the fourteenth century and is actually connected with the grandest creative events of national and parliamentary history. The elaborate ritual of bowing to the chair and manipulating the mace adds to

this as a factor striking reverence and awe in the breast of the average member of Parliament, causing him, as he approaches, to feel, as someone has recorded, like a schoolboy before the principal. Moreover, the speaker enjoys high state precedence: silk-stockinged, gowned, and wigged, and frequently selected with an eye to his own physical impressiveness, he himself renders obeisance to the chair at the opening of every sitting of the House.

For centuries the speaker has been denied the right to speak and vote in the proceedings of the House. A casting vote he has, but its occasion is necessarily rare, and practice has defined that the casting vote be used to vote no change of the existing situation. It is the convention that he shall cease to have connection with political parties or membership of a political club. His constituency was never contested from 1895 to 1935, when the Labour party was ill-advised to contest Speaker Fitzroy's seat, unsuccessfully.<sup>3</sup>

Thus the speaker is insulated from politics, and this is, indeed, the condition which underlies his usefulness to the House and his authority over it, which are intimately related. The speaker's dignity is supported by a large salary (on the Permanent Appropriations Act), an official palace, and, unless he objects, a peerage on retirement. The speaker presides over the house, applies the rules of debate, and settles questions of order. He is, as near as a human being can be, the rules and practice of the house come to life without interposition of his personal or party view. He regulates the order of speech, puts the question, and announces the House's decisions. He revises notices of motion and questions. He is the safeguard of private members against the abuse of the powers of the leaders in government and opposition and is their mentor in procedural difficulties. Most important is the understanding that if in giving a ruling the speaker chooses to insist, the ruling prevails in the situation,

<sup>1</sup> Cf. T. Erskine May, *Parliamentary Practice* (London, 1946 edition), *passim*; Joseph Redlich, *The Procedure of the House of Commons* (London, 1948), Vol. II, p. 131 ff.; and Michael Macdonagh, *The Speaker of the House* (London, 1914); cf. also John Evelyn Dennison, *Notes from My Journal* (London, 1900); Lord Ullswater, *A Speaker's Commentaries* (London, 1925), and G. P. Gooch, *Life of Lord Courtney* (London, 1920). Such biographies as Disraeli's, Gladstone's, Harcourt's, and Campbell-Bannerman's must be consulted for ministerial attitude to the speakership.

<sup>2</sup> The practice began with Speaker Compton

<sup>3</sup> Spanning eleven elections. From 1714 to the present only four contests occurred.

although the ruling may be challenged in a vote of censure.

His powers include the following weighty controls over the pressure of party against party. He can prevent the putting of the previous question until he is satisfied that the minority has had adequate opportunity to put its views to the House. He can accept or refuse a motion, put just after the question period, that the House adjourn on a matter of "definite urgent and public importance"—the application of this definition to the matter which a member wants to get debated by the House is in the discretion of the speaker.<sup>4</sup> Furthermore, when the House in 1947 was discussing the extent to which ministers were prepared to answer questions about the everyday administration of the nationalized industries, and the government declared for the maximum restriction, the speaker informed the House, at the urging of some members, that he and not the government was the authority to settle what questions were admissible. He recognizes the right of members to speak, and as such assumes the responsibility of seeing that all representative views get their fair share of available parliamentary time, even if this means that the leaders of government and opposition are irked by speeches from

men in their own following whom they do not like. He is empowered to stop irrelevance and frivolous repetition in debate. Questions to ministers are regulated by him as to their admissibility, and the amount of time allowed to supplementary questions is settled by his ruling. He has the power of choosing amendments among those offered; since all cannot be debated, he exercises the power of jumping over the less important and controversial—this is the "kangaroo closure." Finally, he has the very important power of certifying money bills.

When the Labour party contested his seat in 1935, all other parties rallied to Speaker Fitzroy's support. One of the arguments, namely that because the speaker has become impartial his constituency is disfranchised, is, in view of the nature of British political parties, ridiculous. The action of the Labour party precipitated the submission of the question to a select committee of the House of Commons. Its historical and comparative researches led to the conclusion that well enough should be left alone. The speaker, it thought, ought to be elected like other members of Parliament—this gave him something in common with them. If the speaker's seat were then liable to contest, the undesirability of contest must be met by "fuller education of the electorate toward the recognition and increased understanding of those vital democratic safeguards which it is the duty of every speaker to defend."<sup>5</sup>

It has been my constant experience in explaining to American students the nature of the speaker's status to meet with incredulity that he could possibly be impartial. This is a reflection of the designed and necessary partisanship of the speakership in the United States House of Representatives, and is an act of homage to a system of government which is mature enough to have freely and consciously established such an arbiter in a whirlpool of party politics. It is an important index to the self-control of the British in political action that the present

<sup>4</sup> Cf. the speaker's view on the gravity of this responsibility in reply to suggestions by members that speakers, especially since 1923, had so strictly interpreted the phrase as to reduce almost to nonexistence the right of the rank and file to challenge the government by such a motion. Cf. Third Report, Select Committee on Procedure. Evidence, H.C. 189-91, 1946, p. 88. For illustration: "Mr. Speaker, your criticism of this proposal [to allow members to interpret the phrase] is that if the question of urgency and public importance were left to the House, in effect forty members could continually obstruct the business of the Government?" "Yes." . . . "My point is this, that I suppose in nine cases out of ten the motion which is put to the House arises from something that appears in the Press, and you invariably see it as well as the Members, and are able to judge whether it is a matter of public importance equally as well as the House?" "Yes. Personally, I think it is a responsibility which the Speaker has to accept and to exercise in the interests of the House of Commons and all parties." (Questions 3064 and 3077.)

<sup>5</sup> See Report on Mr. Speaker's Constituency, No. 98, 1939.

(1949) deputy speaker was formerly a Labour member of Parliament and the present speaker a former Conservative. Each agent of government, in any system of government, is the epitome of all that is significant everywhere in that system: "the universe in a grain of sand." The student will recall the discussion of the meaning of the word "system" in the first paragraphs of the chapter on constitutions (Chap. 8).

*The Speaker of the United States House of Representatives.* In the House of Representatives the speakership, although originating in the conventions of the British eighteenth-century speaker,<sup>6</sup> is an entirely different institution. Whereas the speaker of the House of Commons simply utters the rules of the House, whether they are to the advantage or disadvantage of minority or majority, the speaker of the House of Representatives has often made the rules of his House by wide discretion in interpretation or in the appointment of committees with power over the procedure of the House. Some of the steering and program-making powers customarily exercised by the government in England are exercised by the speaker in America.

In the United States, the speaker is not impartial and is not intended to be by the majority; nor, if we judge by experience, does he intend to be, although he is expected to be fair both to the minority and to the rank and file of the majority's followers. He is today one of the majority party leaders; before 1911 he was *the* party leader in the legislative branch of government, and not seldom a rival in political pre-eminence of the President of the United States.

The speakership is established in the constitution,<sup>7</sup> where it is provided that "the House of Representatives shall choose their Speaker." In fact he is chosen by the

caucus of the majority party and then the House proceeds to his election. No minority party when it becomes a majority will, as in Great Britain, take over a speaker previously selected by the former majority. Within the caucus the fight rages between various sections of the party for this great tactical position of leadership and control. When the speaker is chosen he does not cut off connections with his party—on the contrary, they are even more sedulously cultivated. He occasionally promotes bills of great and sometimes of general importance. He speaks in debate, although the written rules of the House deprecate this.<sup>8</sup> He votes, although the rules of the House do not encourage him to vote except in certain circumstances.<sup>9</sup> He is in constant consultation with the executive and the leader of the Senate when of the same party as his, so that the executive's policies may be effectuated and the latter's collaboration cultivated. He is one of the small knot of policy-makers and campaign leaders—partisan in the profoundest and most vociferous sense. His seat is contested, and therefore he must nurse his constituency by tidbits from the "pork barrel" and by declarations of policy, and he must frequently harbor a certain resentment against his opponents. He promotes by positive strategy and intervention a legislative and executive policy.<sup>10</sup> Thus the speaker of the House of Representatives is the avowed agent of the majority; he is involved—often he leads—in the party councils. Before 1911 he was the supreme party leader. In entering into the analysis of these functions we concern ourselves, also, with the general arrangements for governing the work and time of the House.

The House of Representatives is specially obliged to make detailed arrange-

<sup>9</sup> Rule I, 6.

<sup>10</sup> Cf. Congressional Record, 62nd Congress, 1st session, p. 7. Cf. also Congressional Record, 69th Congress, special session, 1st session, p. 379 ff., the debate on election of Speaker Longworth. Cf. also the course of events between March, 1933 and April 23, 1945, and the remarks of Speaker Rayburn.

<sup>6</sup> Cf. M. P. Follett, *The Speaker of the House of Representatives* (New York, 1896), Chap. I, and A. C. Hinds, "The Speaker of the House of Representatives," *American Political Science Review*, May, 1909, Vol. III, p. 116 ff.; and C. W. Chiu, *The Speaker of the House of Representatives since 1896* (New York, 1928).

<sup>7</sup> Article I, sect. 2.

ments for the conduct of its proceedings (1) because it has a large membership, the individuals of which hunger for a part of its time (especially, too, since bills of a private character are promoted in exceptionally large numbers); (2) because the total amount of business is large;<sup>11</sup> and (3) because the executive, under the rule of the separation of powers, does not lead and serve the assembly, as in the cabinet system. But why should the power of leadership and discipline have found its way to the speakership? For three main reasons. *First*, the spirit of majority rule is exceptionally strong in the United States, and this has produced the disposition to vest very great power in someone. *Second*, power tends to go first of all to the person in a conspicuous position with an already acquired prestige. *Third*, the separation of power between legislature and executive requires the bridging of the gap by personal arrangement between the formal spokesman of the House—namely the speaker—and the President (when they are both of the same party), and sometimes produces a contest between the speaker on behalf of a majority party in the House and a President who happens to have been put in power by the party which is in a minority in the House.<sup>12</sup>

From the beginning of the Republic these tendencies were at work. When, after

the Civil War, the economic and social development of the country began to force a mass of new work upon political institutions, the parties were compelled to promise much, and, in order to keep some part of their promises, to submit themselves to a systematic and rigid discipline. This involved both Congress and the executive. A combination of personal character (as embodied in speakers like Blaine,<sup>13</sup> Randall, Reed,<sup>14</sup> and Cannon,<sup>15</sup> who were forceful and capable leaders of their parties) with the novelty of the problem of positive governmental leadership gave the power, with remarkable absoluteness, to the speaker.<sup>16</sup> There it remained until, by 1911, Congressmen realized that, after all, this was not the only possible way of providing for the leadership that was needed. There were alternatives; and such alternatives might open the way for a share in power by those who dissented from the policy of the party leaders. Moreover, a new generation, especially from the West and Middle West, were insurgent against the "old gang" who had made the rules to suit themselves. Hence the Congressional revolt of 1911, and a slight decentralization of the speaker's power.

Several questions require discussion: first, the formal sources of the speaker's power 1911; second, the formal changes made as a result of the revolt of 1911; third, the practical results of the revolt.

The speaker's strength before 1911 issued from his right to the exercise of three main powers: (1) the appointment of committees (2) his chairmanship, *ex officio*, of the committee on rules, and (3) the "recognition" of a member to address the House.

<sup>11</sup> Cf. J. C. Ridnath, *Life and Work of James G. Blaine* (Boston, 1893); J. G. Blaine, *Twenty Years in Congress* (Boston, 1893).

<sup>12</sup> Cf. S. W. McCall, *Life of Thomas Brackett Reed* (New York, 1914).

<sup>13</sup> Cf. L. W. Bushey, *Uncle Joe Cannon: The Reminiscences of a Pioneer American* (New York, 1927). Sidelines on Cannon's powers are to be found in N. W. Stephenson's *Nelson W. Aldrich* (New York, 1930).

<sup>14</sup> They claimed that if they were "czars," it was only if the majority supported them.

<sup>11</sup> From January 3, 1941, to December 16, 1942 (77th Congress), 7869 bills were introduced in the House, and 1018 House bills and 476 Senate bills were passed. Cf. Joint Committee on the Reorganization of Congress, *Symposium*, p. 41 and pp. 210-238.

<sup>12</sup> Cf. G. H. Brown, *Leadership of Congress* (Indianapolis, 1923), p. 52: "Perceiving a possible danger to the security and stability of legislative government, the House of Representatives, the body peculiarly the bulwark of popular liberty, put itself in a posture of defense to meet its two deadliest enemies, fortifying itself on the one hand against the possible encroachment of the Executive, from an instinctive fear of despotism, and on the other against forces within its own membership likely under exceptional circumstances to seek the destruction of the party system for the sake of immediate selfish interest, as a thoughtless boy might fell a splendid tree to obtain a kite caught in its branches."

## THE PRESIDING OFFICER

(1) The appointment of committees was a tremendous source of strength, because in the American Congressional system, as we show later, no bill is considered by the House unless first reported by a committee. Committees have authority not only over the bill in all its essence and parts but also (in practice) as to whether it shall ever arrive before the House at all. Hence, the power to appoint committees was a plenary power to determine policy; it was not only leadership but command. Though certain rules, like that of seniority and geographical distribution, were conventional restraints upon the discretion of the speaker, they could still be overcome by determined speakers, and they were. If the committees had such power, not only over bills of general importance and of appropriations and taxes, but over those of a private and local nature, giving benefit to specific districts, then they were obviously the key positions for political influence. The speaker therefore had the distribution of the political prestige, of the chairmanships which gave the holders thereof a claim in party councils and in the patronage which fell to the party under the "spoils" system. He also had the wherewithal to please and attach his constituency, territorial or group, to himself. This was a formidable power; the speaker could make or destroy the careers of Congressmen. Hence their humility and subservience, which again added to his power. Hence also their readiness to revolt as soon as cleavage within the party should offer the prospect of throwing off the yoke. Especially bitter were the personal controversies relating to chairmanships of the committees. The speaker ruled in the name of the party;<sup>17</sup> he ruled, however, with the cooperation not of the whole party but

of a half dozen principal henchmen. The House was guided and controlled in its debates, its legislative output, and its executive investigations by the speaker and the chairmen of the half dozen principal committees.

Nor was that all. (2) Among the committees of the House was and still is the Committee on Rules. This was first appointed in 1858 to revise the rules of the House and report the revision to the House.<sup>18</sup> The committee, in 1880, became permanent. The pressure of business and of the constituencies upon the House increased. New powers, calculated to help the House to cut through the thick jungle of legislative proposals, were given to the committee. It acquired the power to make a way in the business of the House for the consideration of any bills. This was done by giving the Committee on Rules the right to report at any time<sup>19</sup> that the rules should be changed, and the change of rules permitted any other committee to report its proposal only at the time stated by the Committee on Rules. True it was that a majority of the House had to accept this report—but when has a majority party ever refused to follow its leaders? Dilatory tactics against the Committee on Rules were swept away by the speaker's ruling,<sup>20</sup> and it was allowed to report without previous notice.<sup>21</sup> These "special orders" were thus used to give priority to legislation which the committee and the speaker believed to be entitled to it.<sup>22</sup> Notice well that they are Congress' equivalent of the power of the cabinet in the British House of Commons to ask for, and obtain, by majority vote, the settlement of the timetable of the House. Before 1911, the speaker was chair-

<sup>17</sup> Cf. G. H. Brown, *op. cit.*, p. 160: "The appointment of the committees," said the Speaker, "is made by the Speaker under the rules, unless the House should otherwise specially order. The Speaker of the House in the exercise of that function is responsible to the House and to the country, this being a government through parties and the Republican party has placed power in the Speaker as to the appointment of committees."

<sup>18</sup> Cf. A. C. Hinds, *op. cit.*, Vol. IV, sect. 4321; D. S. Alexander, *History and Procedure of House of Representatives* (Boston, 1916).

<sup>19</sup> Cf. M. P. Follett, *op. cit.*, p. 275; D. S. Alexander, *op. cit.*; S. W. McCall, *The Business of Congress* (New York, 1911).

<sup>20</sup> Hinds, *op. cit.*, Vol. V, sect. 5739.

<sup>21</sup> M. P. Follett, *op. cit.*, p. 276.

<sup>22</sup> Cf. *Congressional Record*, 60th Congress, 2nd session, pp. 588-89; Hinds (clerk at the speaker's table) on *Order of Business in the House*.

man of the Committee on Rules, and he appointed its two majority members, while the two minority members received scant grace. Thus the triumvirate ruled the House; and of the three the speaker was first and all.<sup>23</sup> He benefited from the admitted need to disentangle the thousands of threads of Congressional business and to give preference to the business which the party leaders, whether in the Congress or in the presidency, considered indispensable. What the speaker decided in committee, the speaker would facilitate from the chair.

(3) Yet in order to overcome obstruction, the right to "recognize" a member needed to be vested in the speaker. This was done by a succession of developments which led to a singular absoluteness of his power. No one could address the House unless by previous arrangement with the speaker.

This system was attacked and formally destroyed in a campaign which began in March, 1910.<sup>24</sup> Two vigorous tendencies sought their outlet: the Republican "insurgent" movement invigorated by the political forces in the western states, and the individual dissatisfaction of Congressmen, ostensibly with the injustice done to their constituencies by an unrepresentative system. The result was the establishment of certain new rules: (a) making the Committee on Rules elective by the House and of an increased size, and depriving the speaker of the right to a place upon it; (b) making the committees of the House selective no longer by the speaker but by a Committee on Committees, and (c) establishing by the rules of the House definite times for certain business which the speaker must respect—

such as Calendar Wednesday and the Discharge Calendar.

What have been the results of this evolution upon the speakership? He still remains in intention and practice a party man. He is still one of the very small knot of Congressional leaders who treat with the president for passage of "administration" measures. He is still consulted by, and has great sway with, his party "steering" committee and the floor leader of the majority party. He is still a major factor in deciding assignments to committees and the priority of business, because he is one of the most eminent, usually the most eminent, of his party; that, indeed, is why he was elected speaker. Order and system in a House of four hundred and thirty-five members there is bound to be, and the power of leadership must somewhere be lodged. While, until 1911, it was concentrated in the speaker and his friends by grace, it is now concentrated in the speaker's friends and the speaker. Leadership has been "syndicated" or put into "commission," but the speaker is still the predominant member of the syndicate. The contrast with British procedure is remarkable: each speakership epitomizes a whole political system.

Instead of losing his political partisan character on becoming speaker, he becomes speaker in order to be more political. Having helped his party to power by electoral leadership in company with the other party leaders who are out to obtain victory in Congressional elections and in the nomination and election of the President of the United States, he continues to help the party to carry through the program desired by the leaders. As former speaker, John Nance Garner is said to have declared in 1931 when a Democratic House confronted a Republican President: "I hold the most powerful position in this government excepting that of President of the United States. I accepted the proposed Vice-Presidential nomination with much hesitancy."

*France.* The president of the Chamber of Deputies, now the National Assembly, is, of course, like the British speaker and unlike the American speaker, the product

<sup>23</sup> *Congressional Record*, 56th Congress, 1st session, p. 7: "To say that the Committee can be controlled by the majority is not candid, because the Committee is considered the Speaker's official family, and no gentleman of the Speaker's party would serve upon it unless he could support the Speaker's policy."

<sup>24</sup> Cf. Chiu, *op. cit.*; also, C. R. Atkinson and C. A. Beard, "Syndication of the Speakership," *American Political Science Quarterly*, Vol. XXVI (1911), pp. 381-414; Brown, *op. cit.*, Chap. X ff., especially p. 159 (speech of Nelson of Wisconsin).

of a parliamentary system in which the guiding and controlling authority is a responsible ministry. The presidents have little extraneous cause, therefore, to become partisans. Yet the conditions of effective technical excellence or impartiality are not present in the same measure as in England. In France <sup>25</sup> the president of the Chamber was elected anew at every session, and in the procedure of the Assembly of the Fourth Republic the rule was continued.<sup>26</sup> This is part of the tradition of distrust against constituted authorities. It is a grave fault from the standpoint of legislative efficiency, as with each contest in every session there is a stirring of all the passions of party, and objections are urged to the incumbent as well as his merits. Nor is there sufficient time for the president to dominate his electors: the sense of his recent arrival is always there, and he cannot acquire the aspect of doom which permanence gives. Whereas, between 1872 and 1945, the House of Commons had six speakers, France had fifteen, and between them Paul Deschanel and Henri Brisson held office for one third of the time, the latter very intermittently. The uncertainty of election produced by the large number of groups is also a factor which prevents the president from towering above them all, especially since the need for an absolute majority produces the second ballot system. Nor is that all. The presidents of the Chamber and of the Senate (now Assembly and Council of the Fourth Republic) have become part of the regular machinery of state with the President of the Republic in the formation of ministries. They are opposed in their constituencies. They remain attached to their parties (though not in sittings of the Chambers), cooperate at group meetings, sometimes enter into press controversies. They pass into ministries, then

back into the chair <sup>27</sup> and, although they do not intervene as partisans in debate, their frequent hortatory remarks are necessarily biased and provoke partisan passions. In July, 1926, there occurred an incident in the Chamber of Deputies, unthinkable in England. M. Herriot, then president of the Chamber, suddenly determined to prevent the government from obtaining powers of legislation by decree. Without notice he quietly and suddenly appeared in his seat in the Chamber, and his speech overturned the Briand government. Hereupon he was called by the President of the Republic to form a new ministry.<sup>28</sup> In June, 1935, M. Fernand Bouisson, Socialist, president of the Chamber since 1926, resigned to become premier. Within a few days, the Chamber overthrew his cabinet. It then elected him to the chair! The presidency of the Chambers is a steppingstone to Presidency of the Republic.<sup>29</sup>

It is in order to avoid some of the political manoeuvres which took place every year, that the constitution of the Fifth Republic decides in its art. 32 that the President of the National Assembly shall be elected for the whole of the life time of that House, and that the President of the Senate shall be elected once every three years, after each partial renewal.

The presidents of the French Chambers have powers in regard to the regulation of business similar to those possessed by the English speakers, though perhaps more complicated by virtue of the many groups, the parliamentary commissions, and participation in the council which settles the order of business. It is somewhat simplified by the fact that the

<sup>25</sup> Cf. *Règlement*, March, 1947, Chap. IV

<sup>26</sup> Cf. E. Pierre, *op. cit.*, Vols. I, II, and III, paras. 407 ff., and sections on his various attributes; Ripert, *La Présidence des Assemblées Politiques* (Paris, 1908): for history and evaluation.

<sup>27</sup> For example, Paul Deschanel, Charles Dupuy, Casimir Perier, Henri Brisson, Léon Bourgeois, Painlevé, Herriot, Fernand Bouisson.

<sup>28</sup> Cf. for an account of this incident Georges Suarez, *De Poincaré à Poincaré* (Paris, 1928), p. 138 ff.

<sup>29</sup> For example, Deschanel, Casimir Perier (Bourgeois and Painlevé were spoken of), and Doumer (1931). But Herriot was unsuccessful in 1930.

order of speech is settled by the rules. The task, moreover, is made very difficult by the tradition of the office, its connection with politics, but most of all by the restiveness of the Chambers. Calls to order are unheeded or are challenged with invective. The House may, and often does, reverse by its vote a ruling of its president. Irrelevance when reprimanded turns sour and becomes sarcastic expostulation. Suspensions of the House for a quarter hour are frequent to quiet the irate. At the root of all this is the notion of the deputy's individual sovereignty, the petulant party divisions, and the lack of a sense of state.

The rules of the National Assembly of the Fourth Republic had rendered the position of the president of the Assembly even more difficult by adding powers and subtracting authority. His power to convene the commissions and transmit bills to the Council of the Republic and to the president of the Republic for promulgation; his right to promulgate laws if the president of the Republic does not do so within ten days of their submission to him for promulgation; the power to impose disciplinary penalties on disorderly deputies and to control the military forces guarding the assembly—all these can be used by men of ill-will to obstruct the government of the nation at crucial times. In the hands of antidemocratic men it would be easy to do more damage than merely upset the shaky coalitions which constitute the cabinets of France in sub-revolutionary times.

Nor is that all. In seeking to strengthen the Assembly as the unrivalled center of political power in the nation, the president of the Assembly was vested by the constitution of the Fourth Republic with immense responsibilities of an order quite distinctive from those of other presiding officers of legislatures. When a cabinet decides on dissolution of the Assembly it must first ask the advice of the president of the Assembly (article 51, and see p. 396 above and p. 643 below). Finally, in case of obstruction duly verified by a vote of the "parliament" (the two houses?), or in

case of vacancy through death, resignation, or any other cause, the president of the Assembly assumes the functions of the President of the Republic in the interim until the election of a new President (article 42).

The rules had imported proportional representation into the voting for president of the legislature and the six vice-presidents (the *bureau*) who would take the place of the former, one by one, in the order of their precedence if he were incapacitated or absent. Who is to be second and third vice-president is a matter, then, that might shake the foundations of the Republic, especially in a day when the Soviet Union has strong friends in the Communist party of France. And already the non-Communist groups have interpreted proportional representation in a way—quite legitimate—to exclude a Communist leader from second and third place.<sup>30</sup> Is it to be expected that a session which begins with a riot over the President will deliberate calmly thereafter? Again let it be said that the presiding officer of the legislature is the epitome of the political character of each country.

The Fifth Republic has increased the power of the President of the House. He has now autonomous powers, such as that of appointing members of the Constitutional Council, and bringing bills to the notice of that Council. The fact that he is elected for the whole of the lifetime of the House unquestionably enhances his status. The framers of the constitution of 1958 have tried to make the office resemble

<sup>30</sup> For the riotous scenes at the opening of the session of January, 1948, see *New York Times*, January 14, 15, 16, 1948. The Communist party appealed to the President of the Republic, since the rules require that he be notified of the formation of the *bureau*. As we have already noticed, the Communist party representatives on the constitutional committee of the assembly to draft the new constitution held as fast as steel to the principle of proportional representation electorally and of its extension throughout the apparatus of government. Proportional representation is the barricade of minorities.

more closely that of the Speaker of the House of Commons.

## DISCUSSION

WE have no means of knowing the earliest history of the establishment of the number of readings of a bill in its progress toward law, because British practice, which has been of such influence upon other countries, began at a remote and unreported time. We can only guess at the motives from the remarks of commentators who have rationalized the processes at whose birth they were not present.<sup>31</sup> Three readings of a bill have become an unquestioned dogma in England, though, of course, today the dogma is hollow and practice is far different from anything that the term suggests. But the notion of three readings was carried into the United States through the early legislative assemblies in the colonies and Thomas Jefferson's *Manual of Procedure*,<sup>32</sup> and into France and Germany by the influence of Bentham.

*No Longer Three Readings.* No constitution can escape the molding effect of the necessities of character and environment, and today in England the three readings are not what they seem, while on the Continent and in America, vital differences from the English system have been instituted. The great changes which have occurred in English practice are: the change in the public significance of the first reading, the increased importance of committee discussion, and the reduction in the seriousness of the third reading.

On the Continent and in America a system of deliberation has been developed, the features of which are direct contradictions of all for which English parliamentarians seem to strive. For, in England, in spite of the increasing importance of committees in parliamentary procedure,

the theory is still maintained that the House itself, as a whole, is sovereign over the principle and the major applications of a bill. The Continent and America have abandoned this practice if not the theory, and their committees are made if not the sovereign then the principal masters of the bill. Regard, for example, *Pierre's* great treatise on French parliamentary law; the parliamentary commissions must be treated of first, for they are so much the masters of the chambers, and have rights of intervention and decision to such a degree, that if their composition and functions are not well grasped, the whole meaning of procedure in the chambers is misunderstood.

We may briefly say now the demonstration will follow later that in America and on the Continent the proceedings of the full legislature are mainly (not wholly) directed to impressing the public, while the real work is done in the commissions; and England maintains the House as still an effective place of thought, deliberation, and decision only by the most desperate effort. For, hard and unchallengeable in their power, the dictates of the party system have impatiently torn the power of government away from the legislature as a body of individual members, and have firmly vested it in the leaders of the major parties. Of the full assembly a kind of essential committee has been formed, consisting of the leaders of the government and the opposition, and these—with their immediate confidants and officers and with others drawn from time to time (as required) from the body outside to help them in special matters—draft bills, lay down the limits of discussion, bargain for compromises, and fix the date and time of a vote. In England, if we went by the historic declarations, the standing committees are supposed only to edit the bill and the amendments resulting from this process; they are supposed to be non-contentious but in fact, their work is taking them more and more into the fields of the struggle for power. Elsewhere the parliamentary committees or commissions share the power of decision with the little knot of party leaders. Mindful of these general conditions we can approach the stages of parliamentary deliberation.

*English Practice.* In England the first reading is almost entirely a formal and nondeliberative state. A bill may be intro-

<sup>31</sup> Cf. Sir Thomas Smith, *De Republica Anglorum* (Cambridge, edition of 1906), p. 54: "All bills, be thrice, in three divers days, read and disputed upon before they come to the question . . ." Cf. Blackstone, *Commentaries*, Book I, Chap. II; J. Redlich, *op. cit.*, Vol. I, p. 6 ff.

<sup>32</sup> This is still a part of the rules of procedure of the House of Representatives, and the official edition of these rules begins with the manual.

duced either by its simple presentation at the table<sup>33</sup> or with a brief explanatory statement from the member who moves the motion for leave to bring in the bill.<sup>34</sup> In the first case, the first reading has taken place without any debate at all, and perhaps without members realizing that a bill was being introduced. In the second case, a brief explanatory statement is allowed to the mover and the member who opposes introduction; and the rule has come to be called the Ten Minutes' Rule. The Ten Minutes' Rule is usually employed for government bills where a deliberate public announcement is deemed necessary, as in the Education Bill of 1917, but it is now rare. Simple presentation is adopted by private members who wish to impress their constituents with their zeal, and who know very well that their chances of getting a bill made into law are almost as remote as the moon. It is also adopted by the government. This undebated introductory stage is purely one of preliminary formal advertisement that the subject is about to be treated by Parliament. For the first time, a formal draft is presented of the detailed form in which principles discussed at previous elections are to be made law, or, sometimes, never discussed before.<sup>35</sup> It is a notice of intention not only to Parliament, but to the press, the party caucuses, and the organized interests. While it is the beginning of one process, it is the end of another: for from the moment that legislation becomes possible, and the draft is in preparation, the most important interests scan the press for signs of its progress, and exert every means to influence its shape. So also does the depart-

ment responsible for composing the bill call in to its aid experts and representatives of interests. Kites are also flown in order to give the government the opportunity of discovering its strength or weakness.

A day is fixed for the second reading by the member proposing the bill. In England no difference is made, formally, between a private member and a member of the government for this arrangement. But practically there is all the difference in the world, for the government commands the time of the House, and fixes the day, usually after conversation through its whips—"the usual channels"—with the opposition. The rules of the House do not provide for an interval between the first reading and the second. In olden times, the rule was on "divers days"—undoubtedly as a safeguard against surprise. This is hardly necessary in England, where rather strong principles of fairness are shared by all parties and the electorate, and in fact plenty of notice is given to the opposition. Jefferson's *Manual* provides that the second reading must regularly be on another day.<sup>36</sup> (On the Continent there are regular, but short, intervals.<sup>37</sup>) The second reading is not the time for detailed amendments or for any discussion and vote upon the clauses. (It corresponds almost exactly to the Continental practice of "*discussion générale*," which usually precedes passage to the specific articles.) The supporters of the bill agree why *in general* such a bill, and even this specific bill, is necessary—not to insist that every clause is either perfectly adapted to its purpose, or that every purpose is incontestably good. It is true, indeed, that ministers would and do speak in this sense, but more out of the tactics of bargaining than out of an unqualified belief in their charge. The opposition, on the other hand, moves formally that the bill be put off to some impossible time,<sup>38</sup>

<sup>33</sup> Standing Order (2); cf. T. E. May, *op. cit.* (14th edition), p. 485.

<sup>34</sup> Standing Order. Cf. May, *op. cit.*, p. 484. "The practice of introducing bills under this procedure is frequently adopted, more especially by private members, as it gives early publicity to a controversial measure or one of general interest . . ."

<sup>35</sup> Though, indeed, the bill may be merely presented in "dummy": that is, there is the title, and a bare explanation of the objects of the bill, without argument.

<sup>36</sup> P. 156, section XXV.

<sup>37</sup> Thus Germany and France.

<sup>38</sup> This locution is thus reasoned (May, *op. cit.*, p. 498): (a) Such a form of amendment is

or in a "reasoned amendment" that for various reasons it ought to be rejected. Its attack is to show that the details of the bill do not carry out its mean intention, and that the intention itself is unjust or inexpedient.

The words of Erskine May, former clerk of Parliament, are carefully selected but still convey a slightly erroneous impression. He says that "The second reading is the most important stage through which the bill is required to pass; for its whole principle is then at issue, and is affirmed or denied, by a vote of the House."<sup>39</sup> Now this may have been true of the House of Commons up to 1870, but it became less and less true from that time. It cannot be gainsaid that any other stage in the full assembly is less important; it cannot be denied that the House divides. It is true that members (the few who are interested and instructed in the matter of any specific bill) fervently applaud or denounce the bill; but we must not forget the saying which is proverbial in all parliaments, "I have heard speeches which have profoundly moved members; but none which has even turned a single vote." The principle has already been affirmed or rejected in the electoral process which put some men in a majority and others in a minority. Neither does the opinion of the great clerk of Parliament adequately include a consideration of the part played by the committees of the House. Decisions are made there; but not in the second reading; though it is true that argument during the second reading may and frequently does influence the government and cause it to make promises of amendment. What is more, the organs of opinion of party and interested groups are extremely vocal from now onward and seek to exert influence upon the minister in charge of the bill. These obtain their opportunity for concrete amendments in the states of cogitation which immediately precede, and operate during, consideration in committee.

It will be seen on close inspection that actually there are five stages in the normal progress of a bill: the first reading, the second reading, the committee stage, the report stage, and the third reading. If

these five stages were each of adequate length, there would be no question of the care with which the House discusses a bill. But we shall shortly see that in fact these stages are short, sharp, and vehement; that not all clauses are discussed; that not all amendments are considered; that not all the loose ends are tied up; that not all obscurities are clarified. Disaster would entirely overcome the House of Commons if it were not for strict rules. An even worse fate would overwhelm Parliament were it not based, as it is, upon the assumption that parties and not the individual members are the appropriate managers of discussion. In fact almost the whole process of discussion and amendment is carried through by the initiative, the expertness, and the drive of some ten leading members, who are particularly expert upon the given subject, and who are aided by private experts, or members of the parties' research staff, or even specially briefed assistance. There must be a continuously attentive and expert body which assumes the responsibility of discussion: a small body which can sift from the numerous objections those which are most important and for which there is time. That small body is in all countries the party, which, for the time being, is represented by a specially designated member from among the ranks. In England the party operates in the House and in committee; in France, Germany, and the United States it operates more forcefully in the committees. Let us then turn to the procedure of these countries; sketch their general manner of handling bills, and then concentrate particularly upon committee procedure.

*France: the Power of the Commissions.* Following Jeremy Bentham's "Tactics"<sup>40</sup> the French constitution of 1791 required three readings with intervals of eight days between them. Under the Consulate, the Empire, and the following régimes, one reading only was required; but this was in assemblies which were not sovereign and to whom the bill was sent in its ultimate form by the *Conseil d'État*. The short-lived Second Republic, being founded upon a single-chamber system, provided for three readings. The first impulse of the Assembly of 1871 was to de-

more courteous than a point-blank rejection; (b) a mere negative would not prevent the repetition of a bill on any subsequent day.

<sup>39</sup> May, *loc. cit.*

<sup>40</sup> Cf. C. P. Ilbert, *Legislative Forms* (London, 1901); and cf. Pierre, *op. cit.*, Vol. I, p. 971, footnote.

cree three readings; but since a biennial system then prevailed, the readings were reduced to two, with an interval of five days between the vote of each reading.<sup>41</sup> The system that prevailed to 1946, and has since then been continued, is as follows. Owing to the looseness of party control, discussions tend to become interminable; and the tendency, therefore, has constantly been to curtail the formal stages of debate, which would give members an opportunity to raise questions and offer objections. Indeed, as we shall later see, parliamentary self-control was so weak that financial legislation was rarely passed within the proper time, given the date of ending of the financial year, and the rules of procedure went so far as to reduce the deliberation upon money bills to one stage.<sup>42</sup> The urgency of such bills dictated the discarding of the safeguard of debate, whereas in England the gravity of such bills has caused the creation of additional safeguards.

As we shall see, the constitution of the Fifth Republic has introduced drastic changes in order to prevent the time-wasting procedures which pre-1958 Assemblies used in order to weaken the Government even *before* debate had really begun.

Now it has been decided<sup>43</sup> that normally there shall be only one deliberation in the Chamber—unless a second stage is moved by a member at the point where the bill as a whole is being voted on after all discussion is finished, when the Chamber decides what should be done and whether to recommit the bill to a commission. This would seem a strange and dangerous procedure were it not for the fact that the bill has already been thoroughly threshed out by commissions whose report has been distributed in advance of the debate. The constitution and function of these commissions we shall study in a moment. Let us now sketch only the broad lines of procedure. The reading falls into two parts: the “*discussion générale*” and the “*passage aux articles*”;

as a rule the first precedes, but the order is sometimes reversed. Amendments may be put, of course, only in the discussion of the articles. Before the final vote is taken on the whole bill, directly after the articles have been discussed and passed, the parties are allowed a Parthian shot. Deputies may “explain” their vote in a five-minute speech.<sup>44</sup> It appears that these “*considérations générales*” may be the collective declarations of groups.<sup>45</sup>

Amendments must, according to the constitution of the Fifth Republic, be presented in commission. Before 1958, it was possible to move an amendment from the floor of the House, even though the commission had not discussed it. This meant delay, and a possible setback for the Government. Amendments offered during debate could be sent to the commission for study. When the amendment was not challenged in this way, the motion was put to the House “Shall we consider this amendment?” When the chamber had decided that it was to take the amendment into consideration, it went to the commission; of course, to save time, the commission did deliberate at once very often. But the discussion had to be suspended if the succeeding articles were affected by the amendment and this was a device often used by deputies who wanted to kill a bill or weaken the Government’s position. Since amendments have, since 1958, to be presented at the commission stage, or not at all (unless the Government approves of them) these delaying tactics are no longer possible.

There are two further complications in the procedure. *Firstly*, since the Fourth Republic, the Economic Council has, on economic bills, to be consulted and it sends a *rapporteur* to the chamber. *Secondly*, in case of a disagreement with the Senate, bills go through a lengthy procedure: in the first place, they are read, once more, by both Houses; if the disagreement persists, the Prime Minister can provoke the setting-up of a joint committee of both Houses. If the Prime Minister does not

<sup>41</sup> Pierre, *op. cit.*, Vol. I, p. 972.

<sup>42</sup> Pierre, *op. cit.*, Vol. I, para. 816.

<sup>43</sup> *Règlement*, Third Republic, Chap. X, article 82; Fourth Republic, article 56 ff.

<sup>44</sup> Pierre, *op. cit.*, Vols. I and III, para. 820.

<sup>45</sup> Pierre, *op. cit.*, Vol. III, p. 822.

## DISCUSSION

do so, bills have to move between the Houses until agreement is reached. If, after the joint committee stage, there is still disagreement, the Government can send the bill once more to each House successively. Finally, if there is still disagreement, the Government can then ask the National Assembly to give a final decision which will override the Senate.<sup>46</sup>

The two Houses are called in joint session for one purpose only, that of amending the constitution, and provided the President of the Republic has decided to use that procedure.<sup>47</sup>

Despite the changes which have taken place in 1958 and which diminish the number and power of commissions (see below, p. 494), the picture remains different from the English picture. The powers of the Government have been increased but the commission is still very influential: the House cannot discuss before it reports: it selects and amends amendments, it watches the whole of the debate, guides it and intervenes as a specially authorized body. The English committee has no such decisive rights of intervention: it works within the limits settled by the House. Parliament as a whole dominates it in theory and, still, in practice, although the superior ability of the committee wins it important authority, for the House has neither the time nor the knowledge to review all its decisions.

*The German Reichstag.* The formal march of a bill in the Weimar *Reichstag* was through three readings. The first reading was usually one of simple announcement without debate. If there was debate it was a short discussion of general principles.<sup>48</sup> But before the first reading of any bill was undertaken, it went through a number of stages outside the *Reichstag*. These which are discussed more fully on the proper occasion were important preparatory stages. When the draft left the ministry (which normally obtained an expression of public opinion by publica-
